Among the attacks on our bill there was one that came from the American Bar Association. A special committee of that association prepared a report which disapproves of the medical-care provisions of Senate bill 1161. The national committee on social legislation of the National Lawyers Guild studied our bill as a whole, and published a very valuable report on it entitled "The New Wagner-Murray-Dingell Social Security Bill, a New Social Security Charter for America," in the Lawyers Guild Review for November-December 1943. Though their report was enthusiastically favorable to our bill, it was not without criticism. However, such criticism as that committee made was constructive and useful. The Senator from New York and I thank them for their help.

Now the same committee of the National Lawyers Guild has published a second report. This one deals specifically with the medical-care provisions of the bill, and makes an analysis of the report issued by the special committee of the American Bar Association. In its latest report, published in the Lawyers Guild Review for November-December 1944, the committee of the National Lawyers Guild shows that the American Bar Association was grossly in error both as to the need for medical-care provisions and as to legal and constitutional questions raised with respect to our bill.

I ask unanimous consent to have this report from the national committee on social legislation, National Lawyers Guild, printed in the RECORD.

I have received from the Public Printer an estimate that the printing of the report will require four pages of the CONGRESSIONAL RECORD, at a cost of $208.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

ANALYSIS OF THE AMERICAN BAR ASSOCIATION REPORT ON THE MEDICAL-CARE PROVISIONS OF THE WAGNER-MURRAY-DINGELL SOCIAL SECURITY BILL BY THE NATIONAL COMMITTEE ON SOCIAL LEGISLATION OF THE NATIONAL LAWYERS GUILD

The house of delegates of the American Bar Association has adopted [1] the report [2] of a special committee of three which disapproves the medical-care provisions of the Wagner-Murray-Dingell bill. The national committee on social legislation of the National Lawyers

[1] American Bar Association Journal, April 1944, pp. 198-199.

[2] Summary of report printed in American Bar Association Journal, May 1944, p. 275; report printed in full in the journal of the American Medical Association March 11, 1944, vol. 124, No. 11, p. 716.

Guild, having previously studied and reported upon the entire bill[3] and having arrived at a conclusion regarding the medical-care provisions contrary to that of the special committee of the American Bar Association, deems itself obligated to examine and evaluate the report of that committee, which has received wide circulation among the medical and legal professions and in the press.

The special committee was appointed pursuant to a resolution of the house of delegates "to study, analyze, and investigate Senate bill 1161."[4] Only the medical- and hospital-care provisions of title IX of the bill, and some of its financing provisions were considered by the special committee.

With respect to the one portion of the bill with which the special committee is solely concerned, its medical-care provisions, we find that the special committee has come to erroneous conclusions based upon a misreading of the bill and a misconception of its effects.

THE MEDICAL-CARE PROVISIONS OF THE WAGNER-MURRAY-DINGELL BILL

Briefly stated, title IX of the bill would provide medical and hospital care for insured persons and their families. Insured persons include all employed and self-employed persons. They are covered when they have specified minimum earnings during the 18 months preceding the benefit year. The benefits are paid from contributions of employer, employee, and self-employed. For complete coverage under the act for unemployment insurance, old-age and survivors' insurance, medical and hospital care, temporary and permanent disability benefits, and other benefits employees and employers would each pay 6 percent of wages up to $3,000 per year. Self-employed persons would pay 7 percent of the market value of their services not exceeding $3,000 per year, but they would not be covered for unemployment, temporary disability, and maternity benefits. Medical care and hospitalization would be paid for by one-fourth of the contributions paid by employers and employees and three-sevenths of the contributions paid by self-employed persons. The medical and hospitalization benefits would be administered by the Surgeon General of the United States Public Health Service. All general practitioners licensed to practice would have the right to treat insured persons under the act; all insured persons would have the right of free choice of physicians; and physicians would have the right to treat or refuse to treat particular persons. There would be no interference with the confidential relationship between doctor and patient. Physicians need not qualify under the act and may freely engage in private practice, or they may combine the treatment of insured persons under the act and noninsured patients in private practice.

1. The need

A proper evaluation of the medical-care provisions of the bill requires an examination of the need, which these provisions seek to meet. The Bureau of Research and Statistics of the Social Security Board has estimated that approximately 7,000,000 persons in our country are disabled by illness on an average day.[5] In a recent article Fortune magazine points out[6] that the people of the United States lose about 1,500,000 man-years of work annually; that from 30 to 50 percent more mothers (and about 50 percent more infants in the first month) die than would die if all received good medical care; and that with more surgery and radiation treatment, 30,000 cancer victims a year could be saved. It concludes that "too few Americans are getting the medical care that they need, and that the community needs for them."

In a documented statement of the need, the Report of the National Committee on Social Legislation of the National Lawyers Guild[7] referred to the many studies which have demonstrated the widespread and compelling need for security against sickness and the cost of medical care. That report stated:

"The economic burden of ill health falls more heavily on the largest segment of the working population, which cannot afford adequate health service and at the same time suffers the greatest amount of illness.[8] The social wastes involved must be measured in terms of the loss of millions of man-hours and man-days of productive labor and in the avoidable deterioration of the human wealth of the Nation.[9] Our failure to provide adequate health insurance and medical care has resulted in the alarmingly large percentage of young men called for military service who have been rejected because of physical defects and ailments.[10] The American Medical Association has published an analysis in which it declares that, aside from the indigent, families earning up to $3,000 a year are unable to meet the costs of major sickness and need some measure of assistance.[11] This means that 92 percent of our population need assistance in meeting the costs of medical care.[12] Thus an adequate health program providing medical care and disability benefits is urgently required in the interests of the national welfare and is indeed a wartime necessity. Our country has lagged behind the rest of the civilized world in failing to create a health insurance system."[13]

The American Bar Association report would deny or minimize the existence of the need by claiming (1) that the medical care now provided in the United States affords the highest level of health and the lowest death rate ever known under similar circumstances; (2) that there are being developed in this country and under our system of free enterprise many plans for providing adequate medical care without paying the price of "socialized medicine," including group and hospital insurance and Blue Cross plans under principles approved by the medical profession, ant now covering more than 15,000,000 people, thus providing for the moderate means class, on which hospital bills fall heavily. From this it concludes that the bill would safeguard a minimal percentage of the population, which has difficulty in obtaining complete medical service, and that the bill would put all the people in a medical straitjacket under the supervision of the Federal Government for an alleged service which the vast majority either do not require or are able to provide for themselves.

There is no justification for the assumption by the special committee that, because the United States has the lowest death rate, its people are healthiest. Length of life expectancy rather than death rate is considered a basic test of the health of a people. Prewar statistics showed that there were four countries in which the life expectancy of males at birth was greater than in the United States for white males; it was greater at age 20 in 8 countries; at age 40 in 11 countries, and at age 60 in 12 countries.[14]

Even the coverage of 15,000,000 persons, principally for limited hospital care, under private plans too costly for the low-income groups, who need medical care most and receive less of it, does not begin to solve the Nation-wide problem. Less than 4 percent of the population is covered today by voluntary medical care plans, as distinguished from hospitalization plans. Most of these medical plans provide only limited classes of services.[15] The rate of growth even of the hospitalization plans is not encouraging in terms of national needs. If these plans continue to enroll as many members each year during the next 10 years as they did in their very best year, they would cover less than 25 percent of the population in 1954.

It is still true that in an ordinary year, one-third of the population receive no medical or

dental care whatever,[16] and, as has been found by a distinguished group of experts in the field of medical economics: "At least nine-tenths of our population need protection against the uneven and unpredictable costs of sickness".[17] This demonstrates that our existing arrangements for providing medical care need much improvement, and that proposals for making adequate medical care available to everyone require our most careful and earnest consideration in the interest of the public welfare.

II. Constitutionality

As lawyers, we are specially concerned with the issue of constitutionality raised by the American Bar Association's special committee, who say: "S. 1161 is utterly beyond the powers of Congress." No argument or citation of authority is presented in support of this assumption. It would seem that the constitutionality of legislation to promote the general welfare of the people was authoritatively established by the United States Supreme Court in 1937, in upholding the Social Security Act, which established an unemployment insurance system and a system of old-age security.[18]

In *Helvering* v. *Davis*, Mr. Justice Cardozo, speaking for the majority of the Supreme Court, said (p. 640):

"Congress may spend money in aid of the general welfare. Constitution, article I, section 8; *United States* v. *Butler* (297 U. S. 1, 65), * * * There have been great statesmen in our history who have stood for other views. We will not resurrect the contest. It is now settled by decision * * *. There is a middle ground or certainly a penumbra in which discretion is at large. The discretion, however, is not confided to the courts. The discretion belongs to Congress, unless the choice is clearly wrong, a display of arbitrary power, not an exercise of judgment. This is now familiar law. 'When such a contention comes here we naturally require a showing that by no reasonable possibility can the challenged legislation fall within the wide range of discretion permitted to the Congress.' *U. S.* v. *Butler*, supra p. 67 * * *. Nor is the concept of the general welfare static. Needs that were narrow or parochial a century ago may be interwoven in our day with the well-being of the Nation. What is critical or urgent changes with the times."

The Supreme Court said further (p. 641):

"The hope behind this statute is to save men and women from the rigors of the poorhouse as well as from the haunting fear that such a lot awaits them when journey's end is near."

Similarly "the hope" behind the medical care provisions of this bill "is to save men and women" and children "from the haunting fear" of ill health and inability to procure adequate medical care.

The considerations which justified the original Social Security Act fully justify this bill. These were stated by the Supreme Court as follows (p. 644):

"The problem is plainly national in area and dimensions. Moreover, laws of the separate States cannot deal with it effectively. Congress, at least, had a basis for that belief. States and local governments are often lacking in the resources that are necessary to finance an adequate program of security for the aged. This is brought out with a wealth of illustration in recent studies of the problem. Apart from the failure of resources, States and local governments are at times reluctant to increase so heavily the burden of taxation to be borne by their residents for fear of placing themselves in a position of economic disadvantage as compared with neighbors or competitors. We have seen this in our study of the problem of unemployment insurance. (*Steward Machine Co.* v. *Davis*, supra.)

"When money is spent to promote the general welfare, the concept of welfare or the opposite is shaped by Congress, not the States. So the concept be not arbitrary, the locality must yield" (p. 645).

Legislation to provide adequate medical care for the people of the Nation is as much for the general welfare as the provision of unemployment insurance and old-age security.

III. The private practice of medicine and the authority of the Surgeon General under the bill

The principal objections of the Bar Association are: (1) That the bill would abolish the private practice of medicine; and would create a system of "socialized medicine;" and (2) that all medical care would be put under the complete power of one man, the Surgeon General of the United States, who would have complete and arbitrary authority over all physicians and patients and would deprive the citizens of this country "of their rights and liberties." These objections are, indeed, the basis upon which the report was approved by the house of delegates. At its meeting, one of the delegates stated that the report had not been distributed until it was presented and asked that action on it be postponed until the report was made available for study.[19] Postponement was objected to by another delegate. He appealed to the assemblage of lawyers, asking what the reaction of the delegate who asked for postponement would be "if Mr. MURRAY (Senator MURRAY) introduced in the Senate a proposed bill whereby the Attorney General would tell each lawyer in the United States who his clients shall be, what he can charge them, and that he can represent no other person.[19] Thereupon the delegates, all lawyers, adopted the report. Since it is evident that no one, except the members of the special committee, had studied the bill or had had an opportunity to consider the report, no one told or was able to tell the speaker that the dire example, which he had presented to the assembled lawyers regarding their own profession, in no way resembled the provisions of this bill. For, under the bill, the Surgeon General cannot tell every doctor in the United States who his patients shall be, what he can charge them, and that he can treat no other persons.

Throughout the report, the committee insists that the bill would create a system of socialized medicine. An examination of the provisions of the bill demonstrates this to be clearly untenable. Socialized medicine is the operation of all medical facilities in a country by the government, including employment of all physicians by the government and furnishing medical care to everyone without direct cost.

The system of medical care provided by title IX of the Wagner-Murray-Dingell bill has no resemblance whatever to socialized medicine. It is merely an insurance system by which, on insurance principles, employed and self-employed persons contribute to a fund from which payments are made for medical and hospital services for those within the insurance scheme and their families. There is nothing socialized about that. Indeed, the insurance system proposed is merely an extension of the familiar and accepted principles of workmen's compensation, which provides medical care and cash benefits in cases of industrial disability. And the suggestion that workmen's compensation is a system of socialized medicine would be regarded as patently preposterous not only by lawyers, but by doctors themselves.

The emphasis upon the claim that the bill would place the practice of medicine in this country under the control of one man—the Surgeon General of the United States Public Health Service—ignores the fact that any plan of health insurance or medical care requires administration. What better person could be found for that administration than the eminent doctor who is the Surgeon General of the United States Public Health Service with the vast experience of that Service in the field of national public health.

In particularizing the objections to the powers granted the Surgeon General by the bill, the report contains numerous errors in statement, interpretation and conclusions in respect of the authority granted to the Surgeon General. The report asserts that the Surgeon General will have the power to prescribe rules under which legally qualified doctors shall be qualified to furnish services, and rules under which an insured person may change his selection from among those "designated by the Surgeon General." The broad statement that the Surgeon General has the power to designate doctors, including those who may qualify to render medical benefits, is contrary to fact. The fact is that the bill specifically provides with respect to general medical benefits that "Any physician legally qualified by a State to furnish any services included as benefits under this title shall be qualified to furnish such services * * * in accordance with such rules and regulations as may be prescribed" (sec. 905 (1)). There can be no exclusion of any such qualified physician.

The statement is made that "the measure will subject to bureaucratic control and supervision the intimate and confidential relationship between doctor and patient;" that the freedom of choice of doctors and patients will be impaired; and that it "would seriously disturb existing intimate relationship between doctor and patient." On the contrary, the fact is that there will be no interference in the normal relationship and confidence between doctor and patient. Every person insured under the act will have the right, the absolute right, within the framework of unavoidable practical limitations and subject to the right of the physician to refuse to accept a patient, to choose the doctor who may treat him (sec. 905 (2)); and since every qualified physician has the right to practice under the act (sec. 905 (1)), the choice will be no more limited than it is now. No doctor is compelled to render services under the act, and no doctor is compelled to accept any person as a patient whom he does not wish to treat (sec. 905 (2)) and of course, any physician who does not wish to treat patients under the insurance system may continue his private practice and private practice may also be combined with practice under the system. These freedoms of choice remain unimpaired. When an insured person is refused by a physician he has the right to make another choice, and of course, subject to routine regulations, will have the right to change physicians (sec. 905 (2)). Even today patients meet with obstacles in changing physicians during treatment.

A dire objectionable result is foreseen, by repeated emphasis, from the provision that the Surgeon General will have the right to allocate among the doctors in an area those patients who have not made selection of a physician, and to prescribe the maximum number of insured persons who may be on a doctor's list. It is asserted that these provisions nullify the freedom of choice between doctor and patient, compel doctors to treat patients whom they do not wish to treat, and compel patients to be treated by doctors by whom they do not wish to be treated. The lack of justification for this assumption becomes obvious when we exam-

[16] Reports of the Technical Committee on Medical Care, supra, note 8.

[19] Journal of American Bar Association, April 1944, pp. 198–99.

ine the provisions of the bill which are claimed to be the basis of the conclusion.

Among the methods of payment, which the physicians in any area may themselves select by the democratic procedure of a majority vote as the method under which they will be paid for rendering services to insured persons under the act, is the per capita method of payment. Under that system, every doctor is paid a certain amount periodically for every insured person who has selected him as his physician, whether or not that person requires any treatment. In turn, the physician is obligated to render treatment to every such person who has selected him and whom he accepts as a prospective patient. Thus, a physician is paid per capita for every insured person on his list. Of course, the act provides that the physicians in an area may choose other methods of payment, viz, fees for services actually rendered, a salary for whole or part time, or a combination of any or all of the three methods.

Obviously, in an area where the physicians have decided that they wish to render services on a per capita basis, it is important to assure: (1) that the doctors in the area receive payment for all the insured persons in that area—those who have not selected a physician as well as those who have—because with this particular method of payment the aggregate amount of the doctors' income properly depends on their being paid for all such persons: (2) that all insured persons who have been refused by doctors and who have not made another selection or have been unable to find a doctor who will accept them, be assigned to some doctor so that they may receive care when necessary; and (3) that a doctor shall not accept on his list such a large number of persons as not to be able to render proper service to them, for it is obvious that, if a physician accepts 5,000 insured persons on his list, he cannot render adequate service to all. It is also reasonable that a salaried physician should not undertake to care for more persons that he can treat adequately.

Accordingly, the Surgeon General is given authority to limit the number of persons which any doctor may have on his lists. He also is given authority, but only in those areas in which the per capita system of payment is chosen by the doctors, to allocate pro rata among the doctors in the area the persons who, after due notice, have not made selection of a physician, and those who having made a selection, have been refused. For those persons who have not selected a doctor, the allocation in practice is of dollars, not of patients. This is merely an arrangement to assure doctors all the money they are entitled to under capitation. The rights of doctors and patients are fully protected. There is no interference in the private and confidential relationship between physician and patient, and—except in the extraordinary case of the patient who cannot find a doctor to accept him—no doctor is required to treat anyone whom he does not want as his patient. The only condition under which an assignment would be made to a doctor is when an insured person has been refused by all available doctors (under sec. 905 (11) and (12)). When we consider how few persons will be affected and the reasons for these provisions, the argument of that special committee becomes insignificant.

The statement is made in the report that the Surgeon General, to whom authority is given is not "an elected servant of the people and who is not amendable to their will." Obviously, it is unwise, if not impossible, that the director of every administrative agency or bureau, especially those involving specialized technical skills, be elected by direct vote. There is no reason in this situation for failing to follow the usual procedure under our system of government of having such directors subject to the control of the Executive and Congress, whose Members are elected by the people and are amenable to their will.

The report states that these provisions constitute a direct attack on the rights and liberties of the citizens of this country; and that the Surgeon General is given the power arbitrarily to make rules and regulations having the force and effect of law which directly affect every home; and that there is no safeguard against the "arbitrary or capricious action of one man."

The specific provisions of the bill completely refute these assumptions. Even on general principles of law, no arbitrary or capricious action of the administrator would be sustained by the courts. The law is well settled that rules and regulations promulgated in administering any statute must comply with the provisions and purposes of the statute.

But in addition, the bill specifically limits the power of the Surgeon General with respect to the issuance of regulations. Section 905 of the bill sets forth at length, specifically and explicitly, guilding principles and provisions for administration for the guidance of the Surgeon General. Section 914 provides:

"SEC. 914. The Surgeon General, after consultation with the Social Security Board, and with the approval of the Federal Security Administrator, shall make and publish such rules and regulations, not inconsistent with other provisions of this act, as may be necessary to the efficient administration of this title."

It is thus apparent that the Surgeon General of the United States Public Health Service, who is said to have unlimited power to control and enslave all the doctors and hospitals and all the patients, comprising practically all the people of the United States, by his "rules and regulations," can make rules and regulations only "after consultation with the Social Security Board, and with the approval of the Federal Security Administrator," and these rules and regulations must not be "inconsistent with the other provisions of the act," and they must be "necessary to the efficient administration of this title." Therefore, the Surgeon General cannot adopt rules which are "arbitrary" or "capricious" as the special committee claims. Obviously, any rule or regulation which does not meet these limitations would be rejected by the courts.

Equally unfounded is the claim that the bill fails to provide for any appeal to any court from any action of the Surgeon General. The special committee itself states that the Surgeon General is given all the powers conferred on the Social Security Board by sections 205, 206, and 208, and in a footnote it endeavors to summarize the provisions of these sections. But it omits to mention those provisions of section 205 which specify at length and in detail the manner of judicial review. It is the intent of the bill, as stated by its proponents, that the provisions for judicial review contained in section 205 of the act shall be applicable to title IX. While there may be difference of opinion whether the language of section 1108 of the bill includes subsection (g) of section 205, one would expect the special committee to state that it may have been intended to include section 205 (g) and that there was doubt whether the language used accomplished that intent. If there be any doubt of the effectiveness of the language used in the bill to grant the right of judicial review provided by section 205 (g), we are certain that the proponents of the bill will make that section applicable by definite and unmistakable terms.

IV. Factual errors and omissions

The report of the special committee contains many errors and omissions of fact and errors of interpretation in relation to the provisions of the bill.

Hospitals: It is error to say that there is no freedom of choice of hospital. The bill provides no restriction on the choice of hospital. It is reasonable to assume that present practice will be followed, that a patient needing hospital care will be sent to the hospital recommended by his physician.

The intimation that hospitals will be entitled to participate only if selected by the Surgeon General ignores the provision of the bill that in establishing lists of participating hospitals the Surgeon General must follow general standards worked out with the advisory council (sec. 907 (b)). These, it is safe to say, would be the same or similar to those now followed by the American Medical Association and the American College of Surgeons in listing acceptable hospitals.

There is no foundation for the statement that Senator WAGNER erred in stating that there was freedom of choice by hospitals of types of payment. The bill provides that hospital treatment may be paid for at certain specified rates per day (sec. 915 (g)), which could be paid as reimbursement to the insured, or the Surgeon General may make contracts with hospitals for payment on the basis of rendition of services at specified rates (sec. 915 (g)). The hospital will have the choice as to which type or method of payment it desires. There is no compulsion upon any hospital to accept any proffered contract.

Canadian plan: The report compares the proposed Canadian plan for medical care with that provided by this bill, and comes to the conclusion that the Canadian plan is preferable. The special committee prefers the Canadian plan because Canada respects its constitutional limitations against a federal plan and provides for the adoption of a model bill by each province, drafted by the Dominion, under which the Canadian Federal Government will merely provide subsidies to the provinces. The special committee fails to indicate that a national plan is not constitutional in Canada and that Canada's limitation is, therefore, not a guide for us where a Federal plan is, as we have demonstrated, constitutional.

The committee prefers the administration of the Canadian plan by a commission appointed by the lieutenant governor in council whose chairman must be a doctor. But the Surgeon General of the United States Public Health Service is a doctor, and his administration of the plan must be in consultation and cooperation with the Social Security Board, the Federal Security Administrator, and an advisory council, representing physicians, hospitals and other groups. There is also an adivisory council to the Social Security Board composed of representatives of employers, workers, and the public.

And finally, it emphasizes the contrast in cost: that the Canadian plan would cost $250,000,000 a year, while the plan for the United States would cost $3,000,000,000 a year. It fails to note, however, that the population of the United States is 12 times that of Canada, and that a cost 12 times as great as Canada's is, therefore, not excessive.

The indigent: The special committee criticizes the plan by saying that the indigent who are most in need of free medical care are not covered by S. 1161.

The National Lawyers Guild, in its report on the bill, recommends that the indigent be included in the single unified system of medical care provided for insured persons, and that the cost of providing such care for the indigent be paid by contributions by the Federal Government to the medical care and hospitalization account established in the bill.

However, it is error to say that the bill makes no provision whatever for the medical care of the indigent. Under title XII, which deals with a unified public assistance program, provision is made for reimbursement of the States for money advanced

to the indigent for medical care and for direct expenditures for that purpose (sec. 1205 (a) (2)). Such contribution is to be not less than 50 percent of the State's expenditure and may be as high as 75 percent for the least prosperous States. Sections 910 and 913 (c) of the bill also authorize local and State public agencies responsible for the care of the indigent to make payment to the Federal health insurance system for medical and hospitalization benefits for their indigent. Under such agreements, the indigent would receive the same medical and hospitalization benefits as other insured persons, and the Federal Government, by virtue of the provisions of title XII, would pay 50 to 75 percent of the cost to the States.

State medicine: The committee is against State medicine but it mentions with approval the fact that 42 percent of expenditures for hospitals and doctors in 1942 "were either tax-supported or otherwise without cost to the patient," and it also says that in this country, "no form of State medicine is in effect." The committee apparently forgets that nearly all hospitals for mental and nervous diseases and for those suffering from tuberculosis are public institutions, accounting for more than one-half of all hospital beds in the United States, with approximately 70 percent of our hospital services already administered by "State medicine," [20] and that we have public systems of medical care for veterans, for merchant seamen, for the indigent and others.

V. "The rights and liberties of the citizens of this country"

As a final conclusion, the report states that the bill constitutes "a direct attack on the rights and liberties of the citizens of this country" and that "The vicious system whereby administrative officials judge, without court review, the actions of their subordinates in carrying out orders issued to them is extended in this bill to a point foreign to our system of Government and incompatible with the adequate protection of the liberties of the people." There is nothing "foreign to our system of Government" about the provision of medical care for the people of our country by an insurance system. It is no more "foreign" to our system of government than is the system of old-age security and unemployment insurance. In fact, the very first health insurance system introduced in the modern world was established in the United States in 1798 when Congress enacted the health-insurance system for merchant seamen. With some variations, this has existed for nearly 150 years.

The report views these provisions of the bill as a direct attack upon the rights and liberties of the citizens of this country. Providing its citizens with the right to medical care, with the opportunity to enjoy health, with the ability to prevent suffering and destitution caused by illness and the inability to obtain medical treatment is not an attack on the rights and liberties of the citizens of this country. On the contrary, it establishes conditions of health and decency under which citizens of this country can enjoy their rights and liberties.

Nor is the issue of local government at the expense of a decent available system of medical care to those who cannot afford it of such importance as to justify abandonment of the provisions of this bill. There is nothing incompatible between a national system of medical care and local administration. Such a system is, in effect, provided by the terms of this bill, which speaks of areas in which physicians are listed and different methods of payment may be adopted. Authorization is also given for the establishment of local and regional boards, committees, or commissions (sec. 904 (b) (8)). The reasons for adoption of a national system of health insurance and medical care rather than waiting for the adoption of separate systems by the several States are as cogent as those which exist in the case of old-age security and unemployment insurance. Those reasons were stated by Mr. Justice Cardozo in *Helvering* v. *Davis*, quoted above. They are so apposite that they will bear repetition:

"The problem is plainly national in area and dimensions. Moreover, laws of the separate States cannot deal with it effectively. * * * States and local governments are often lacking in the resources that are necessary to finance an adequate program of security for the aged. This is brought out with a wealth of illustration in recent studies of the problem. Apart from the failure of resources, State and local governments are at times reluctant to increase heavily the burden of taxation to be borne by their residents for fear of placing themselves in a position of economic disadvantage as compared with neighbors or competitors."

The committee says, "Of all like plans in foreign countries, none are like this, except in Russia, which involves the complete socialization and regimentation of medicine. Such a course, if followed here, would produce the same result." The system proposed here, as pointed out above, is in no way similar to the Russian system, where state socialized medicine exists. The system provided by this bill in no way resembles such a plan. The committee is apparently not acquainted with systems of medical care in other countries. The system here proposed is to a large extent similar to that existing in Great Britain for over 30 years and now about to be greatly extended to cover everybody; in Germany before Hitler, where it was first established in 1883; and in the 50 countries which had health or sickness insurance before the war.

The special committee says that "under the pretext of the general welfare" this legislation "either inadvertently or with deliberate subtlety constitutes a direct attack on the rights and liberties of the citizens of this country." The report thus accuses those who are trying to provide social security, "freedom from want," for the people of this country, as plotting to destroy its liberties. The special committee ignores the fact that under present methods of payment, nine-tenths of the people cannot afford to pay for the cost of adequate medical care and catastrophic illness; that before the war, one-third of the population of this country received no medical care at all; and that hundreds of thousands of deaths annually are preventable by the provision of adequate medical care. It fails to learn any lesson from the over 40 percent of rejections on physical grounds of young men for military service, young men at the age which should make them the healthiest group in our population.

The report ignores, as do all opponents of health insurance, the fundamental problem which health insurance is designed to meet: How to distribute the cost of medical care so that those who need it can receive it. As we have heretofore stated in our report (p. 5): [21]

"It is because sickness is unpredictable that it is impossible for the majority of the American people effectively to budget to meet its costs. It is because catastrophic sickness most frequently falls upon those who can least afford to pay for its cost, that a method to distribute the cost is necessary. It is because the whole Nation is concerned with the health of all the people that this problem must be solved on a national scale. The bill provides a sound and effective method of dealing with the problem."

The report of the special committee fails to offer any plan to meet the need for adequate medical care, the greatest need of the American people in the field of social security.

S. 1161 COVERS A VAST FIELD OF SOCIAL PROTECTION

The special committee's report is concerned only with the medical-care provisions of the bill. The bill also provides a unified system of social security for our country covering many social benefits besides medical care—extension and improvement of old-age and survivors insurance, federalization and extension of unemployment insurance, reorganization and extension of public assistance. Moreover, the bill would insure against the loss of income because of disability by creating a system of cash disability benefits for temporary and permanent disability. These provisions have seemed to us to be of enormous benefit to the American people.

CONCLUSION

Upon analysis, we conclude that the medical-care provisions of the bill are urgently needed for the protection of the health and welfare of the American people. We find nothing in the bill which will diminish or impair "the rights and liberties of the citizens of this country." On the contrary, its enactment would serve to make these rights and liberties real and effective. For the sick are not free, and only a healthy America can exercise its rights and enjoy its liberties.

NATIONAL COMMITTEE ON SOCIAL LEGISLATION,
LEO J. LINDER, *Chairman.*
MORRIS A. WAINGER, *Secretary.*

Small Business Needs Administrative Law Reform

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, March 30 (legislative day of Friday, March 16), 1945

Mr. MURRAY. Mr. President, on June 7, 1943, I submitted to the Senate, on behalf of the Small Business Committee, a statement which among other things included the following:

The Senate Small Business Committee (and the same committee in the House of Representatives) has for many months been holding hearings and studying the problems of the smaller businessman under war emergency regulation. It is obvious that there is a great deal of meritorious complaint, not with the laws which Congress has passed, but with the execution of those laws.

Nor do I mean to say that the administrative arm of the Government has acted with complete abandon or in reckless disregard of the laws of Congress or the rights of citizens. Because either the laws are fragmentary or incomplete, or because of the limitations on the right of private parties to defend themselves and have the benefit of those laws, some administrators may have felt that they had reason to assume that some provisions contained in acts of the Congress are merely advisory. I do not think that Congress so intended.

Legislative correction in the field of so-called "administrative law" has become a recognized need. The Commit-

tee on the Judiciary now has before it for consideration legislation to provide a simplified administrative procedure and a day in court for every party subjected to the unjust application of administrative regulations. In this connection, I ask unanimous consent to have printed in the RECORD an article appearing in the February 1945 issue of the Journal of the American Judicature Society. I feel that the article is worthy of the attention of everyone interested in good government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAW AND ADMINISTRATIVE GOVERNMENT

(By David A. Simmons)

(NOTE.—The author is a member of the Houston, Tex., bar, president of the American Bar Association, and past president of the American Judicature Society.)

The professor of legal history in the University of London, writing in the dispassionate and scholarly style of the true historian, describes in the following language a crisis in common-law history at a time when lawyers were called serjeants:

"The serjeants from the beginning held a high place in the legal world; we soon find Parliament referring hard questions to the serjeants as well as to the judges, and quite early in the fourteenth century the Crown adopts the policy of recruiting the bench from the outstanding men at the bar. * * *

"The courts of equity—chancery, star chamber, court of requests—were differently organized. The permanent clerical establishment of each of these courts undertook the duties of attorneys, and so professional attorneys had no place there. Still, there remained numerous duties of a quasi-legal character which had to be done, and litigants soon found it convenient to have a sort of law agent who would set the complicated machinery in motion by engaging and conferring with the various branches of the profession as occasion required, and doing other duties, sometimes of a legal and sometimes of a business character. * * *

"The rise of new courts and the extension of the jurisdiction of old ones had far outgrown the limits within which the serjeant cared to act. * * * Indeed, the position of the law had changed considerably under the Tudors. Justice was no longer the exclusive concern of judges and serjeants. * * * It was now an affair of state requiring constant attention from the Crown, which was viewing with some anxiety the activities of its courts. * * * There was a chance of the Crown turning to the civilians for exponents of a newer technique of law and government; but in the end a sort of compromise was worked out. * * * The law was brought once more into vital contact with the world of affairs and politics. That contact was necessary if the law was to continue as a growing system, but the dangers were of the gravest, as the history of the Stuart judiciary will show."

Professor Plucknett (Concise History of the Common Law, second edition, 1936) there presents a parallel with the present situation in the United States, except that the result of the situation here still hangs in the balance. New institutions have been created, each with its permanent clerical establishment in which attorneys are said to have a dubious place. Justice, if such this form may be called, has again become an affair of state. There has been more than a little turning to the civilians for exponents of a newer technique of law and government.

Indeed, the struggle of which the distinguished historian speaks is more than a parallel, for it was a part of the tradition out of which America was born. That was not only the period when the legal institutions of what is now the English-speaking world were reaching their modern form, but the period when the American Colonies were founded.

One needs but to reread the Declaration of Independence and the 27 paragraphs of indictment against the King and Parliament to have a very clear picture of what to them constituted tyranny. We have become so accustomed to thinking of the Declaration of Independence only in the terms of its grand pronouncements as to life, liberty, and the pursuit of happiness that we are prone to overlook the very practical aspects of that document which defined the grievances of the colonies and of the individual citizens caused by the arbitrary and unbridled exercise of power by King and Parliament.

Among other things, it charged (a) that the King had made judges dependent upon his will alone; (b) that he had created a multitude of new offices and had sent hither swarms of officers to harass our people and eat out their substance; (c) that he had combined with others to subject us to a jurisdiction foreign to our Constitution, unacknowledged by our laws, and contrary to the forms of our government; (d) that he had deprived us in many cases of the benefits of trial by jury; (e) that he had altered fundamentally the forms of our government; and (f) that King and Parliament had suspended our own legislatures and had declared themselves invested with power to legislate for us in all cases whatsoever.

Those were charges that were said to justify a revolution, and there are those who now say that the same acts of tyranny in modified form have appeared among us again. I am perfectly willing to let each thoughtful person reason out the comparison for himself, but I believe most of us will agree that bureaucracy, with its absorption of all powers of government, is in violation not only of the spirit of this country as expressed in the Declaration of Independence, but is in violation of the very letter of our Constitution. Certainly our form of government is now entirely different from anything envisioned by the founders.

The problem today, of course, concerns no usurpation or oppression from afar. The question is whether surrender shall come from within, as so well stated in the seventh and eighth chapters of First Samuel:

"And Samuel judged * * * And he went from year to year in circuit. * * * Then all the elders * * * came to Samuel * * * and said unto him, '* * * Now make us a king to judge us like all the nations.' But the thing displeased Samuel, when they said, 'Give us a king to judge us.' * * * And he said, 'This will be the manner of the king that shall reign over you. * * * Ye shall be his servants. And ye shall cry out in that day because of your king which ye shall have chosen you * * *. Nevertheless the people refused to obey the voice of Samuel; and they said, 'Nay; but we will have a king over us; that we also may be like all the nations.'"

Though history, whether legal or biblical, usually speaks in terms of kings, the point is always arbitrary government. Samuel's people, short-sightedly weary of the effort required in democratic government, wanted to be "like all the nations." The Tudors and the Stuarts, and the House of Hanover, which lost America for England, in order to free themselves from the restraints of law championed what Professor Plucknett rationalizes as "a newer technique of law and government."

Nothing indicates that these urges will not remain so long as men inhabit the earth. The question at any time is whether enough people with enough intelligent vigor remain to preserve the gains of law over insidious and multiform despotism. Today arbitrary power, as the concomitant of either war or political philosophy, rules the greater part of the world. Indeed, most of its people have never known a different governance.

THE AMERICAN EXPERIENCE

At the close of the eighteenth century a constitution was adopted creating the United States, in which it was expressly provided that a Congress of elected representatives would do the legislating for the Nation and a system of independent courts of law would supply the necessary judicature. With the advent of the twentieth century both legislation and judicature, with mounting frequency, have been combined with executive powers in a nonrepresentative and nonjudicial arm of government called administrative. That this is a second revolution in American Government is not denied by its partisans, who not only advocate these institutions and stoutly defend them but, like the Tudors and the Stuarts, wage unremitting war against the supremacy of law.

It has been said that neither court nor administrative agency "should repeat in this day the mistake made by the courts of law when equity was struggling for recognition as an ameliorating system of justice" (*United States* v. *Morgan*, 307 U. S. 183, 191 (1939)). But on the law-making side Senator CONNALLY, the present chairman of what is now and for some time to come will be the most important legislative committee in the world, has said that in placing transcendent powers in administrative agents, "the Congress seemingly has divested itself of its own judgment and its own discretion and its own legislative wisdom." (79 CONGRESSIONAL RECORD, p. 11156.)

Administrative government is one of the great facts of our time. Reaction to it takes many forms. There are those who refuse to recognize it as legitimate, though its proponents point out that revolution, like monarchies, create their own legitimacy. There are those who find no praise too high for it, although in other affairs they would be the first to deplore such an extreme. There are those who study it to an infinity of words and documentation, though it is no new phenomenon. And then there are those who assay the more arducus task of fitting it into our institutions in such a way as to preserve their free nature without preventing government from achieving its present-day purposes. Let us see what has been or may be done in support of this latter attitude.

In the 1920's the problem of administrative government was treated in terms of judicial review—that is, the relations of administrative agencies to courts—whereas we now know that mere court review is sterile where Congress confers unlimited discretion. Senator GEORGE, during the debate on the war-contract renegotiation bill, called it "arbitrary" legislation. (90 CONGRESSIONAL RECORD, January 21, 1944, p. 533.) Special administrative courts were once suggested by a committee of the American Bar Association (S. 1835, 73rd Cong. 1st sess.; S. 3676, 75th Cong. 3d sess.; 58 A. B. A. Rep. 203, 426 (1933); 59 A. B. A. Rep. 539 (1934); 60 A. B. A. Rep. 136 (1935); 61 A. B. A. Rep. 220, 233, 721 (1936) and by the minority of the Attorney General's Committee on Administrative Procedure (Senate Document No. 8, 77th Cong. 1st sess., pp. 203–209 (1941)). In 1937 the President of the United States recommended a comprehensive plan for the separation of judicial and prosecuting functions in administrative agencies. He stated that the present form of administrative tribunal, which performs "administratve work in addition to judicial work, threatens to develop a 'fourth branch' of the Government for which there is no sanction in the Constitution." (Report of the President's Committee on Administrative Management, with Message of the President and Special Studies, 1937.) So far as these proposals mean a trial de novo by an independent tribunal on the order of the Board (now Court) of Tax Appeals, they are a solution of only the problem of the judge-prosecutor

combination found in administrative agencies. Special courts have at least four disadvantages: (1) Because they are specialized, they are subject to the pulling and hauling of special private and governmental interests; (2) they weaken the jurisdiction of the regular courts of the land with which citizens are familiar and to which they are accustomed to resort for justice; (3) there is more to the problem than mere separation of judge and prosecutor, for the judge must have some law to apply, which he does not have so long as administrative powers are conferred in practically unlimited terms; and (4) courts can exercise only powers of adjudication and hence furnish no solution for the increasingly serious problem of administrative rule-making typified in general price, wage, rate, and food regulations.

More recently legal thought has turned to matters of procedure, in some part, perhaps, as a result of the movement for the revision and uniformity of rules of procedure in the Federal trial courts. An administrative procedure act was passed by Congress but vetoed by the President. (Walter-Logan bill, H. R. 6324, 76th Cong., 3d sess.; H. Doc. No. 986, 76th Cong., 3d sess.) Meanwhile, the Attorney General of the United States in 1938, as a part of the movement for reform of judicial procedure, recommended that attention be turned to the procedure employed by the administrative process; and the President authorized a thorough and comprehensive study of existing practices and procedures with a view to detecting deficiencies and pointing the way to improvements. (S. Doc. No. 8, supra, pp. 251–252.) Pursuant thereto the so-called Attorney General's Committee on Administrative Procedure, after elaborate studies, made its report in 1941. (S. Doc. No. 8, supra.) The Senate held hearings on the legislative proposals growing out of the work of that committee (hearings, Administrative Procedure, on S. 674, S. 675, and S. 918, 77th Cong., 1st sess.), but suspended consideration with the imminence of war. The current World War, however, has been more than an interruption, for it has given us further experience with administrative agencies and has increased the awareness of administrative government on the part of every citizen and every group or interest. We believe we now know more than we did when the Walter-Logan bill was drafted or when the Attorney General's committee reported.

It has recently become common to approach administrative government by a method of search and publicity. The search is for shocking cases of bureaucratic government. The publicity feeds undiscriminating appetites for public scandal. A little thought will demonstrate, however, that such investigations have a limited usefulness so far as maintaining orderly legal processes are concerned. Of course, legislative investigations have an assured place in all matters of government, but, as the Senate Small Business Committee has so well put it (89 CONGRESSIONAL RECORD, pp. 5411, 5412):

"We, the Congress, cannot examine into individual cases or regulations beyond what is necessary to determine whether parties should have legal protection. Our function, once we are satisfied that the conditions so require, is to pass laws not only so that administrators may have power under them, but also in order that the people may have the protection of those laws. * * * Laws without enforcible rights are a mirage. Administration without or beyond the law is doomed to failure. * * * The way to make it workable is to grant the necessary powers to the administrators and the necessary rights to those who are regulated, including the means of protecting those rights in any administrative or judicial proceedings."

LEGISLATIVE NEEDS

The immediate lines of approach are necessarily legislative, and it seems clear that they must take two separate but related courses. First, there must be an Administrative Procedure Act. Second, Congress must—as it now seems firmly to recognize—more specifically state and limit the powers which it has delegated to administrative agencies. The latter is essential in order that jurisdiction may be understood by both the regulators and the regulated. The former is equally essential to furnish the regulators and regulated with a basic blueprint of methods of operation and means of control.

An administrative procedure statute, such as is proposed in the widely supported McCarran-Sumners bill (S. 7 and H. R. 1203), must have three principal features: (1) It must provide for publicity of administrative law and procedure. (2) It should differentiate and state at least the minimum requirements of the two types of administrative action, rule making and the adjudication of particular cases. (3) It must specify and simplify the methods of judicial review. In addition, two further matters are desirable; a statement of the incidental procedural rights, such as those relating to appearances or investigations, and express limitations upon the sanctions which administrative agencies may impose. Within each of these different items there is, of course, much room for inclusion and exclusion. There is a minimum beyond which such legislation may not be reduced, and this seems to be about the position taken in the McCarran-Sumners bill. Additional and tempting features to add to such a measure there surely are, but wisdom dictates against any proposal which may sacrifice fundamentals for detail.

If both an administrative procedure act and a more precise definition of administrative powers can be secured, at least we will be assured of some measure of law in administrative government. But that need not and should not end efforts at further improvement. Some functions of the agencies should be recaptured by the Congress and some function should be returned to the ordinary courts.

Congress should recapture its legislative power even in the fields of lesser Federal legislation. If necessary, it could act through its own Bureau of Legislation working under the immediate direction, supervision, and control of the Congress and its various committees. The congressional establishment has only a few thousand employees to assist the 96 Senators and 435 Congressmen. If Congress does not have the time nor the means to investigate and draft all the subordinate rules and regulations needed to supplement its acts, it can certainly take out of the executive departments and the administrative agencies the people engaged in composing, writing, and expertizing these minor laws. It is estimated that there are thousands of these. If they functioned as part of the congressional establishment, they would have a legislative esprit de corps and a broad general outlook on legislative problems distinct from that of bureaucrats anxious to expand their own authority. Certainly the draftsmanship of all rules and regulations would become more uniform and more consistent with the spirit of our institutions.

Congress should also give thought to returning judicial functions to the ordinary courts. Why not create a system of minor Federal courts similar to that of the States and cities, with jurisdiction in controversies arising under minor Federal regulations? Of the uncounted thousands now exercising judicial functions in the bureas and commissions, those who are qualified might well be placed under the courts as masters, commissioners, and examiners, where they would properly become a part of the judicial establishment and have the outlook, impartiality, and esprit de corps of the judge. They could be localized throughout the country in Federal courthouses and thus be available for the prompt hearing of complaints involving the thousands of minor governmental regulations.

At some time this Nation will surely stand, without knowing it, at a crossroads which point one way to freedom and order and the other way to bondage and chaos. Many people cite good reasons for saying that the day of choice is at hand. If we pass blindly on, we may find ourselves so used to bargaining rather than adjudication, and so accustomed to politics rather than legal administration, that we will neither recognize nor appreciate a government according to law. This is not said in a spirit of legal isolationism. The antidote for arbitrary power is not a strugge against all power—to the point of depriving governments of the means to govern and protect. Dictatorship versus Anarchy, though delusively opposite and conveniently simple labels, are extremes and not alternatives. They currently stand for things which are equally opposed to that government under law which the civilized world has sought for more than 2,000 years and has occasionally achieved. We have achieved it here on this continent, and the issue is whether we shall retain it or see it frittered away, bit by bit, as expediency and indecision dictate.

When VE-Day Comes

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 29, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, as the Allied Nations draw nearer to the day of victory in Europe, it behooves us now to resolve that when that victory comes, and as we rejoice over its achievement, we must also restrain ourselves from the false assumption that it means the end of this war.

We must not let the jubilation of victory slacken our efforts against our enemies, the Japs, for until they are also defeated this war must continue.

An editorial in the New York Times of today upon this subject is worthy of reproduction, and under leave granted is submitted herewith:

WHEN VE-DAY COMES

Perhaps the footless and fantastic rumors that have flooded this country as our armies sweep through Germany can be made to serve a useful purpose. They should serve as a warning to us against breaking into too frantic a celebration of VE (victory in Europe) day when it actually comes.

Even VE-day will only relieve in part the intolerable agony of a tortured world. It will not end it. It will not automatically and at once spread good-will among men. We can certainly afford to be proud and happy because of our victory, for it will have been stupendous. We can rejoice that the God of Battles gave us the decision. But our sacrifice has been too heavy for hysterical jubilation, for "frantic boast and foolish word." We cannot forget the feelings of mothers and fathers whose boys lie dead on foreign soil, of wives who have lost their

husbands, of all who have lost someone dear to them.

Peace in Europe will be only partial peace. We have another war to fight on the other side of the world, a long one and a hard one, with thousands more of our bravest called to die. No one with any feeling could regard such a prospect lightheartedly. No one with any judgment could relax the effort each of us must still make. VE-day will entitle this Nation to a sigh of relief. But it must also serve as a day of rededication for that total victory we have still to win.

Reaction to British White Paper on Employment Policy

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, March 30 (legislative day of Friday, March 16), 1945

Mr. THOMAS of Utah. Mr. President, as one of the sponsors of the full employment resolution adopted at the last meeting of the International Labor Office Conference, I ask unanimous consent to have inserted in the Appendix of the RECORD a study made by one of the members of our own Department of Commerce, entitled "Reaction to British White Paper on Employment Policy."

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

REACTION TO BRITISH WHITE PAPER ON EMPLOYMENT POLICY

Parliamentary reaction to the employment policy white paper was recorded during a 3-day debate in the House of Commons. The majority of the House, regardless of party affiliation, looked with critical approval on the paper, welcoming the proposal that the State would hereafter be responsible for maintaining a "high and stable level of employment," but questioning the scope, emphasis, and adequacy of the Government plan.

In giving their support, the conservatives and liberals stressed those sections of the white paper which dealt with the importance of reestablishing and expanding of foreign trade, making British industry more efficient, and securing sound central finance. On the other hand, the Parliamentary Labor Party emphasized that the task of maintaining full employment would be made easier if substantial sections of the economy were brought under public ownership; that, while the revival of the export market was important, the Government must be prepared with domestic policies if foreign trade failed; and that it had no confidence that an energetic and affirmative policy to maintain full employment would be carried out by any conservation or coalition government.

The only real differences of opinion during the debate arose over the question of the future ownership of industry. This, in spite of Labor Minister Bevin's clear statements that the "proposals of the white paper will operate whatever the ownership of industry may be" and "the question of how you can give effect to the decisions as to who will own industry is not prejudiced by this white paper." Aneurin Bevan, Labor Member of Parliament, claimed that the white paper was unworkable and a fraud. He stated that it admits by implication that unemployment is endemic under a system based on private enterprise carried on for profit, yet refuses to apply the necessary basic remedy which is socialist ownership.

The opposite extreme was voiced by Sir Herbert Williams, representing the die-hard element of the Conservative Party. He assailed the white paper only on the ground that it was an unnecessary, unjustified, and unauthorized interference with free enterprise and private property and would lead inevitably to socialism, regimentation, inflation, and national bankruptcy.

It should be noted that Bevan and Sir Herbert were supported by only about a half-dozen members who completely rejected the paper for varying reasons. The Government's proposals were in general favorably received, criticism being directed at the indefiniteness and apparent ambiguity of some of the specific measures proposed.

Before the motion on which the debate took place was carried several members insisted on making the point that it committed them to approval of nothing beyond the acceptance of responsibility by the Government for securing a high and stable level of employment, and not to approval of the methods by which this end was to be attained.

Press comment on the paper and debate followed party and sectional interests for the most part, with the conservative press reaffirming its faith in private enterprise, but making no criticism of the Government statements that there was a place for public as well as private ownership, the official labor press noting that the white paper closed no door to socialism and the business press reserving its support until it was clear what the specific legislative measures were to be and their effect on finance, industry, and trade.

The Conservative Party has been among the strongest supporters of the plan and has generally approved it, at the same time stressing the need for an expansion of exports, and expressing a fear that under it the budget was going to be unbalanced, if need be, to provide employment. The ambiguity of this section of the paper on central finance may be illustrated by the fact that the Labor Party came away equally convinced that the budget would not be unbalanced, if need be, to provide employment.

The Liberal Party's report on the white paper accepts and endorses the proposals in large part, but suggests that the proposed measures are inadequate to maintain full employment. The basic error is, according to the criticism, the adherence to the old concept of a balanced budget. This will have a deflationary effect, and thus prevent the expansion of purchasing power, which is an indispensable condition of full employment. Adjustment of the income tax, not social-insurance rates, should be used to increase public purchasing power. World-wide freedom of trade is advocated, and the Liberal Party insists that the fall of exports was not the chief cause of pre-war unemployment. Another error of emphasis, they say, is that the white paper is designed to deal with the problem of cyclical unemployment rather than with the important problem of how to absorb the hard core of workers, 10 or 12 percent of the working population, who remained unemployed even in the boom years between wars.

Commonwealth Party post-war plans state that the achievement of full employment must be through the establishment of common ownership without which national resources cannot be mobilized to meet human needs.

Sir William Beveridge compares the Government white paper with his own book, Full Employment in a Free Society. His comment parallels that of most other views in that the paper represents within the limits set a sincere attempt but that its practical proposals are inadequate. He goes on to say that its action is inhibited by a sense of values that is wrong—treating private enterprise as sacrosanct, a foreign power independent of the state; and treating the maintenance of budgetary equilibrium as of equal importance with full employment. The Government plan he regards as only a public works policy and argues that the policy of compensatory public expenditure to offset declines in private expenditure will not work, partly because the over-all national policy will not become effective in all sectors of the economy, and partly because the unplanned market economy is incapable of creating at any time a demand for labor sufficiently strong and steady to maintain full employment.

While the Government objective, as stated by the Chancelor of the Exchequer, is to "reduce to a minimum the period of unemployment for people willing to work but who are excluded from work because of conditions obtaining for the time being," Sir William says the policy of his report is full employment, defined as meaning "always more vacant jobs than idle men."

The council of the London Chamber of Commerce generally endorses the white paper's plans. However, in the chamber's view, the white paper attaches too much importance to influencing public expenditure and not enough to influencing private expenditure as a method of regulating the volume of consumption, and contends that the variation of the rate of income tax allowances for obsolescence and replacement of plant and machinery would be an even more direct way of affecting the level of capital expenditure than varying social insurance contributions. Complaint is voiced on the failure of the section on central finance to give a clear picture of the financial aspects of the employment policy.

The general line of the Labor Party was one of welcoming the victory of a "case which labor has pressed in Parliament for half a century" but adding that the Government's policy will not be brought to full fruition unless nationalization of basic industries is greatly extended. Other complaints are the modesty of the proposals; the absence of any reference to a comprehensive national-development plan; the vagueness of Government plans, if any, to force private enterprise into line on planning; and the inadequacy and impreciseness of the Government's foreign trade policy.

Dick Sanders, Youngest General in the Army

EXTENSION OF REMARKS

OF

HON. ABE MURDOCK

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, March 30 (legislative day of Friday, March 16), 1945

Mr. MURDOCK. Mr. President, in my opinion, the State of Utah has made as outstanding a contribution to the war effort and program as has any other State in the Union. I am sure my colleague the able senior Senator from Utah

will agree with that statement. Utah's metal production for war purposes is not surpassed by that of any other State, but the greatest contribution which the State of Utah has made to the war program has been her young men and women who are now in the armed forces.

Recently my attention was called to an article in Look magazine for April 3, 1945, on the youngest general in the United States Army. This young man is 29 years of age and is a brigadier general. He is Richard C. Sanders, of Salt Lake City. His progress in the Army may well be described as miraculous. His record is one of outstanding achievement. It seems to me, Mr. President, that it is very timely and appropriate to place in the CONGRESSIONAL RECORD this article, which is very brief, concerning this fine soldier. So, in behalf of the senior Senator from Utah and myself, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUNGEST GENERAL—DICK SANDERS IS A 29-YEAR-OLD EX-SODA BOY FROM UTAH

(By Luther Davis)

At 29, Brig. Gen. Richard C. Sanders is the youngest man since Custer to become a general officer in the United States Army. He earned the rank without any spectacular heroism, by solid Air Forces service.

Two years ago he was a colonel, on routine combat duty in North Africa. He was just one more pilot who quietly carried out his orders. Flying a B-24, he made 25 missions from bases in north Africa—a total of 200 combat-hours, during which, by some miracle, no member of his crew was injured. His plane was never hit.

One afternoon over Tripoli, his B-24 was bracketed by intense flak. His tail gunner reported, quaveringly: "Sir, the bursts are getting closer and closer all the time."

Said Sanders: "Well, soldier, let me have a full report when one hits."

AN EASY-GOING ADMINISTRATOR

Such calm at tight moments explains the slick ease with which Sanders, no West Pointer, has risen in the Army. Youthful, unmarried, good-looking (he's blond and blue-eyed), Sanders stands 6 feet 2, weighs 220, handles a very tough job without apparent effort.

He's administrative officer of the IX Bomber Command, that part of the Ninth Air Force controlling all American medium bombers in England. He is responsible for a mass of administrative and operational detail that would make the average man a total wreck. Yet Dick gets it all done in a short working day, and without raising his voice.

His only bawlings-out are strictly for laughs. Once he shouted for his adjutant and held out an enormously complicated directive from higher headquarters. The first page, dotted all over with formulas, references, and footnotes, looked like a musical score. Thrusting it at the adjutant, Dick barked: "How dare you send this in without a trombone!"

HOW TO BE A GENERAL

If you would like to follow in Sanders' footsteps and become a general early and practically painlessly, here are some helpful hints. Get born a Mormon in Salt Lake City, to what Sanders calls a "one-car, no-servant family that hates thieves and people who don't vote." In the public schools you take life easy, get dignified but unspectacular grades. Pin money comes from working after school, delivering things for a drug store.

After 4 years of this, your industry is rewarded. At least Dick Sanders' was. He was promoted to soda jerker.

HE WORKED HIS WAY

At the University of Utah, he paid for his clothes and a secondhand car by running an elevator at the Salt Lake City Chamber of Commerce, where he is remembered as a conservative pilot who made landings precisely but at half throttle.

He always owed money to the college bursar. But his grades were A's. The general-to-be wanted to be a doctor in those days. It was to get the money for medical school that he decided, after graduation from college, to go into the Army for a year.

In July 1937, a shiny new second lieutenant, he reported to Fort Lewis, Washington. He liked the life—"enjoyed playing soldier," as he puts it—and took competitive exams for a Regular Army commission.

Although his grade was good, other candidates did better. So Dick applied for Air Cadet training, just as a means of getting into the Regular Army. He had never been up in a plane but his attitude was, "If others can do it, I can too." He prevailed on an Army pilot at Fort Lewis to take him up.

Fists clenched, face green, Dick was introduced to every acrobatic maneuver in the book. Finally, the pilot flattened out and asked: "Do you want to be sick?"

"No, thanks," said Dick. "I don't feel that well."

CAME MORE EXAMINATIONS

But he got through flying school and was assigned to Mitchel Field, New York. There he took more examinations for a Regular Army commission. This time he scored the highest grades at Mitchel Field and the fourth highest in the country. This was the beginning of the long series of efficiency reports with which his commanding officers have milestoned his Army career. A superior general recently described Sanders as "mature beyond his years and having good judgment and tact."

As a commander of men of superior age and military experience, he needs tact. His trick of listening instead of talking, now famous in the Ninth Bomber Command, helps him deal with older officers.

HIS SILENCE IS ELOQUENT

Once a group commander, a colonel who felt he had been treated unfairly by headquarters, crashed into Dick's office to resign his command. He ranted for over an hour, during which time Dick just stared at him and nodded sympathetically.

Finally, the colonel, meeting no argument, talked himself around to the opposite view, apologized for his rashness and agreed to try the new tactics that had made him angry.

Young General Sanders' own combat record in north Africa—he holds the Distinguished Flying Cross and Air Medal, each with two Oak Leaf Clusters—is respected by his men.

They know that he was one of the few especially skilled pilots chosen shortly after Pearl Harbor to initiate American heavy bombardment in the Mediterranean area. Dick got one automatic promotion before going overseas, and—on the same day—an additional up, from captain to major, in recognition of his position as squadron leader.

When the time came for him to leave the group, Dick was a full colonel and group executive. As such he had exhibited qualities which caused Lt. Gen. (then Maj. Gen.) Lewis H. Brereton to make him chief of staff of the new Nineteenth Bomber Command.

THE FINAL STEP TO GENERAL

Those who were on the spot explain the sudden elevation this way: Because the new command was small, it had escaped the notice of Washington; otherwise some older head might have been sent out from the States to take over the job. It was mainly an operations job, and Brereton felt that a man who knew the problems of combat should be chosen. Dick Sanders filled the bill.

The Ninth Air Force completed its desert chores and moved to England in the winter of 1944. The following June, Colonel Sanders' superiors reported that he had "efficiently performed the duties of the next higher grade" for 8 months in Africa and 5 in England. And he was promoted to brigadier general.

HE HASN'T CHANGED A BIT

Today Dick is still the same smiling, unhurried guy he was back at Fort Lewis and in flying school. He addresses other brigadiers, all of whom are older than he, as "Sir." And he is often mildly surprised when lower-ranking men salute him.

Dick is not only unmarried, he is not even corresponding with any girl, in Salt Lake City or elsewhere. After getting through his working day in record time, he spends long evenings playing poker, augmenting his $846 monthly Army pay by winning almost constantly. He plays late and regularly, smiling blissfully to himself as he rakes in each pot.

In his poker playing he exhibits some of the qualities that made him a boy general. "He always has the cards to back his bets," says one officer, who owes Dick 3 months' salary. "He never bluffs, never overvalues his hand. Hell, he does it just right, that's all."

So, if you want to be a general at 29, there's your answer. Just do it right, that's all.

Good Prospects of Irrigated Land for Veterans

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. MURDOCK. Mr. Speaker, the land hunger which veterans have on returning from the wars is well known to us and has been evident after each war in our history. There is every reason to believe that the veterans returning from this war will have the same land hunger as in the past and that there will be far more of them who would like to own a home on a productive piece of land. Public officials are expecting such to be the case when the veterans of this war return, and many officials in Washington and in the various States are planning to do something about it. This planning is particularly true in the Western States where reclamation has yet to attain its greatest development and reach its highest productivity.

The circumstances confronting the returning veterans of World War No. 2 are quite different from those which faced the veterans of other wars. After the Revolutionary War there was an abundance of land beyond the eastern mountains and in the Ohio Valley in a humid

climate where land could be had for the taking and homes might be established easily. After the War between the States many of the men who wore the blue and those who wore the gray went farther west beyond the Mississippi to establish homes on the land under a liberalized Homestead Act for their benefit. These veterans, for the most part, were still able to find good lands in a humid region.

By the turn of the century the greater part of good land had been preempted, homesteaded, or had passed into private ownership, leaving the vast area of public domain in a dry climate where conditions of homesteading were exceedingly hard. Nevertheless, after the First World War many returning veterans hoped to be benefited by the liberalized Homestead Act, and many attempted to go out into the desert and own a piece of land. Because these western lands lack water and can only be made productive by great irrigation projects and expensive construction, too many of the veterans of the First World War were unable to satisfy their desire for farm homes which could be made productive. On every hand we hear it said now, "Conditions must be made better for the veterans of the Second World War." It is that matter I wish to discuss today.

It is an almost empty gesture merely to liberalize our homestead laws for the benefit of veterans, for out of the vast public domain there is relatively little on which the veteran could make a living without great reclamation cost. However, by reclamation a large area of the West, and that, too, in the most favored sections of the West, may be made highly productive. It will take great engineering constructions and heavy costs, but it is assumed that the Government will be willing to make such expensive outlays even if there were only the one reason as a reward to the Nation's defenders. Of course, it must be borne in mind that every dollar thus spent is an investment which will return to the Treasury manyfold. All costs for reclamation are reimbursable and are repaid to the Government, but even such repayments are but a part of the ultimate return to the Public Treasury.

During the four decades through which the Reclamation Bureau has been at work, the Government has invested nearly a billion dollars, and a large portion of this has already been repaid to the Government by those who benefited from the work. The farmers who are water users on reclamation projects repay the cost to the Government over a 40-year period amortized at 3 percent interest. Under a recent modification of the reclamation law, the consumers of hydroelectric power bear a large portion of the cost of repayment to the Government. Surely no right-thinking official would oppose the investment of Government funds in sound and feasible reclamation projects, nor furnishing the machinery and equipment which is a part of the installation, when it is seen that such construction immediately following the war will give employment to thousands in the West and other thousands east of the Mississippi River. Surely no Government official who recognizes the value of home ownership on productive land would furnish any opposition to such a program that will give thousands of veterans a piece of land in private ownership on which he may make a living.

PENDING BILLS

Two pieces of legislation are now pending before Congress to which I want to call attention. H. R. 2742, introduced by the gentleman from Florida, J. HARDIN PETERSON, was reported out by the House Committee on Irrigation and Reclamation and is now on the House Calendar. The committee report on that bill is No. 397. This bill amends the Boulder Canyon Project Act so as to extend the benefits and preferences to veterans of the Second World War as the original act extended them to veterans of earlier wars. A second bill, on which the House committee has not yet held hearings, is H. R. 520, which is designed to give preference to all veterans on all new reclamation projects in the entire country. Hearings for that bill are scheduled to begin within a few days.

When we consider that as much as 20,000,000 acres of land might still be irrigated, over and above what is now being irrigated, it will be seen that a great amount of construction lies ahead for the Government. With it veterans and war workers may hope to have employment after the war in carrying out this program, and many qualified veterans may hope to get some good land in private ownership. There are more than three hundred possible projects within the 17 western States feasible of development. Each of these is a potential center of wealth and agricultural production.

Some of these projects could duplicate, in a given time, the history of that project now surrounding Phoenix, Ariz., where about a quarter of a million acres of land in the last 12 months produced $40,000,000 worth of food and fiber. What has this project cost Uncle Sam? Still speaking in round numbers, the United States Government has put about $20,000,000 in it. Its physical value today is approximately $50,000,000, and the assessed valuation of the property, which has depended upon its existence as an economic base, is more than $200,000,000. Thus, in one lifetime, a wise investment by Uncle Sam of $20,000,000 in round numbers has caused the growth of a rich community assessed in value at 10 times the Government's investment, and it has in the 1 year last past produced in cash double what the Government had invested. The great question is whether our Nation will want, with the coming of peace, to repeat such an investment many times over to ward off depression after the war and stabilize our economic life on a sufficiently high level.

At the moment, I want to point out the possibilities through the enactment of H. R. 2742. I believe that fully a million acres of land along the lower Colorado River, in Arizona and California, may be newly irrigated and veterans' preference made to apply to it. Being convinced of this, I wrote a form letter to veterans in the Southwest, a copy of which I herewith enclose. Following my letter, I wish also to enclose the accompanying article from the March 24 issue of the Arizona Farmer entitled "Making History on Yuma Mesa."

DEAR FRIEND: Enclosed herewith is Report No. 397, dated March 27. This report on H. R. 2742 comes from the Committee on Irrigation and Reclamation. H. R. 2742 is a bill amending section 9 of the Boulder Canyon Project Act and giving preference to veterans of the Second World War on any lands irrigated under that act in the same way that preference was extended to earlier veterans. This measure is one of several which I have sponsored or am sponsoring to give veterans opportunity for homes on newly-irrigated lands with good and sufficient water rights. Naturally, the benefits of this measure will apply only to lands watered from the main stem of the Colorado River and then only when those various parts of the project are opened for settlement.

In view of the fact that there may be as much as 500,000 acres of land in southwestern Arizona and probably another 500,000 acres of land in southern California capable of being developed through irrigation from the Colorado River, this preference bill should be of great interest to land-hungry veterans who would like to make their homes on irrigated land in this favorite section of the country.

How long before such lands will be available? It shouldn't be very long after the end of the war. Let it be remembered that Boulder Dam is completed, the Imperial Diversion Dam is finished, the All-American Canal is constructed and in operation, and the Gila canal on the Arizona side is now ready for use and is being used. Thus, many millions of dollars of the basic construction costs of this great project have already been expended and what remains is applying the water to the lands. When any portion of these lands are declared open for settlement by the Secretary of the Interior, the veterans' preference contained in H. R. 2742 will apply.

Although I am asking Secretary Ickes to open hearings April 12 on another measure—my bill, H. R. 520—which is designed to give veterans preference on all irrigated projects in the 17 Western States, I felt that you would want to know now about the provisions of the first mentioned bill which is also one of the links in the chain of development for which recent and pending legislation is laying the legislative foundation for great post-war development.

Sincerely yours,

JOHN R. MURDOCK,
Member of Congress.

[From the Arizona Farmer, Phoenix, Ariz., March 24, 1945]

MAKING HISTORY ON YUMA MESA

Nature's dusty face is being changed and new pages in reclamation history are being written on Yuma Mesa.

Alfalfa and potatoes already grow on nearly 2,000 acres of desert sand, and only a beginning has been made. The way that desert smiles when it is leveled and wet with Colorado River water is astonishing the natives.

What is happening there portends much for the future of Arizona and is of deepest interest to every man who hopes to locate on a farm as a veteran of World War No. 2. For a new Bureau of Reclamation policy is being given its first try-out. It is very possible that this policy will be extended to every post-war project that the Bureau undertakes.

Instead of merely providing water and leaving the settler to wrestle with the problems of land subjugation, the Bureau is doing the subjugating. It is leveling the

land the way it ought to be leveled, getting it planted to a soil-building crop, and "set."

Any veteran who is fortunate enough to get a farm on Yuma Mesa won't have to wait and toil and hope for years before he starts to make a living. He can begin harvesting crops, or, at least, alfalfa, right away.

Now, let's back up and see how all this came about.

YUMA MESA—TWO UNITS

The Yuma Mesa spoken of here is unit A of the Gila irrigation project. It is not to be confused with unit B of the older Yuma project. That lies south of the upper Yuma Valley and is irrigated with water pumped out of the main Yuma Valley canal. Unit B has about 1,500 acres in production, mostly citrus.

Unit A totals around 75,000 acres, south and southeast of Yuma and east of unit B. All but a little, right at the south edge of town, lies between United States Highway 80 and the Mexican border.

Water comes from Imperial Dam, on the Colorado north of Yuma. A canal extends southeast from the dam and crosses under the Gila's dry bed through an inverted siphon 11 miles east of Yuma. At the south outlet of the siphon is a pump lift which raises the water 53 feet to the level of unit A.

When the war came along the Bureau of Reclamation had the canal completed, the pump lift partly installed, and a beginning made on a distribution system for unit A. Under orders from the War Production Board, construction was suspended.

But the Army took over Fly Field, the airport 10 miles southeast of town, and converted it into the huge Yuma Air Base for flyer training. Sand blowing in from the desert, where there were only a few sparse bushes to tie it down, began causing all kinds of motor trouble. Extra repairs, it was estimated, were costing $1,500,000 a year. Besides, working conditions were very bad for everyone stationed at the base. Efficiency was lost.

At Army request, therefore, the Bureau of Reclamation undertook a dust-control project. The pump lift was completed. Canals were dug and concreted to serve 8,500 acres. Laterals were also dug but they have not yet been concreted, although they certainly should be.

About half the 8,500 acres are public domain, the rest in private ownership. The Bureau's dust-control project consists of leveling 4,200 acres and seeding them to alfalfa.

Ian A. Briggs, associate agronomist at the University of Arizona, was borrowed half-time by the Bureau to supervise this planting program. He now spends every other week at Yuma. There he is directly responsible to J. K. Rohrer, Bureau engineer in charge of the Gila project and also the All-American project over in California.

Briggs' services were almost indispensable because of all the alfalfa he had grown at the university's experiment station on Unit B. No one else had enjoyed his opportunities to become acquainted with that loose soil under varying conditions.

HENRY SEAMANS, TOO

The University of Arizona did the Bureau another big favor by consenting to have Henry Seamans, superintendent of that station, double as irrigation supervisor of the dust-control project. All the Government alfalfa gets water strictly in accordance with Seamans' orders.

Alfalfa planting began in the fall of 1943 with 300 acres; 1944 plantings were 800 acres; since January 1 the total has risen to 1,222. Plans calls for the rest of the 4,200 to be seeded next fall.

In the meantime, some astonshnig hay yields are being harvested from the alfalfa old enough to be in production. Last year five cuttings were had from blocks seeded the previous fall, and the total output was five and a quarter tons to the acre. This year those blocks were mowed for the first time in the latter part of February. Yes, February—weeks earlier than even the very early Yuma Valley. For Yuma mesa is practically frost-free. Briggs predicts that there will be six more cuttings this year and that the yield will be seven or eight tons.

BENEFIT OF VETERANS

Now, where does the veteran come in?

Ultimately unit A will be thrown open to homestead entry, with World War No. 2 veterans given a 90-day preference. So you can bank on it that unit A will be a veteran colony. They aren't going to pass up that chance to get land in a semitropical climate, perfectly leveled, already in production.

That much is certain. Nobody knows, though, how much land one veteran will be allowed to hold, nor what the terms will be. Those points are yet to be decided by Congress.

But the delivery of subjugated land, to veterans or anyone else, will be something new in the annals of America. The Bureau of Reclamation, up to now, has been concerned to get water onto land. Beyond that, it was up to the people who undertook to farm that land. It is scarcely news that many went broke before they could get their fences up, their ditches in, their land cleared and leveled, their crops planted, and their first harvests to market. Nor is it any secret that much of the land was never properly subjugated, since the settlers did not have the means to do so, and that it has never produced to its capacity.

Long before anybody dreamed of a war with Japan, there was talk that the Bureau might pursue a different course with the Gila project—Congress willing. High officials were strongly inclined to the idea of getting unit A, at least, leveled and into crops before dividing it into farm units. War and the W. P. B. sidetracked their hopes for a time. Then the necessity for protecting the Yuma Air Base from dust provided an unexpected opportunity to give the proposed new policy a trial.

There seems to be good reason for hoping that the Bureau won't have to stop with any 4,200 acres. Without too much trouble, the canals could be extended to cover 23,000 acres, of which about 15,000 acres is publicly owned. Nearly all the remaining 52,000 acres in unit A are public land.

ROLL AND WELLTON

Now, it is not contemplated that the canal down from Imperial Dam to the Gila, the siphon and that costly pump lift, will be used solely for irrigation of unit A on Yuma Mesa. The Bureau is most evidently proceeding on the assumption that Colorado water will eventually be supplied to 80,000 acres farther up the Gila, east of the Gila Mountains, and embracing the Roll-Wellton area. The engineering investigations have been made and the plans are drawn.

Nearly all that is privately owned land. Much of it has been farmed and some is still in cultivation; but a large percentage has gone back to the brush. That is because of a falling water table in the wells, and saltiness of the water pumped from lower depths. Pumping costs and salt increasingly vex the farmers who remain and manage to produce those surprising crops of alfalfa and Bermuda seed for which the Roll-Wellton country is famous.

Those farmers are most evidently confident that they will not be forced out, but that Colorado water will come in time to save them and to make fertile farms over an area half again as large as Yuma Valley. To tell the inside truth, there is plenty of basis for their confidence.

Union Now—United Nations—Super United States of the World

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. HOFFMAN. Mr. Speaker, for years there has been a small but well-financed and vocal group who want to surrender some portion of our independence and sovereignty; who want to superimpose upon the Constitution of the United States a Constitution of the United States of the World. They would also unfurl, above the Stars and Stripes, an international flag. More than 2 years ago such a flag was presented to me.

The original advocates of a one-world government apparently believed that by bringing all nations and all peoples of every race and creed under one organization the whole world would profit. Perhaps they thought they might be more successful than those who attempted in earlier days the same experiment at the Tower of Babel. It may be that a somewhat similar idea, plus a desire to establish an enduring, universal world peace, was back of the League of Nations.

Be that as it may, since the present World War came on, there has been a renewed and widespread drive to convince the American people that at least some of our sovereignty and independence should be surrendered to an international organization which would, by force if necessary, compel all nations to avoid war. Just why a condition brought about and maintained by force—war—should be described as peace, was not explained.

Early in this war, we were given—at least we thought we were given—a document entitled "The Atlantic Charter," under which our armies were to carry and maintain the "four freedoms" throughout the world. Later, we were told by the President there was no such document, though the principles enunciated at what was believed to have been its birth would be followed.

Then came Dumbarton Oaks, a conference of the representatives of many nations. They, according to the principles proposed, provided in brief for a general assembly of the representatives of all nations; a security council composed of the representatives of Russia, the British Empire and Northern Ireland, the United States, China, later France and the representatives of six smaller nations, to be designated by the larger nations.

Under the plan, there was to be, when the war was over, an international police force, to which each nation should contribute its quota of money, materials and men. There was also to be an international standing army, which, under the command of an international staff, could impose force upon any aggressor nation.

Then came Yalta, where Stalin, Churchill, and Roosevelt met, and out of which, we were later told, came the agreement that any one of the big nations could veto not only the use of force but economic measures, as against not only itself but any smaller nation.

Still later came a statement from the chairman of the Senate Committee on Foreign Relations, published in Look magazine of April 3, which stated that there was some disagreement as to whether or not there should be a military force under the control of the executive council, as to how such forces should be formed, and how they should be sent into action. The same article also stated, and I quote:

> There is considerable misunderstanding about what kind of policing force the international organization is expected to have. Opponents of establishment of an independent military force under the direction of the executive council should know that none is planned unless it be some air units of limited size.

So it may be noted that, from a hard-and-fast international organization, with teeth—and heretofore every advocate of such an organization has insisted that it must have teeth, if it was to be anything other than an international debating society relying upon moral suasions to enforce its decisions—we now have before us, if some of its proponents are accurate in their statements and conclusions, the proposition that we will bring about and maintain peace throughout the world by inducing all nations to submit their grievances to some sort of a world council and that, through appeals to a sense of justice, and through Bretton Woods—by loaning or giving money to develop other nations, enable other people to live in greater comfort—we might create a state of contentment which would take away any desire for war.

We may all hope that such a highly desirable objective may be reached, but confidence in the success of the San Francisco Conference scheduled for April and which was to follow through on the Dumbarton Oaks and Yalta Conferences, was handed a severe jolt this week, with the forced admission by the White House that Roosevelt and Stalin had entered into a secret agreement at Yalta that Roosevelt would support the proposed Russian demand for three votes in the assembly of the international organization, in return for Russian support for three votes for the United States, to balance Britain's six votes—one each for herself, the four Dominions, and India. This, of course, would increase the big three's control of the Assembly, in addition to their veto rights through the Security Council.

A major controversy has been started, which has led to expressions of surprise and concern by the representatives of the smaller nations. One official of the French Foreign Office exclaimed, "What next?" One radio commentator stated that some Americans had been "naive enough to believe that no secret agreements" had been entered into at Yalta, but that this forced admission of the Roosevelt-Stalin agreement had raised the concern that there might be others.

One of the arguments which has been used by the big three in favor of the international organization was that, in the Assembly every nation would be equal, retain its sovereignty. Now that powerful argument is destroyed by the admission of the secret agreement of three votes to Russia and three to the United States.

Although it is contended that this is all tentative, nothing definite, the so-called three-votes announcement has done not a little to undo the effect of the propaganda currently circulated by the administration to induce favorable sentiment for the international organization.

As stated, while we all hope for an enduring world peace, some of us believe that the United States of America can best contribute to that world peace by admonishing the victors in this war that a just peace must be established; that they, not the United States, when Germany lies prostrate at their feet, must prevent her from again rearming for a future war.

That, in addition, we can serve the cause of world peace best by building an invincible Army, Navy, and Air Force. Then tell the rest of the world that, if they insist upon fighting each other, we will not aid either, but will do our utmost to see that no trouble, no war, comes to the Western Hemisphere.

We have established our power in this World War No. 2. There is no reason why we should not maintain it when victory has been won. As the most militarily powerful, most productive, Nation in the world—and Churchill said we were—we will be in a position where our voice, speaking for peace, will be persuasive.

Trojan Horse Tactics of Committee for Constitutional Government in Public Schools—Long-Range Planning by This Group Through Vicious Tactics in the School System of Our Nation

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. PATMAN. Mr. Speaker, I would like to give you an example of the vicious and unscrupulous tactics to which the proponents of the so-called twenty-second amendment will stoop in their program for what they hope will be ultimate victory in getting their millionaires' tax limitation scheme written into the Constitution of the United States.

This will prove to us just how vigilant we must be for outcroppings of new schemes by the master planners of the Committee for Constitutional Government. This whole plot is like an epidemic of weeds. If we are not constantly on the alert for the first appearance of the pest, it will just be that much more difficult to eradicate once it gets roots started without proper control measures being taken.

The Committee for Constitutional Government is at present very slyly and quietly sowing seeds in our school system which they hope will grow into a very profitable crop.

I shall outline the plot, briefly, and then I shall elaborate a little on the ramifications which will arise from this supposedly innocent-appearing and patriotic gesture on the part of the noble "upholders of our American Constitution and our Bill of Rights":

The Committee for Constitutional Government is offering for sale "a decorative four-color, embossed wall piece, which carries the Bill of Rights in English and 11 other languages." They are urging that firms and individuals purchase these wall pieces and distribute them to the classrooms of our Nation. This, on the face of it, is something that none of us should be able to criticize and we should all assist in—if only we did not know the caliber of the men behind this movement and know the motivating influence which governs their every move. What, then, is behind this apparently patriotic gesture?

Here is what they claim they are doing, and I quote Dr. Rumely:

> The main purpose was to stimulate in the schools more intensive study of the Constitution.

That comes from Dr. Rumely, who personally is such a splendid example of a believer in our American form of government that he was sentenced to the penitentiary after the last war for collaborating with the German Government.

Again, then, what is behind this? The purpose is twofold:

First, and of immediate benefit, it provides a method by which the proponents of the "twenty-second amendment" movement believe they can secure additional funds for the financing of their propaganda operations—and a method by which their supporting contributors are supposed to be able to make political contributions which can be claimed as legitimate income tax deductions and also free from the scrutiny to which political contributions are subject.

Second. They hope by educating the students in our schools in their own particular interpretation of the Bill of Rights that enough of these students will, by the time they become of voting age, have become sufficiently indoctrinated in this philosophy that additional support will have been gained to put over their millionaires' tax-reducing scheme. This, indeed, is long-range planning of a most subtle nature.

Now to elaborate a little on their first objective—that of providing new working capital for their nefarious propaganda machine: Here we must take stock of the inevitable answer which comes in reply to any question directed at this group which has a tendency to probe into their political activities; and again I quote from our good friend Mr. Rumely:

> This is an educational, nonpartisan, nonprofit organization. Its trustees devote time

and contribute money to the committee's work. We are not a pressure group. We want nothing from Government but freedom. We clamor for no subsidy. We foster no raids upon the Treasury for special interests. We lobby for no legislation favoring special groups, exalt no class above another. We make no political deals, back no candidates for public office. This committee has never spent or contributed a dime to the support of any candidate for public office or the defeat of any candidate.

These are quotes from a letter from Mr. Rumely to the Special Committee of the House to Investigate Campaign Expenditures.

Yes; I will admit that it is an educational organization; this vicious attempt to influence the thinking of our children into their way of thinking is proof that it is an educational organization. It is nonprofit to the extent that all funds available are spent in additional propaganda coverage. Naturally its trustees devote time and contribute money to the committee's work. They want nothing from our Government but freedom; no truer words were ever spoken. Freedom, however, from questioning as to their motives and freedom to ply their sordid propaganda upon all sections of the country. They do clamor for a subsidy, however, with every piece of propaganda issued by them—clamoring for contributions to subsidize their own operation. Ask the Treasury Department itself whether or not the proposed twenty-second amendment does not constitute a raid upon the Treasury for special interests. The answer is quite evident in the Treasury Department's Division of Tax Research reports of May 31, 1944, and February 1, 1945.

And as to their emphatic denials of political activities, permit me to quote from the splendid talk made on the floor of the House on March 13 by Hon. CLINTON P. ANDERSON, a member of the House Campaign Expenditures Committee, which asked some rather embarrassing questions of the Committee for Constitutional Government group. Our colleague said this:

> Now, the interesting thing is that this organization which dishes out political propaganda in its every release, claims to be entirely nonpolitical and has had the effrontery to attempt to obtain rulings which would permit funds given to it to be deducted in income-tax returns as a proper business expense. While the Committee to Investigate Campaign Expenditures for the House of Representatives in 1944 was doing its work, we came across many evidences of this intention and desire, and we found that corporations, particularly large corporations in Texas, were being solicited for funds on the basis of a legal opinion that it was proper to give money to the Committee for Constitutional Government for the purchase of books and that thereby those provisions of the Corrupt Practices Act which prevent contributions from corporations for political purposes, might be either evaded or avoided.

The legal opinion setting forth that it was proper to give money to the Committee for Constitutional Government to which Mr. ANDERSON refers, was an opinion written, strangely enough, by one of the four mainsprings of the Committee for Constitutional Government, our well-known Mr. Samuel B. Pettingill, "the gentleman from Indiana," as he calls himself. Mr. Pettingill, in his opinion, which so conveniently influences contributions from the big boys, states that the Federal income-tax laws expressly permit corporations to make contributions for educational purposes, and that they may deduct a certain percent against gross income and that, for instance, a Texas corporation can legally make such expenditures within the following limitations:

> (a) If the money is not contributed to a political committee of a party or a committee sponsoring the election or defeat of any candidate for public office, or the passage or defeat of any specific legislation pending before a legislative body—Federal, State, or municipal. (b) If the money is used for the nonpartisan, nonpolitical education of the public in the broad principles of constitutional government and the free-enterprise system.

Ah, yes, there it goes again—nonpolitical education of the public. As a result of my activities in exposing this group, I had a taste of some of their "nonpolitical education of the public" down in my own district in Texas last summer and fall.

Quite by accident, I am sure, the Committee for Constitutional Government just happened to institute their educational program in my district about primary election time. Mr. Pettengill just happened to be down there and made a very fine talk in Texarkana, my home town, in his efforts to further this education program. One of Mr. Pettengill's articles which was being freely circulated about that time down there by the Committee for Constitutional Government made very splendid contributions to this education program with such unfounded and untruthful statements as the following, quote:

> Your city will tell a similar story. I mention Texarkana because it is the home of Congressman PATMAN who is one of those who thinks nothing of debt. He proposes to go right on going into debt when the war is over. The thought of putting any limit on debt and taxes is very obnoxious to him.

Fortunately for me, my constituents having known me for many, many years, just did not believe Pettengill's tripe. A tip to you, Mr. Pettengill—the people in Texarkana and my district are not the gullible people who will fall for such falsehoods as you use in your educational program—try your teachings elsewhere in more receptive localities. I am proud to be the Representative here in Congress of the people of the First Congressional District of Texas and if they ever voice their disapproval of me at the polls, I will know that it will be for some good reason and not because you have been expounding on some of your nonpolitical educational theories down there.

And now let us take a glance at the double-purpose financing plan mentioned earlier in this talk. The House Campaign Expenditures Committee tried to determine the cost of the Bill of Rights wall piece. These are supposed to be sold by the Committee for Constitutional Government at 75 cents for single copies and down to 40 cents in quantity purchases. It was discovered that it cost this group about 4½ cents each for one order of 200,000.

You can readily see what would result in a large purchase of these wallpieces by a corporation or an individual who was very much interested in the work of the Committee for Constitutional Government. The purchase could be nothing more than a camouflaged contribution to this group's vicious political propaganda machine under the guise of its being a contribution for educational purposes so that the contribution could be set up as a legitimate income-tax deduction. That is a clever scheme for which we must take off our hats to this group. The profits can go for propaganda and political activities and the vehicle used—the Bill of Rights wallpiece—can be distributed to schools with the hypocritical gesture of their active support in "stimulating in the schools more intensive study of the Constitution." This is the lowest and most despicable tactic yet perpetrated by the Gannett - McClure - Pettengill - Rumely syndicate—hiding under a cloak of righteousness, they are stooping so low as to pervade our very classrooms in an attempt to instill in our children their teachings and concept of what the Bill of Rights and our Constitution should mean.

If you would be aware of Pettengill's interest in our school system and our school children, write and ask him to send you a copy of his syndicated release of March 6, 1945—Release No. 648. This entire release is a tirade against Federal aid for schools, with the whole theme being that Federal tax money would have to be turned over to the States. He claims that if the States want better educational facilities let them spend their own money.

Truly, Mr. Pettengill, can you have the nerve to come out against an emergency fund which would tend to equalize the inequities that have arisen as a result of our wartime dislocations in teacher supply and enormous shifts of population—with resultant excess burdens on some sections? Can you sincerely come out, Mr. Pettengill, against a fund which would be used in the post-war period to more equalize the educational opportunities throughout the country? Would you come out and insist that if some States could not, for some reason or other, afford to provide sufficient funds for full educational opportunities, that status quo should be maintained in that respect—that the Federal Government should not assist in what we must recognize as our national duty?

Keep it up, Mr. Pettengill. Rant and rave against the National Education Association, the school teachers, the millions upon millions of fathers and mothers of our school children, and even the Federal bureaucrats, as you call them, who are sponsoring this method of equalization of our educational opportunities. Your efforts, I can assure you, will prove to be the most successful example of a boomerang ever displayed in this country.

The Bill of Rights should be a part of every classroom, I will admit. But, in the name of common decency, should it be used for the purpose that the Committee for Constitutional Government intends to use it? Should it be accom-

panied with distribution of propaganda written by this same Mr. Pettengill who so forcefully fights improvement of our educational system in the hope that his efforts will result in still more reduction of his millionaire bosses' taxes? Yes, Mr. Pettengill's interpretive propaganda would accompany the Bill of Rights wall piece. This propaganda would, through very subtle innuendo and distortion, Mr. Pettengill hopes, gradually educate the children to believe that nothing can save our Nation except an amendment to our Constitution which would limit the power of the Federal Government to tax incomes, gifts, estates, and inheritances.

Here are some quotes from Pettengill's primer on education:

You have seen pictures of Nazis leading a gentle-faced cow away from a farmer and his weeping wife. Could your cow or any property you own be taken by our Government without compensation? No. Why not? The Bill of Rights.

That sounds far-fetched enough to be harmless, but it is all part of a pattern which is far from harmless. Let us continue with a quote from Mr. Pettengill's particular brand of education which would define for our children just what type of liberty we should be guaranteed by the Bill of Rights:

What is a liberty? It is a limitation upon the power of government. Which chiefly limits the powers of government? The American Constitution.

There it is. A "limitation upon the power of government." Does the pattern become evident now? The particular bit of limitation which the respective members of the Committee for Constitutional Government would sell their souls to have incorporated in our Constitution is the proposed twenty-second amendment which would limit their millionaire's taxes to a maximum of 25 percent.

In an article showing arguments of the proponents for the tax limitation, I find the following which is another piece in the jigsaw puzzle of their most generous high ideals of fostering study of the Bill of Rights, and I quote:

Proponents claim that adequate constitutional safeguards against abuses of the taxing power are as essential for the protection of citizens as the provisions of the Bill of Rights which protect freedom of speech, press, and religion, the right of jury trial, etc. They claim that the Bill of Rights was instituted to protect people against the abuse of governmental authority, and that it is as important to protect them against the abuses of the taxing power as against other types of abuse. It is contended that Congress abused its power to tax incomes and estates during the 1930's by imposition of heavy rates and that the limitation proposed would protect against future abuses of this particular power.

This group believes it is all right for Congress to have the power to compel a citizen to give his all in war if he has nothing but his life to give, but consider it wrong for a citizen to be compelled to give more than 25 percent of his income.

There is the answer to the "educational" program which the Committee for Constitutional Government is fostering. What a huge and profitable oak tree they hope to grow by sowing their rotten seeds in our schools today. That is an example of the long-range planning which they are willing to undertake.

Cannot such tactics be likened to the Trojan Horse? The gift which this clever group brings to the doorway of our schools contains within it an infiltrating power vastly more dangerous than the army which was borne within the Trojan Horse. Let us recognize this gift for what it is immediately or that most vicious of all plots will succeed and unleash its deadly cargo within the classrooms of our country.

Petitions in Protest Against Prohibition Legislation

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 21, 1945

Mr. CELLER. Mr. Speaker, I submit for the RECORD two petitions containing 59 signatures of citizens of the United States who protest the enactment of any prohibition legislation:

WE DO NOT WANT IT TO HAPPEN HERE AGAIN

This petition is sponsored by Paul Kosow, 778 Lafayette Avenue, Brooklyn, N. Y.

We the undersigned, all voting citizens of the State of New York, hereby protest against the enactment by Congress of any prohibition legislation.

We believe that prohibition, either local or national, would impede the war effort and bring back the evils of bootlegging and racketeering.

Cobb Jurist, George Kaaenburn, Harry Merriam, Louis Geller, Sam Horowitz, J. Silverstein, Dave Nebunzahl, O. Silverstein, L. Gifn, W. Meyer, H. Goodman, Frank J. Vojek, Chas. McDowell, C. Schultze, Francis Gregory, Minnie Runge, Gladys Wied, Mrs. Noonen, Ch. Thompson, Rose Grossman, Maria Monalta, Patrick Downs, Domenico Canorcetti, Rose Moran, D. Costa, L. Costa, Marcy Herrold, F. Johnson, Mr. George, Seex Obersold.

This petition is sponsored by Helen Neufeldt, 393 Sumpter Street, Brooklyn, N. Y.

We, the undersigned, all voting citizens of the State of New York, hereby protest against the enactment by Congress of any prohibition legislation.

We believe that prohibition, either local or national, would impede the war effort and bring back the evils of bootlegging and racketeering.

Dallas K. Fox, Helen Neufeldt, Al H. Baudel, Rose Esehole, Ethel Schwing, Dennis E. Sweeny, Florence Pomerantz, F. A. Schmitt, Lee M. Harley, Walter McCarthy, Walter F. Lundberg, Martha H. Jarcth, Rose Jarcod, L. C. Finney, Winfield Keve, Nicoletta Mirro, Frank Vacek, Marina Pittari, Ann Kolar, Mae Miserandino, Florence Catanzaro, Louis Bonura, A. M. Mortenson, Joseph T. Murphy, John Michelzuk, Ray McGill, Henry Forte, Charles McWilliams, N. Sehlmyer.

For Serious Consideration by the Rural People of America

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the bill already introduced to delegate the power to one man to have direct control of our foreign agricultural policy deserves careful study.

The following article in the April National Grange Monthly by Mr. A. S. Goss, master, merits every consideration:

The battle is on again over reciprocal trade agreements. A bill has been introduced in Congress extending the act for another 3 years. The present act permits reductions in tariffs of 50 percent below the rates established by Congress. The new bill permits reductions of 50 percent below the effective duties on January 1, 1945. Since many rates had already been cut 50 percent, the new bill would permit an additional 50 percent slash, or a total of 75 percent.

The Grange believes that the tariff policy should be determined by Congress—not by one man who happens to occupy the office of Secretary of State, whose major concern is international relations, and not the welfare of our domestic economy. Juggling tariff rates up and down at will can keep our domestic economy in a continually upset state and prevent business recovery or expansion.

The Grange recognizes the difficulties in writing tariff schedules in Congress, and advocates a commission for that purpose, on which our major economic interests have representation, such commission to be responsible to Congress.

The Grange has opposed the "most favored nation" clause. Under it, if a tariff concession is granted to one nation, the same concession is granted to all nations with whom we have agreements. Let us assume that we enter into an agreement with Canada in which equitable concessions are made on both sides. We then enter into another agreement with Mexico, in which further equitable concessions are made. Immediately, additional concessions automatically become effective with Canada, and the equity of the concessions originally made becomes unbalanced. We enter into an agreement with Brazil and both Canada and Mexico benefit by it, so that eventually the original equities are completely upset.

Finally, the Grange believes that Congress should have the right to revoke any trade agreement within a reasonable length of time after its adoption. Congress is the people's only representative. It makes the policies and is answerable directly to the people for its acts. To transfer this power to the executive branch of government is contrary to the spirit, if not to the letter, of the Constitution, and places in the hands of the Executive power which can be used in dictatorial ways. This is the way that representative governments are destroyed and dictatorships developed.

History records many cases of representative governments before the United States Government was born. Most of them have failed, and practically all have gone the route of gradually surrendering the legislative power to the executive branch of government. It is so much easier to govern by one-man rule than by representative means that little by little we slip over to the easier

way, until finally a dictator takes over. Eternal vigilance is the price of liberty. This generation has surrendered too many powers already, and we should be studying means for recapturing the powers belonging to the people rather than surrendering more.

Congress should equip itself to carry out its constitutional responsibility with reference to the tariff and international relations on a practical basis, rather than weakly to surrender such vital powers to the executive branch of government. If time will not permit this to be done before the necessity of renewing the Reciprocal Trade Act, it can at least reserve to itself the right of approval, and can limit the term of extension to 1 year so that it will have time to do something more constructive.

A. S. Goss,
National Master.

What Is Being Planned for You

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Reader's Digest:

WHAT IS BEING PLANNED FOR YOU

(By Ralph Robey)

For weeks there has been one Washington rumor after another as to the ultimate program which is being planned for us. The stories all have been of a pattern, which in such cases usually indicates that they are accurate. The various reports fit together into a cohesive program, which should make all of us stop and do some hard thinking. Here are the main points:

1. There is to be established a National Production Council which is to be the over-all "planning agency" and will have the responsibility of controlling the entire economy.

2. Under the over-all agency will be a subagency or subcouncil for each industry, composed of representatives from labor, management, and Government.

3. The volume of production will be set by these councils for each industry, which means, of course, a quota for each company and plant in each industry. This production schedule will be set at such a level that in the aggregate it will insure "full employment."

4. To insure that the full production schedule is carried out the Government will perhaps even "guarantee" the companies against loss by buying any products which cannot be sold on the open market.

5. No new company can enter any field without the approval of the appropriate industry council.

6. Prices will be fixed for each commodity and permanently controlled by the planning agencies.

7. Wages also will be fixed and labor will be guaranteed an annual wage. All wage agreements will be certified by the planning agency and will be frozen a year at a time in order to prevent price schedules from being upset.

8. To offset an anticipated "$125,000,000,000 deflationary gap" when war production stops there must be no cut-back of wages, and workers are to receive as much for 40 hours as they now receive for 48 hours.

9. An enormous program of Government expenditures and expansion of Government activities is to be undertaken. This is to include not only regional developments of the T. V. A. type all over the country but housing, education, airport construction, both transcontinental and local road building, wholesale extension and increase of benefits of social security, and so forth.

This is said to be the specific program of the C. I. O. and its political affiliate, the P. A. C. But from other sources it is clear that the thinking along this line is by no means limited to the C. I. O. And it also is clear that those whose thinking is following this path know exactly where they are headed.

For example, take this excerpt from the Wall Street Journal: "Suppose a man wanted to open a new shoe factory. 'If he's got a new product that's needed and the facilities and materials can be spared, O. K.,' say the planners. 'But if the market is well supplied and leather is scarce, we would suggest some other line of endeavor. If he insisted on going into a business which was not approved, that would be antisocial—in the same class as opium smuggling—and police powers would have to be used.'"

Yes; those who are making these plans know exactly what they are doing. And make no mistake about whether they are smart. They are as smart, and clever, and ruthless, and determined, as any group in this country.

One further point. Do not expect this program ever to be presented as a whole for consideration by Congress. It will be brought out part by part, each apparently designed merely to meet a particular problem of pressing proportions. And every part will be carefully labeled with an innocuous name and wrapped around and around with beautiful and innocent-sounding names especially prepared to cover up the real purpose and intent of the proposal.

So if you happen to be a believer in individual enterprise and freedom, watch for the component parts of this program. And don't be misled by someone's telling you that we are just taking a small step toward "industrial democracy" or a "planned economy." Rather, remember that this same program when it was in effect in Italy was known as fascism, and today in Germany it goes under the name of nazi-ism.

What becomes of the enterprise which has created a great nation, when this program gets going?

Some Additions to the Dumbarton Oaks Proposals

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Friday, March 30 (legislative day of Friday, March 16), 1945

Mr. SMITH. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a very important contribution made by ex-President Hoover to the Dumbarton Oaks discussion in his recent newspaper articles, four in number, and also that there be published in connection with these suggestions and recommendations of Mr. Hoover the column appearing yesterday in the New York Times by Mr. Arthur Krock, entitled "The Product of Brains and Experience," analyzing Mr. Hoover's proposals.

A statement I have received from the Public Printer indicates that the space occupied by the articles will exceed by half of a printed page the two pages allowed, under the rule of the Joint Committee on Printing, without a statement of cost. The estimate of cost is $130.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

SOME ADDITIONS TO THE DUMBARTON OAKS PROPOSALS

(By Herbert Hoover)

(The North American Newspaper Alliance requested former President Herbert Hoover to write a series discussing the Dumbarton Oaks proposals and the prospects of the San Francisco Conference. Mr. Hoover's long association with problems of world peace and the book, The Problems of Lasting Peace by Herbert Hoover and Hugh Gibson, published in 1942, have undoubtedly influenced American thinking and stimulated interest in the views of Mr. Hoover on considering international problems.)

ARTICLE I

The most fateful conference in all American history is that which meets at San Francisco to formulate the proposals at Dumbarton Oaks into a world charter of organization for maintenance of peace. During those fleeting moments the future of mankind may be molded for the next hundred years. A third world war would return the world to the barbarism of the stone age. These discoveries of new methods of killing; this shift from wars between men to war against women and children, and the gigantic destruction of men's toil of centuries makes certain the extinction of civilization.

If the charter at San Francisco emerges with a reasonable hope of success, the United States must take its full part in carrying it out. When we in America took up the sword to secure peace we were committed to join in holding the sword if we would preserve peace as against the inevitable hates and violences of a generation to come.

The modern world has seen these gigantic explosions into world war and revolution before. Each time from the bitterness of its travail, it has groped for organization to preserve a lasting peace.

The Dumbarton Oaks proposals are in most ways patterned upon the world's last great experiment—the League of Nations. The League was a partial success and its failures present vivid experience which it would be folly to ignore. In the light of these experiences there are some important additions which should be infused into the Dumbarton Oaks proposals and thereby greatly strengthen this chart of peace.

I state them at once and I shall in later articles amplify the reasons for them. They include:

1. Positive standards of the political rights of men and nations and the establishment of a world committee to promote these political rights. This committee to rank with the economic and social committees already proposed in the Dumbarton Oaks plan.

2. Provision for revision of onerous treaties between nations at, say, 10-year intervals, in order to assure that the peace settlements are dynamic and not static.

3. Regional organization of the organization to preserve peace into three areas, Asia, Europe, and the Western Hemisphere; the regional organizations to be subject, of course, to the Security Council.

4. Absolute disarmament of the enemy powers.

5. Immediate relative disarmament of the United Nations and the establishment of

maximum limit of armies, navies, and air power among them.

6. While it is probably not a part of the charter itself, when it is adopted by the Congress the authority to use force should not be given the American delegate on the Security Council but that power should be delegated to the President of the United States with the provision that he be bound by the majority of the joint Foreign Relations Committees of the Senate and the House as to whether a vote to employ American force shall be submitted to the Congress as a whole.

7. Take enough time in formulating the charter of peace to do it right.

These proposals are not counsels of perfection. They are lessons of grim experience.

There are three general methods by which peace can be preserved:

1. Through measures of force to stop aggression.

2. Through pacific methods, the immediate effect of which is to settle controversies between nations by negotiation, arbitration, and judicial decisions.

3. Beyond all this are the moral, spiritual, political, and social forces which either foment conflicts or allay them. If we are to have lasting peace, we cannot rely wholly upon stopping quarrels. We must set in motion these forces which build for peace.

The weakening of the power to stop military aggression in the Dumbarton proposals by the voting formula now agreed renders it even more imperative that the great underlying forces building for peace should be more greatly developed at San Francisco than they appeared at Dumbarton Oaks. The League of Nations proclaimed its base as the maintenance of honor and justice between nations. Even that wholly nebula enunciation of a standard of conduct between nations does not appear in Dumbarton Oaks.

The great principles of political rights of nations and men, the standards of conduct among nations and the curative functions which eliminate the causes of war are wholly absent from Dumbarton Oaks. These forces must underlie not only the whole basis of international law but of moral and spiritual progress of nations toward peace. We are in danger of setting up a purely mechanistic body without spiritual inspiration or soul.

ARTICLE II

The political rights of nations and men should be proclaimed in the charter

In the last article I stated that positive standards of political rights of nations and men should be incorporated at San Francisco if we are to mobilize the moral and spiritual forces of the world in the charter of peace.

Some of these principles and ideals are stated in the Declaration of Independence. Mr. Wilson stated part of them in his Fourteen Points. Part of them appear in the Atlantic Charter. Some of them are referred to in the Moscow Declaration and the Yalta Declaration. Many of them are thus accepted by the United Nations, but they are not expressed in any binding treaty. It would not seem unreasonable that they should be codified and specifically stated in the new charter of peace. If so, we may at least have a hope that the day may come when they will prevail.

From these declarations we can condense some of these principles and standards of conduct between nations:

1. No aggrandizement or annexations, territorial or other.

2. No territorial changes that do not accord with the freely expressed wishes of the people concerned.

3. The restoration of sovereign rights and self government to those who have been deprived of them.

4. The right of all peoples to choose their form of government by free and unfettered elections and secret ballot.

5. Equality in trade.

6. Freedom of the seas in peacetime.

7. Disarmament of aggressor nations.

8. Reducton in arms of all nations.

Of equal importance to these standards of conduct between nations, the history of the last 30 years cries out for the establishment of definite rights and protections to individual human beings. These principles have been eloquently proclaimed time and again as elements of peace by the leaders in this war. They include:

9. Protection from execution or imprisonment without fair trial.

10. Prohibitions against compulsory labor or slavery in any disguise.

11. Protections to minorities and backward peoples.

12. The freedom of the press and of religion.

And why not again try those great banners at the masthead of the charter.

13. Renunciation of war as an instrument of national policy.

14. The relations between nations must be founded upon honor and justice.

My proposal is therefore, first, that such fundamental principles and ideals shall be set out in the charter itself. The Security Council would then have standards of conduct upon which to make decisions. And of equal importance, if they be proclaimed to the world, at least public opinion can define, judge, and support. Without them the San Francisco charter will not be a chart of peace. It will be simply another transitory pact or a declaration.

My second proposal arises from the fact that the Dumbarton Oaks plan includes the creation of one world committee to promote economic welfare and another to promote social welfare. Therefore, I propose the creation of a third World Committee to Promote Political Rights. It is a more important function than the other two world-wide committees, great as they are.

If we are to delegate any part of our national sovereignty, we have a right to know exactly what the standards of conduct of other nations are to be. If the five great nations are to be above the law through this voting formula, it becomes all the more important that we definitely express the standards of conduct to which they are committed in relation to the smaller nations and ourselves.

ARTICLE III

Revision of treaties

The second proposal I have made for the San Francisco Conference is that there be provision for revision of onerous or inapplicable treaties or of the wrongs of imposed settlements. There is no such suggestion in the Dumbarton Oaks plan.

The future of nations cannot be frozen. The forces which will arise out this war cannot be foreseen.

If we are going to accomplish anything in our time, we must approach our problems in the knowledge that there is nothing rigid or immutable in human affairs. History is a story of growth, decay, and change. If no provision, no allowance is made for change by peaceful means, it will come anyway—and with violence.

There was an indefinite provision for change of onerous or inapplicable treaties in the covenant of the League of Nations, but it was never allowed to function. This failure to recognize inevitability of change became one of the definite causes leading to World War No. 2.

There is one overall effect of both the covenant of the League and Dumbarton Oaks proposals which the American people should understand.

Once we settle down to peace again there will be treaties defining boundaries and other relations or imposed relations of nations. The yardstick of who is an aggressor then becomes one of determining who violates the then existing situation or law. Thus the world organization automatically becomes the guarantor of the existing situation—that is the status quo.

Experience demonstrates that there are unpredictable areas of most dangerous controversies which rise from the pressure for change in the relations between nations. Among them are provisions imposed during the heat of war emotions, shift in economic pressures and population, the growth of ideas and inventions. There are shifting rights of minorities and the development of backward nations which become conscious and capable of self-government.

Oppressed peoples will agitate and even rebel against oppression. They are hardly likely to go on considering themselves bound by a bargain entered into unwillingly by their fathers. As a rule they would be willing to readjust matters without going to war.

Boundary and peace treaties are not inspired documents. Certainly the whole experience after the last war shows that peace can be preserved, not by preventing change and putting the future in a strait jacket, but by seeking to control change and direct it. Any attempt to maintain the status quo indefinitely is a direct cause of war—for peaceful means being denied, the change can come only through force. War becomes the only available solvent.

Each and every plan for preserving peace, whether it be the Pax Romana, the balance of power, the legitimist theory at the Congress of Vienna, or collective security of the League, however divergent they may appear outwardly, have this one thing in common. They set up a new order, and knowing it to be good, they provide that the new boundaries and other conditions shall be kept and anyone who violates it is evil. Never yet, however, have settlements been made after firing ceases that held against growing and changing forces after the war.

After the last war, whenever there was an appeal for revision, the world was flooded with speeches on the sanctity of treaties, and it was represented that any attempt to reconsider a single article of the Versailles Treaty was nothing less than a sinister attempt to undermine the whole fabric of peace which must be resisted as such by all law-loving people. Many people were led to believe that all change was to be resisted on high moral grounds. We can agree as to the sanctity of the pledged word, but most of this talk meant something quite different. What was really meant was not the sanctity of treaties but the sanctity of the status quo.

And this question becomes far more important to Americans today than ever before. The peace settlements, the form of governments and the boundaries of many nations have not yet been determined. Unless there be provision for revision of treaties, we will at San Francisco become the blind guarantors of the peace settlements of which we as yet know nothing.

To meet this problem Mr. Gibson and I made a suggestion 3 years ago, and I again propose that there be a definite provision in the United Nations charter that the application of any nation for revision of treaty provisions not sooner than 10 years after its conclusion should be considered, and, if advisable, negotiated by the Committee on Political Rights, which I have suggested.

There will be continuing gigantic wrongs in the world. Americans for all time will sorrow for the fate of Finland, of Estonia, of Latvia, of Lithuania, the partition of Poland, and other states that will be partly or wholly submerged by this war. We cannot even think of another war to secure their freedoms, but we do not need to sacrifice our ideals by acquiescing in their plight. We

could at least leave a hope open for their long future.

Regional organization

My third proposal for the San Francisco Conference is that there should be a much more definite regional organization of the whole machinery of the charter at San Francisco than that suggested at Dumbarton Oaks.

Three years ago Mr. Gibson and I proposed that regional organization should be the foundation of the whole machinery and that the three regional groups should be established—the Western Hemisphere, Europe, and Asia. A year later Mr. Churchill publicly supported this idea.

In the Western Hemisphere the long development of the Pan American Union pointed in that direction and the recent agreement at Mexico City advances it one step further. The success of the nebulous "concert of Europe" in preventing world war for nearly a century pointed in that direction for Europe, and the practical problems which developed in the League of Nations abundantly confirmed the need for that form of organization.

Such regional councils should embrace all United Nations' areas and should deal in the first instance with all controversies that might lead to war. If they fail to secure settlement by pacific methods, then, and only then, should the world security council intervene.

If regional organization were established at once, it would bring six powerful benefits:

1. It would give the smaller nations a greater voice, for they should be more largely represented in the regional councils and could well be given equal standing;

2. Policies which would prevent conflict are different in the three great areas and need separate organization;

3. These regional organizations would relieve the security council of many problems and controversies before they reached it;

4. Such an organization would relieve the whole mechanism of much of its present color of a military alliance of a few great powers;

5. Regional organization at once lessens the pressure for military alliances;

6. Such a regional organization would greatly relieve the anxieties of the American people and probably most nations lest they be constantly involved in secondary problems all over the earth.

There is no reason why the proposed economic, social, and political rights councils should not also be regionalized for the better handling of problems peculiar to those regions. Their top world councils would be the more free for coordination of the three great areas. It might also be worth consideration that the world court be organized with three regional courts which would act as courts of first instance in questions involving nations in that region alone.

Some objection has been raised that there would be some implied rivalry of interest between regions which would be thus emphasized. The contrary is the truth, for such decentralization would make cooperation the more easy.

ARTICLE IV

Disarmament of the enemy

My fourth proposal for the San Francisco Conference is that agreement upon continued and total disarmament of the enemy nations must be entered into either as part of the United Nations charter or a separate agreement. In any event it will have to be enforced by the security council. And it profoundly affects the whole question of peace.

Three years ago Mr. Gibson and I proposed that the enemy states must be completely disarmed and kept disarmed for an entire generation. We pointed out one of the great errors of the Treaty of Versailles in which Germany was permitted to retain a professional army of 100,000 men, supposedly for purposes of maintaining internal order. She was permitted to have a navy limited only in tonnage and types of ships.

We stated that this leeway perpetuated her professional armies and navies. It perpetuated the warrior caste and all its traditions. It afforded a skeleton army and navy of skilled men ready for quick expansion. It insured the continuity of the general staff with its military skill, brains, and ambitions. It perpetuated their know-how to make war.

Repeated experience with the warrior caste of these nations in their intimidations, aggressions, blitzes, and attacks without even declaration of war should be enough for the world in this particular. We must make a better job of it this time.

We should require total dissolution of the military establishments of all enemy nations and the substitution, for purposes of a civic order, of a constabulary of the police type, excluding the whole officer and military caste from such organization. And we should prohibit the manufacture of arms of any kind. We could thus assure the disappearance of them and their know-how from the world.

And if this were done an occupying force of men of the United Nations of a hundred thousand men in Germany and a hundred thousand in Japan would suffice. But it will need be kept there for a generation.

Reduction of armament of the United Nations

My fifth proposal for the San Francisco Conference is that disarmament of the United Nations be more definitely dealt with. The Dumbarton Oaks proposals appear to contemplate a reduction of arms of the United Nations. But having regard to the fate of the same proposals in the League of Nations a more positive program should be introduced. Obviously our present war establishments will need be reduced. But they should be reduced relatively to each other and systematically. And obviously, huge military establishments are themselves a threat of aggression which should be the purpose of any world peace organization to reduce—and quickly.

In 1932 I proposed to the then world disarmament conference that these aggressive weapons be suppressed in order to throw the military advantage into the hands of the defense and thus into the peace-loving nations. That proposal was accepted by over 40 nations. It was renewed by Mr. Roosevelt in 1933. At least it is worth reconsideration.

But of more importance is agreement now upon the maximum size of armies, navies, and air power for the principal United Nations. We should remember that after the disarmament of the enemy the only dangerous armaments are those in the hands of our allies and it is imperative that we arrive at a method by which we do not start competition with our friends with all the dangers to good will which would flow from that.

The Covenant of the League of Nations provided for limitation of armaments at some future time and the time never came so far as the efforts of the League were concerned.

Therefore there should be incorporated in the new Charter of United Nations a much more definite program for limitation of the size of military establishments in the United Nations than that provided in Dumbarton Oaks if we are not to repeat this failure of the League of Nations.

Powers of our delegate to the Security Council

My sixth proposal refers to that most thorny question for the American people of whether the American delegate on the Security Council will be given the authority to make war. This is no doubt outside the provisions of the charter, but it will face the Senate when that treaty comes up for adoption. I cannot bring myself to the delegation of such power to any one human being. That is what happens if he votes to apply either economic sanctions or military force against an aggressor. The most vital determination that can be made under the democratic process is war. It means thousands of our people are sent to death in foreign lands. To give that power to some one man who represents us is the negation of the democratic process. The other side of the question, however, is that to delay decision against an aggressor presents dangers that the whole world security may break down at some critical moment.

Extremists are perhaps exaggerating both positions. A study of a hundred years of conflicts which have led to world-wide dangers indicates very few instances, if any, where there was not time for ample consideration by the Congress.

Upon this I offer the tentative suggestion that this power should not be given to our delegate on the Security Council but to the President. And the President should be required to secure the majority vote of the joint Foreign Relations Committees of the Senate and the House on whether the issues should be submitted to the full Congress. Thus Congress would have a voice in determining both the urgency and the dimensions of responsibility. In minor and urgent undertakings there would need to be no full congressional action. If action means war with a great power, the approval of the whole Congress is essential.

Less haste and less hate

My seventh proposal for action at San Francisco does not as much concern that text as the procedure of the governments in this crisis. I have time and again urged that we should not attempt to determine a final organization for lasting peace until we have laid secure its foudations in the post-war settlements between nations.

We should take time to cool off from the hot emotions of war. Our indignation may lead us away from stern justice into vengeance. Victory with vengeance means ultimate disaster to the victor. We cannot have both peace and revenge. The men who led the world into this war should be hanged for murder and those guilty of other crimes must also be punished, but the masses of great races must be given a chance to enter the paths of peace where fear, hate, and revenge may be turned aside and die. Our purpose must be to create a regime of law and justice in the world, not regencies of hate.

We do not know the shape of things in the immediate settlements of this war. And we should take time better to understand the now unknown forces that will come out of this gigantic explosion. No human being can foresee them today. No one foresaw them at Versailles. Such forces will be more powerful than any signed documents.

I suggest, therefore, it would be great wisdom if the peoples of the world should have time in which to consider and perhaps perfect any agreement at San Francisco.

Every thinking man and woman prays for a successful issue of the Conference. The destruction of war is now so terrible and the animosities among nations have become so deep that failure to assure a lasting peace now means the end of all hopes of humanity. America has fought this war for the greatest purpose of all time. That is to secure a lasting peace. And this agreement at San Francisco will determine whether our purpose has been won or lost.

[From the New York Times of March 29, 1945]

IN THE NATION—THE PRODUCT OF BRAINS AND EXPERIENCE

(By Arthur Krock)

WASHINGTON, March 28.—Through this and other newspapers served by the North Ameri-

can Newspaper Alliance former President Hoover has now, in four brief articles, given to the public and the Governments of the United Nations the product of his mentality and experience with respect to the objectives of the San Francisco Conference on world security. The practical common sense and foresight of what Mr. Hoover modestly titled "Some Additions to the Dumbarton Oaks Proposals" make his omission from the American delegation to San Francisco the more remarkable.

It is difficult to think of any other country where its only living former Chief Executive would be excluded from such a group. But, in view of two other facts, the difficulty is increased. These facts are that Mr. Hoover is a veteran of the Paris-Versailles Conference in 1919 where a previous attempt was made to set up a world security system; and that his book, The Problems of World Peace, published in 1942 (in collaboration with Hugh Gibson), was the source of the fundamental ideas that were reduced to writing at Dumbarton Oaks. Also, Mr. Hoover is not only a veteran of Paris-Versailles, he was in the top rank of President Wilson's advisers on the League Covenant. And, furthermore, he has had more first-hand experience with the economic and social problems that follow conquest and liberation than any other living man.

Only for personal reasons could a citizen of this distinction and equipment be obliged to make his contribution in such a grave matter through books and the public press instead of in official committee and conference. Had these reasons been rejected by the President as unworthy of the times and the need of the world, Mr. Hoover, as his writings on the subject reveal, would have helped directly to insure the success of San Francisco and of the post-war security system to be drafted by the United Nations there.

HIS SIX POINTS

The four articles are simply and clearly written, and the suggestions they contain cut through many complications. Most important are these:

1. There is little in the Dumbarton Oaks draft that reflects the standards of future conduct to which all nations must adhere if war is to be minor and infrequent. "We are in danger of setting up a purely mechanistic body without spiritual inspiration or soul," wrote Mr. Hoover, and he urged the inclusion of these standards in the Charter. They are, he said, implicit in the Declaration of Independence, the Fourteen Points, the Declarations of Moscow and Yalta, and the shattered codes of international law.

2. Since it may be years before the final peace settlements are determined, including boundaries, and since one reason for the failure of the League of Nations was insistence by the victors that the Versailles peace terms were permanent, Charter should provide for periodic revision of these settlements—say every 10 years—negotiated by a Committee on Political Rights which should be added to the proposed economic and social committees of the projected world organization.

3. There should be more accent on regional peace—keeping machinery as the foundation of a world peace-keeping system, to "deal in the first instance with all controversies that might lead to war." In these small and intermediate nations would have a greater voice than they can have for years under the Dumbarton Oaks Charter. And the anxiety of Americans, among others, that they may find themselves "involved in secondary problems all over the earth" will thus be relieved.

The regional method should also be employed with the social, economic, and political rights committees and with the new world court.

4. Total disarmament of the enemy nations, their internal order to be kept by a constabulary, should underlie the charter, so that occupying forces of 100,000 soldiers each in Germany and Japan would suffice to keep these nations demilitarized—though these forces would have to remain for a generation. But, as a corollary, an agreement should be reached at once on maxima of army, navy, and air power for the United Nations themselves, taking into account the burden of peace keeping on the Big Three for the first few years.

LIMIT ON COUNCIL MEMBER

5. Not to our delegate on the security council, but to the President, should be given the authority for a vote by that delegate that would engage the United States in war. And this power should be limited by requiring the President to abide by the decision of the majority of a joint congressional committee on foreign matters whether he should submit the issue to the whole Congress.

This is not a matter for San Francisco, but it is proposed for inclusion in our treaty of adhesion to the charter of the world security league that is intended to be written there.

6. As many parts of the San Francisco structure as possible should be set up tentatively so that time may be given to perfect them in the light of change and experience.

These six points were the major ones made by Mr. Hoover in his newspaper articles. The Government over which he once presided did not ask for them. But, if the unacknowledged use of his 1942 book is a guide, and the former President's wisdom is received according to its need and value, the suggestions will affect the conclusions.

Questions on Voting Plan Unanswered by Mr. Stettinius

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, April 2 (legislative day of Friday, March 16), 1945

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washington Evening Star of March 31, 1945, entitled "Stettinius Refuses To Answer 33 Questions on Voting Plan."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STETTINIUS REFUSES TO ANSWER 33 QUESTIONS ON VOTING PLAN

Thirty-three questions regarding the Big Three agreement to seek additional voting power for Russia and the United States in the general assembly of the proposed world peace organization were submitted to Secretary of State Stettinius at a news conference today. Twenty-seven of them were prepared in advance by a group of reporters and more were asked verbally. Mr. Stettinius refused to answer the questions but promised he would try to answer some of them next week.

R. H. Shackford, United Press correspondent, read the 27 prepared questions to Secretary Stettinius after Leon Pearson, International News Service correspondent, explained to the Secretary that they had been drafted by a group in the State Department press room as representing "what has come into the minds of most of us regarding this matter."

He added that the questions were presented "not merely in an effort to get a story" but because reporters felt that "more than a general statement of assurance" was necessary to allay apprehension in the public mind.

QUESTIONS RAISED

These were the questions:

1. Were there any other secret agreements on the Dumbarton Oaks plan made at Yalta?

2. Were there any other secret or as yet unrevealed agreements on any other subject made at Yalta?

3. Why did the United States consider it necessary to keep such an agreement secret?

4. Since the assembly agreement was kept secret 47 days and finally revealed only after the Herald Tribune dispatch on it, the assumption is that it was intended to spring the proposal without advance announcement at San Francisco. Do you care to let that assumption stand?

5. If not, why was it held up for 47 days?

POLICY OF SECRECY

6. How does this policy of secrecy fit into the State Department's professed new policy of taking the people into their confidence and of building a people's foreign policy?

7. Dispatches from London this morning said British officials were surprised at the White House announcement, especially the reference to three votes for the United States. Their understanding was that the Yalta secret agreement concerned only three votes for Russia. Can you explain that difference?

8. Will the Ukrainian and White Russian republics have separate representatives and thus a separate vote at San Francisco?

9. Why does the United States consider it necessary for the United States and the U. S. S. R. to have more than one vote in the assembly?

WHAT OF CHINA, FRANCE?

10. If the United States and U. S. S. R. are to have three votes wouldn't France and China be justified in asking for more than one?

11. Wouldn't some of the middle powers like Brazil, the Netherlands, Mexico, etc., be reasonably expected to ask for more votes than El Salvador, Liberia, and Saudi Arabia?

12. Do we consider that three votes for France are provided through Syrian and Lebanese representation?

13. Were France and China advised of the secret Yalta Agreement? When?

14. Were any of the other countries advised of it?

15. Were the members of the United States delegation advised of the secret agreement, and if so, when?

WHO DECIDED ON SECRECY?

16. Whose decision was it to keep the agreement secret?

17. Does the secret Yalta Agreement on the assembly in effect amend the Dumbarton Oaks plan so far as the Big Three are concerned?

18. Does it also nullify principle No. 1 in chapter 2 of the Dumbarton Oaks proposals which say that the basis of the organization shall be the sovereign equality of all nations?

19. How will the principal of sovereign equality be expressed now that at least two nations want an unequal distribution of votes in the assembly?

20. One of the main arguments against the charge that the Big Three will dominate the new organization has been the equal position of all nations in the assembly. What will be the new United States "line" on this point?

PROPORTIONAL REPRESENTATION

21. Has any consideration been given to the possibility of proportional representation on the assembly in view of this development?

22. The United States is now committed by the President to support the Russian proposal at San Francisco. Can you tell us to what length the United States is prepared to go to fulfill that commitment?

23. In the absence of any explanation it is assumed that the Russian move is prompted by a desire for a closer parity with the British Empire in the assembly. Do you wish to let that interpretation stand unchallenged?

24. If that interpretation is not correct, why wouldn't the United Kingdom also demand three votes?

25. Doesn't the fact that she has not asked for parity with the Soviet Union and the United States support the theory that she already has a block of at least sympathetic votes in the dominions?

HOW WILL VOTES BS CAST?

26. How would the United States' votes be cast? Would one man cast all three or would there be separate representatives for such territories as Alaska, Hawaii, etc., such as the Russians contemplate?

27. Do we really want any nation to have more than one vote in the assembly or was our request for three votes merely an indication of opposition to the Russian request?

28. Some of the Latin-American countries are unions of states like the United States. Would not the American countries by the same token be entitled to three votes in assembly?

29. In the discussions between the United States and the Latin-American countries, the United States assured them that the organization would be built on the principle of equality and sovereignty of all states. Does not this secret agreement negate those American assurances?

PERMANENT SEAT FOR BRAZIL

30. Is it true that at Yalta, as has been reported, the Three Powers agree to give one Latin-American country, presumably Brazil, a permanent seat on the council?

31. Was it also agreed to give the inter-American system the right to settle disputes in this hemisphere?

32. Mr. Secretary, this is a matter that perhaps has no relationship to the questions at hand, but is the autonomous status of the White Russian Republic and Ukraine such that we could exchange Ambassadors, just as we exchanged Ambassadors with Canada and other dominions?

33. I wonder if you would deal with the assumption that the State Department regards the British Government as, say, controlling the votes of Canada and Australia?

Faithful to "Their Appointed Rounds"

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 26, 1945

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD I include an excellent editorial on H. R. 2071 which appeared in the Daily Argus published at Mount Vernon, N. Y.:

FAITHFUL TO THEIR APPOINTED ROUNDS

Before the Seventy-ninth Congress is House Resolution 2071 behind which, we are confident, will be the support of a large majority of the residents of this city as well as of Westchester County. It is a bill designed to lift salaries of postal employees to meet increased living costs.

Note that this is not an appropriation measure to offset wartime increases of living costs. Postal employees have not received a salary increase since 1925 and they receive less pay for overtime than they do for regular time.

There is at present a $300 bonus, but this expires on June 30. And even with due consideration of this bonus, 20 years is entirely too long a time to wait for adjustment of salaries to meet the advances in living costs which have come in those two decades.

H. R. 2071 proposes to give mail carriers in city delivery service pay ranging from $1,700 to $2,700. There is also provision for an 8-hour day, compensatory time for work on Saturdays, Sundays, or holidays; overtime pay in emergencies requiring more than an 8-hour workday; a 10-percent differential for night work; a 15-day vacation with pay.

The bill in general raises salaries of postmasters, clerks, and other postal employees, but it is the faithful letter carrier in whom we are most interested. Of these, says Herbert Gebhardt, of Yonkers, secretary of the New York State Association of Letter Carriers, comprising 11,000 members:

"Our contact is the closest of any service employee throughout this Nation, and no matter how tough the weather may be or how large a load we have to carry, our good friends, the general public, look for us around the same time every day. And very seldom do we fail them.

"For some reason, the powers that be have given us the so-called runaround and stagnated us to such an extent that we cannot continue under such a foreign existence. We want to live like real American citizens."

Those are true words. The average letter carrier is a friend to nearly all upon his route. He comes to know the members of the families, their troubles and their jobs, and to share in them, albeit vicariously. To him, the delivery to a family of a delayed letter from a boy over there is as welcome responsibility as it is a comfort to those who receive it—and probably detain him to hear excerpts. Day in and day out, he plods his way with heavy pack but a faithful heart.

It was Herodotus who wrote, and Woodrow Wilson who translated, that excellent tribute engraved upon the facade of the general post office in New York City: "Neither snow, nor rain, nor heat, nor gloom of night stops these couriers from the swift completion of their appointed rounds."

We suggest that the time has come when those who agree with that sentiment should do something about it. The best thing would be to let your Congressman and your Senator know that you favor early passage of H. R. 2071.

The Seaway Project

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit an editorial from the Courier and Freeman of Potsdam, N. Y., in favor of this great project:

THE SEAWAY PROJECT

The St. Lawrence Seaway project is being promoted in the Congress again and as usual a few selfish interests are opposing it.

As this newspaper and all its resources have been and are back of the project, it may be in order to restate a few facts about it which are being overlooked in the hysterical headlines being written in some publications.

The suggestion that the project should be further investigated is an idle one. For more than 50 years surveys have been made from every angle. Our great Army Engineers, great civilian engineers specializing in hydroelectric developments, and personnel of the most conservatively operated corporations have found that the project is feasible and economically sound.

In some quarters the suggestion has been made that the water-power phases of the project be developed and the shipway idea dropped. This is not practical, and it is of doubtful origin. For more than 3 centuries our great northern river has been a seaway, and it already carries a great traffic. Provision would have to be made for these river steamers. It has been established that, when the water-development phase of the project is complete, the actual seaway phase requires a comparatively small amount of additional capital and work for its completion. This shipway, it will be remembered, is short. Most of the river is already a deep seaway.

Opponents, particularly along the Atlantic coast, often suggest that because the river is frozen over for 3 or 4 months a year, the project is not economically sound. In the first place winter conditions would not interfere with the making of electric power. In the second place, the suggestion does not follow historical practice on this continent. Our Great Lakes, which are really great inland seas, also are blocked at points for a few short winter months. This natural condition has not stopped the United States and Canada from spending hundreds of millions of dollars to improve the shipways between the Lakes.

This project cannot be branded a New Deal plan either. About 30 years ago a great private corporation tried to get permission to carry out the project. They failed because it was held, truly, that this great natural potential wealth is owned by the people of the State of New York and the people of Canada.

The opposition from railroad groups is based on the premise that the seaway would hurt this great and vital industry. This fear is not borne out by precedent. It is obvious that the great flood of cheap power this project would bring could stimulate the starting of more industries in this and nearby States, making more jobs and more goods, naturally increasing the use of railroads for transporting raw and finished materials.

It can be stated from experience that opposition to the seaway is local in nature in that those who are against the plan are alarmed without cause by the fear that it would harm a particular industry or port.

We in the East have watched great projects like Boulder Dam carried through; it is time that this great natural resource in this region be put to work to make jobs, to make goods, and to end the waste of nature's bounty.

Farmers' Labor Troubles Are Real

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. HILL. Mr. Speaker, as emphasis is being placed at the moment on the shortage of beef and pork, let us not lose

sight of the imminent, critical shortage of other food products.

I direct the attention of the House to the critical shortage of sugar. Now they tell us the Philippines will not be able to provide sugar even for their own consumption in the present or the near future. The price control program on sugar by the O. P. A. has been based on the theory of freezing consumer prices on sugar at a pre-war level. This sugar price control program of O. P. A., coupled with labor shortages and the disregard of the Tydings amendment by Selective Service in inducting essential and irreplaceable farm workers, aggravated by a shortage of necessary farm machinery, certainly does not indicate that a solution for the shortage of sugar is a possibility in the immediate future.

The Sterling Advocate, of Sterling, Colo., in a forthright and clearly stated editorial in its paper of Tuesday, March 27, 1945, outlines to its readers the serious condition facing the increasing of beet acreage in their community:

FARMERS' LABOR TROUBLES ARE REAL

The Government has asked substantial increase in sugar-beet acreage during 1945. And the request is wholly logical; the quick-energy food is imperatively needed at home and on the battlefronts.

Colorado, and the Sterling district, can do more than any other region to meet this crisis of wartime. The capacity to produce beets has been proved. But—

In the Sterling district farmers have contracted to grow 1,034 acres of beets, with the condition that if their sons or experienced farm workers are taken by the draft the beet production will be canceled. Moreover, 516 potential acres may or may not be contracted for beet production, as the needed workers are left or taken for military service.

In practically every instance, the Advocate is advised, the farm family has given one or two, or even more, sons to the armed forces. Logan County is a farming community; it has not been slacker in any particular of this global war. And no respectable citizen desires it to fail in any responsibility.

The Advocate does not, of course, have documentary evidence. But on basis of many bits of circumstantial evidence, and the statements of numerous persons who have seen much of war industry, we are convinced that relatively the farmers' labor problems are particularly acute, and selective-service officials at the top (the local board is in no sense condemned) fail to comprehend the gravity of the manpower needs in the production of food.

There is no hoarding of labor on the farms—farming would never stand that expense. There are no 40-hour weeks. And there has been no feather bedding.

In the Sterling district, the Advocate well knows, the farm-labor problem is a compelling reality and not a theory. Possibly in a few cases there is maneuvering to avoid military service, but generally the farmers and their few workers are doing a job that for long hours, toil and sweat, if not for danger, compares with the demands of military service.

One of the great faults of selective service, as it has been in the present war, it seems to the Advocate, has been its inability to determine and adhere to a straight line of policy. The unpredictability of its course has kept industry as well as individuals in uncertainty year after year, as the beet growers are now up in the air.

As Broad as Humanity

EXTENSION OF REMARKS

OF

HON. HAROLD H. EARTHMAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. EARTHMAN. Mr. Speaker, in my opinion, nothing has done more to aid farm families over the Nation than has T. V. A. In addition to this aid, I am certain that we are all aware of the great reduction in electric rates made available to the multiplied thousands of homes in the urban districts of the Nation. In the post-war period I hope to see ample funds provided to the Rural Electrification Administration which will cause wholesale expansion and extension of rural electric lines to the farm homes located even in the remote sections.

The following editorial is from the Nashville Tennesseean:

AS BROAD AS HUMANITY

A lot of people have been wondering what T. V. A. is going to be able to do with all its electric power when war uses taper off. A linked question is what is going to happen to T. V. A. revenues ($14,000,000 net last year, or 4 percent on the public's investment in power facilities) when big industrial consumers drop back to a normal rate of production.

These matters were discussed this week by G. O. Wessenauer, manager of power for the Authority. His forum was the Senate Small Business Committee. T. V. A. anticipates, he said, stiff cut-backs in power use in the aluminum industry and in other war-production plants.

"But we will shut down some of the steam plants. * * * We will again offer some surplus secondary power to industries and utility companies, * * * and, most important, we will do all we can to encourage the abundant use of electricity in the homes and on the farms of the Tennessee Valley and in the stores and small businesses which can make so much more effective use of electricity. * * *

"We may not be able to continue to earn a return of 4 percent on the Nation's investment in the T. V. A. power program, * * * but we will stop a long way short of going into the red. * * *

"We are relying primarily upon our conviction that the use of electricity by half a million small consumers in the Tennessee Valley region will show a very rapid growth soon after the war."

Popular use of power has always been the insurance of the success of T. V. A.'s power program, and Mr. Wessenauer has good grounds for the conviction that the half a million small consumers hereabouts will be taking more power rapidly as soon as appliances again are available. Every new consumer on the line will be eager to equip with modern electrically operated devices and old consumers will be eager to add to the comforts and services they already possess. Up to the war, per capita consumption of electric current in this region soared far above the average for the Nation. After the war, the trend will resume where it left off.

For the people of the Tennessee Valley region have in their own homes and the homes of their neighbors a constant demonstration of the lift of living abundant electricity makes possible. They know what they want, and they have put their rivers to work to supply them. And because electricity—cheap electricity—can enter to serve even the humblest home, the support of T. V. A. power is as broad as the humanity it reaches or can reach. Here the curve of power use will continue to rise—and the standard of living with it.

Ratification of the Bretton Woods Proposals

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. BIEMILLER. Mr. Speaker, to my mind, prompt ratification of the Bretton Woods proposals for an international bank and an international currency fund is one of the most urgent problems confronting this Congress. I sincerely hope that we are to have a favorable report on the bill to ratify these proposals immediately after the spring recess.

The Milwaukee Journal, one of the most important organs of opinion in the Middle West, has consistently advocated the ratification of the proposals without amendment at this time. In extending my remarks, I wish to read into the RECORD three editorials from that paper dealing with the Bretton Woods agreement:

[From the Milwaukee Journal of February 14, 1945]

RATIFY BRETTON WOODS PROPOSALS

The Bretton Woods proposals for an international bank and an international fund to facilitate rebuilding of war-ruined industries and to encourage consequent revival of world trade must be accepted by each of the 44 governments represented at the conference if they are to participate.

Without acceptance by the United States and Britain and Russia, it is doubtful that the bank or fund could prove effective. It is for this reason that President Roosevelt has twice urged Congress to take the lead in ratifying the Bretton Woods proposals.

The arguments for ratification seem overwhelming, with the objections running more to details than to principles. The feeling of Bretton Woods proponents is that if the United States starts quibbling over details, and sets a pattern for other nations to quibble, the entire work of the conference may prove in vain.

No one, even with the greatest optimism, believes that the bank or fund would solve all, or even most, of the problems of foreign exchange and international trade. But the proposals offer hope that some difficulties can be minimized.

In this country, and in England, the principal objections come from bankers, though not from all by any means. Some of the best financial men advocate ratification of the Bretton Woods proposals. Part of the hostility is merely opposition to anything new. Wall Street, for instance, opposed the Federal Reserve System when it was first proposed. One writer has said there is opposition by some bankers who have a kind of dog in the manger attitude and no program for the revival of international lending, but hate to see the Government do it.

In view of the billions of dollars unwisely lent abroad by bankers in the twenties, and subsequently lost by American investors, it does not seem reasonable that the objections of these gentlemen should be given great weight.

A good many of the suggestions of the American Bankers' Association are thoughtful, but—since they agree in principle with the Bretton Woods outline—it would seem wiser to ratify the proposals as the 44 nations worked them out than to risk losing all by starting a confusing series of amendments and changes.

The Bretton Woods proposals, as the president has pointed out to Congress, are not panaceas, nor do they stand by themselves. They are part of several closely related plans for international cooperation—like U. N. R. R. A., Dumbarton Oaks, the Crimea Conference, and the forthcoming conference at San Francisco.

With all of these undertakings we must build toward a peace to be secured by international cooperation. The Bretton Woods proposals should be ratified.

[From the Milwaukee Journal of February 21, 1945]

REPEAL THE JOHNSON ACT

The Johnson Act was passed in 1934 because of debt defaults related to World War No. 1 and the great depression that began in 1929. It prohibits foreign loans to countries in default to the United States, with certain exceptions authorized by Congress. Even the Export-Import Bank was put under the terms of the act in 1940.

The purpose of the act was more or less to punish delinquent debtors; also, to keep us from throwing good money after bad. Whether it was wise or not—and the evidence is that it was too arbitrary a manner of dealing with a world, much of which was facing financial near collapse—the Johnson Act is now far out of date.

The Second World War has intervened and has created new problems, economic and financial. As we recover from this war, we must start building on conditions as we find them in the world. We cannot stagnate and keep our economic and financial hands tied because of conditions that were caused by World War No. 1 and the depression.

This country, possessing 75 percent of the monetary gold and the greatest demonstrated wealth-producing capacity of any nation, must approach the future without restrictions imposed by the past.

If the Export-Import Bank is to function at its best, if the proposals drawn up by 44 nations at Bretton Woods for an international bank and an international fund are to work, if world trade is to redevelop and commerce revive, we must have a free hand.

We cannot sit brooding over our disproportionate hoard of world credit, refusing to facilitate an international economic revival, merely because some nations defaulted to our fathers and grandfathers.

The Johnson Act has outlived any usefulness it ever had. It should be repealed.

[From the Milwaukee Journal of March 27, 1945]

BUSINESS AND BRETTON WOODS

The Committee for Economic Development, through its research committee, recommends, on the whole, the adoption of the Bretton Woods program. This is the first stand on the Bretton Woods question that has been taken by large or important representatives of general business.

Although the C. E. D. research committee favors certain minor changes, it says it would not wish to have its suggestions for strengthening the proposed international bank delay approval of the entire plan—that the enlarging of the international bank's powers might be made at "an appropriate time."

The C. E. D. committee makes clear that, while it seeks limited changes, it is not opposed to the fund in the sense that the American Bankers' Association and the New York State Bankers' Association are. The committee, viewing the importance of the long-range goal, if there are "weighty political and diplomatic considerations." There are.

The C. E. D. report is helpful and realistic. It is also important, coming, as it does, from a committee, including such men as two Federal Reserve bank presidents, a vice president of J. P. Morgan & Co., the president of the Studebaker Corporation, and the president of the Chamber of Commerce of the United States.

Since the Bretton Woods proposals were developed by representatives of many nations, it would seem wise policy for our country to get the plan started by accepting it as it is. If we begin to insist on modifications as a basis for acceptance, many of the other nations may insist on other changes—and we may not get started at all.

The minor objections that have been raised to the international bank, and the somewhat stronger objections to the international fund, do not seem important enough to risk losing the entire program. Let's accept both the bank and fund—and then work for modifications later, if they appear desirable or necessary as experience indicates.

The C. E. D. report is highly heartening, showing a forward looking attitude on the part of big and responsible business interests. It is a far more progressive attitude than that shown by the majority of American bankers. The country has the right to expect leadership from its bankers. We have not received much in the past; we are not receiving it now.

Counsel of Churches Vital to Just Peace

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include a column from last week's Washington Evening Star. This column includes some very thoughtful observations by the outstanding columnist and essayist, Mr. David Lawrence:

COUNSEL OF CHURCHES VITAL TO JUST PEACE—OBSERVER RECALLS PRONOUNCEMENT OF CATHOLIC BISHOPS LAST FALL

(By David Lawrence)

Again and again in the last 5 years or more people have cried out: "Why must there be war? Where was the church in the years that led up to the Second World War?"

Sensitive perhaps to this questioning, the Catholic bishops of America and the Federal Council of Protestant Churches, as well as Jewish groups, are expressing themselves rather frankly on current problems and especially on the Bill of Rights or provisions of the general international organization to be set up to maintan peace.

Whether the statesmen or the politicians or the exponents of expediency as against principle will accept the counsel of the churches, with their plainly disinterested advice, remains to be seen. Already the so-called practical school of thought is trying to disparage the defenders of principle and to belittle them as "perfectionists." But it is doubtful whether this will either discourage or drown out the voice of the church groups.

Approximately 2,000 years have passed since the code of Judeo-Christian ethics was given to the world and yet the time for the application of that code is suggested always as being somewhere in the dim distant future—certainly not now.

BASIC EQUALITY OF RIGHTS

One utterance in particular, however, stands out as not likely to lie dormant. It is the pronouncement of the Catholic bishops of America who met for several days last autumn and on November 19 issued their statement of principles, which in part reads as follows:

"We have no confidence in a peace which does not carry into effect, without reservations or equivocations, the principles of the Atlantic Charter. We feel, too, that it should provide assistance for prostrate nations in reconstructing their economic, social, and political institutions. If justice is compromised, if unreasonable concessions are made to might, grievances will rankle in the bosom of aggrieved nations to endanger the peace of the world. If prostrate nations are not assisted in giving to their peoples fair economic opportunities, they will become the arena of civil strife and turmoil. No international organization will be able to maintain a peace which is unfair and unjust. * * *

"The international institution must be universal. It must seek to include, with due regard to basic equality of rights, all the nations, large and small, strong and weak. Its constitution must be democratic. While it is reasonable to set up a security council with limited membership, this council must not be an instrument for imperialistic domination by a few powerful nations. Before it every nation must stand on its rights and not on its power. It must not allow any nation to sit in judgment in its own case. Frankly it must recognize that for nations as well as individuals life is not static. It must therefore provide in its charter for the revision of treaties in the interest of justice and the common good of the international community, as well as for the recognition of a people's coming of age in the family of nations. * * *"

IDEOLOGY OF A NATION

"The ideology of a nation in its internal life is a concern of the international community. To reject this principle is tantamount to maintaining that the violation of the innate rights of men in a country by its own government has no relation to world peace. Just at this moment, in the interest of world peace, our nation is exerting itself to root out some ideologies which violate human rights in the countries we are liberating.

"We hold that if there is to be a genuine and lasting world peace, the international organization should demand as a condition of membership that every nation guarantee in law and respect in fact the innate rights of men, families, and minority groups in their civil and religious life.

"Surely our generation should know that tyranny in any nation menaces world peace. A nation which refuses to accord to its own people the full enjoyment of innate human rights cannot be relied upon to cooperate in the international community for the maintenance of a peace which is based on the recognition of national freedom. Such a nation will pursue its own selfish international policies, while paying lip service to international cooperation."

It is interesting to note how the suggestions that are coming from various quarters for amendment of the Dumbarton Oaks plan are founded on these simple basic principles of the great declaration by the Catholic bishops.

Manpower Control and Freedom of Man

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. AUGUST H. ANDRESEN. Mr. Speaker, I know that the Members of the House of Representatives and the people of the United States will be interested in reading the convincing editorial on the "work or jail" bill, the passage of which was demanded by President Roosevelt of the Seventy-ninth Congress, which was written by Mr. Elmer W. Olson, the managing editor of the Daily Republican Eagle, of Red Wing, Minn. The editorial, which appeared in the Daily Republican Eagle on March 28, 1945, is herewith quoted in its full text. Mr. Olson deserves the praise of every true American for his courageous and timely warning against further encroachment upon the lives of freedom-loving Americans.

MANPOWER CONTROL AND FREEDOM OF MAN

For those who juggle records of Congressmen when election time rolls around, it might be well to mention for the record here that Congressman AUGUST H. ANDRESEN, of this district, was one of 160 Representatives who voted against passage of the manpower control bill passed by a 7-vote margin in the House Tuesday. Representatives GALLAGHER and STARKEY, both Democratic-Farm-Labor Members, voted for passage. Labor has denounced the bill as being a long step on the road to serfdom, a tyranny and a slavery-brought-up-to-date measure. Other State Republican Representatives who voted against were H. CARL ANDERSON and JOSEPH P. O'HARA. Final decision rests with the United States Senate.

If ever there was a measure devised to control the actions of American citizens so that they might dovetail with objectives of the planners who appear to be gradually taking over the conduct of national affairs and guide not only the actions but even the thinking of the people, this manpower edict has all the earmarks of being the one. It would freeze men and women workers of all ages in whatever jobs are deemed essential by those in authority; it would fix manpower ceilings on industries and in any area designated by those in authority as shortage areas; it would give this over-all authority into the hands of one man; it would provide prison terms and heavy fines for either employe or employer who violated the terms.

The time may come when American citizens look back and wish there had been more men in Congress with the courage to vote against a law of this type which strikes at the very roots of democracy and is but another step along the road that leads to systematic planning which, unless checked, can lead only to a regimented and central-controlled existence that will be entirely different from anything Americans who had a hand in making this Nation great, have known. Not even the excuse of war's demands nor the threat of future wars, nor the necessity of preparing to combine with other nations in a hook-up ostensibly designed to maintain peace can be successfully masqueraded as any valid reason for this inroad on the rights of free men and women. And the promise that this and other similar controls are only for the duration and will be shelved once the emergency is over, is only a promise and no guaranty. Too often, as great men in American life have warned time and time again, and the history of other nations proves, rights and liberties freely sacrificed in the time of emergency are never regained once the emergency is passed.

Ghosts of Yalta Rise to Peril League Plans, Frisco Parley

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Sears Henning:

GHOSTS OF YALTA RISE TO PERIL LEAGUE PLANS, FRISCO PARLEY—F. D. FACING GREATEST DIPLOMATIC CRISIS AS SECRETS ARE BARED AND STALIN BALKS

(By Arthur Sears Henning)

President Roosevelt is facing the greatest diplomatic crisis of his career. The fate of his post-war plan for a world peace organization hangs in the balance.

With the withdrawal of Russia from the San Francisco Conference on the Dumbarton Oaks peace league plan or a postponement of the conference looming as possibilities, all is confusion on the New Deal front.

DELEGATION SPLIT

Mr. Roosevelt's handsome, jovial, backslapping Secretary of State Stettinius is at his wit's end and waiting for a directive from the President.

The delegation the President named to the San Francisco conference is hopelessly split on his promise to Stalin to deliver it in favor of three votes for Russia in the new league-of-nations assembly.

The New Deal poet laureate, voluble Assistant Secretary of State MacLeish, has been struck dumb by the revelation of the secret Yalta agreement repudiating his radio script stating that each nation would have but one vote in the Assembly.

STALIN PRECIPITATES CRISIS

The only calm figure in the New Deal aggregation is Senator CONNALLY, chairman of the Senate Committee on Foreign Relations and deputy chairman of the San Francisco delegation. He knows where he stands—with the President wherever he stands.

The crisis was precipitated by Soviet Dictator Stalin's demand that his Russian-sponsored puppet government of Poland be invited to the San Francisco conference and by the refusal of Great Britain and the United States to accede to the demand as a violation of the Yalta agreement.

The refusal of Great Britain and the United States to accede to the Russian demand constitutes a rebuff for the Soviet dictator that he may not be inclined to take sitting down. There are lively apprehensions in official quarters that he will retaliate with a withdrawal of his delegation from the San Francisco Conference.

WOULD BE BODY BLOW

That would be a body blow for Mr. Roosevelt, who has staked his political future on the erection of a post-war peace preservation scheme stamped with his imprimatur. Without Russia a world peace league could not be organized even on paper.

The collapse of the San Francisco Conference would also be a serious blow to the British, who would have lost their Empire but for American aid in this war and seek through a new league of nations to assure American protection in the future.

At Yalta Stalin learned the overweening ardor of Messrs. Roosevelt and Churchill for Dumbarton Oaks and made no bones of his contempt for this and other schemes to organize peace.

He underlined this contempt by appointing a delegation to San Francisco headed by a minor functionary, Gromyko, Russian Ambassador to the United States, instead of Foreign Commissar Molotov.

REBUFF FOR F. D., CHURCHILL

This was generally regarded a rebuff for Mr. Roosevelt and Mr. Churchill and a delicate hint that Stalin was not taking the project seriously and wouldn't hesitate to kick over the traces completely.

Ever since Yalta Stalin appears to have been playing upon Roosevelt's and Churchill's desperate need of him to make San Francisco a success.

As the matter is viewed here, Stalin probably is maneuvering to force Britain and America to agree to the inclusion of pro-Russian members in the reorganized Polish Government under the implied threat that otherwise he will kick out of San Francisco.

He might withdraw from San Francisco because of a refusal to invite his Polish Government just as he kicked out of the International Aviation Conference at Chicago last November, ostensibly because among other participating countries were Switzerland, Spain, and Portugal, which he accused of being anti-Soviet.

Speculation revolves around the possibility that Mr. Roosevelt will seek to appease Stalin sufficiently to keep him in the San Francisco picture. The President began appeasing Stalin at Teheran, where he gave tacit agreement to Russian partition of Poland and continued lend-lease unconditionally because, said New Deal apologists, Stalin otherwise might pull out of the war and make a separate peace with Hitler.

"LAST RESORT" FOR ROOSEVELT

The President continued his appeasement policy at Yalta, where he assented to the settlement of all the matters at issue substantially on Stalin's terms. He agreed to the partition of Poland and to a formula for establishing governments in the liberated countries under which Stalin is having no difficulty in dictating Communist regimes. He agreed to Stalin's demand for a veto on use of force by the peace league against an aggressor and to Stalin's demand for three votes for Russia in the league assembly.

Special Consideration for the Few—Prosecution, Lawsuits, and Fines for the Many

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the following article in the Sunday Star of April 1 is another exhibition of what is happening:

MILK PRODUCERS IN D. C. AREA SEEK PRICE BOOST—SUBSIDY TO PREVENT RISE TO CONSUMERS IS HELD LIKELY

(By Malcolm Lamborne, Jr.)

Milk producers in the Washington area will seek an increase of 49 cents per 100 pounds in the price of fluid milk when the War Food Administration opens a public

hearing here April 16 on proposed changes in the Federal milk marketing order for this area, it was learned yesterday.

The 49-cent proposal would have the effect of hiking the retail price of milk by 1 cent a quart, according to W. F. A. sources.

However, should producers receive the increase, it was considered likely that the increase to consumers would be avoided through some subsidy arrangement.

CALLS INCREASE NECESSARY

Bruce B. Derrick, executive secretary of the Maryland and Virginia Milk Producers Association, said the price increase was necessary to compensate producers for higher production costs and to more nearly align Washington prices with those paid for milk in nearby markets.

He pointed out that dairymen's wages have risen materially since 1941, while hay now costs between $55 and $60 a ton compared with $25 a ton in January 1941.

Meanwhile, the W. F. A., with the approval of Economic Stabilization Director William L. Davis, announced it was extending unchanged through April its dairy subsidy program with payments ranging between 60 and 90 cents per 100 pounds for milk. The W. F. A. originally had planned to cut the payment back to 35 cents starting today. Producers in this area have been receiving a subsidy of 80 cents per 100 pounds.

OFFICIAL SUPPORT GIVEN

The announcement said the extension was found neeessary after a review of current costs of milk production. Officials thus lent support to the association claim for a flat increase in milk price.

W. F. A. cited higher prices for hay, higher farm-wage rates, and a decreased farm-labor supply as primarily responsible for the postponement of the seasonal cut in payments. Dairy production payments were initiated by the Government in October 1943, when milk production began to fall.

Proposed changes to be discussed at the hearing, to be held in the United States Chamber of Commerce auditorium, include:

Extension of the marketing area to include the urban area of Arlington County and the city of Alexandria, and the extension of the milkshed to include producers shipping milk to a country receiving station at Cumberland, Md.

WANT MARKET-WIDE POOL

Substitution of a market-wide pool for the individual-handler plan now in effect. Under the new plan, the total quantity of milk sold by all producers to distributors in the market would be pooled and each producer would be paid according to the amount of milk he has sold regardless of the use made of the milk by the distributor.

Establishment of a fund from payments due producers encourage greater milk production in the months of seasonally low output. Under the amendment, a specified sum would be withheld from producers' return in April, May, and June (months of peak production) and to be used as a bonus in September, October, and November, when milk production takes a drop.

Reclassification of milk which would define class 1 milk as milk used for fluid consumption, including buttermilk and flavored milk; class 2 milk to mean that used for cottage cheese and table cream; and class 3 milk to mean that used for making ice cream and butter.

When and if you read this article keep in mind some of the situations that have transpired in the past. I do not care to discuss the merits or demerits of these Virginia milk producers' demands but I do ask that you consider their demands in the light of what the Office of Price Administration and the War Food Administration have been doing to the dairymen of the sections of the country that have really given the increased milk production needed for the war.

First. I wish to call your attention to the fact that these Virginia producers are receiving $4.05 per hundredweight for their milk; a subsidy of 80 cents per hundredweight and now ask another 49 cents per hundredweight which is expected to be another subsidy.

Second. I wish to call your attention to what is going on in Wisconsin at this time. The producers marketing their products through coops are being sued by the O. P. A. although they received less than $2.65 per hundredweight for milk being used as a war food. The details of this unfair attack on these Wisconsin Coops can be found on page 2963 of the March 29 issue of the CONGRESSIONAL RECORD. I am not upholding any group for violating the law. No law was violated by these producers. There is not even a dollars-and-cents ceiling on their product even today.

Third. We see the milk used for domestic consumption supported, subsidized, and subsidized at the very time the bungling bureaucrats are harassing, persecuting, suing, and exacting fines from the dairymen that are producing the war dairy products. This is not only unfair, unjust, and senseless but these same bungling bureaucrats are and have harmed the war dairy program.

Fourth. You will note the article states that hay is $55 to $60 per ton. Where is the O. P. A.? The producer of hay has a ceiling price on his hay of about $20 per ton. Is the O. P. A. only for the purpose of putting a strait jacket on the producer? The O. P. A. ceiling on alfalfa hay on the farm in Virginia is $24 to $27 per ton, according to the O. P. A.

Fifth. These complaining Virginia producers are able to come to Washington headquarters and personally state their grievances, but out in Wisconsin the producers have to listen to the diatribe of individuals who evidently have their jobs through political expediency and hold them by trying to think up reasons to justify their existence and their jobs.

Sixth. Before too much damage is done the war dairy food program someone had better wake up to the fact that Wisconsin milk goes largely for war uses, and also wake up to the fact that one-fourth to one-third of the increase in national milk production has come from this one State. Even in 1944 with all the ill-advised harassing, Wisconsin accounted for over one-third the increase in national milk production over the previous year. And remember Wisconsin did this at a time that other leading dairy States, such as Minnesota, Iowa, and New York, showed less milk production than in the previous year.

Seventh. Last feed season Virginia dairymen received over $1,100,000 worth of free hay. This hay went to the "needy as well as the greedy." It was handled in a sloppy manner and no one seems to know whose cows ate the hay. Since Virginia produced only 1,600,000 pounds of milk in 1944 this hay gift in this political dust bowl of $1,100,000 is a rather substantial subsidy to be receiving on the side.

Eighth. You note from the article they expect an additional subsidy. Do you wish to provide funds for an additional 49 cents per hundredweight subsidy for a small group already receiving $4.05 per hundredweight, and 80 cents per hundredweight subsidy where the milk is domestically consumed, at a time when a Government agency is suing a large group of dairymen receiving less than $2.65 per hundredweight and 25 percent less subsidy for their milk, and milk that is being used for war purposes?

Ninth. I wish to call your attention to the fact that in 1944 farm labor in Virginia was $54.90 per month and in Wisconsin $82.50 per month and in North Dakota, another low milk price State, labor was $109 per month.

Does it make sense to anyone to urge a group to produce more milk and even pay them 60 cents per hundredweight for increasing the production and then turn around and bring suit against them when the O. P. A. has not to this very day put a dollars and cents ceiling on the product? Are other groups to enjoy a cost-plus formula and the Wisconsin milk producers a cost-minus formula?

Tenth. Before the O. P. A. or W. F. A., or any other Federal agency, provides more supports and more subsidies, or figures out any new schemes to help the few, they had better check on what they are doing in Wisconsin to harm the dairy war food program. These Wisconsin dairymen are producing nearly one-third of the evaporated milk, over one-half of the cheese, and over one-third of the powdered whole milk of the Nation. These are all-important war dairy foods and deserve every consideration.

Do you, as a Member of Congress, and one who has supported every request to furnish the funds to provide food for the war effort, wish to see the dairy war food program continuously jeopardized?

We should maintain this dairy food production for war. Yes, though the few with the price in our midst are not evidently going to even have their cream rationed during wartime.

Present Food Crisis

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following colloquy with Bob Evans over radio station WFBL, at Syracuse, N. Y:

Mr. EVANS. We're happy to greet Congressman HALL. Tonight Mr. HALL is going to talk about food—meat. What's new about that? you may ask; everybody's talking about food. However, Congressman HALL is particularly well situated on this subject. In the House he's a member of the all-important Committee on Agriculture and he has been particularly close to the food picture in Washington for weeks.

Representative HALL. Yes, Bob. I'm going to talk about food—for a change. But first may I say that it is certainly a pleasant experience to find myself your guest once more. I am especially privileged to talk over WFBL because of its wide coverage in Madison and Chenango Counties, which, along with Broome County, comprise my congressional district. But, Bob, let's follow procedure first. So you give that round-up of yours—the week's news in Washington—and then we'll go on to meat.

Mr. EVANS. All right, Ed.

* * * * *

Mr. EVANS. Now, here is Congressman EDWIN ARTHUR HALL.

Representative HALL. Well, Bob, a lot happened in Washington this week, as you've been saying, but most significant to the country, I believe, and most indicative of how the folks back home are feeling, is the fact that the House passed a resolution of its own which sets up a special committee to investigate the increasing threat to our food supply.

Mr. EVANS. The Senate also has a committee for the same thing.

Representative HALL. It has, Bob, and together—and also independently—we're going to set out to find out what's wrong, what has precipitated this present food crisis. A food crisis? you ask. Yes. It is exactly that. We need not kid ourselves. There is a real lack of food for civilian consumption in America today. I know it seems fruitless to say "I told you so" every time anybody complains about the unhappy situation in which we find ourselves. I'm not going to say that again tonight. What I will do is point out some of the mistakes that have been made, with the idea in mind of recommending correction for as many of these mistakes as we still have time to correct.

Mr. EVANS. Well, Ed, you certainly sound as if you're loaded for bear tonight, so let's have some of your suggestions.

Representative HALL. Bob, whether my suggestions will be heeded, I don't pretend to know. In any event, I'm going to get them off my chest. As a member of the House Committee on Agriculture I have been urging a change in procedure for a long time on the part of those who are in charge of our food program. In the first place, I believe the initial mistake was made 2 years ago when the price fixing of agricultural products was taken out of the hands of the Department of Agriculture and lodged with the O. P. A.

Mr. EVANS. Which reminds me of something I didn't mention earlier. Extension of the Price Control Act for 1 year, without change, was approved yesterday by the Senate Banking Committee. But go ahead, Ed.

Representative HALL. Bob, the knowledge of matters pertaining to the farm always has been a prerogative of the Agriculture Department. I believe the experts in that branch of government would have made a success of the farm program. Certainly, under present conditions, no one can say it has been anything but a failure. In proving this point, I am not going to complain about what has already been done. It is enough to say that the broad general policy of the Government's refusal to allow the American farmer his cost of production in return for his labors, is the chief cause for the shortage now haunting us.

Mr. EVANS. Well, you have to qualify that, Ed. Tell us why.

Representative HALL. I will Bob. The patent argument, at every suggestion to give the farmer a fair price for his goods, is that the increase is too great for the consumer to bear. But the answer to that is that the consumer had paid a high price long before agricultural prices began to retard. Nearly every layman realizes the tremendous margin between the price the farmer receives, and the price the consumer is called upon to pay.

Mr. EVANS. Well, of course, Ed, that has been a fact ever since the effects of modern day living began to complicate the method of distribution. The products of the farm nowadays pass through a lot of hands before they reach the consumer.

Representative HALL. Of course, Bob—but I want to tell you that right now, under this administrative set-up it is my opinion that the farmer can, and should be paid more, while at the same time, the consumer can pay less. The responsibility lies heavily on the shoulders of the officials in charge to prove otherwise. Without the incentive of a price to cover his cost of production, the farmer will fall short of the ambitious production goal set for him by Government bureaus. Without the necessary production of the food, the consumer will not have to worry over what price he pays because there won't be any food to buy. Therefore, I strongly urge an immediate change in the basic price fixing policy as it affects farm products.

Mr. EVANS. Well, Ed, after all, farm production has gone up year and after year in recent years.

Representative HALL. Bob, I don't care how much statistics show that American farmers have increased production. There are enough immediate factors in evidence right now to show that farm-food production is going to be curtailed this year. Increased draft calls, for example, those draft calls which started raiding the farms of men, until Congress stepped in to reaffirm the Tydings amendment and put a stop to it. But one thing is evident, because of all these factors, the farmers aren't producing enough, or we wouldn't be faced with a food shortage; and the best way, the only way, to cause the farmers to produce more is to give them an incentive to produce, by guaranteeing their cost of production. And while we're talking, Bob, we must not forget the dairy farmer of up-State New York and the trouble he's having, trying to produce more milk. He's raised milk output by a substantial percentage. But to meet demands of the Government, five times more milk ought to be produced.

Mr. EVANS. Five times more—does it run that high, Ed?

Representative HALL. That's the way I figure it. Getting down to cases, Bob, I believe the dairymen of our Northeast alone could do the job, if a policy of persuasion were instituted in place of all the handicaps already put in their way. Instead of placing the farmer last on the priority list, why not place him first? Food is as important as armament in winning the war. Instead of making it difficult for New York farmers to obtain feed for milkers, why not get the feed to them at all costs? Enough corn to feed all the cattle in the world has been stored in the granaries of the Middle West for the past 2 years. It is rotting away. Why hasn't something been done to change the disastrous policy of holding back this feed from our dairy herds?

Mr. EVANS. What about priorities on armaments, Ed? This has curtailed grain shipments.

Representative HALL. I know, Bob. I just finished saying that food is as important as armament in winning this war. The grain should be moved too. Then there is the little matter of farm labor. We know what that means in central New York. We know what strain our farm population is under. We know how the women have worked all day outdoors and then done housework half the night to keep their families going. We know the sacrifices they've all made, including the youngsters. This Herculean effort has resulted in a substantial increase in production, but it could have, and should have, been much more. It could have been more if orders from Selective Service in Washington had considered the farmer generally of more value on the farm than in the Army. It could have been more if those allocating farm machinery from Washington would give the American farmer priority over all the others. It would have been more if those issuing orders from headquarters had recognized the farmers as human. That the farmer wants the fruit of his labors just as the worker wants fair pay and the industrialist his profits.

Mr. EVANS. Naturally. No one is going to refute that.

Representative HALL. The production of milk and other foods, Bob, can be increased several times its present capacity and must be if the present food shortage is to be overcome. The special House committee which will investigate this shortage should recognize the mistakes in policy up to now and be in a position to make adequate recommendations as to how more food can be produced. Feeling that this will be the result of the food investigation, I voted for the creation of the committee to handle it. I look for big things to be accomplished. In addition to finding a way to getting more food, the paramount duty of the investigation should be to insist on a fair distribution of the food, with an eye to priorities on who gets it. I don't think anybody will quarrel with me when I say the order for receiving the food America produces must be as follows: First, the members of our armed forces; Second, our civilian population. Then, whatever is left can rightfully go to those of our allies, and to freed territories really in need of it.

Mr. EVANS. You haven't mentioned black marketing, Ed.

Representative HALL. Bob, with a fair distribution of the returns—the profits, with the farmer getting his share along with the others, black marketing will disappear almost overnight. And now, I see its getting late. I've tried to outline in the time we've had available how I feel about the menacing food shortage—how we can avoid a more serious shortage in the months to come, and what policies I believe should be put into effect and recommended by the Food Investigating Committee for which I voted in the House this week. It has been a real opportunity to be with you and the W. F. B. L. audience again Bob. I do hope that we, as Americans, can all join together in a firm determination to solve our wartime problems.

Mr. EVANS. Thank you, Ed; and it has been a pleasure to have you with us.

Importance of Printing to the War Effort—Address by A. E. Giegengack

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, April 2 (legislative day of Friday, March 16), 1945

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very comprehensive address delivered by the Public Printer, Mr. Giegengack, before the Washington Club of Printing House Craftsmen last week. Few of us realize the very important and prominent place which the Government Printing Office has filled in our war effort. It has

promptly, efficiently, and effectively met the needs of the Government in these wartime emergencies.

I believe Mr. Giegengack's address will be read by the Members of Congress with a great deal of profit, and it will be a source of satisfaction to them to know that this agency has been carrying on so well.

The printing of the address, I am informed, will require approximately two-thirds of a page more than is allowed under the rules of the Joint Committee on Printing, at a total cost of $138.80.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For the second time in a matter of a few weeks I have been asked to talk on the Importance of Printing to the War Effort. I do not believe that there is serious doubt anywhere that printing is a vitally important part of our job of fighting. But printing in this World War is playing many new roles, doing jobs it has never been asked to do before, and the audiences to which I have talked seem to find in our work at least a few classes of printing that are unfamiliar to them or used in an unfamiliar application.

I am particularly pleased by the action your officers have taken in inviting members of the Joint Committee on Printing to attend this meeting and I am honored by the presence of Senator WILLIS and Congressman JARMAN at the speakers' table. I believe that even Senator WILLIS, who has given a lifetime of distinguished service to our craft and who, through his unflagging work for the Joint Committee on Printing, is very close to the Government's printing problems, will be impressed by an account of the importance of printing to the war. Congressman JARMAN, who is also a valued member of the Government Printing Office board of directors, by virtue of his post on the joint committee, has already expressed to me his amazement at the scope of the story told by the war printing jobs in our display. Yet he is up to his neck every day in the work of helping to direct the world's largest printing establishment.

We are very proud to have here from Chungking the head of the Chinese Government's Bureau of Printing and his assistant. I hope they can take away from this meeting something which will be useful to them in their work at home.

In order to spare you an account of the thousands of jobs the Government needs, I have had arranged a visual exhibition which is probably different from any that was ever displayed before. This display includes nothing that was selected as an example of typographic display, or use of color, or elegant binding. When I first made my notes on this talk I started to say that if there was an example of fine printing in the whole display it was accidental. What I mean, of course, is that I have tried to bring you merely a cross section of our hundred thousand jobs done in the last year—whether they be simple forms of thousand-page books—arranged to show their use and tell a story.

Every piece of printing in our display, however humble and humdrum it may appear, has a direct connection with the war effort. There's the emergency medical tag book, for example. It's a simple-looking specimen, but let me tell you that the production of several million books of them has been no simple matter, and, humble as it may be, it serves the purpose of identifying casualties and giving the base hospital a history of the emergency treatment the wounded man has received in the field.

When you realize that the wounded man may be your own son or brother, the tag assumes a new importance.

You can trace through these printing samples nearly every activity of the Government and of its military, naval, and administrative organization. Printing is essential, regardless of the way it may be classified.

Our fighting men have reached the high level of efficiency which brought about our military successes because of the printed word which directed their efforts in the use of the tools of war. Hitler bleats that his headquarters is to be in the driver's seat until the Germans win. I think he's got his headquarters where his hindquarters ought to be. Printing puts the emphasis on headwork. Our great military and administrative minds, and the colonels, majors, and captains which make up our team, know that printing is essential. The commanding general of the Army Service Forces states, with respect to printed bombing tables:

"These tables are to be regarded as items which are as essential to operation of the Army Air Forces as the bombs dropped, the bomb sight employed, or the type of aircraft used. No single component of the many which are required to execute a bombing mission can be separated from the combination without impairing the success of the operation."

Let me illustrate the part printing is playing in the war effort by reporting on the activities of the Government Printing Office. Our normal peacetime volume amounted to less than $18,000,000. In the first year of the war civilian functions were curtailed but the volume of needed printing doubled and then tripled. Last year our volume exceeded $70,000,000, and indications are that this year it will surpass even this figure.

Early in the war it was evident that the vast printing job required could not be handled exclusively from Washington. It was also evident that our war agencies could not function at their best without the trained technical assistance and control that the Government Printing Office was created to give. We overcame these objections by decentralization and by the development of programs. To meet the urgency of printing requirements, field warehouses have been established in the cities of New York, Chicago, San Francisco, Dallas, and Atlanta, and we have representatives in Philadelphia and St. Louis.

This decentralization gave us access to the principal printing centers of the country, which, coupled with the tremendous productive capacity of the Government Printing Office in Washington, paralleled—in a national sense—the global planning of military activities. Incidentally, this decentralization called for an almost complete reorganization of the Office and put an added strain on our own manpower resources.

A great many of the printing jobs presented to us are the result of General Staff development. They are required for instruction in the training centers throughout the country and often for direction on the far-flung battlefields of the war. This, in turn, required distribution on a grand scale, so we developed that phase of our operation which we call program printing. I can best explain it by briefly describing the program established for the printing and distribution of War Department orders, bulletins, tables of organization, and the like.

A standard format has been established, applying to all of these publications. Contracts have been arranged with nine firms located in New York, Atlanta, Chicago, Denver, San Francisco, and San Antonio. We receive a monthly order from the War Department for all of the work, and we write a production order on each contractor for the month's requirements. The War Department requisition form has been designed to serve also as a printing order blank. All the manuscript comes to the G. P. O., where the type is set overnight; reproduction proofs or mats are air-mailed from the Office on the second day to each contractor in a War Department depot area; and the job goes to press on paper which we keep stocked in his plant. Delivery is made to 12 War Department depots throughout the country at the same time 5 and 10 days after receipt of the copy, and in 5 more days distribution is completed within the Army, down to the company level.

In addition to the printing in the United States, we make extra sets of mats and plastic plates which Army Air Forces delivers overseas to printing presses waiting back of the battle area.

The program arrangement works very well and saves time and effort. The Office controls the job, but the ordering from the contractor is relayed directly from the department after we have established rates, schedules, and method of production. We have eliminated the duplication involved in specifying hundreds of separate jobs, and have even omitted the rewriting of the Army's original specifications, except at the beginning of the period.

Some idea of the size of a job like this can be gotten from the following figures: There is an average of 5,400 separate publications a month, reaching a total of 36,000,000 copies and requiring better than 40,000,000 sheets of paper, 38 by 48 inches. Some of the nonconfidential publications have been made a small part of our display.

This principle of programing and decentralized production is being extended to every kind of work to which we can apply it, such as Army Service Forces catalogs, Navy's technical data manuals, and a hundred or more other classes of printing. You might take a look at the Signal Corps catalogs. The SIG 5 edition shown ran to 3,000 pages; had to be printed in 3 volumes. There are 18,000,000 ems of intricate composition, involving use of many pi characters. I. B. M. cards are photographed to make the copy, which is collated and printed in supplement form prior to the printing of these monthly catalogs. Is the publication important? Only insofar as supply officers cannot order equipment for the field without it. A good operator could set the type in 2 years if he took no leave until he was through. And it's just a part of the program.

These new program procedures have been established with the primary object of reducing use of manpower and of conserving paper and materials. I'd like to cite a couple of examples of how Government and industry have cooperated toward this conservation.

In the early planning for gasoline-ration printing it was evident that the millions of individual coupons could not be efficiently handled from the consumer through the retailer, the distributor, and back into the O. P. A. To simplify this, a gummed bingo sheet, to which 100 stamps are glued, was designed. These sheets could be handled easily and they lent themselves to rapid inspection and test.

The volume of these gummed sheets rapidly increased to the several hundred million mark. We reached the point where the gumming facilities of the country were not in a position to meet our requirements, except at very high cost. Therefore, a substitute method of production had to be developed and we hit upon the idea of printing the sheets on a rotogravure press and applying the gum in the same operation. One of the large gravure companies was contacted and requested to do a little experimental work in applying nonpoisonous and water-soluble gum to the sheet.

After a few weeks of cooperative experimentation with various degrees of coverage

and different gum formulas, including the development of special drying units, tension rolls, and delivery principles, the job was put on a production basis. The press is now producing at the rate of 2,000,000 sheets a day and printing the necessary gummed area from a regular gravure cylinder using glue instead of ink.

I might also mention that many thousands of dollars were saved, as the price was reduced to approximately 65 percent of the original cost. This method of printing with gum on such a large scale was entirely new. It may have a wide application after the war. Perhaps the single sample sheet exhibited with other O. P. A. jobs looks unimpressive, but that single job was large enough to effect wide changes in an entire national industry. I think you might be interested in seeing it because unless you know about this particular job you have certainly never seen anything like it before. It is another G. P. O. first.

Another example of worth-while paper and manpower savings by extensive cooperative planning between the G. P. O. and industry was brought about in the manufacture of the Army Signal Corps message books. As originally designed by the Department, there were only two or three firms in the country who could produce these books, and they could in no way produce the millions of copies required.

After we had taken the full capacity of plants which do the entire job we still lacked the quantity needed. Then we broke down the operations, procured different parts from a dozen printing contractors, and assembled the parts in a number of binderies. By further cooperative planning with industry the message book was recently redesigned with a resultant saving of approximately 115,000 pounds of sulfite pulp for the year.

The present book can be produced on more commonly used equipment, the list of possible suppliers has been greatly broadened, and a much lower competitive price secured. Only by these progressive alterations were we able to meet the urgent appeals from the Signal Corps for delivery. The money saving runs into more than a half million dollars on this single job. The sample takes up only a few square inches to display, but the regular run is scattered from Cologne to Iwo Jima. When Tokyo falls to us at last the first news of the victory will probably be written on the Signal Corps Message Book which was printed by the G. P. O.

Taken as a separate classification, the production of field and technical manuals is probably most typical of our work. The technical nature of the training required in this war has made it necessary to print more manuals for our Army and Navy than in all the previous wars in our history. The field manual has been prepared and printed so that the soldier can have up-to-date information—the latest research developments—on any activity in which he may become engaged. They include, for example, such subjects as sanitation and first aid, unarmed defense, or booby traps and antipersonnel mines. There is a manual for every type of ordnance, dealing with its maintenance and operation; also on enemy armies, camouflage, telegraph construction, and others too numerous to mention.

In a war like this one, which makes use of a thousand and one scientific and engineering developments, the Army needs a thousand and one different field and technical manuals. As soon as something new is developed, we are called upon to print a textbook which will tell our officers and soldiers the whole story.

The Army gives us such a short schedule for printing TM's that special arrangements had to be set up with printers in New York City to produce them. Five contractors are now producing them on a schedule which calls for delivery of any TM 21 days after receipt of copy, and they have guaranteed performance.

This program was established only as recently as February 1. In one 3-day period we submitted orders for over a million press impressions on this one program. Just last week the program was double what we set it up for less than 2 months ago. According to present estimates and production, it will use 15 tons of paper daily and 175 carloads a year. A part of this display is given over to these manuals. We rushed off in 8 days the printing of a manual for the construction of pontoon bridges, which was immediately used in the crossing of the Rhine. That's how significant the time element is in the printing of these texts.

A committee to expedite war printing, formed by the New York City printers, gave me invaluable assistance in securing facilities to produce this manual program—and other work as well.

We have had a new job in the Office for a couple of weeks. While it is not our biggest order, it transcends in importance almost anything else we are doing. This is the printing and distribution of releases of casualty lists to newspapers and radio stations. The Army and Navy were dissatisfied with their past method of releasing the lists, and the Office of War Information proposed bringing the whole problem to the G. P. O., to reduce embarrassing delay in the compilation, reproduction, and distribution.

The lists, as they had been compiled, were Nation-wide and each newspaper and radio station received information concerning casualties in all States of the Union. To reduce this unnecessary listing, the country has been divided into 18 regions relatively equal in population. The newspaper editor now gets copies of only those regions in which he has an interest. It is our job—the saddest we have ever had—to provide for a capacity listing of nearly 100 pages, 8 by 10½, in 6½-point type—about 400,000 ems a day. These must be collated by type of service, casualty classification, and home region, printed in the required quantities and stuffed in air-mail envelopes. All this must be done in 36 hours. The second day of the program the listing was twice the size planned for—7,000 names—but the list was out on schedule. Last Saturday's list exceeded 8,000 names.

By the changes we have made in the method of preparing the releases, paper will be reduced from 300,000 to approximately 75,000 pounds a year in handling of the releases. We also expect a speed-up of several weeks in furnishing the copy to the papers.

I quoted awhile ago the Air Forces' views on the importance of the bombing tables which are used with our famous bomb sight. Before we could get approval to exhibit one of these tables we had to scramble the figures in order to destroy the value of the information. This is a very special job, printed with fluorescent ink in a form which permits the bombardier to read his tables easily either by natural daylight, or under an ultraviolet lamp without impairment of his night vision. We have two contractors on this job, one of whom devotes practically his entire facilities to it.

We have now developed a new plan in which the paper, instead of the ink, is fluorescent. The Department has approved it, and the job is wide open for any classified printer whose press is big enough for the sheet size. The cost will be greatly reduced, and it will be another step toward conservation of manpower and materials.

When I read, a few days ago, that our B–29's had been over Tokyo again, I got a real thrill out of the knowledge that our industry's work contributed to the success of the raids. You and I can feel that we are invisible riders in the raiding planes over every enemy target tonight.

Besides the bombing tables which help the bombardier to make a bull's-eye, he carries printed mosaic maps of the objective, target information charts, and text sheets. The mosaics are detailed aerial photographs of the area to be bombed, large enough to show landmarks and terrain, with the objective clearly outlined with china white. The information charts are in four colors to show varying degrees of target inflammability. In order to give maximum success to every bomb run, the text sheets furnish data regarding construction of the objective and camouflage. They specify the type of bomb or ammunition which will do the most effective damage.

You understand how carefully we must handle this printing, both from the standpoint of quality and security. It is a top secret—every new order is a clue to a coming raid.

Orders have jumped from 100 to 2,000 copies, and we are getting a lot of reprints. This ought to mean—and I hope it does—that 20 times as many bombers are out on missions over Tokyo and Berlin. The Joint Army-Navy Board which is responsible for the preparation and issue of the mosaics, consented to declassify a couple of outdated copies so that I could show them to you. They will give you an idea of what the B–29 crew sees before it dumps its bomb load.

Ration currency printing for the O. P. A. is the sum total of several heretofore unknown developments in the paper and printing industry. The paper processing, the close-together press perforations, the numbering of every small stamp are all new ideas, which called for planning, testing, engineering, machine designing, and maybe a little black magic.

We have used 20,000,000 pounds of safety ration paper up to date. Total stamps produced exceed 77,000,000,000. We have printed as many as 65,000,000 gas coupons in a single day. There are about 15 different types of ration currency to fit as many phases of rationing. They have all been standardized, scheduled, and controlled, and they are produced in one ticket-printing plant in the Midwest. Special equipment has been developed and the entire operation is under armed-guard protection 24 hours a day, 7 days a week. We even had to arrange with the city to place special police around the block.

A special paper and printing job on which I should like to increase production is the prisoner-of-war stationery. Under the Geneva Convention prisoners are privileged to write letters home—once a month, I believe. We are not allowed to subject their letters to tests which would deface the messages, and therefore our first prisoners felt safe in transmitting secret reports in invisible fluid ink. Milk, lemon juice, saliva, and other easily available fluids would do the trick on ordinary paper—and some information did get out which might have been damaging. The War Department asked us to do something about it. The director of our laboratories first developed a coated paper, on which invisible acid ink immediately showed up in a bright green. Invisible nonacid ink turned a fine glowing red. We allowed the prisoners to use only this paper for writing their letters, and for a while the censors had an easy time. In the meantime we made several changes and improvements in the coating and production methods.

About a year ago the censorship people got a new headache. The Germans had discovered a substance which could not be detected on our paper. When censorship officials caught up with it, they worked on the problem and finally came over to the Office for help. Within a few weeks we had a new paper, which is sensitive to nearly every known substance, dry or fluid. We are at

work now on an even newer idea. If it meets with the requirements of the Geneva regulations, the only way a prisoner could sneak a message home would be to wigwag it a couple of thousand miles when his guard is asleep.

I am sorry that I cannot report more paper put to this use. We have an order for 20,000,000 pieces of this stationery. I should like to print enough for 10,000,000 prisoners.

I told you at the beginning of my address that I was going to try to let the display speak for itself, but there are approximately 400 samples of our work here to speak for 99,600 other jobs. That is to say, what you see here is less than one-third of 1 percent of the Government's printing. I have not even referred to the War-bond printing, which represents 100,000,000 pieces for the last campaign. The Selective Service System's samples are only 10 percent of the System's forms and 25 percent of its volume.

The display of congressional printing, which, I think, tells its own story better than some of the others, shows only the CONGRESSIONAL RECORD and the printing used in the passage of a single bill. Only about a dozen of the 120 Federal agencies we service are even represented in the display here. If I tried to talk about them all, somebody would begin laying my address end to end, which might be a very good thing.

These displays are intended to show what a terrific job we have to get the Government's printing done, and I am sure you understand that we cannot do it without the cooperation of every division of the Office. We cannot do it without the cooperation of the commercial industry. I might go on and say that industry cannot give us maximum assistance unless there is cooperation within industry. Let me comment briefly on recent developments within the industry which show the accord being reached between it and the Government and among the associations which represent the graphic arts.

For a long time I have been counseling unity and unified action. At a meeting in Detroit some months ago I made it the subject of an entire address. Now we are beginning to see the fruits of coordinate effort of people who have been working for the same cause. The Joint Committee on Government Relations of the Commercial Printing Industry, which had been doing a fine job, has joined, as you know, with the United Typothetae of America. The enlarged and strengthened organization will be known as Printing Industry of America, Inc. U. T. A. is one of the oldest trade associations in the Nation and has always worked for the betterment of the graphic arts industry. This merger has opened the way for further consolidation of the industry's many associations and will promote the good of all.

It is easy to demonstrate how unity of action can be of benefit. The Joint Committee of the Printing Industry—to give it a shorter name—has been successful after a long, hard fight in protecting the interest of commercial printers and in preventing arbitrary cuts in our paper quotas. I think we are assured that necessary paper-quota cuts will be shared equally by all paper users and that the end-use theory will be discarded.

These are some of the results which we get in industry when we all pull together. We have always known that strength lies in unity, but it has taken the urge for full support of the war effort to make the industry do what we knew it should do.

With the commercial printing industry and the Government, represented by the Government Printing Office, working together and doing our best, the armed forces are getting the kind of printing service to which their own efforts and their needs entitle them. We cannot do less. And we mean to keep that service at such a level that we can say with equal truth that we cannot do more.

Greek Independence Day Address by Hon. Theodore Francis Green, of Rhode Island

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, April 3 (legislative day of Friday, March 16), 1945

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a commemoration address delivered by the Senator from Rhode Island [Mr. GREEN] at the celebration of Greek Independence Day, on March 25, 1945, in Symphony Hall, at Boston, Mass.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, officers, and members of Greek communities and societies, fellow citizens here, and my radio audience in Athens and all Greece, today is the one hundred and twenty-fourth anniversary of Greek liberation from the domination of the Ottoman Empire. We celebrate that memorable day on which she threw off the shackles of servitude and emerged as a nation of free people. I feel greatly honored in being asked to speak to you on this occasion, for the anniversary of the freedom of any people will always be worthy of commemoration in this, my country—this land of the free. And when I say that I am honored to be here with you today, that statement comes from the heart. It is indeed an especial privilege to address you as representatives of America's citizens of Greek descent, because I am especially interested in Greece.

All of my life Greece has meant much to me, probably more than any other land except America. I was born and brought up in nearby Providence, steeped in independent New England tradition, but very early in life my father, who had spent much time in Athens, taught me that Greece brought a message to the world such as no other country has given. I found my first heroes in the pages of Greek history and the lessons which I found there were the lessons of liberty and freedom. Today this same liberty and freedom is being challenged and the soldiers, sailors, and airmen under the Allied banners are fighting for the same principles as the Greek soldiers fought for 500 years before Christ. Greece failed in those ancient days, because her people were not united. She had great leaders, but they did not work together. So today if we had not combined our strength and resources we might have lost this war and the civilization of centuries might have been trodden down by the brutal Hun. But we are still going to fight together, and we are going to win, if it takes as long as the Greek Revolution, the successful outcome of which we celebrate today.

You Americans of Greek descent have a double heritage. As American citizens your homes are here, your future is bound up in the future of this country. Your loyalties are first and foremost to this nation—the United States of America. If any proof were needed, the numbers of your brave men on our battlefields today, and the names of your honored dead on the casualty lists, would be testimony enough of your devotion to this our country—your country and my country.

There is no such thing as a hyphenated American. There are no French-Americans or Russian-Americans or English-Americans, and there are no Greek-Americans. But most of us in this comparatively new Nation have ties to those older civilizations from which we sprang. Certainly this is true of you Americans who have a Grecian heritage.

The entire modern world owes a tremendous debt to the culture of ancient Greece. Our whole concept of modern civilization would be changed without it—our literature, art, philosophy, and architecture. All of these reflect in a greater or less degree the wonderful sense of proportion which the Greeks developed to a greater extent than any other race which has ever lived. This sense of proportion, which includes appropriateness, is one of the reasons why the Greeks' standards of beauty have ever since prevailed and probably always will prevail. However, today we would rather emphasize an even greater contribution to the civilization which we are defending and which our opponents are seeking to destroy, namely, democracy, to which Greece gave birth.

And the world owes a debt to modern Greece also. This is due to the fact that Greece, this ancient and glorious though small nation, was the first in modern times to regain its independence. Since then, throughout 123 years, Greece has been a factor of peace and stability in the Near East. Although when she established her independence she was weak and poor, yet she felt that it was one of her chief duties to seek the liberation of millions of Greeks left under foreign rule. She not only recognized but was successful in fulfilling that duty.

The continued resistance of the Greek people in our present conflict has been an invaluable contribution, one which they have given valiantly, in the midst of the destruction of their homes and institutions, the bloodshed and suffering of their men and women and children. And for that contribution she has won the admiration of the freedom-loving nations of the world.

At the present time, while Greece still suffers, bruised by the heel of a foreign tyrant, we look forward to the day when she will again arise and again contribute on the side of the democratic powers to the establishment of a lasting peace. In the League of Nations the successive Greek delegations were always cooperative with the efforts made to establish collective security. They thus maintained the highest standards of their ancient heritage.

Let us turn our thought to the terrible impact of this war on Greece, what it has meant to her as a nation and as a people. When that country was overrun by the Germans, she was subjected to what is probably the most complete devastation of any of the occupied countries. In the flush of premature triumph, the enemy used every possible means of despoliation—the machinery of warfare, political confusion, social unrest. Their theme was "divide and conquer." With cold brutality and cunning, faction was set against faction, house against house. Probably not since the days of Tamerlane has a conquered country been subjected to such horrors as was Greece under German occupation.

And yet the phrase "conquered country" was never applicable to Greece. She was beaten and bloody, but she never ceased resisting the invader. The miracle of the Hellenic resistance is the miracle of the human spirit which will not be cowed by brute force.

This is something the Germans seem incapable of learning. Once again in Greece they put to the test the Nazi philosophy of a master folk ruling a slave race. And to the eternal credit of the Greek Nation, once again that philosophy was proven a failure.

But in striving to establish the superiority of German might over free people, the Nazis leveled and utterly obliterated a thousand villages—not one Distomo—but a thousand Distomos. The country's transportation system was completely wrecked. First reports

after the liberation stated that only 6 usable locomotives and 40 freight cars were left in all Greece. Subsequent reports showed that there were perhaps 40 locomotives usable or capable of salvage, but not one of these was under 20 years old. As a result of the war, there was left only one-sixth of the Greek merchant marine which before hostilities had totaled some 2,000,000 tons. In the terrible winter of 1941, thousands died of starvation in the very streets of Athens, and those who still lived had no strength to move the dead bodies from those streets. When the Nazis were gone, Greece was left stripped of all food and medical supplies, of all vehicles and livestock, and 1,500,000 people homeless. However, the greatest sacrifice of all was the war casualties. Cold figures do not convey the meaning of the real loss, but here they are. Killed in action 13,000, wounded in battle 70,000, executed about 10,000, died of starvation and illness about 400,000.

Greece paid the price of her inspired resistance with torture, starvation, disease, and devastation. But the other nations fighting this war for freedom did not forget their debt to her. The Greek relief program has been a unique operation during this war. It has involved the one large-scale breach of the economic blockade of occupied Europe. Almost 450,000 tons of food, medicines, and other supplies were brought into Greece to save her heroic people from extinction.

Through the Greek War Relief Association many of you who are here before me today have contributed toward this work. The Greek Government itself, the American Red Cross, and Greek Red Cross have been helped to obtain supplies and to get them into that beleaguered country. Up to March 31, 1944, relief for Greece had cost more than $40,000,000. The United States Government and citizens had made payments of more than $20,000,000—three-fourths through lend-lease to the Greek Government and one-fourth through the Greek War Relief Association and the American Red Cross. Canada's contribution exceeded $12,000,000. The United Kingdom had advanced some $6,000,000 to cover early relief shipments from the Near East.

Now the United Nations Relief and Rehabilitation Administration, commonly called U. N. R. R. A., has gone into Greece, one of its member nations, with its constructive policy of helping nations to help themselves. This organization has geared its work in Greece to provide not only food and clothing and other supplies for suffering civilians, but also to provide farm equipment, seeds for planting crops, machinery that will help rebuild the factories, the transportation systems, and the public utilities. These are first steps that must be taken to regain national security for the country of Greece.

For Greece knows that she must unite her people for a great task. She must get back on her economic feet again. She must set up and maintain a stable government, regaining the ground lost through Nazi tactics and the bitterness of civil war that was an aftermath of this insidious type of devastation.

These things the indomitable people of Greece will do. And for these tasks, they know that they have the support and the help of the United Nations. Throughout this whole period Greece has had the friendship of America, and the Greek people have felt, I know, that they had both the interest and friendship of the American people. Certainly President Roosevelt echoed the sentiment of American citizens in a letter which was published a few months ago, when he wrote:

"I am glad to have this opportunity to reassure my friends of Greek origin and Greek birth everywhere that it is the desire of the American Government to help Greece to the utmost of its capabilities. It is the further desire of our Government that the Greek people who have fought so valiantly for democratic ideals will be able to exercise, as soon as possible, the rights of all democratic people and choose freely for themselves the form of government under which they will live."

Let me also quote from a modern Greek poet:

"And the miracle that is America
A rumor mythical to millions untold
Is spreading weakly at first
Then like a prairie fire
Then like an astounding typhoon
From town to town
From factory to factory
From farm to farm
Over the seas and the mountains
The Frenchman and the Norwegian
The Pole and the Russian
The Greek and the Yugoslav
The Dutchman and the Belgian,
All hear of it,
All repeat it,
One to another.
A new Easter of hopes
The great Messiah
From the west."

The Greek Nation knows, and no nation better, that the one chance for freedom and even survival for smaller nations lies in the development of a spirit of friendly cooperation among the nations of the world, a spirit based upon mutual respect and mutual understanding. She has taken a firm stand in favor of plans for a great international organization for world peace and security by supporting the Dumbarton Oaks proposals. While other nations are still pondering the question, deliberating about details, Greece has signified "This is what we want, what we must have."

There has been a great deal of discussion revolving around the question of whether these proposals would produce a democratic organization, one which would give the small countries a chance instead of giving all the power to the big countries. Greece comes within this category of small countries, however large have been her contributions to the world, and she has realized one basic fact about the Dumbarton Oaks proposals. This basic fact is that these proposals present a plan for safeguarding the rights of the smaller nations and for assigning to them sovereign importance in a world made up of many nations. In Greece, so long dedicated to the democratic principles, as in our own United States, this kind of international cooperation, and this type of machinery for setting it up are seen as great steps toward finding a practical method of promoting true democracy in the modern world.

Upon what does Greece, one of the so-called smaller nations, base her recognition of these basic facts?

The Dumbarton Oaks proposals call for a general assembly to be charged with responsibility for dealing with economic and social and humanitarian problems among nations. They call for a security council to take action whenever the peace and security of the world is threatened. They call for an international court of justice to hand down recommendations on justiciable disputes. They call for an economic and social council that, operating under the general assembly, would give detailed consideration to problems coming under its responsibilities, including the promotion of human rights and fundamental freedoms. What role will the smaller nations play in this set-up?

In the first place, they would become members of the organization on the basis of sovereign equality. In the general assembly their representatives would have an equal voice with those of the larger states. They would occupy 6 nonpermanent seats on the Security Council, giving them a majority. All members of the organization would have equal access to and equal standing before the international court of justice. All would be equally eligible to election as 1 of the 18 members of the economic and social council.

The Government of the United States and an overwhelming majority of our citizens believe in this proposed organization. We believe that with the good will of nations and peoples behind it, the machinery will work. And because we believe this, we look forward with eager interest to the San Francisco Conference, at which the United Nations will come together to draft a charter for such an organization. In the meantime, before that Conference, and even while it is being held, and perhaps afterward, we are going to discuss it at our clubs and organizations and in our homes.

We are going to do our best to promote public understanding that will bring about enlightened support by the people for the kind of international organization best fitted to maintain peace and security. And if this is done, all the sacrifices we have made in the war for freedom, the great courage of nations such as Greece, who have known the horror and suffering of this global war, will not have been in vain. They will have benefited not only us today, but also the whole world tomorrow.

The New Federal Insurance Law

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, April 3 (legislative day of Friday, March 16), 1945

Mr. HATCH. Mr. President, in the current issue of the magazine, America, for March 31, 1945, a very able article by the Senator from Wyoming [Mr. O'MAHONEY] appears. It is entitled "The New Federal Insurance Law." I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NEW FEDERAL INSURANCE LAW

(By Senator JOSEPH C. O'MAHONEY)

When President Roosevelt, on March 9, put his signature to the insurance bill which Congress passed on February 27, after one of the longest and most stubborn legislative battles in recent years, he not only ended a determined struggle by one segment of the insurance industry to divest Congress of all power over the business but he also opened the door for State legislatures and insurance executives to demonstrate to what extent State regulation can protect the public interest in a business the national aspects of which have become obvious and all-important. What the States and insurance leadership do in readjusting State laws and insurance practices to meet the facts of modern business life will go far to determine to what extent we may look for the reestablishment of real State responsibility in our economic life.

Congress by this act has reasserted two fundamental and traditional principles of American political and economic theory: The first is that economic power, like political power, proceeds from the people and should be kept as close as possible to them. The second is that private monopoly cannot be tolerated, and that the power of the Federal Government should be exerted to aid

the States when private monopoly, operating nationally, threatens local economic independence.

OPPOSITION BY MISREPRESENTATION

The position of those of us who opposed the attempt of a part of the insurance industry to induce Congress to repeal the antitrust laws, so far as this business is concerned, was flagrantly misrepresented from the very outset. It was charged that we really sought to establish Federal regulation. We were accused of seeking to enable the Federal Government to seize the assets of the insurance companies for purposes of Federal spending or, at the very least, of trying to take over the insurance business for the Federal Government. All this was said in complete disregard of the incontrovertible fact that the Temporary National Economic Committee, which in 1940 conducted a study of life insurance, specifically recommended the strengthening of State regulation. It was said in total disregard of the fact that the T. N. E. C. issued a warning against the relaxation of State regulation in these words:

"If forthright steps are not taken now to plug the gaps where State regulation cannot do an effective job and to prevent relaxations of regulatory standards in several States such as have occurred in the past to the disadvantage of numerous policyholders, State regulation may eventually decay and all-inclusive Federal control will be required."

The act of March 9, in complete harmony with the recommendations of the T. N. E. C., declares "that the continued regulation and taxation by the several States of the business of insurance is in the public interest." It grants a moratorium until January 1, 1948, from the Federal antitrust laws, but declares that, notwithstanding the moratorium, the Sherman antitrust law shall continue to be applicable to any agreement or act of boycott, coercion, or intimidation. Thus is reasserted, in language that is incapable of being misunderstood, the purpose of the new Federal law to reestablish historic principle by strengthening State regulation and prohibiting the evils of private monopoly.

To the insurance business there has now been extended an opportunity to perform a magnificent service for the rehabilitation of fundamental American economic and political principle. No business is more concerned with the individual and his welfare than is insurance. It has been the shield at one time or another of most American families against disaster. It has, indeed, sustained the widow and the orphan in the face of death. It has protected the householder in the midst of disaster. It has throughout most of its long history been geared to the individual; but in modern times, like every other business and industry, it has been geared to the organized commerce of our era. It has lost much of its local aspect and more and more has become a national and international business, operating in a sphere in which both State lines and State laws have little significance. The savings of the people, contributed in the form of premiums on insurance policies, have flowed from all over the country into fiscal reservoirs in a few eastern centers from which they can be redistributed for the support of local and little business only with the greatest difficulty. The big insurance companies of New York City which are confronted every morning with the necessary of investing millions of dollars of the people's money have no interest in business loans in small amounts, because it is too great a nuisance to service small loans. Only big business has had any real access to these funds.

INSURANCE FAVORS BIG BUSINESS

The growth of big business, the expansion of the chain stores, the increasing emphasis on the national aspect of economic affairs, were naturally reflected in the business of insurance, particularly fire insurance. Great national industries with processing plants in a half dozen or more States found it inconvenient to negotiate policies separately in each State, and so a national system was evolved whereby the entire insurance business of such a company, all the way across the country, was handled in a single central office. The result was the establishment of discriminatory rates. Big business could get protection at a lower cost than little business, and gradually developments were such that the householder and the little businessman were carrying an undue proportion of the cost of insurance. There was no uniformity among States nor among communities in the same State, all because the insurance industry had become so national in scope and control, had become so concentrated, that neither individual citizens, individual communities, or the States themselves could always protect the public interest.

There grew up, particularly in the fire-insurance field, a complex system of regional and national private government. It was the National Board of Fire Underwriters that decided for every community whether or not it had taken sufficient steps to protect the community against fire. Regional combinations of underwriters were established, like the Southeastern Underwriters Association, which in fact governed most of the details of the insurance business in groups of States. The whole country was thus subdivided in strict accordance with the pattern upon which many Federal agencies, like the National Forest Service, the United States Bureau of Reclamation, the Reconstruction Finance Corporation, the War Production Board, and the Office of Price Administration, carry on their functions without regard to State lines or State authority.

All of these groups were then, as it were, merged in the Insurance Executives Association, which is a national organization of underwriters in which multiple voting rights are allowed upon the basis of the amount of business done by any particular company. The trustees were authorized to hear charges against members and to punish them under penalties ranging as high as a fine of $10,000 and expulsion from the association. The control of this association was so rigid that during the hearings before the Senate only the president of this organization appeared for the insurance industry. The Interstate Underwriters Board was created to handle national risks with precious little regard for State law. In the aviation field and in the trucking field, as well as in the merchant marine, more and more emphasis came to be placed upon interstate and national matters, while self-determination with respect to insurance law actually began to disappear in the States.

HISTORY OF LITIGATION

This was the situation when the Department of Justice brought criminal proceedings against the Southeastern Underwriters Association in the Federal court at Atlanta, Ga., charging monopolistic combinations in violation of the antitrust laws. The defendants resisted the prosecution on the ground that insurance had always been regarded as being wholly within the domain of State law. Seventy-five years before, the Supreme Court had ruled that insurance is a local business and is not commerce. This was the issue presented in the Southeastern Underwriters case and, when the court at Atlanta ruled against the indictment on the ground that the insurance business was not commerce and therefore not within the prohibitions of the antitrust laws, the Department of Justice appealed the matter to the Supreme Court.

The fire-insurance groups then resorted to Congress in an attempt to secure a law exempting the entire insurance business from the antitrust laws. Such a bill, if enacted, would have had the effect of validating the system of private government which had been built up by national and regional organizations to control and direct the industry. It became the storm center of a legislative struggle, the immediate objective of which, on the part of the insurance companies, was to get a law passed before the Supreme Court had acted on the Department of Justice appeal. The ultimate objective was to place the national and regional organizations of the business beyond the reach of Federal law.

INSURANCE IS COMMERCE

The effort failed. The Supreme Court decision was handed down before the bill was even reported to the Senate from the Judiciary Committee. It held that insurance is commerce and that Federal law applies. By a curious coincidence the Supreme Court handed down two insurance decisions on the same day, one holding, by unanimous vote, that the Federal law known as the National Labor Relations Act applies to insurance, and the other, in the Southeastern Underwriters case, holding by a vote of 4 to 3 that insurance is commerce and, therefore, within the operation of the Federal antitrust laws. How the insurance business could be commerce for the purpose of sustaining a Federal law against unfair labor practices but could nevertheless be held not to be commerce under a law prohibiting unfair commercial practices was a dilemma which the three dissenting justices in the Southeastern Underwriters case tried to resolve to their own satisfaction.

From the moment the Court acted, however, the exemption bill was doomed to failure, and it remained to be decided only what form of legislation Congress would enact to meet the new situation. State insurance authorities, acting through the National Association of Insurance Commissioners, immediately sought a compromise, and the final result was the act of March 9, 1945.

This law represents an effort to preserve regulatory and taxing power in the States while clearly recognizing the jurisdiction of Congress over the interstate and international phases of the business. Although the new law grants a moratorium until January 1, 1948, from the antitrust laws, it expressly declares that agreements and acts of boycott, intimidation, or coercion are unlawful notwithstanding the moratorium. It also reasserts the application to the insurance business of the National Labor Relations Act of 1935, the Fair Labor Standards Act of 1938 and the Merchant Marine Act of 1920.

The new law amounts to an invitation to the States and to the insurance industry to work out in good faith a system of State regulation in the public interest which shall be free from restrictive monopolistic practices although allowing cooperative effort among insurance companies that may be necessary to maintain their solvency, and gives them 3 years in which to do a careful job. It is an invitation accompanied by a warning that if the States do not succeed in protecting the public interest, the Congress reserves the power to act.

NEW LAWS FOR A NEW WORLD

In a very real sense the insurance legislation represents an effort to adjust the law, State and Federal, to meet the new conditions which have arisen in the modern world. It is a recognition of the fact that in this business, as in every other, there is a local interest and a national interest, an individual interest and a corporate interest. It is a recognition of the fact that the just solution of modern economic problems must take into consideration the rights and the needs of all who are affected by the modern economy.

It was inevitable that the technological improvement of our time, which has largely erased geographical boundaries and extended the radius within which business may be transacted, should bring about the development of private understandings and agree-

ments to regulate business. It was inevitable that these understandings and agreements, though working to the advantage of those who initiated them, would also work to the disadvantage of others who were not included. It was natural and inevitable, therefore, that there should be complaint upon the part of those who found themselves barred from entering a particular economic activity because of these private understandings. To put it in another way, it was natural and inevitable that as the field of interstate and foreign commerce expanded, by reason of the improvement of the means of transportation and communication, a system of private government should grow up and that this would be followed by a demand for more realistic legislation in the public interest.

What has happened in the insurance field has happened in a score of other fields. The same problem exists throughout our economy. It is the problem of adjusting the rights and liberties of the individual, of the local community and of the State to the broad sweep of national and international economic organization. The inconsistency of the position in which the managers of big business find themselves when, although establishing their own national and international controls over commerce, they attempt to deny the people the right to regulate national business under the Constitution, was never better illustrated than in this controversy. If the insurance industry accepts the new insurance law in good faith as it was enacted by Congress, it may very well be that insurance will set the pattern upon which the free-enterprise system and local economic independence can be preserved in a world which has apparently been headed toward collectivism and central power.

Maj. Gen. E. B. Gregory, Quartermaster General of the Army

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 3 (legislative day of Friday, March 16), 1945

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Christine Sadler, published in the Washington Post of yesterday, which describes the work being performed by Maj. Gen. E. B. Gregory, Quartermaster General of the Army, in supplying the needs not only of the military forces but of prisoners of war and civilians in liberated areas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENERAL GREGORY HAS HUGE TASK SUPPLYING NEEDS OF MILLIONS

(By Christine Sadler)

Civilians who think they have food worries might like to know what Maj. Gen. E. B. Gregory, the Quartermaster General of the Army, is up against, for he's the man behind those "increasing military needs" they have been reading so much about.

Nobody is happier about a military victory than General Gregory is, but every new batch of prisoners and every new liberated area mean that many more mouths to feed, more clothing and more shelter to be provided.

Already he had food and other supplies going to about 70 different theaters of operation scattered around the world, and now he has all Europe opening up, in addition to new Pacific islands almost every day.

JOB IS GROWING BIGGER

"There were wars when the defeated general handed over his sword, his soldiers all went home, and everybody stopped worrying," he said yesterday, "but that was a long time ago and before 'the wake of battle' became such an important phrase."

General Gregory doubts that Americans fully appreciate how big a job it is to provide for civilians "in the wake of battle" or are well enough acquainted with the fact that this simple phrase has increased the number of persons eligible for military supplies by at least one-third.

"And we think the percentage is going higher," he warned. "When victory in Europe comes our job will be bigger—not less. We are going to need more food, more clothing, and more shoes right along. It would help if everyone realized that, for we cannot afford a psychological let-down on VE-day."

Food needs of the Quartermaster's Office may ease before there is a let-up in its demands for textiles and shoes, he said, adding that, "of course, we are not sure."

SAIPAN AN EXAMPLE

Typical of the way General Gregory's job continues after victory is the situation on Saipan. The Army is now feeding there a population of about 30,000 on Saipan because it is "in the wake of battle."

"The inhabitants of these islands work for us and gradually stores are set up, but we have to see that they get supplies. Sometimes we have a vicious circle because we want work done and that takes men away from the fields in which they could be growing food.

"The Philippines are going to be a considerable supply problem. They always have had to import food, although that is not generally remembered," he said.

Occupants of liberated areas do not receive full military food quotas, General Gregory stressed, and prisoners of war do not get the identical food supplied to American soldiers.

"We watch the calorie content, but we don't feed them steaks," he declared. "Fortunately, Italians and Germans prefer a lot of grains and potatoes in their diet. There's plenty of wheat in this country, of course, but we are having railroad transportation problems."

MOVING EVER NORTHWARD

Considerable clothing has been shipped to Europe for "military relief," General Gregory said, from stocks accumulated by the Foreign Economic Administration and Treasury Procurement. Also, Army clothing and shoes are salvaged and reused for prisoners and wake-of-battle civilians.

"Shoes last just practically no time in the Southwest Pacific," he moaned. "If the coral dust doesn't eat them up, the humidity and heat do—but clothing problems on the southern islands have not been as great as we can anticipate farther north."

The Quartermaster General has a globe in his office and points out latitudes on it to persons who ask why heavy uniforms are needed in the Pacific. "You can see that Tokyo is pretty far north and that we are moving northward all the time," he says.

Vast stores of Army supplies stocked by the Quartermaster's Office in Australia and on nearby islands are now being moved north as the scene of battle shifts.

"It takes a lot of ships for that," he said, "and we are sending more things to the Pacific from this country all the time. Got to have them there when more of the boys arrive."

Views of Hon. Arthur H. Vandenberg, of Michigan, on San Francisco Conference

EXTENSION OF REMARKS

OF

HON. WALLACE H. WHITE, JR.

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 3 (legislative day of Friday, March 16), 1945

Mr. WHITE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial of the April 3d edition of the Baltimore Sun commenting on the views of the senior Senator from Michigan [Mr. VANDENBERG] with respect to the impending San Francisco Conference. The editorial is so analytical that I think it highly desirable that it should appear in the RECORD and be available to all the Members of the Senate and to the country at large.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAKING JUSTICE EXPLICIT

Senator VANDENBERG, it is good to note, is keeping his attention focused on the essentials of the impending San Francisco conference.

Peripheral disputes about secondary issues are bringing almost daily alarms. Shall Russia and the United States have one vote or three? Shall the Lublin Government of Poland be invited or will Poland be left out until her new government is formed? What secret understandings were reached at Yalta? Is Russia taking the security organization as seriously as we should like her to do?

These questions are natural, and they are not unimportant. But they are not in the major question. That has to do with the aims and direction of the whole United Nations organization. It is to the aims and direction of the organization that Senator VANDENBERG is making his contribution.

Dumbarton Oaks, for all its excellent work, left out of its published proposals certain considerations which could not be ignored for long. Here is a scheme for an international organization. What principles, what ideals, shall provide its motivation? Peace, yes. But peace is possible only if some effective general rule is set up for the guidance of those who seek peace. Power, yes. But power, unless applied under accepted rules, will almost certainly degenerate into tyranny.

Moreover, whatever the present generation may desire, the world will change. Nations rise and fall. International arrangements wholly suitable today may prove to be a strait jacket tomorrow. To adopt a constitution for the world without making prior provision for peaceful and orderly evolution is to decree that necessary change can be made only by violent means.

Along with many others, Senator VANDENBERG has been giving his major attention to these basic concerns. He has seen that the Dumbarton Oaks proposals have given, as they must, full weight to the present concentration of military might in the hands of two or three, or perhaps five or six, great powers. But he has also remembered that those who possess power have an obligation to impose restraints on themselves lest they be tempted to tyrannize over the weak and defenseless.

No one at Dumbarton Oaks, of course, overlooked this truth. The difficulty is to find a way to formulate it and then bring about its acceptance by the present strong powers. The especial difficulty, of course, is to find a formula which will be acceptable to Russia, strongest of the land powers and, unfortunately, the one still harboring the greatest suspicions of her present allies, as so many recent events have shown.

The Vandenberg proposals are specific amendments to the charter which emerged from Dumbarton Oaks. The first amendment he would make discloses the nature of his approach. To the objectives outlined in the charter—maintenance of peace, development of friendly relations, international cooperation in various fields and affording a center where nations may harmonize their actions to achieve these ends—he would add this one:

"To establish justice and promote respect for human rights and fundamental freedoms."

This seems simple and reasonable enough, but it is a fact, nevertheless, that the word "justice" is not now to be found in Dumbarton Oaks. Perhaps it was not an intentional omission. But perhaps, also, it was omitted by design. For the special concept of justice upon which the civil structures of western Europe have been erected is clearly not the same conception of justice upon which other peoples have built their structures. It is not easy to discover what they have in common.

Yet we should not forget that Russia, new as her Government is and revolutionary as it aims to be, still has as its announced aim the protection of the weak against the strong. Dictatorial as it is, the Russian Government still insists that present dictatorship is but a step on the road to ultimate freedom for the individual. Freedom means a limitation on the powers of government. Such a limitation implies the acceptance of the rule of law, with courts to decide wherein justice lies. Let us not jump too quickly to the conclusion that no common denominator can be found between western justice and Russian justice.

To weave the concept of justice into the fabric of the charter of the United Nations is thus the first aim of the Vandenberg amendments. The second follows as a matter of course. It provides a means by which the United Nations association may provide an escape from arrangements already made which clearly promote injustice. The council, it says specifically, may investigate conditions which seem unjust and make recommendations for changing them. This is, in effect, an amendment clause to provide escape from the possible strait jacket of postwar mistakes. It is as necessary to the charter as a whole as the amending clause is to our own Constitution.

These two proposals are the essence of the first clearly defined suggestions for meeting some of the possible shortcomings of Dumbarton Oaks. They are so succinctly stated, they are put forward with such candor and with such persuasiveness, that they cannot be ignored.

Senator VANDENBERG suggests that their adoption or the adoption of amendments of similar import will have great influence in the United States Senate when that body comes to vote on the charter. The suggestion is a reasonable one. Beyond a doubt, most of such opposition as may develop in the Senate to the United Nations association will come from the Republican side. Senator VANDENBERG, as one of the most influential spokesmen for that side, has been high-minded enough to indicate in advance the changes which will do most to lessen that opposition. His is a statesmanlike attitude.

Full Post-war Employment

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 3 (legislative day of Friday, March 16), 1945

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interview with Mr. Beardsley Ruml on the subject of post-war full employment. This interview, by Mr. Charles G. Ross, appeared in the St. Louis Post-Dispatch of March 19, 1945. In it Mr. Ruml stated that the full-employment bill, which is now before the Banking and Currency Committee, is "one of the most encouraging steps taken toward the solution of the full-employment problem."

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

MEN AND JOBS AFTER THE WAR—BEARDSLEY RUML GIVES HIS VIEWS ON HOW TO HAVE REAL POST-WAR PROSPERITY WITH FULL EMPLOYMENT—NO TARIFF RISES, WITH GRADUAL FREER TRADE, IMPROVED FISCAL POLICY, INCLUDING TAX STRUCTURE, FEWER GOVERNMZNTAL CONTROLS THE BETTER

(By Charles G. Ross)

NEW YORK, March 19.—"There are 52 cards in the American pack and four chances of getting a royal flush. There are many more chances of getting a straight flush—and that's generally considered a pretty good hand."

Beardsley Ruml, author of the pay-as-you-go tax plan, chairman of the Federal Reserve Bank of New York, treasurer of Macy's, member of the research committee of the Committee for Economic Development, chairman of the business committee of the National Planning Association, was talking to the Post-Dispatch correspondent about the prospects for full employment in the United States after the war.

He amplified: We have a full deck of cards. There is no limit to what the American people can do if they play the cards wisely.

Mr. Ruml should know. With the Treasury against him, he had no better than a pair of deuces when he started advocating his pay-as-you-go plan. He finished with a straight flush.

PROBLEMS INTERLOCKED

The writer asked Mr. Ruml to discuss the No. 1 problem of the post-war era.

"You mean," he said, "the No. 2 problem."

"Surely it's the top problem."

"No; the first problem is to establish world peace. But the two great problems are interlocked. It's a truism, but it cannot be said too often, that the best contribution the United States can make to the peace of the world is to get a high level of prosperity at home."

That brought up the subject of foreign trade, and Ruml referred the writer to a memorandum he had helped to prepare for the National Planning Association. In this he had recommended, as a corollary to our fiscal and monetary policy, "a definite, declared policy that there will be no increase in tariffs, followed by a gradual reduction of tariffs and freer trade as higher levels of employment are reached."

"And foreign trade," he added to the interviewer, "means foreign trade. It means buying as well as selling, and over the years in about the same amount.

"International trade will improve the standard of living in the United States by making it possible for us to have things that other peoples can make either of better quality or design, or at lower prices, than we can make them for ourselves, in exchange for our sending them the things we can make better than they can."

ON THE FISCAL POLICY

Ruml lays stress on the imperative necessity for an appropriate fiscal policy if we are to reach the goal of continued high production and high employment.

"Of course," he said, "we can't do the job with fiscal policy alone, but a wrong fiscal policy will make it difficult if not impossible for us to utilize our human resources.

"We have done three very bad things. First, we have raised tax rates against a falling national income; thereby we have drained off purchasing power that might have sustained employment. Second, there has been inadequate planning of expenditures for public works and conservation; we have never had a proper criterion of what should be done in this field. Third, we have set up our social-security program on a deflationary basis by attempting to build reserves in a time of unemployment. It is a fantastic thing that our unemployment insurance funds have tended to create the very unemployment they were designed to relieve.

"There is enormous strength in the American culture—in its intelligence, energy, imagination, competitive spirit, desire to improve the standard of living. And it should be remembered that much of our activity bears no relation to the mere desire to make money. Men work to make a better showing from year to year. They work to gain honors. The spirit which you see expressed in the rivalries between cities, as between St. Louis and Kansas City, is wholesome. The football spirit, not greed animates a lot of what we do.

"I feel that if we can correct our terrible mistakes in fiscal policy and give the people the normal opportunities that Americans will seize if they have the chance we can take a long breath and see what happens. The correction of these errors would be the greatest antidote to regimentation.

"We were told in 1940 that we had to choose between guns and butter in order to equip a two-hemisphere army; today we have a standard of living slightly higher than it was in 1940, and we are putting $85,000,000,000 into war goods. That is called the miracle of production.

"I venture to say there are some more miracles ahead of us in the social and economic field. As a matter of fact, the sheer necessity of creating and maintaining a high level of employment in order to maintain our democratic institutions will force the 'miracles' to come."

What steps should be taken, Ruml was asked, to correct the fiscal errors into which we had fallen? He named three:

"First. We should set our tax-rate structure, regardless of where the burden is distributed, so that the Budget at high employment will be balanced at high employment. This policy will be automatically deficit-creating with underemployment, and surplus-creating with overemployment.

"Second. We should plan and organize our public works and conservation programs to stabilize the construction industry at a high level of activity, between fifteen and eighteen billion dollars annually.

"Third. We must take the deflation out of social security. Broadly speaking, this means that we should finance the old-age security program so that income and expenditure about balance currently; and we should set the rates on unemployment insurance so

that income balances outgo at high employment."

These three measures, he said, would be "automatic stabilizers" of the economy and would be consistent with Senator JAMES E. MURRAY'S pending full-employment bill, which proposes that whenever the prospective "gross national product" falls below the amount needed for full employment measures shall be taken to fill the gap.

ON THE MURRAY BILL

Describing the basic policy and substance of the Murray bill as sound, Ruml said he regarded its introduction as one of the most encouraging steps that had been taken toward the solution of the full employment problem.

"Nobody," he said, "expects the bill to be passed in its present form, but, even if it should be modified in every paragraph, it will have served the important purpose of focusing discussion."

Ruml had praise also for the House Committee on Post-War Planning, under Representative WILLIAM M. COLMER, of Mississippi, which he said had shown "aggressive and competent leadership," and he felt that some good work had been done on war-contract termination. Public-works planning, he said, had lagged.

"There is no evidence now," he said, "that the executive branch of the Government is operating aggressively in the field of post-war planning. It seems to fear that any such planning now will detract from the war effort. A certain amount of work was being done last fall, but this was dropped when the war took a sudden—and happily short—bad turn.

"I think the suspicion is justified that the executive branch may be deliberately throwing the ball to Congress, so that Congress will see how difficult the job is and how essential it is that appropriate action come also from the executive branch if there is going to be an over-all attack on the post-war prosperity problem. It may be, in other words, that the administration is trying to impress on Congress the need for teamwork."

THE 60,000,000 GOAL

What of the 60,000,000-job goal set by the President and Secretary Wallace?

"The 60,000,000 figure," Ruml replied, "should not be made a football of politics. You will recall that the President spoke of the provision of 'close to 60,000,000 jobs in the post-war period.' If we have two and one-half million men and women in the armed services after the war, these certainly will be in productive jobs. Then, too, you must remember that we must always have more jobs than we have people at work, owing to the fact that there will always be some jobs not yet filled and many jobs will be part-time and seasonal jobs.

"Consequently, I see no inconsistency between the President's statement and the figure centering around 55,000,000 civilian jobs which has been used by the National Planning Association, the Committee for Economic Development, and others. Fifty-five million is as good a figure as I know of.

"Our 40-hour average week I take as an opportune figure. If you go much below that, you are freezing unemployment into the workweek, or else you are creating a situation where people will take more than one job. On the arithmetic of the situation at present price levels, it's simply 55 million people working 40 hours a week and producing $140,000,000,000.

"If you take $100,000,000,000, or one hundred and twenty billion, you have to alter the points of your triangle; you must then accept mass unemployment, a workweek of less than 40 hours, or a lower price level than we have today. Some people would say it is more conservative to take $120,000,000,000 than one hundred and forty billion, but from my point of view the conservative thing is to take one hundred and forty billion.

"A $140,000,000,000 national income means, of course, a higher standard of living than we have ever had in this country. It means a change of between 40 and 50 percent, a historic change of extreme character, one that represents qualitatively a new kind of American life."

ABOUT THE TAX STRUCTURE

How did he think the tax structure should be changed?

For one thing, Ruml replied, the corporation income tax should be abolished and a small franchise tax of 5 percent substituted, this levy representing the value of doing business in the corporate form.

"One main reason for doing away with the corporation income tax," Ruml said, "is that, once it settles down, it tends to raise the cost of goods and services and to keep wages lower than they might otherwise be. You will, of course, get higher earnings per share, but the bulk of the benefits will go in lower prices and higher wages.

"Then, too, the taxation of corporate profits prior to distribution imposes double taxation on dividend income. Millions of small stockholders are the victims of this inequity. The earnings are first taxed in the hands of the corporation at full, identical rates for all stockholders, and then that portion of the earnings distributed as dividends to stockholders is taxed again, but only in the latter case at progressive rates.

"The need is for revision that would eliminate the corporation tax as a cost of production and distribution, that would tax the shareholder only once on the earnings attributable to him, and that would encourage rather than inhibit the distribution of earnings as dividends."

This and other recommendations as to taxes are set out in Ruml's study, in collaboration with H. C. Sonne, made for the National Planning Association. No. 2 is that the principal source of Federal revenue should be the progressive individual income tax. He believes that, at high levels of production and employment, we can cut out the corporation income tax and most of the excise taxes, and avoid a general sales tax, and still reduce the individual income tax by 30 percent over-all. This calculation is predicated on an eighteen-million-dollar post-war Federal budget.

Further recommendations call for avoidance of the general sales tax because it is deflationary and therefore harmful in periods of low consumer spending; for retention of the excise taxes on tobacco, liquors, and perhaps on gasoline to yield some three billion dollars, and for revision of the social security program. "The old-age insurance program should be neither inflationary nor deflationary. * * * The unemployment insurance program should be compensatory, building reserves in periods of excess employment, building purchasing power in periods of unemployment."

The tax reduction that Ruml advocates cannot, he emphasizes, be put into effect abruptly after the war. This is because reconversion and the readjustment of population will not then be sufficiently complete for anybody to say with assurance that we have at that time a potential income of one hundred and forty billion dollars.

"You have to wait," he said, "until reconversion has been substantially completed. But I see no reason why the excess-profits tax cannot be eliminated at once after the end of both wars and why at that time the normal tax on corporations cannot be reduced to 16 percent and the surtax to 8 percent. The next step would be to take off the 8 percent and the next after that to take off the 16 percent or treat it (as in Great Britain) as a credit to the individual on his normal tax."

GOVERNMENTAL CONTROLS

What of governmental controls over the national economy?

"Our American competitive way will give us the best results," Ruml replied. "The less interference by the Central Government the better. But some controls there must be—controls to prevent objectionable monopolies, to give reasonable equality of opportunity to the different parts of the population, probably to make technical knowledge and capital more readily available to small business. But all these things can be done without objectionable Government interference and supervision."

Jewish Participation With Allied Fighting Forces

EXTENSION OF REMARKS

OF

HON. THOMAS C. HART

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, April 3 (legislative day of Friday, March 16), 1945

Mr. HART. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting article written by Mrs. CLARE BOOTHE LUCE, a Representative in Congress from the State of Connecticut, concerning the participation by Palestine Jews in fighting with the Allied forces.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PALESTINIANS FIGHT TO SETTLE BLOODY SCORES WITH "KRAUTS," MRS. LUCE FINDS ON BRITISH FRONT

(By CLARE BOOTHE LUCE)

WITH BRITISH EIGHTH ARMY, Italy, April 2.—On the British front I visited the Palestine brigade commanded by Brig. Ernest F. Benjamin. The brigade is on a small sector of the Italian ruined country. Its members, who fight for the first time in this war under their own flag, are all Palestinians, though many of them were once refugees from the hinterlands. Their senior officers are all British professional soldiers of Jewish blood.

The formation of the brigade was announced last September 30. On November 1 it sailed for Italy. It had been in the line only a matter of days when I went to see it. Many British officers with whom I talked before and after that visit said there was no more grim and determined unit on the whole Italian front.

After all, many of them have some very bloody personal scores to settle with the Krauts, I certainly have never seen men more eager to do so, or so fiercely glad that when their hour to strike comes they will be fighting as every freeman has a right to fight, armed like the enemy and fighting under his own flag for a homeland where his wife and children are.

I talked to a young Jewish "noncom," Sgt. Channan Levi, of Tel Aviv. He was 6 feet tall, had blue eyes and blond hair and had been born in Berlin. His English was very poor. I tried a few words in German, and he said very quietly,

"I talk Hebrew or English now. I forgot my German when I was driven from my home in 1939. I do not wish to speak it again except to the German prisoners we take. I

will never go back to Germany except with this army. When we have won I shall return to Palestine and to my farm.

"The Jews in Palestine are good farmers. We shall prove here that we are good fighters."

A few of the men I talked to at brigade headquarters were unhappy about only one thing—that political pressure had so long prevented the formation of overseas Palestine forces. They wish that their Jewish military history had not begun so late in this war. They felt that if political action had been taken long ago by Great Britain and the United States, indeed at the beginning of the war, Palestine could easily have put, not a brigade, but divisions into the battle against Germany. They know, as well as informed Jewish opinion on the American front knows, what occasioned this long delay in calling Jewry to arms.

They point with considerable pride to the part that Jewish units have played in British forces all through the bad days of the north African campaign. There has been no conscription in Palestine. Nevertheless, since 1939 Palestinians and refugee Jews coming into Palestine volunteered in many numbers to join the British forces.

For the Yishuv is not only a worker, a trader, a farmer under his own flag in his own home, but he is and must be a fighter when his country calls and his people are threatened, as they have been so mercilessly by Hitler for years.

I was told that upward of 50,000 Palestine Jews, men and women, so far have voluntarily enlisted for armed service in the British Army, Navy, Air Force, and women's auxiliary services.

If an American volunteer army had been raised in proportion to the population of Palestine, the United States of America would have a volunteer army of about 12,000,000. Since the war began, Palestine units with the British Eighth Army have seen service in France, Libya, Egypt, Syria, and Iraq.

In Palestine brigade headquarters, as in all headquarters everywhere in this war, you can hear many stories of heroism in battle. Here they tell of Jewish commando units selected by British officers in the Mediterranean battles for particularly dangerous jobs because the volunteers were all men whose families had suffered horribly at the hands of Adolf's hordes. And there are yarns of fair-haired, blue-eyed Jewish boys who look more like Aryans than you or I do, picked for certain missions behind the enemy lines, who either returned successfully or died fighting because they knew what it meant for an armed Jew to fall into the hands of the Nazis.

NOT TOLD SUCCESSFULLY

The story of the Jewish part in the war effort in the Near East is one which they feel has never been successfully told. They hope the record of this brigade in battle will draw some attention to that story.

What are these Jews fighting for. Revenge? Yes; but also, like Poles, for freedom of their homeland and the liberation of an ancient people—the right to work in peace in shop or field. That's what Sgt. Channan Levi, of Tel Aviv—once Hans Levi, of Berlin—is fighting for anyway.

I did not talk to Sergeant Levi about how he thinks the other Hans Levis of the world would like Madagascar or Eritrea, or British Guiana, or San Domingo for a homeland if the white-paper policy should remain in force in Palestine. I did not ask him for two reasons:

1. His primary task is to kill Nazis, and he is in no mood to be distracted. 2. I think I know how he might answer, anyway.

"I have been part of the great miracle of the rebirth of Palestine. I have been among those who have made the desert bear fruit, and the swamp yield a rich harvest, who have blasted rocks and crushed them to make roads to ancient, forgotten soil of the frontier, who have worked to make the soil of the valley of Jordan free of the Dead Sea salt so it would bloom, who have built universities and schools and there worshipped the God of the Jews who gave us this task to do in the land that He promised us; our home. Talk of no other young Hans Levis of Europe now."

The Housing Situation in Washington

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 3 (legislative day of Friday, March 16), 1945

Mr. CAPPER. Mr. President, some time ago I introduced, and there is now under consideration before a subcommittee of the Senate Committee on the District of Columbia, a housing measure known as S. 610.

In the April 1, 1945, issue of the Washington Post there appeared an article by Merlo J. Pusey under the heading "N. I. C. B. digest clarifies public-private housing issues for Washington." I commend the entire article, and I ask unanimous consent that a few of the more important paragraphs of the article be reprinted in the RECORD. In doing so I particularly invite attention to Mr. Pusey's comment relative to S. 610, in which he says:

Substance of this report by the National Industrial Conference Board seems to point to the desirability of enacting the bill suggested by the National Capital Park and Planning Commission which makes ample allowance for both private and public housing.

There being no objection, the excerpts from the article were ordered to be printed in the RECORD, as follows:

N. I. C. B. DIGEST CLARIFIES PUBLIC-PRIVATE HOUSING ISSUES FOR WASHINGTON

(By Merlo J. Pusey)

Washington's struggle against slums long ago settled down to a question of ways and means. Almost every one now accepts the thesis that wretched housing which breeds disease, crime, and juvenile delinquency must go. The sharp controversy of recent months has been concerned almost solely with questions of how we should attack the problem. Shall a large share of the transformation be assigned to National Capital Housing Authority or shall the job of rebuilding slum areas be entrusted entirely to private enterprise?

Private builders are vigorously bidding for this work for the first time. N. C. H. A., naturally, is eager to continue its own activities. Consequently, the city has witnessed a sharp clash of interests.

Last year Senator BURTON'S subcommittee made a conscientious effort to uncover the facts. It succeeded in getting to the bottom of the controversy, but not in surmounting it. Buried under a seemingly endless flow of contradictory testimony, and volumes of censure and praise for N. C. H. A. as well as plans offered by the Home Builders Association, the busy Senators became more and more bewildered.

Further progress seemed to depend upon unscrambling this testimony and giving it proper weight. The Burton subcommittee had neither time nor proper facilities. So the National Industrial Conference Board was employed, with the aid of Eugene Meyer, publisher of the Post, to examine the voluminous testimony and prepare a digest that would aid the public, as well as the committee, in understanding the issue.

SOME DISAPPOINTMENT DUE TO CONGRESSIONAL ACTION

That digest is now at hand. It will enable any citizen willing to spend a few hours on this vital subject to inform himself as to arguments of N. C. H. A. and the home builders, relative costs of private and public construction, rents charged, and different types of subsidies granted and requested. N. I. C. B. has done a good piece of work in summarizing the pros and cons.

It should be stated at once, however, that the N. I. C. B. has not solved the problem. That was not its purpose. The Board was asked only to find the facts. Even in this limited field it has left many questions unanswered. The chief value of its study is that it reduces the claims, allegations, and charts of contending groups to more manageable form.

The report throws a great deal of light on reasons for N. C. H. A.'s limited accomplishments. That is important, for one of the chief accusations against N. C. H. A. is that it has failed to clear the slums after more than 9 years of effort. Under title I of its act, N. C. H. A. provided only 112 housing units in 5 small projects, although a number of cleared alleys were developed for commercial purposes and still others were sold after being cleared. The reason for this meager accomplishment is not obscure. Congress provided N. C. H. A. with only $865,000 for this purpose. In 1938 it authorized slum reclamation loans to N. C. H. A. of $1,000,000 a year for 5 years.

N. C. H. A. repeatedly sought funds under this authorization, but no appropriation was made. Three years ago, moreover, N. C. H. A. was deprived of even the receipts from the initial investment in slum clearance. Congress forced it to turn its revenues of more than $54,000 into the Treasury and allowed it a wholly inadequate $12,000 to manage its title I properties.

This experiment in slum clearance has been a disappointment largely, if not solely, because Congress strangled it. With such meager funds N. C. H. A. could do no more than demonstrate on a small scale what would be possible with sufficient working capital.

This strangling of the slum-clearance program is particularly tragic because N. C. H. A. was attempting to carry out this work on a self-liquidating basis. Representatives of H. B. A. assert that the title I projects are far from being self-liquidating. N. C. H. A. refutes their charges and the National Industrial Conference Board report gives us no conclusive answer as to who is right. The one definite fact that stands out is that a hopeful approach to transformation of the slums has been thwarted by lack of funds and crippling legislation.

RELATIVE COSTS STUDY SEEMS TO LEAD NOWHERE

N. C. H. A.'s accomplishments under title II have been much more substantial. It has built 2,432 dwelling units in eight projects, eliminating slums in 13 squares. In this program, however chief emphasis was upon construction of low-rental housing with Federal subsidies rather than elimination of slums. Washington's worst slums could not be touched because U. S. H. A. would not permit loans to be made for housing on property costing more than $1.50 per square foot.

N. C. H. A. is now using less than half the subsidy available on these projects, thanks to wartime wages for low-income families and a disposition on the part of the authority to keep subsidies at a minimum consistent with adequate housing. Even so Congress is

not likely to be as lavish with subsidies for public housing in the future as in the late thirties. Certainly if we are going to have large-scale redevolpment of slums, projects will have to be more nearly self-liquidating than contemplated by the old U. S. H. A. when it lent funds for title II projects in Washington and elsewhere.

The N. C. H. A. record, as revealed in this report, indicates a major attack upon slums could be made through that agency or through N. C. H. A. and private enterprise working in their respective fields at the same time. But neither N. C. H. A. nor any other organization could have made an impressive showing on the pittance granted under title I.

Much space is given in this survey, as in the Burton hearings, to the relative cost of public and private housing. But the data assembled seems to lead nowhere. Comparison of certain projects indicates public housing costs more than private. Perhaps the higher cost of public housing can be accepted as a generality. But the N. I. C. B. report points out there is often much variation in the costs of closely similar projects. And projects developed by N. C. H. A. and various private builders are sharply dissimilar.

To summarize, the N. I. C. B. survey throws emphasis on the possibilities of private enterprise operating in slum clearance. That seems wholly appropriate, for the need for a broader approach than can be provided through public housing is evident. But it would be a gross distortion of evidence to say that it warrants abolition of N. C. H. A. and abandonment of all effort toward public housing.

The social approach to housing cannot be abandoned without serious community loss. Public housing has already done much to lift housing standards. Its influence will be needed, especially in the post-war period, if extensive slum clearance is to be undertaken. Even if it were only a matter of demonstrating which method of reclaiming slum areas is the least expensive and most satisfactory in the end, the argument for continuation of public housing would be strong.

Substance of this report, therefore, seems to me to point to the desirability of enacting the bill suggested by the National Capital Park and Planning Commisison which makes ample allowance for both private and public housing in areas where families are living in hovels fit only for animals.

The Yalta Voting Agreement

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, April 3 (legislative day of Friday, March 16), 1945

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address which I delivered in New York City, last week, on the question "Is the Yalta Voting Agreement a Just One?"

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The thought just struck me that "the gentlemen talk more now of the peace" than of winning the war. For those of us not now actually fighting and who in some measure have the responsibility of helping to shape opinion for this tremendous task, this is good. It is good because it has suddenly crystallized in our mental processes toward this task—the definite feeling something should be done about this before the war is actually over. G. I. Joe needs the assurance that he is fighting for something more than just the defeat of the enemy. If that blueprint, for his brave new world, is something he can see and feel, the end will come much quicker. We can well be heartened tonight with the news that our great Allied armies are sweeping across Germany, although this is still only the fourth inning of this bloody game. Yet, it is proper that we talk of peace.

But we approach those discussions too often with rose-colored glasses. That is, and could be, disastrous to the ultimate goal. It can be particularly so, when this time—the actors—the authoritative cast making this blueprint is playing to a tough audience. An audience that paid for its admission in blood and an audience that cannot tolerate any more flops. I hope therefore we can be realistic, and talk less of the abolition of wars, and more of an objective that can be maintained, namely, reducing the possibilities of war to the absolute minimum consistent with human nature and the conflicting interests we know will exist. The fighting men will like that better as they proceed to the victory.

The road to that peace goal will be a long one. It is good that we are starting the journey now—that we are on the way. At times it will be difficult. It is, of course, inevitable that when many governments and peoples attempt to agree on a single plan the result should be in the terms of the highest common denominator rather than the plan of any one nation. If we can approach the details in that spirit, we will finally reach the goal. Thus the importance of details in the early stages should not cause too much controversy—they should not be placed higher on the ladder of consideration than they deserve at the time

Tonight we discuss, it is true, an important detail, namely, the voting arrangement of the assemblies and councils we hope to set up. But we must discuss it on the common ground that all of us, with the exception of the actual leadership of our enemies, have the greater will to work it out than the will to deadlock.

That we are and have made progress is indicated by what has happened in regard to the voting procedure in the so-called proposed Security Council. At Dumbarton Oaks nearly everything was agreed upon. We batted 900. The President thinks that is a good average. So do I. On one point an agreement was not reached. Russia held out on her right to forfeit her vote when she was up before "the mast" of the Council. Well, everybody went home and slept on it. In the meantime the critics pointed to this as the prime example of why nations could not get together. Then came the history-making conference at Yalta. There, frankly, a compromise was made. Roosevelt proposed the plan. A concession to Russia, sure—we will make many, they will make many—but we are again more of the will to work it out than to give it up. Crimea produced the compromise. As I understand it, we moved forward, and it was agreed that any nation before "the mast" of the Council, including the five nations who will have the responsibility to maintain this peace we talk about and who can do it—anyone can vote on its own case. It smacks a little of judge and jury procedure, but I defend it on the ground that we have made progress. It is give and take. That's peace, and only that is peace. I defend the voting agreement on the further ground that if Yalta can change opinions made at Dumbarton Oaks, San Francisco can further perfect—and the future planned councils can proceed further up the difficult trail of our hopes for peace.

H. R. 1752, Manpower for War Production

EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. MAY. Mr. Speaker, the House, this week, has acted favorably upon very important legislation to insure that the necessary manpower will be available for the production needed to win two wars. Almost simultaneously, the National Labor Relations Board has announced a policy which can easily nullify the action Congress has taken on manpower legislation. This week, in the case of the Packard Motor Co., the National Labor Relations Board has ruled that foremen will receive the protection of the Government in organizing and bargaining collectively. That, in my judgment, was never the intention of the Congress.

Two years ago a similar attempt was made to secure bargaining rights. At that time, I sponsored legislation in the House to prohibit this innovation—an innovation which only could seriously impair and impede war production. When that legislation was pending the National Labor Relations Board decided that the purposes of the Wagner Act would be jeopardized by compelling employers to bargain collectively with their own representatives, their supervisory personnel. That was the decision in the Maryland Drydock case. Now, 2 years later, this same board has reversed by a two to one vote. Calling attention to this reversal Mr. Gerard D. Reilly, a dissenting board member, has said that such a "fundamental change in our established rules cannot but have an unsettling effect upon essential war production."

I insert Mr. Reilly's dissenting opinion:

GERARD D. REILLY, DISSENTING

In my opinion, the decision we are making today does irreparable damage to the delicate balance between the conflicting interests of management and worker which the National Labor Relations Act sought to bring about in American industry. From the very beginning of the administration of this act the Board has recognized that in the mass production industries the interests of foremen lay predominantly with management groups. Consequently in its decisions dealing with unfair labor practices the Board deemed the actions of a foreman the actions of his employer.

Less than 2 years ago a majority of the Board, recognizing that this historic principle was rapidly being fatally compromised by the effects of its then recent Union Collieries decision, decided in the Maryland Drydock case that employers were not required to bargain collectively with labor organizations composed in whole or in part of supervisors. The doctrine of this case has become one of the guiding principles in industrial relations policy in our national wartime economy. Although challenged on the date of its issuance in a dissenting opinion by Chairman Millis as "administrative legislation," there has been no effort made by any Member in Congress to overrule it by legislative amendment. It has been widely accepted as a rule

of decision by State courts, State boards, and Federal arbitrators dealing with cognate problems. Yet for all practical purposes, and at a time when any fundamental change in well established rules cannot but have an unsettling effect upon essential war production, this decision is now being overruled.

While I would be the first to agree with my colleagues that we should not shut our eyes to recent developments and believe emphatically that, to the extent that we have discretion under the statute, any decision of this Board should be overruled if its impact has a disastrous effect upon sound industrial relations, I find wholly unconvincing the arguments now advanced for the view that the Maryland Drydock rule has proved unworkable in practice. In fact, it seems to me that any complete appraisal of the industrial history of the last 2 years demonstrates its essential correctness. As the text of the majority opinion in that case clearly shows, the Board at that time was fully aware that the economic position of the foremen would be improved if the act were extended to facilitate collective bargaining by them. It was concluded, however, that the benefits which might thus accrue to supervisory employees were outweighed by the dangers inherent in the commingling of management and employee functions, and in the possible restrictive effect upon the freedom of rank and file employees.

The dissenting opinion in that case, however, contending that these dangers were not supported by evidence (although, of course, the majority observations were based upon the same premise implicit in the treatment by the entire Board of foremen in unfair labor practice cases) and, relying upon ex parte testimony given by a spokesman for the foremen's organizations in hearings before this Board and congressional committees, argues that the grievances of foremen were so real and numerous that their right to bargain collectively under the protection of the act should not be denied if there was "proper provision for organizational autonomy."

In controversies of this sort, it has been aptly said that "a page of history is worth a volume of logic." Fortunately, on both points the inexorable facts now leave no room for speculation. The experience of the last 2 years has made it clear (1) that the standard foreman grievances, so repeatedly cited in argument before this Board, have by reason of an exhaustive investigation of a panel of the War Labor Board turned out to be largely fanciful; (2) but to the extent to which the organization of foremen has expanded, the danger of collaboration with rank and file unions to the detriment of individual freedom of choice and established management techniques has proved all too real.

In enacting the National Labor Relations Act, Congress in the preamble of the statute stated as one of its reasons an "inequality of bargaining power between employees and * * * employers * * * which tends to aggravate recurrent business depressions by depressing wage rates and the purchasing power of wage earners in industry." Since one of the crucial questions in this controversy is the intent of Congress, it would seem extremely far-fetched to believe that the Congress had in mind the kind of employees involved in the case before us. While there are undoubtedly some industries in which foremen are underpaid and neglected, the financial plight of the foremen in the Packard Motor Co. can hardly be advanced as the reason for giving such supervisors legal encouragement to organize. As the majority opinion reveals, the employees in the bargaining unit which this decision finds appropriate receive salaries ranging from $5,000 to $6,000, including overtime compensation. The findings of the War Labor Board panel, to which reference has already been made, fill out this picture. The foremen in the industries in which the Foremen's Association of America is active do not fall into the category of that "one-third of the Nation—ill-fed, ill-housed, and ill-clothed," for whose relief the social legislation of the New Deal was enacted. Instead, these men, according to the panel, fall into the upper third of the Nation's income bracket. The panel also found that in the very company in the instant case, as well as in the other companies where strikes have been conducted by the Foremen's Association of America, the record did not support the conclusion that these corporations allowed the foremen to be bypassed in handling grievances, or failed to back them up when they attempted to impose discipline. Moreover, with respect to promotions, demotions, and discharges, it was found that there were no serious grievances at Packard.

Recent developments have made it equally clear that in the strongly organized industries, foremen's associations possess no real autonomy so far as effectuating their bargaining objectives unless they ally themselves in their policies and tactics with representatives of the employees whom they are hired to supervise. When this happens, of course, the proper line of demarcation between supervisor and supervised becomes hopelessly confused. It will be recalled that when the Union Collieries case was heard, the organization of mine officials whose petition for an election was entertained was an independent union. Shortly thereafter, it was given a charter by the United Mine Workers. Failing to achieve recognition by the operators, this new affiliate called a number of strikes last fall in various coal mines. Pursuant to section 8 of the Smith-Connally Act, this Board conducted strike referenda in these mines. Although in several instances a majority of the foremen voted against striking, in every case reported to us the strike call brought about a complete stoppage as the miners refused to cross the picket lines of this supposedly autonomous union. In other words, in order to make these strikes effective, the foremen's group found it necessary to achieve the same degree of collaboration with the production workers that exists among constituent unions of the building-trades department of the A. F. of L., on a construction project.

It is common knowledge that under normal industrial conditions, strikes of factory foremen have little chance of succeeding, for the places of the strikers can readily be filled by promotion from the ranks from which the foremen themselves were originally selected. The record of this case reveals that in order to prevent its strikes from being broken, the Foreman's Association of America, the petitioner in the instant case, though nominally independent, has also been driven to resort to treaties of mutual aid and assistance with rank and file unions. In response to a question from the bench, counsel for the petitioner admitted in oral argument that "when the foremen struck there was a direct and express agreement between us and the responsible C. I. O. leaders that members of the C. I. O. Maintenance and Production Workers Union would not be permitted to take the place of foremen." And in answering a question as to whether there was any agreement with the C. I. O. against crossing picket lines of the foremen, he stated that there had been in Republic Steel and that this matter was "adjusted in each plant in each instance." Can anyone doubt that if such an agreement or adjustment was being negotiated on the eve of a foremen's strike, that supervisors would be inclined to think twice before overruling any union steward on grievances, no matter how unfounded, or disciplining, for infractions of the plant rules, employees influential in the rank and file union whose consent was necessary to the strike agreement? Is it theoretical to assume that the average worker, whose susceptibility to his foreman's influence we have so often noted in unfair labor practice cases, would hesitate to advocate adoption by his union of policies evincing lack of sympathy with the objectives of the organization to which his foreman belongs? Under these circumstances, "proper provision for organizational autonomy" is as unrealistic as the former notion—now discredited by the majority opinion—that the mere placing of different levels of supervisors in separate bargaining units somehow achieved the effect of segregating conflicting interests into watertight compartments. It is difficult to find any logical distinction between supervisors' unions which have such alliances with the rank and file groups, and the labor organizations which we have hitherto proscribed because of the presence of supervisors in their councils.

I turn now to the arguments advanced by the majority for the theory that the Maryland Drydock rule has been found wanting in the light of recent developments. Briefly summarized, these arguments seem to boil down to this:

1. Foremen in mass-production industries have lost much of the authority and policy-making functions they possessed in the 1900's and have viewed with some envy and resentment the superior collective bargaining strength of the organized workers they supervise.

2. Consequently, the membership of the Foreman's Association has greatly increased, and, being denied access to the certification procedures of the Wagner Act, it has conducted strikes for recognition which have interrupted war production in several key plants. Therefore, it is urged that, since one of the purposes of the Wagner Act is to promote industrial peace, our rules of decision should be changed so as to compel employers to recognize the Foreman's Association as collective-bargaining agent whenever it represents the majority of any supervisory group.

Other than the fact that there have been strikes I do not find any recent developments to justify this conclusion. There is nothing startling in the finding that foremen in the mass-production industries differ from foremen in the small shops of the 1900's. This was a development which occurred long before the passage of the National Labor Relations Act, and the expansion of heavy industry in recent years has simply accentuated the trend. We have adverted to it in prior cases. Morever, it must be remembered that it is in these very mass-production industries that company unionism developed in the 1920's and 1930's, and it is this very class of foremen, whom the Board now depicts as shorn of their management prerogatives, that we have always regarded as employer representatives when we find them engaged in any union activity which runs counter to the organizational efforts of a competing union.

As for the strikes—hardly an unforeseen phenomenon in the light of the prediction contained in the dissenting opinion in the Maryland Drydock case—I readily concede the importance of uninterrupted war production and concede that the particular strikes which occurred in the Detroit plants last spring would probably not have occurred if employers had been compelled to recognize the Foreman's Association. Unfortunately, however, while a certification may take one issue out of the arena, it may merely be substituting the possibility of others. Our own files show that in most of the strikes which have occurred in wartime the organizations involved were unions to which the orderly procedures of this act were available. As we recently noted in our annual report, the bulk of the strike notices seem to arise from dissatisfaction with the decisions of some Government agencies. It is unfortunately no novelty to have disgruntled unions strike and interfere with production because this Board had refused

to recognize units which they proposed as appropriate. Such defiance, however, can scarcely be deemed a justification for retreating from well-established legal principles. If strikes of this sort are sufficiently numerous to bring about substantial impairment of the flow of materials to the theaters of war, a wiser remedy would be legislation conferring upon this Board the same power to invoke judicial process against recalcitrant labor organizations which it now possesses with regard to disobedient employers. And since the foremen's strikes described by the majority were already known to the Board last fall, such recommendation might properly have been included in our last annual report to Congress. The adoption of the alternative course proposed by the majority smacks of a peace-at-any-price policy.

In any event, it would seem that any possible immediate gain in the way of eliminating some of the causes of strife is more than outweighed by the general long range impact of this decision upon industrial relations. A most disturbing feature of the majority opinion is the plain implication that all the bars are down which have hitherto been invoked to confine management and labor within their proper spheres of influence. It is true that the text does give some recognition to the dangers of divided allegiance if the foreman's organization is affiliated with the same union which represents the rank and file, since stress is laid upon the fact that the petitioning labor organization admits only supervisors to membership and is not affiliated with any other group. It also goes on to suggest that the certification could be revoked if any material change in the petitioner's present status should develop. This is rather a curious doctrine coming from this quarter. The authors of the present opinion also comprise the Board majority which has consistently adhered to the proposition enunciated in the plant-protection cases that once the Board had fixed the boundaries of an appropriate bargaining unit, it was powerless under the statute to reject as unqualified any representative selected by the majority. It, therefore, appears that the Board is now claiming a power over foremen's units which it disclaimed in the plant guard situation. If it lies within our discretion to overcome the undesirable aspects of a divided allegiance in the foremen's cases by insisting that supervisors must have a different bargaining agent from the workers they supervise, it would seem incumbent upon us to exercise the same discretion with respect to monitorial employees, where the factor of divided allegiance is present, although in a lesser degree.

It should be noted, however, that the bargaining unit which this decision defines includes persons in different levels of supervision, viz, general foremen, foremen, assistant foremen, and special assignment men, although the higher officials have the power to make recommendations concerning rates of pay, transfer, rehire, lay-off, discharge, and discipline of the supervisors in the next lower bracket, a factor which certainly infringes upon freedom of choice under all the accepted criteria in the company domination cases. A large portion of the opinion is devoted to minimizing the resultant danger of disloyalty by pointing out that the company may always resort to its normal disciplinary powers against disloyal or inefficient supervisors. Such an argument, of course, ignores the administrative difficulties of supervising the supervisor. It is particularly strange to find such a theory advanced in a tribunal created within the framework of Anglo-American jurisprudence which from earliest times has laid down the principle that a fiduciary may not serve conflicting interests, and that the mere possibility of temptation renders voidable any transactions made in a dual capacity, irrespective of their honesty.

Even more significant is the apparent indifference of the Board to the close relationship of the petitioner with unions of production workers affiliated with the C. I. O. which the record revealed. Although the alleged independence of the Foreman's Association, in view of the holding in the Soss case, was one of the pertinent issues in this proceeding, the majority of the Board in advance of the hearing refused to instruct its trial examiner to obtain evidence on this point. Such facts as do bear on the question therefore were either introduced by the company or elicited from petitioner's counsel at the argument before the full Board. Included in this former category were the resolutions of support on the part of the Michigan C. I. O. Council, the refusal of the organized steel workers at Republic to cross the foremen's picket line, and the interference of production workers at Briggs with the plant officials who tried to maintain continuous operation during the strike. A tendency to view these facts as immaterial is also illustrated by the majority's holding certain related evidence to be incompetent, although in other respects the majority opinion makes the widest use of secondary material and even personal experience. It would, therefore, seem that despite the footnote expressing the view of one member that the applicability of the present decision to affiliated organizations is still an open one, there is little doubt as to the form such a decision will take when a case presenting this issue arises.

In making these observations, I am fully aware that there is a school of thought which will regard them as unduly pessimistic, in view of the fact that foremen for many years have been organized in the printing, maritime, railroad, and building construction industries. This state of affairs has frequently been cited as disproving the theory that industrial efficiency is impaired or union democracy frustrated by the presence of foremen and workers in the same bargaining organization. These examples have little relevance to the controversy. For one thing, only two of these industries—the printing and maritime trades—even fall within the scope of the National Labor Relations Act, and the pattern of collective bargaining established in them grew up quite independently of this statute and in some respects is quite contrary to its basic concepts. Because of the traditions of the sea, implemented by the admiralty laws, there is little danger of the officers and crew merging their respective labor organizations. In the newspaper field, where the foreman is traditionally a member of the printers' union, the composing room staff operates almost as independently of the publisher as would be the case if the work was done by a job printing establishment. Then again, in none of the enumerated industries is this country particularly unique, and the technological developments in these fields in recent years have been relatively minor. An entirely different spectacle is presented by the mass production industries, where the constant development of technological science, with the resultant subdivision of labor operations, requires constant attention in the coordination of production with supervisory and engineering techniques. It is these industries which have made this country the foremost industrial nation of the world and contributed so heavily to war production, and it is in these industries that the basic principles of the National Labor Relations Act have been most frequently applied. It therefore seems to me that we may well be forcing these industries and their employees into a Procrustean bed when we project upon them practices which have grown up in entirely unrelated fields.

Mr. Speaker, having taken steps to assure adequate manpower, it is now the solemn duty of this House to take the necessary steps to counteract the devastating effect of this new bureaucratic rule. We should do so now, and to do so would be in complete harmony with the past practice of all the great labor groups and their employers over a long period of years. It has been without question written and carried in collective-bargaining agreements that managerial and supervisory personnel should not be and were not included as employees entitled to collective-bargaining rights. The Wagner Labor Relations Act was surely passed for the benefit of both the employer and the employee, and, having been so intended by the Congress and thus understood and construed by the parties interested, it seems strange that the National Labor Relations Board did not continue to accept the legislative intent and, furthermore, the construction placed upon the act by the parties interested. It is almost universally recognized by courts, business, and litigants that the acts and things done by interested parties to a contract themselves thereby place a construction upon the law by the parties interested, and the courts hold in harmony with this construction that the acts of the parties interested control, and this is sound principle. If the National Labor Relations Board cannot avoid vacillation and doubts as to the meaning of the law, or if there is really doubt as to the legislative intent, then it is the plain duty of the Congress to make clear that intent, for otherwise constant change of front by the Board can only lead to confusion in industry and resulting lack of efficient production. It actually may lead to utter chaos, confusion, and paralysis of production and seriously retard our war effort. Is it possible that we, as authors of the legislation and responsible for its enactment, will permit such confusion of thought to continue without meeting our own responsibility by amending the law so as to remove all reason for doubt? The hour has come, gentlemen, when we must face our own responsibility to clarify our own act, if clarification is needed. When and how shall we meet this grave question? As for me, I am ready to meet my own responsibility and do my duty.

The Aircraft Carrier "Enterprise"

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, April 3 (legislative day of Friday, March 16), 1945

Mr. MAGNUSON. Mr. President, I had the opportunity at one time in the early part of the war to serve in the armed forces. I was fortunate to be put aboard a great ship of the United States Navy, the aircraft carrier *Enterprise*, a ship which has not only built a legend, but has done a great deal of fighting for this country. I ask unanimous consent to have printed in the RECORD an able article written at Pearl Harbor regarding this "grand old fighting lady."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"BIG E" BUILDS LEGEND HER MEN NEVER FORGET

(By Al Dopking)

PEARL HARBOR.—The *Big E* turned her proud, tough old nose into the wind at full throttle—she had come through the gray mist on time again, this time for the battle for Leyte Gulf. The Japanese Fleet had split and was trying to slip in from three directions against Douglas MacArthur's sitting convoy and the 4-day-old invasion of the Philippines depended on the outcome.

To the U. S. S. *Enterprise*, sole survivor of her class and holder of a Presidential unit citation, it was an old story. She has a habit of casting a shadow across the "Rising Sun." Away back in '41, returning from Wake Island, where she had delivered some fighter planes, she ran smack into the Japanese sneak attack and hers were the only carrier-based aircraft in action that December 7. Since then the 19,500-tonner's exploits have become a legend.

ESCORTS THE "HORNET"

On a map, the train of her persistent hunts for the enemy looks like the scribblings in a child's picture book and takes in most of the major Pacific engagements.

She sallied forth deep into the Marshalls and Gilberts soon after Pearl Harbor for the first American blows against enemy territory.

She escorted the *Hornet* to within 800 miles of Tokyo for Jimmy Doolittle's daring air raid.

Often she hunted alone, for there was a time when Uncle Sam could muster no other carrier for the battle. When the sleek new carriers arrived, she refused to be benched.

She was in on the invasion of the Gilberts and Marshalls; at Truk, Palau, Yap, Woleai, and Ulithi in the Carolines; Jaluit in the Marshalls; Emirau in the South Pacific; Hollandia in New Guinea; Saipan, Guam, the Bonins, the Ryukyus, Formosa, and the Philippines.

In the Gilberts she pioneered with night combat fighters, losing one of her most famous flyers, Lt. Comdr. E. H. (Butch) O'Hare.

OUT FOR BLOOD

In the battle of the Philippine Sea in June 1944, 1 of her planes was first to sight the enemy fleet and later she damaged 2 enemy carriers there and got 32 planes.

At Santa Cruz she and the *Hornet* destroyed 135 enemy planes; damaged 2 carriers, 2 battleships, and 3 cruisers before the *Hornet* was mortally hit.

At Truk her airmen sank 11 ships, damaged 21 others, and destroyed more than 75 planes; at Palau sank 3 ships and destroyed 11 planes.

Now in the battle for Leyte Gulf she was turning her battlewise snout into the breeze once again for blood. Her fliers swarmed off against a huge battleship, Japan's biggest and newest; another battlewagon of the older *Kongo* class, a *Mogami* cruiser, and seven or so destroyers.

With the *Big E* brood still 15 miles away, the Japanese were even firing their main batteries.

The giant battleship, the *Musashi*, was hit with 11 bombs and 8 torpedoes and sank. A new type destroyer was set ablaze; the *Mogami* and another destroyer were left smoking.

CHASES FRANTIC ENEMY

Again next day the ack-ack was terrific. A large carrier was left afire, dead in the water; a battleship was hit; a light cruiser and a destroyer were plastered with rockets. Both the carrier and the cruiser later sank and pilots said the destroyer exploded amidship.

By then, in the words of the air group commander, the Japanese Fleet "was spread over an area of many miles, was fleeing, a disorganized mob."

Before the day ended *Big E* planes sank a small carrier, damaged a light cruiser and a destroyer and, as a parting gesture, gave chase to the frantic enemy, planting five bombs on a light cruiser, and three more on a battleship.

The *Big E* is known as a lucky ship and for the spirit of her men.

There was Midway. Teaming with the ill-fated *Hornet* and *Yorktown*, she had been combing the broad waters without success for the Japanese carrier force only 750 miles west of Pearl Harbor.

If they failed to find the enemy, it might give him the initiative and spell disaster. The *Big E's* air group commander, Lt. Comdr. Clarence Wade McClusky, Jr., decided to take one more look—this time much farther out. Planes were running low on fuel.

MEN ALL FEEL IT

But they found the enemy and history was made that day. Never again has the enemy dared such a thrust.

The spirit of the *Enterprise* is hard to describe. Commander Thomas J. Hamilton, of Columbus, Ohio, her executive officer for 18 months, once tried it.

"You can't really feel it," he said, "unless you've ridden her. It's something that grips men so completely that they subordinate themselves to all else."

Admiral William F. (Bull) Halsey was carrying his flag on her when war broke. He rode her to the Marshalls. His heart still rides her. He told her so in congratulating her on the Presidential citation.

One of the past skippers is Vice Admiral George D. Murray, of 3402 Q Street, Washington. Murray wrote her first battle order, after she had started for Wake with Marine fighter planes in December 1941.

In closing, he said, "It is the tradition of our Navy that, when put to the test, all hands keep cool, keep their heads, and fight. Steady nerves and stout hearts are needed now."

NO TIME FOR GLORY

The *Enterprise* never has been held up in an operation by major engineering trouble; never has had to wait on the rearming crew for a strike. Her gunners have always bagged their share of enemy planes.

She never has time for glory. There was her return to Bremerton, Wash., in July 1943 for overhauling after 26 months in the Pacific. As the Old Lady poked her nose—a little the worse for battle—into port, there were only the guards to greet her. Officially she wasn't there.

Her indomitable spirit, which only the men who ride her know, always seems to impel them to that one extra step like it did McClusky at Midway.

And then there was the young fighter pilot, Ensign Walter A. Wood, Jr., of Grand Rapids, Mich., shot down as he and his buddies plastered the Manila water front.

Later friendly forces found his body and note pad. On it he had scribbled his farewell message to his buddies of the *"Big E,"* "Got three."

War Manpower Commission Regulations on Employment Stabilization Programs

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, April 3 (legislative day of Friday, March 16), 1945

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the complete regulations of the War Manpower Commission on the subject of employment stabilization programs.

There being no objection, the regulations were ordered to be printed in the RECORD, as follows:

TITLE 29. LABOR—CHAPTER VII. WAR MANPOWER COMMISSION (REGULATION NO. 7)—PART 907. GOVERNING EMPLOYMENT STABILIZATION PROGRAMS

By virtue of the authority vested in me as Chairman of the War Manpower Commission by Executive Orders Nos. 9139 and 9279, and War Manpower Commission Regulation No. 4, as amended effective August 16, 1943, I hereby prescribe the following regulation governing War Manpower Commission employment stabilization programs:

Sec. 907.1. General policy.
Sec. 907.2. Control of hiring and solicitation of workers.
Sec. 907.3. Establishment and approval of programs.
Sec. 907.4. Minimum standards in general.
Sec. 907.5. Optional provisions.
Sec. 907.6. Definitions.
Sec. 907.7. Revocation of previous policies.
Sec. 907.8. Effective date

Authority: Sections 907.1 to 907.8 inclusive, issued under Executive Order No. 9139, 7 F. R. 2919; Executive Order No. 9279, 7 F. R. 10177; part 904 (Reg. No. 4) 8 F.R. 11337.

SEC. 907.1. General policy.—(a) Objectives: The purpose of an employment stabilization program is to assist the War Manpower Commission in bringing about, by measures equitable to labor and management, and necessarily for the effective prosecution of the war:

1. The elimination of wasteful labor turnover in essential activities.

2. The reduction of unnecessary labor migration.

3. The direction of the flow of scarce labor where most needed in the war program.

4. The maximum utilization of manpower resources.

(b) Authority and responsibilities of management-labor committees: The several regional and area management-labor war manpower committees are hereby authorized to consider questions of policy, standards, and safeguards, in connection with the establishment and the administration of employment stabilization programs, and to make recommendations to their respective manpower directors.

(c) Encouragement of local initiative and use of existing hiring channels: To the maximum degree consistent with this regulation and with the objectives of employment stabilization programs, local initiative and cooperative efforts shall be encouraged and utilized and maximum use made of existing hiring channels such as private employers, labor organizations, professional organizations, schools, technical institutions, and Government agencies.

(d) Special authorization to designated Government agencies: The Chairman of the War Manpower Commission may authorize designated Government agencies to perform some or all of the functions of the United States Employment Service under this regulation in accordance with such conditions and procedures as he may prescribe.

SEC. 907.2. Control of hiring and solicitation of workers:

(a) After establishment of employment stabilization program: All hiring and solicitation of workers in, or for work in, any locality for which a War Manpower Commission employment stabilization program has been established shall be conducted in accordance with such program.

(b) Pending establishment of employment stabilization program: All hiring and solicitation of workers in, or for work in, a locality for which no War Manpower Commission em-

ployment stabilization program has been established shall, pending the establishment of such a program, be conducted in accordance with subsections (a) to (1), inclusive, of section 907.4 of this regulation which subsections shall be considered an employment stabilization program for this purpose.

SEC. 907.3 Establishment and approval of programs:

(a) General: Employment stabilization programs shall be formulated by area or regional manpower directors after consultation with their management-labor war manpower committees, but shall not become or continue operative except as provided in this section.

(b) Area programs: Area employment stabilization programs may be established for any War Manpower Commission administrative area designated by a regional manpower director for employment stabilization purposes.

(c) Other programs: Employment stabilization programs shall be established not later than October 15, 1943, for all portions of States or regions for which area employment stabilization program has been established.

(d) New programs: Employment stabilization programs which are not in effect prior to the effective date of this regulation shall be submitted to the regional manpower director for his approval. No such program shall become operative until approved by the regional manpower director.

(e) Existing programs: All employment stabilization programs in effect on the effective date of this regulation shall be promptly amended by the appropriate manpower director, after consultation with his management-labor war manpower committee, so as to include therein the provisions set forth in section 907.4 of this regulation, and otherwise to conform to this regulation. The program thus amended shall be submitted to the regional manpower director for his approval. Any existing programs not so amended and approved by October 15, 1943, shall cease to have operative effect on and after such date.

(f) Termination of industry programs: No War Manpower Commission industry employment stabilization program shall be established after the effective date of his regulation. No such existing program shall continue in effect on or after October 15, 1943, unless specifically approved by the Chairman of the War Manpower Commission.

(g) Approval: The Regional Manpower Directors are authorized to approve any employment stabilization program which includes the provisions set forth in section 907.4 of this regulation, and otherwise conforms to the provisions of this regulation.

SEC. 907.4. Minimum Standards in General: Except as provided in section 907.5 (a) (5), every employment stabilization program approved after the effective date of this regulation shall contain the following provisions:

(a) General: A new employee, who during the preceding 60-day period was engaged in an essential or locally needed activity, may be hired only if such hiring would aid in the effective prosecution of the war. Such hiring shall be deemed to aid in the effective prosecution of the war only if:

1. Such individual is hired for work in an essential or locally needed activity or for work to which he has been referred by the United States Employment Service, and

2. Such individual presents a statement of availability from his last employment in an essential or locally needed activity, or is referred by the United States Employment Service of the War Manpower Commission, or is hired with its consent, as provided herein.

(b) Issuance of Statements of Availability by Employers: An individual whose last employment is or was in an essential or locally needed activity shall receive a statement of availability from his employer if:

1. He has been discharged, or his employment has been otherwise terminated by his employer, or

2. He has been laid off for an indefinite period, or for a period of 7 or more days, or

3. Continuance of his employment would involve undue personal hardship, or

4. Such employment is or was at a wage or salary or under working conditions below standards established by State or Federal law or regulation, or

5. Such employment is or was at a wage or salary below a level established or approved by the National War Labor Board (or other agency authorized to adjust wages or approve adjustments thereof) as warranting adjustment, and the employer has failed to adjust the wage in accordance with such level or to apply to the appropriate agency for such adjustment or approval thereof.

(c) Issuance of statements of availability by United States Employment Service:

1. A statement of availability shall be issued promptly to an individual when any of the circumstances set forth in subsection (b) is found to exist in his case. If the employer fails or refuses to issue a statement, the United States Employment Service of the War Manpower Commission, upon finding that the individual is entitled thereto, shall issue a statement of availability to the individual.

2. A statement of availability shall be issued by the United States Employment Service to any individual in the employ of an employer who the War Manpower Commission finds, after notice, hearing, and final decision has not complied with any War Manpower Commission employment stabilization program, regulation, or policy, and for so long as such employer continues his noncompliance after such finding.

(d) Referral in case of underutilization: If an individual is employed at less than full time or at a job which does not utilize his highest recognized skill for which there is a need in the war effort, the United States Employment Service may, upon his request, refer him to other available employment in which it finds that the individual will be more fully utilized in the war effort.

(e) Workers who may be hired only upon referral by the United States Employment Service: A new employee may not be hired solely upon presentation of a statement of availability, but may be hired only upon referral by, or in accordance with arrangements with, the United States Employment Service when:

1. The new employee is to be hired for work in a critical occupation, or his statement of availability indicates that his last employment was in a critical occupation.

2. The new employee has not lived or worked in the locality of the new employment throughout the preceding 30-day period.

3. The new employee's last regular employment was in agriculture and he is to be hired for nonagricultural work provided that no such individual shall be referred to nonagricultural work except after consultation with a designated representative of the War Food Administration, and provided that such an individual may be hired for nonagricultural work for a period not to exceed 6 weeks without referral or presentation of a statement of availability.

(f) Exclusions: No provision of the employment stabilization program shall be applicable to:

1. The hiring of a new employee for agricultural employment;

2. The hiring of an employee in any Territory or possession of the United States, except Alaska and Hawaii;

3. The hiring by a foreign, State, county, or municipal government, or their political subdivisions, or their agencies and instrumentalities, or (for purposes of sec. 907.4 (a) only) to the hiring of any of their employees, unless such foreign, State, county, or municipal government, or political subdivision or agency or instrumentality, has indicated its willingness to conform, to the maximum extent practicable under the Constitution and laws applicable to it, with the program;

4. The hiring of a new employee for domestic service;

5. The hiring of a school teacher for vacation employment or the rehiring of a school teacher for teaching at the termination of the vacation period.

(g) Appeals: Any worker or employer may appeal from any act or failure to act by the War Manpower Commission under the employment stabilization program, in accordance with regulations and procedures of the War Manpower Commission.

(h) Content of statements of availability: A statement of availability issued to an individual pursuant to the program shall contain only the individual's name, address, social-security account number, if any, the name and address of the issuing employer, or War Manpower Commission officer and office, the date of issuance, a statement as to whether or not the individual's last employment was in a critical occupation, and such other information not prejudicial to the employee in seeking new employment as may be authorized or required by the War Manpower Commission.

(i) Solicitation of workers: No employer shall advertise or otherwise solicit for the purpose of hiring any individual if the hiring of such an individual would be subject to restrictions under the employment stabilization program, except in a manner consistent with such restrictions.

(j) Hiring: The decision to hire or refer a worker shall be based on qualifications essential for performance of or suitability for the job, and shall be made without discrimination as to race, color, creed, sex, national origin, or, except as required by law, citizenship.

(k) Representation: Nothing contained in the program shall be construed to restrict any individual from seeking the advice and aid of, or from being represented by, the labor organization of which he is a member or any other representative freely chosen by him, at any step in the operation of the program.

(l) General referral policies: No provision in the program shall limit authority of the United States Employment Service to make referrals in accordance with approved policies and instructions of the War Manpower Commission.

SEC. 907.5. Optional provisions: Regional and area manpower directors, after consultation with their management-labor war manpower committees, may include in employment stabilization programs provisions such as the following designed to meet special manpower needs in the localities affected, but except as specifically authorized herein, no such provision shall conflict with section 907.4 of this regulation or with any State or Federal law.

(a) Subject to standards and instructions approved by the Chairman of the War Manpower Commission, provision for adding to section 907.4 (e) of this regulation the following categories of individuals who must be hired only upon referral by, or in accordance with arrangements made with the United States Employment Service:

1. Individuals for work in specified categories of occupations in activities in which manpower shortages threaten critically needed production, or

2. Individuals for work in specified shortage occupations (in addition to critical occupations), or

3. Individuals whose statements of availability indicate that they were most recently employed in such occupations, or

4. Individuals who can be readily identified as able to meet specifications required for work in such occupations or activities, or

5. All individuals. A program containing such a provision may apply only to a labor market area which, on the date of the approval of the program, was classified by the War Manpower Commission as a group I or group II area. Such a program may, notwithstanding anything to the contrary in this regulation, include necessary modifications of section 907.4.

(b) Provisions designed to protect individuals from loss of seniority or other reemployment rights.

(c) Provisions designed to require or promote more effective utilization of their manpower by employers.

(d) Provisions designed further to control advertising or other solicitation of individuals.

(e) Provisions designed to afford individuals a greater measure of protection against arbitrary discharge.

(f) Provisions designed to facilitate the employment of individuals during vacation, probationary, off season, or other short periods in work other than that in which they have customarily engaged, and to facilitate the return of such persons to their customary employment.

(g) Provisions governing the release of individuals by employers by whom they were hired or solicited in violation of employment stabilization programs, provisions for disregarding for purposes of the 60-day clause in section 907.4 (a) hereof, periods during which individuals were employed in violation of employment stabilization programs or in employments excluded from the programs, and other provisions pertaining to the enforcement of a program.

(h) Provisions designed to minimize loss of working time of applicants for statement of availability or referral.

(i) Provisions designed (1) to permit the hiring of an individual by, or of an individual whose last regular employment was with, a small establishment without regard to the requirements of the program, except that no establishment regularly employing more than eight employees shall be treated as a small establishment for the purpose of this paragraph, or (2) to exclude from the requirement of the program the hiring of individuals last employed in domestic service or last employed by foreign, State, or local governments or their instrumentalities, or (3) to exclude the hiring of individuals for supplemental or casual work, or for other types of short-time or intermittent employment, the coverage of any of which would involve undue administrative burdens and would not measurably contribute to the accomplishment of the objectives of this regulation.

(j) Subject to standards and instructions approved by the Chairman of the War Manpower Commission, provisions for regulating the hiring of new employees through the establishment of fair and reasonable employment ceilings which limit the number of workers or of specified types of workers which may be employed in an establishment or place of employment during specified periods.

(k) Provision for initial issuance of statements of availability by the United States Employment Service in lieu of the individual's employer under some or all of the circumstances set forth in section 907.4 (b) of this regulation.

(l) Provisions which, while conflicting in substantive respects with section 907.4 of this regulation, are approved by the Chairman of the War Manpower Commission after consultation with the Management-Policy Committee and after a finding by him (1) that such provisions are necessary to meet manpower problems peculiar in the locality to which the program applies and are consistent with the fundamental objectives and policies upon which the regulation is based, and (2) that such provisions have previously received the unanimous recommendation of the appropriate area or regional management-labor war manpower committee and manpower director.

SEC. 907.6. Definitions: As used in this regulation:

(a) Agriculture means those farm activities carried on by farm owners or tenants on farms in connection with the cultivation of the soil, the harvesting of crops, or the raising, feeding, or management of livestock, bees, and poultry, and shall not include any packing, canning, processing, transportation, or marketing of articles produced on farms unless performed or carried on as an incident to ordinary farming operations as distinguished from manufacturing or commercial operations.

(b) State includes Alaska, Hawaii, and the District of Columbia.

(c) New employee means any individual who has not been in the employment of the hiring employer at any time during the preceding 30-day period. For the purpose of this definition, supplemental, casual, or other types of short-time or intermittent employment excluded under the program, shall be disregarded.

(d) Critical occupation means any occupation designated as a critical occupation by the Chairman of the War Manpower Commission.

(e) Essential activity means any activity included in the War Manpower Commission list of essential activities.

(f) Locally needed activity means any activity approved by the Regional Manpower Director as a locally needed activity.

(g) The terms "employment" and "work" as applied to an individual engaged in principal and supplementary employments mean his principal employment.

(h) Employment-stabilization program includes any arrangement involving restrictions on separation or hiring of workers, whether through issuance of statements of availability, referral by the United States Employment Service or otherwise.

SEC. 907.7. Revocation of previous policies: The War Manpower Commission Policy to Prevent Pirating of War Workers, dated July 16, 1942, appearing at 7 F. R. 5500, and part 907, sections 907.1 to 907.21, inclusive, War Manpower Commission Policies for Employment Stabilization Programs Which Include the Exercise of Hiring Controls in Areas of Manpower Shortage, effective February 1, 1943, appearing at 8 F. R. 7227 (as amended, June 20, 1943, 8 F. R. 9182), are hereby revoked, effective August 16, 1943, together with all instructions and procedures previously issued by the War Manpower Commission relating to the formulation and content of employment stabilization programs.

SEC. 907.8. Effective date: This regulation shall become effective August 16, 1943.

AUGUST 13, 1943.

PAUL V. MCNUTT,
Chairman, War Manpower Commission.

Incorporated herein are Amendments Nos. 1, 2, and 3, effective May 22, May 22, and October 21, 1944, respectively.

TITLE 29. LABOR—CHAPTER VII. WAR MANPOWER COMMISSION—REGULATION NO. 7, AMENDMENT NO. 4—PART 907. GOVERNING EMPLOYMENT STABILIZATION PROGRAMS

Pursuant to the authority vested in me as Chairman of the War Manpower Commission by Executive Orders Nos. 9139 and 9279, section 907.5 (j) of War Manpower Commission Regulation No. 7, as amended (9 F.R. 5400) is hereby further amended, effective January 3, 1945, by deleting therefrom the words "regulating the hiring of new employees through."

CHARLES M. HAY,
Acting Chairman.

JANUARY 3, 1945.

Analysis of Bretton Woods Agreement by John Francis Neylan

EXTENSION OF REMARKS

OF

HON. HIRAM W. JOHNSON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, April 2 (legislative day of Friday, March 16), 1945

Mr. JOHNSON of California. Mr. President, I ask unanimous consent to have printed in the RECORD an analysis of the Bretton Woods agreement by a very able lawyer, John Francis Neylan, of San Francisco. I say nothing further regarding the matter, except that he becomes an antagonist of John Maynard Keynes. The brief is well worth reading by all my auditors.

I have obtained from the Public Printer an estimate of the cost of printing this document. The estimated cost is $728.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

AN ANALYSIS OF THE BRETTON WOODS AGREEMENT BY JOHN FRANCIS NEYLAN AND ADDRESS DELIVERED BY LORD JOHN MAYNARD KEYNES IN HOUSE OF LORDS, MAY 23, 1944

FOREWORD

The Bretton Woods agreement is the popular designation of the articles of agreement of the International Monetary Fund and International Bank for Reconstruction and Development proposed by the United Nations Monetary and Financial Conference held at Bretton Woods, N. H., in July 1944.

Admittedly it is only one step in an overall plan which may determine the future economic government of the world. The remaining features of the plan are still undisclosed.

In the words of its principal author, Lord Keynes, it "embodies epoch-making innovations," but nevertheless is only "an iron ration."

Whether the United States can make the sacrifices, assume the additional financial burdens, and live under the restrictions is a matter of vital concern to every citizen.

Whether it is prudent to commit the United States to such a revolutionary plan while millions of its citizens, who will have to carry most of the burden, are fighting overseas is a grave question.

The plan has been designated "an assignment by a creditor for the benefit of debtors." To a limited extent, at least, the description is true.

The matter is now pending in the Congress of the United States.

No other country has acted upon it, because the adoption of the scheme depends upon the willingness of the United States to make the sacrifices, accept the restrictions, and carry the burden.

To enable the reader to have access to the views of the principal author of the plan, and to have a first-hand interpretation of its provisions, a copy of an address made by Lord John Maynard Keynes in the British House of Lords, May 23, 1944, is attached to this analysis.

ANALYSIS

In view of President Roosevelt's message to Congress urging ratification of the so-called Bretton Woods agreement and an appropriation of $5,925,000,000 for our financial contribution, there can be no further doubt that a determined effort is to be made to drive this measure through both the

House and Senate by methods reminiscent of the days of rubber stamps and blank checks.

Obviously, the stage setting has been carefully handled and the build-up was timed for a climatic emotional appeal from the President against the background of the meeting of the Big Three at the summer home of Marshal Stalin in the Crimea.

Without the slightest intention of showing the President any disrespect, it seems evident that he has not had the time to examine the plan critically, and that the message was prepared by a Treasury Department adviser. The President's whole background in relation to financial matters, including his nomination of Vice President Wallace to handle $40,000,000,000 negatives the thought that the Congress should act hurriedly or that it should fail to scrutinize this document with "the most anxious concern."

The President refers to the possibility of a few minor imperfections in the plan. The fact is the document embodies so many basic contradictions, and is so loaded with ambiguities it defies understanding as anything but an elaborate contrivance to give away American money and fetter the United States in the post-war era, almost like a conquered nation.

There is no support in common sense or the experience of mankind for the theory that in the days ahead the United States, staggering under a greater debt than all the rest of the world combined, can carry the same disproportionate burden that it has carried in time of war.

Should the underlying theory of the W. P. A., of unhappy memory, be adopted in the international field in times of peace, only Providence will be able to protect the United States and the world from bankruptcy and economic chaos.

Strangely the so-called Bretton Woods agreement is, substantively, the brainchild of a gentleman whose thinking and writings played such a large part in the early years of the Roosevelt administration, inspiring pump-priming and leaf-raking as means of spending our way out of depression.

The real author of the Bretton Woods agreement with what he has termed its "epoch-making innovations in international plans" is Lord John Maynard Keynes, a director of the Bank of England, adviser of the British Exchequer and the most brilliant exponent of the project of substituting economic imperialism for political imperialism with London and other European capitals as the seats of empire.

Of course, it would be provincialism of a low order to discard any plan solely because its author was not an American. On the other hand, Lord Keynes has never posed as a citizen of the world, and if he has hailed this agreement as a triumph of revolutionary ideas which inure to the benefit, principally, of Europe at the expense of the United States, it would seem to be the prudent course to subject it to searching analysis.

Lord Keynes has outlined to the House of Lords in a remarkable speech the enormous advantages that will accrue to his country, and he has paid warm tribute to the American negotiators because of their broadmindedness, generosity, and good neighborliness. Despite his native reluctance in the matter of displaying emotion he felt that the conferees had merged "a band of brothers."

After reading Lord Keynes' speech and the treatises published by Secretary of the Treasury Morgenthau and Dr. Harry D. White, his adviser, I am prepared to accept the development of the fraternal relationship, but I cannot escape the conviction that the brilliant British brother induced an acceptance of the English doctrine of primogeniture under which the eldest son takes the entire estate and the younger boys eke out an existence in the church or the army.

To clarify perspective as to authorship, it is well to bear in mind that in 1943 the British Government issued a white paper embodying what was termed a proposal for "an international clearing union," of which Lord Keynes was the author.

Almost immediately the United States Treasury issued another plan which bore all the earmarks of hasty improvisation.

Lord Keynes frankly stated that his proposed union might become "the pivot of the future economic government of the world." Also to his credit let it be said that his document contained a minimum of thought-concealing phrases. He was forthright about his objectives and blunt and clear in his expressions.

The document created a storm of protest from every quarter, not only in the United States, but throughout the world.

Undaunted, this gentleman who resigned from the British peace delegation at Paris in 1919 and denounced the Treaty of Versailles as an economic atrocity, headed delegations from his country to innumerable conferences, and in April 1944 there emerged what was called a "joint statement by experts on the establishment of an International Monetary Fund of the United and Associated Nations."

In this statement the experts, including Secretary Morgenthau and his adviser, Dr. White, concurred.

Thereafter, on July 1, 1944, the United Nations Monetary and Financial Conference convened at Bretton Woods and when it adjourned on July 22 it produced what is now offered to the Congress as the "Articles of Agreement, International Monetary Fund and International Bank for Reconstruction and Development."

It is interesting to note that the United States Treasury and, presumably, the President had this document all through the optimistic days of August, September, and October when the country was encouraged to believe the war in Europe would be over quickly and reconversion and post-war problems were imminent. However, it was not sent to the Congress and it was not submitted in any solemn referendum to the American people, who will be called upon to submit to its restrictions and pay the cost, not only in money subscribed but in intangibles of far greater magnitude.

Avoidance of twisting the lion's tail for political purposes is a weak and transparent subterfuge, because on every issue of sound foreign policy, including lend-lease, both parties united and there was no criticism.

The conclusion is inescapable that there was fear an exposition of the plan with its enormous disadvantages to American finance, foreign trade, domestic industry, labor, and post-war reconstruction generally would be politically harmful to the administration.

Suddenly, on January 26, it was announced that the bills embodying the agreement would be introduced in Congress by Senator WAGNER and Representative SPENCE, and Speaker RAYBURN was quoted as announcing that the House would act quickly once the bill had been approved by the Banking and Currency Committee.

Now comes the presidential appeal from the far-off Crimea.

It is a safe assertion that not 1 percent of the American people have any understanding of the provisions of this revolutionary plan, and that not 10 percent of the membership of the House of Representatives and Senate have ever read the bill which is scheduled for quick passage.

Again and again it is emphasized that this is only one of a number of measures of similar type which will commit the United States in the international field, but that it includes matters which are basic. We are on notice that a host of Olivers will be asking for "more."

In fact this has been termed a mere "iron ration."

Yet it is conservative to assert that this measure constitutes the greatest surrender of resources and economic advantages by any nation in the history of the world, and signalizes the inauguration of a plan under which a prodigally generous nation puts itself at the mercy of its debtors.

One proponent points out that there is a provision for withdrawal. This is true, but the history of mankind shows that once an individual or a nation accords some great advantage, its withdrawal creates enmity and in the sphere of nations lays the foundation for war.

Already it is certain that the 12,000,000 in the armed services of the United States, fighting all over the world, are coming home to the grim reality of a mortgage of more than $300,000,000,000. With their immediate families they will constitute 40 percent of the population and will face life with the realization that a large portion of the $120,000,000,000—which will be their share—was spent to pay for a riot of prosperity far from the battlefields where they were giving everything.

They will experience difficulty in understanding some of the additional burdens being piled upon them while they will be facing the grim and heart-breaking difficulties of readjustment to the all-important responsibility of supporting themselves and their children.

It would seem equitable that these men should have some voice in determining whether the resources which belong to them and their children are to be squandered to enable old political imperialisms to transmute themselves into economic empires and perpetuate their dominion over hundreds of millions of human beings and vast territories they could neither protect nor liberate.

Not a single European nation or empire was capable of defending itself unaided against Nazi Germany or of protecting or recovering its overseas territories, colonies, or other holdings against Japan.

The day of imperialism is dead and gone, and the attempt to perpetuate it under a new guise is doomed to failure.

The Bretton Woods agreement does not contemplate a new world order based upon freedom and expanding development of all the human race. It is a document which seeks to create an economic strait jacket for the benefit of a continent which for centuries has drained the treasure of the rest of the earth to finance its wars and to support it in intervals of peace.

Its adoption by the United States would give notice to the world, wherein hundreds of millions struggle for political and economic freedom, that we have abandoned the maxim of "live and let live" and have succumbed to the hateful dictum, "don't spoil the natives."

In the event the United States becomes a party to the so-called Bretton Woods agreement creating the International Monetary Fund and International Bank for Reconstruction and Development, Lord John Maynard Keynes, financial adviser to His British Majesty's Government, will deserve to rank second only to the incomparable Churchill. Furthermore it is not inconceivable that he will emerge as the logical successor of the man who "did not become the King's first Minister to preside at the liquidation of the Empire."

Anything less would mark the British as an uninformed and ungrateful people, and no one will allege they are uninformed when their interests are involved. He will also be entitled to the undying gratitude of the French, the Dutch, the Belgian, and the Russian Empires.

Churchill deservedly will receive the credit for pulling the English ship of state off the rocks of Dunkirk, steering it through the tempests and typhoons of war, and ultimately bringing it safely into harbor. After that will come the post-war era with its economic

storms, its contrary winds and mountainous seas to test the seamanship of all nations, and in that day will come a realization of the genius of Keynes.

If anyone should be inclined to feel that I exaggerate or become unduly lyrical in relation to the accomplishments of this distinguished British statesman, I ask only a fair-minded examination of the record. In advance, I pledge the use of only those adverbs, adjectives, and appraisals already used by those bred in the art of understatement.

At the outset let us determine to be frank within the bounds of good manners, because, in the words of Lord Keynes, "the plan introduces an epoch-making innovation in an international instrument," and if the American people should be committed carelessly or improvidently to an agreement which may render their post-war burdens unbearable, the consequences might be calamitous. Again adopting the advice of Lord Keynes to the House of Lords, "we must examine any financial plan to make sure that it will help us carry our burdens and not add to them." In fact, he recommended scrutinizing "with anxious concern."

Let us recognize frankly that the plan should be termed the "Keynes plan for an international monetary fund," because it is simply a modification of Lord Keynes' international clearing union blueprint, which was offered to the United Nations in 1943 and was rejected even by the ardent advocates of a superstate.

It is not cynical to suggest that the Keynes plan now being offered represents the original clearing union program minus those clauses incorporated in the original draft for trading purposes. In this accomplishment Lord Keynes has again demonstrated the genius of the British in working out compromises which concede to the other party the form without disturbing the substance, in fact at the appropriate place, hereinafter, I shall use an extremely apt quotation relative to this feature.

Under the provisions of the agreement the principal office of the fund would be located in the United States, with branch offices in other countries. The location of the principal office means little.

The powers of the fund are vested in a board of governors which will consist of 44 members, 1 being appointed by each of the nations to which a quota has been assigned. Under this arrangement, the United States will have 1 member and the British Commonwealth will have 6, 1 each for Australia, Canada, India, New Zealand, Union of South Africa, and the United Kingdom.

The operation of the fund is placed in the hands of 12 executive directors. The United Kingdom, the United States, Soviet Russia, China, and France appoint 1 executive director each. Of the remaining 7 directors 5 will be elected by nations other than the Big Five and excluding the 19 American republics and the United States. The remaining 2 are set aside for election by the 19 American republics, other than the United States. Argentina is not a member.

The provisions governing appointment and election of executive directors are complex and intricate to the point of defying elucidation except in a separate treatise. Suffice it to say the United States will have 1 and the British Commonwealth will have a minimum of 2 out of the 12, and conceivably 3. More about this latter.

The board of executive directors will function in continuous session at the principal office of the fund and will select the managing director, who, if this plan is ever adopted, is destined to become the most powerful individual the financial world has ever known. He will be the chairman of the executive directors, he will be responsible for the organization, appointment, and dismissal of the staff of the fund, and according to the terms of the agreement he and his appointees will be expected to divest themselves of all loyalties except to the fund.

In appointing the staff the managing director is enjoined to make paramount the highest standards of efficiency and technical competence—national and geographical considerations are expressly made secondary.

In the abstract nothing could be more correct, but in this practical world it seems unfortunate that at this juncture the United States seems to contain the only considerable body of persons who consider devotion to country rather absurd, while Europe and the rest of the world seem crowded with fanatical nationalists who are expert in matters of international exchange and currency.

Frankly, I find it impossible to imagine the Englishman, Russian, Frenchman, or Chinese capable of divesting himself of fanatical loyalty to his native land who would be permitted a chance of appointment to any job in the fund by Churchill, Stalin, de Gaulle, or Chiang Kai-shek.

Unless we intend deliberately to wreck the future of the United States by indulgence in autohypnosis we cannot be unaware of the fact that even before the war is over these nations are engaged in an intensive struggle to better their economic positions as against us and against one another and that any faltering by a national would be equivalent to treason.

So much in general for the hierarchy of the fund.

The purposes of the fund are set forth in article I of the agreement and are enumerated as follows:

(i) To promote international monetary cooperation through a permanent institution which provides the machinery for consultation and collaboration on international monetary problems.

(ii) To facilitate the expansion and balanced growth of international trade, and to contribute thereby to the promotion and maintenance of high levels of employment and real income and to the development of the productive resources of all members as primary objectives of economic policy.

(iii) To promote exchange stability, to maintain orderly exchange arrangements among members, and to avoid competitive exchange depreciation.

(iv) To assist in the establishment of a multilateral system of payments in respect of current transactions between members and in the elimination of foreign exchange restrictions which hamper the growth of world trade.

(v) To give confidence to members by making the fund's resources available to them under adequate safeguards, thus providing them with opportunity to correct maladjustments in their balance of payments without resorting to measures destructive of national or international prosperity.

(vi) In accordance with the above, to shorten the duration and lessen the degree of disequilibrium in the international balances of payments of members.

To all of these objectives, honestly interpreted, all normal minded people certainly will subscribe.

Unfortunately, all nations do not enjoy access to raw materials and natural resources on an equal basis, and, due to many factors, some nations are far more advanced industrially than others. Additionally, there are many complexities arising from relative advancement toward that state we call civilization, and there are many difficult situations which stem from the desire of large populations for political and economic freedom.

Capital of fund

The capital of the fund is made up of quotas which were allocated on some basis that is shrouded in mystery.

The original quotas are set forth in schedule A, as follows:

Schedule A. Quotas

[In millions of United States dollars]

Australia	200
Belgium	225
Bolivia	10
Brazil	150
Canada	300
Chile	50
China	550
Colombia	50
Costa Rica	5
Cuba	50
Czechoslovakia	125
Denmark	(1)
Dominican Republic	5
Ecuador	5
Egypt	45
El Salvador	2.5
Ethiopia	6
France	450
Greece	40
Guatemala	5
Haiti	5
Honduras	2.5
Iceland	1
India	400
Iran	25
Iraq	8
Liberia	.5
Luxemburg	10
Mexico	90
Netherlands	275
New Zealand	50
Nicaragua	2
Norway	50
Panama	.5
Paraguay	2
Peru	25
Philippine Commonwealth	15
Poland	125
Union of South Africa	100
Union of Soviet Socialist Republics	1,200
United Kingdom	1,300
United States	2,750
Uruguay	15
Venezuela	15
Yugoslavia	60
	8,800

[1] The quota of Denmark shall be determined by the fund after the Danish Government has declared its readiness to sign this agreement but before signature takes place.

When we come to the detailed discussion of quotas, which give access to American dollars in exchange for currencies of all varieties the anxiety of all nations for big quotas in the fund will be explained. Such discussion will also suggest the reason for the magnitude of some of the quotas which on their face are inexplicable.

Having seen the outline of the organization and capitalization of the fund, let us examine certain major aspects.

Why the hurry?

Among the many puzzling features of the fund project none is more interesting or inexplicable than the evident anxiety to commit the United States while our armed forces are engaged all over the earth, and in this country all ideas of reconversion have been relegated to the background, although fifteen hundred and twelve businessmen of one belligerent are already traveling abroad drumming up trade.

In his plea for immediate action, Treasury Adviser White suggests that the responsible advocates of delay are aiming at perfectionism, which seems to have become a standard term of derision in international matters. He also hints at the existence of some economic isolationists.

Speaker RAYBURN is quoted as having said the House of Representatives would rush the

agreement through as soon as the Banking and Currency Committee reported.

The paradox is that the enactment of the agreement will immediately isolate the United States, subject it to paralyzing restrictions, and by an express reservation give the British, Russian, French, Belgian, and Dutch Empires a free hand for 5 years to pursue the very practices which the fund is supposed to stop and correct.

Realizing that this statement savors of exaggeration and will naturally be viewed with skepticism, I herewith quote the provision of the agreement and the interpretation of the provision by Lord Keynes in the House of Lords in a speech delivered May 23, 1944.

The provision of the agreement is "Article XIV—Transitional Period," found at page 29 of the official text.

Section 2 of this article provides: "In the post-war transitional period members may, notwithstanding the provisions of any other articles of this agreement, maintain and adapt to changing circumstances (and, in the case of members whose territories have been occupied by the enemy, introduce where necessary) restrictions on payments and transfers for current international transactions."

Obviously, this section makes sweeping exceptions for the British, French, Belgians, Dutch, Russians, Portuguese, Norwegians, Greeks, Czechs, Yugoslavs, and others.

This and following sections emphasize that the abandonment of these practices is within the discretion of such members for a period of 5 years. Furthermore, it is provided that even after the elapse of 5 years these members, with the consent of the fund, may still pursue these practices, and it is expressly provided that in passing on requests of members in such matters the fund shall indulge every reasonable doubt for the benefit of the member.

Fortunately, we do not have to speculate on the meaning or the importance of these provisions.

On May 23, 1944, Lord Keynes, who was then discussing the provision as it appeared in the joint statement of experts at page 8, advised the House of Lords:

"What, then, are these major advantages that I hope from the plan to be of advantage of this country [United Kingdom]? First, it is clearly recognized and agreed that during the post-war transitional period of uncertain duration we are entitled to retain any of those wartime restrictions and special arrangements with the Sterling area and others that are helpful to us, without being open to the charge of acting contrary to any general engagements into which we have entered. Having this assurance, we can make our plans for the most difficult days which will follow the war, knowing where we stand, and without risk of giving grounds of offense. This is a great gain—and one of the respects in which the new plan is much superior to either of its predecessors, which did not clearly set forth any similar safeguards."

In other words, the British, Russian, French, Belgian, Dutch, and other financiers, traders, and industrialists are to be permitted to enjoy all advantages of the fund, while being free not only to maintain all the practices they have heretofore indulged to protect themselves in international trade but to adapt these practices to changing circumstances, and, most amazing of all, to introduce in formerly occupied territory such practices as they consider necessary.

When it is borne in mind that this is only one of the five major advantages Lord Keynes pointed out as accruing to his country it seems incredible that the proponents of the agreement should not be able to make some clear statement justifying a provision which in the guise of an exception turns the purported plan of stabilization of currencies and facilitation of trade upside down, substantively makes the exception the rule, and leaves the United States the isolated victim in the contest for world trade.

Stripped of all the platitudinous utterances which have been indulged in the discussions, this provision of the proposed agreement means that the United States, staggering under the costs of defending not only herself but of defending and liberating these other empires, will be called upon to submit to arbitrary trade discriminations all over the earth, and not only submit to, but finance these harassments.

Certainly, we cannot criticize the delegates from other countries who have sought to gain for their respective nations every possible advantage in the grim and terrible days which will confront men after the war, but before we agree to the amazingly inequitable provision of article XIV some American delegate to Bretton Woods should be required to give some explanation of the demand for unseemly haste.

Sanctions against United States

Another of the features of the proposed fund agreement, which, in the words of Lord Keynes, embodies epoch-making innovations, is that which confers upon debtor nations, present and prospective, the absolute right to repudiate existing debt or debt that may be incurred improvidently in the future and, in addition, take punitive action against the creditor. Admittedly, the provision is aimed at the United States.

I realize this reads like something from Alice in Wonderland, but we have the official text of the proposed agreement, and, in addition, we have the official interpretation by the author, Lord Keynes.

Article VII of the proposed agreement deals with the matter of scarce currencies.

It is recognized that American dollars are the most desirable, if not the only universally desirable, currency in the world. It is also recognized that for some years at least settlements not only with the United States but between other nations will be predicated insofar as possible on dollars.

As a result of war purchases, expenditures by American soldiers abroad and other factors, many nations now have large holdings of dollars and the fund purportedly is to be an agency to enable them to get more at a stabilized rate.

After lend-lease is stopped, presumably, other nations will want goods, foodstuffs, machinery, and every other sort of commodity. Because of other provisions of the fund agreement, the British, French, Russian, Belgian, Dutch, and other nations will be within their rights in resorting to a number of devices to prevent this trade coming to the United States.

However, it is also recognized that in spite of all restrictions and discriminations against the United States these different empires and the other nations may on their own initiative and without any coercion purchase American goods in such large quantities that our exports may exceed our imports and for this and other reasons our currency balances in the hands of others and of the fund might run low.

Then the fund, on the governing board of which the United States has 1 member out of 44, and among the executive directors of which the United States will have 1 member out of 12, steps in.

In the words of American Treasury Adviser White, "the fund might find that the causes of the scarcity were high trade barriers in the country whose currency was scarce, or a failure to undertake adequate international investment, and it would propose appropriate remedies."

Section 3 of article VII confers on the fund power to initiate a boycott, and thereafter under express authorization of section 4 each member has complete jurisdiction to take such steps as it sees fit on its indebtedness to the United States.

In simple language this means that a group representing competing debtor nations would be in a position to invoke sanctions against the United States and relieve other debtor nations of their debts to the generous creditor of all of them. This seems to provoke memories of the Balfour note offering to give away billions of American credits.

Undoubtedly, the word "sanctions" sounds harsh and some might believe its use is for the purpose of creating prejudice. My authority for the description of the power is none other than Lord Keynes.

The amazing fact is Lord Keynes has asserted that the American delegation of their own free-will and honest purpose suggested conferring upon the fund this power to interfere in the vital affairs of the United States and as an alternative punish this Nation. The record, however, shows that while Mr. Morgenthau and his associates might have thought they were originating this idea it was an integral part of Keynes' original International Clearing Union, but even he recognized it was too much to ask a creditor country to accept until such creditor had seen some benefit accruing to it from the fund. In the clearing union proposal he said:

"In the case of credit balances no rigid maximum has been proposed. For the appropriate provision might be to require the eventual cancelation or compulsory investment of bancor credit balances accumulating in excess of a member's quota; and, however, desirable this may be in principle, it might be felt to impose on creditor countries a heavier burden than they can be asked to accept before having had experience of the benefit to them of the working of the plan as a whole."

In the light of this statement made by Lord Keynes in 1943, it seems impossible to understand the following statement made by him to the House of Lords on May 23, 1944:

"There is another advantage to which I would draw your Lordships' special attention. A proper share of responsibility for maintaining equilibrium in the balance of international payments is squarely placed on the creditor countries. This is one of the major improvements in the new plan. The Americans, who are the most likely to be affected by this, have of their own free will and honest purpose, offered us a far-reaching formula of protection against a recurrence of the main cause of deflation during the interwar years, namely, the draining of reserves out of the rest of the world to pay a country which was obstinately borrowing and exporting on a scale immensely greater than it was lending and importing. Under clause VI of the plan a country engages itself, in effect, to prevent such a situation from arising again, by promising, should it fail, to release other countries from any obligation to take its exports, or, if taken, to pay for them. I cannot imagine that this sanction would ever be allowed to come into effect. If by no other means, than by lending, the creditor country will always have to find a way to square the account on imperative grounds of its own self-interest. For it will no longer be entitled to square the account by squeezing gold out of the rest of us. Here we have a voluntary undertaking, genuinely offered in the spirit of a good neighbor and, I should add, of enlightened self-interest, not to allow a repetition of a chain of events which between the wars did more than any other single factor to destroy the world's economic balance and to prepare a seedbed of foul growths."

Evidently, Lord Keynes had forgotten in 1944 that he had originated in 1943 this

revolutionary notion of putting a premium on improvidence in international buying and chicanery in avoiding settlement for goods purchased under conditions known to all parties in advance. Additionally, he seems to have forgotten that in 1943 he did not even hope to have this fantastic proposal accepted until the United States would see some compensating advantage in the operation of the Clearing Union.

Also, when he berates the United States as having been responsible for the world economic mess, he appears to have forgotten that he wrote a book in 1920 entitled "The Economic Consequences of the Peace."

Having resigned from the British Peace Delegation at Paris, Lord Keynes denounced the Treaty of Versailles as an economic atrocity which was unworkable and which put a premium on chaos in the commercial world. He foretold the setting up of restrictions such as were subsequently instituted by the British and French Empires in the Ottawa agreement and the system of quotas on imports and other foul growths which were sprouted in the seedbed of Versailles.

The reference to the "squeezing of gold" out of these other nations by the United States seems somewhat melodramatic when it is remembered that a nation which claimed to be unable to find exchange to pay $62,000,000 on a discounted war debt could find the exchange to purchase American securities valued in excess of $3,500,000,000 at depressed New York stock market prices.

The record shows inescapably that the plan of putting the United States at the mercy of its debtors was the invention of Lord Keynes.

It seems incredible that the scheme to authorize sanctions against the United States has been given consideration, to say nothing of approval, by American delegates.

The implications and possibilities of the scheme are so tremendous as affecting the future welfare of the United States, it would seem no public servant with a respect for his trust would fail to scrutinize it with "anxious concern."

Because of the revolutionary character of the proposal Lord Keynes really had no hope in 1943 of inducing its acceptance.

In 1944 he classified its acceptance as one of the five major advantages to England in the plan now to be submitted to the American Congress. He concluded that feature of his discussion in the House of Lords as follows:

"This is a tremendous extension of international cooperation to good ends. I pray your lordships to pay heed to its importance."

In passing, we might note the use of the adjective "tremendous" by a gentleman born and educated in the tradition of understatement.

Gold—"A barbarous relic"

There are several other aspects of the agreement which deserve the most careful scrutiny. No sounder advice in this respect could be formulated than that given the British House of Lords by Lord Keynes when he was discussing this very Bretton Woods plan.

"It follows," said Lord Keynes, "that we must examine any financial plan to make sure that it will help us to carry our burdens and not add to them. No one is more deeply convinced of this than I am. I make no complaint, therefore, that those to whom the details of the scheme are new and difficult should scrutinize them with anxious concern."

The noted English economist gave the above advice not only properly but confidently because the plan of the Bretton Woods Monetary Fund constitutes a triumph of the first magnitude for Lord Keynes personally. The proposed agreement not only accepts the revolutionary Keynes plan to destroy the traditional gold standard in international dealings, but it incorporates, with one exception, every substantive objective included in his original plan for an international clearing union which was more bluntly worded than the present instrument.

It can be easily understood that in addressing the House of Lords on the merits of the proposed agreement it was necessary for Lord Keynes to be cautious. There were many American correspondents in London, and even the most conservative newspapers in the United States had denounced his original plan. Yet there are some passages in the very interesting address which might be termed startling.

Discussing the gold proposals in the plan he said:

"That is why I say that those proposals are the exact opposite of the gold standard. They lay down by international agreement the essence of the new doctrine, far removed from the old orthodoxy. If they say so in terms as inoffensive as possible to the former faith, need we complain?"

In another portion of his address Lord Keynes indulged the following very striking claim to being the author of the new orthodoxy:

"Was it not I, when many of today's iconoclasts were still worshippers of the Calf, who wrote that 'Gold is a barbarous relic'?"

These words were uttered by the same gentleman, who at Bretton Woods referred to gold as "the constitutional monarch." No doubt he was mindful that in British politics a constitutional monarch is a very dignified but powerless person; however, Lord Keynes is a gifted writer and was conscious of the fact that in nonmonarchial countries the term "constitutional monarch" is customarily overappraised.

Of course an examination of the proposed agreement confirms every statement made by Lord Keynes in relation to the destruction of the prestige of gold, and must prompt every intelligent citizen of the United States to ask the question "Why did gold become a barbarous relic just when the United States acquired 70 percent of the world's supply?"

In the tradition of the gold standard the $20,000,000,000 of bullion owned by the United States would support a sound and orthodox credit structure of $200,000,000,000, and, intelligently administered, would make this country the financial center of the earth.

Additionally an unimpaired prestige of gold will be of limitless material and psychological value to a nation burdened with a war debt of more than $300,000,000,000.

No fair-minded person will question that in the post-war era it will be extremely desirable if not essential that England be maintained in a position of commercial importance comparable with her past, but there is a very grave question if the United States can indulge in quixotic adventures and sacrifices such as are embodied in this assault on the gold standard.

Much has been written of the material sacrifices made by the United Kingdom. With characteristic courage and clear-headedness Churchill has told his people that they have spent their inheritance and that they are going to have to pull in their belts and toil back to prosperity. Also with characteristic lack of courage and with customary muddle-headedness some American politicians have propagandized our people into the idiotic belief that the years ahead hold only uninterrupted happiness and abundance.

However, the cold facts are that England's war debt is $56,000,000,000, a little more than one-sixth of ours, and we are warned that our sacrifices in Europe and in the Pacific may run for several years.

The assumption that the United States is in a position to fight and finance wars all over the earth, while furnishing billions to its allies, and for the post-war era embrace fantastic and revolutionary schemes to finance itself and others does violence to common sense.

We seem to have been hypnotized into a state of exaltation that has made us forget we had 10,000,000 unemployed in the United States in 1939 when our financial position was based upon solid granite compared with the present foundation of debt.

The sole specific reason for abandonment of the project of returning the world to a gold basis is the statement that the opponents of gold are in the ascendant politically in England. There are also references to other countries which are unharmed.

Mr. H. D. White, adviser of the United States Treasury in currency and exchange matters, attempts to answer criticisms of the proposed monetary fund agreement in an article published in the January issue of the Foreign Affairs Quarterly Review.

Contrasting Mr. White's statement with that of Lord Keynes the reader must be impressed with the fact that the American delegate to Bretton Woods is driven to vague and platitudinous explanations which do not explain with any conviction, and to questioning the motives of those who are crude enough to ask what advantages the proposed agreement would have for the United States.

Mr. White's discussion of the gold standard feature of the proposed agreement leaves the impression that the American delegation to Bretton Woods was bankrupt in ideas, or at best made a feeble effort to offset the revolutionary ideas of the brilliant St. George who slew the golden calf—turned dragon since it got a new home.

However, the gold standard feature of the discussion, of transcendant importance as it is to the American people, is not the only subject matter which deserves painstaking analysis. And here again, we are indebted to Lord Keynes for clear and forthright pronouncements, while the American apologists come dangerously close to misrepresentation by omission and studied ambiguity.

Maintenance of prestige of London

Of course, every informed American, for sentimental as well as selfish reasons, will favor the maintenance of London as a financial center of first magnitude, but ordinary prudence demands we pay heed to world changes.

In the post-war era hundreds of millions of bewildered human beings in the United States and elsewhere are going to face the day-to-day problem of earning sufficient to sustain themselves and of laying the foundation of something better than a haunted existence. They are going to face this task amid the greatest disorganization of modern times, many of them in great areas where the devastation of war has created economic deserts.

The theory that the people of the United States, staggering under a debt which may be greater than that of all other nations combined, are not going to face grim and soul-trying problems of their own is just fatuous and contrary to common sense.

Under these circumstances it is important that the prestige of London, Paris, Moscow, Brussels, Amsterdam, Chungking, and all other centers from which plans for orderly reconstruction will naturally radiate shall be maintained. However, it is important that the plans for this maintenance shall have some relationship to the year 1945 and that they shall not be predicated upon political and economic conceptions of the eighteenth century.

Only the blind, or those who will not see, refuse to recognize the fact that the world has been, and is steadily, moving away from European political and economic domination. Not only the teeming millions of Asia and India but of all other continents are in revolt against the theory that the rest of the earth was created and held in trust for the benefit of Europe.

The transformation of the British Empire into the British Commonwealth of Nations after World War No. 1 was, in reality, a peace-

ful revolution and simply cloaked a trend toward complete political and economic independence of self-governing dominions. The inability of the mother country to finance or defend overseas possessions not only in the case of the British but also of the French, the Dutch, the Belgians, the Portuguese, will accentuate this trend.

Another accelerating factor is a vitalized, and prospectively industrialized Russia.

New alinements economically are inevitable and all attempts to push the world back into an eighteenth century pattern put a premium on chaos.

With these facts in mind the anxiety of Lord Keynes as to the future position of London is understandable but likewise it seems clear that he is attempting to achieve the impossible and has warped the whole conception of international monetary cooperation to that end.

Admittedly, Lord Keynes has never posed as a citizen of the world or disguised the fact that his primary concerns were the financial and economic welfare of England and the perpetuation or restoration of the importance and power of London.

As one major advantage to the British of the fund he outlines the amazing exception which permits them to pursue for 5 years whatever trade practices and restrictions they have found useful in international trade and as another major advantage he pointed out the indispensability of the fund in the matter of maintaining London as the financial center of empire countries and many other countries. To use his exact words:

"So far from an international plan endangering the long tradition, by which most empire countries, and many other countries, too, have centered their financial systems in London, the plan is, in my judgment, an indispensable means of maintaining this tradition."

Where is control?

Although the revised Keynes International Clearing Union plan now denominated the Bretton Woods agreement is represented as a plan of cooperation on an equitable basis it is weighted in every feature first in favor of the developed and industrialized nations, and secondly against the United States in favor of the British, Russian, French, Dutch, and Belgian empires.

We do not have to speculate as to the underlying philosophy.

Paragraph 39 of the original Keynes Clearing Union plan stated:

"The Union might become the pivot of the future economic government of the world. Without it other more desirable elements will find themselves impeded and unsupported. With it they will fall into their places as parts of an ordered scheme."

Here is a frank statement of purpose.

Now in attempting to meet criticism that the United States will carry the burdens and have only a minority voice, American Treasury Adviser White makes a thought-provoking statement in the January issue of Foreign Affairs:

"Some critics fear," says Mr. White, "that other nations are not interested in maintaining a sound fund, that the fund will be managed by debtors and that the United States will have only a minority voice. This fear is hardly warranted by the facts. The United States will have 28 percent, and the United Kingdom, the British Dominions, and India together will have 26 percent of the total voting power. Provision is made for having the two largest creditor countries on the executive directorate."

1. Mr. White asserts as a fact that the fund will be controlled by the United States and British as against the rest of the world.

2. He confirms the fact that although the British are expressly allowed for 5 years to continue whatever restrictions they have maintained during the war, and to adapt these to changing circumstances and to institute new ones in occupied areas, they will simultaneously have practically equal voting power with the United States in the fund, which purportedly is created to abolish such restrictions.

3. Mr. White takes the United Kingdom out of the category of a debtor nation by his reference to membership on the executive directorate. If this statement is not an inadvertence it would mean that there has been some forgiveness of England's debt from World War No. 1 and a remission of the enormous lend-lease balance without Congressional action. Whatever the wise course may be ultimately in relation to these matters it is incredible that any steps would have been taken along such lines without legal authority or by indirection.

4. Mr. White omits to point out that under the system of voting for the 12 executive directors the United States would have one, and the British would have a minimum of two and possibly three.

5. In classifying the British as a creditor with 26 percent of the votes, which, with the 28 percent of the United States would control the fund, Mr. White obscures the fact that as a debtor with 26 percent of the vote the British would have a common interest with other debtors having 25 percent to control the fund as against the United States.

Again we are reminded of the Balfour note. Great Britain had a common interest with other debtors and led the attack on all debts to the United States.

The financial leadership of the world has gravitated to the United States as a result of developments of 150 years. As a basis of securing billions of dollars in war aid, this has been dinned into our ears by all politicians, foreign and domestic.

Now, even before the savage slaughter is ended, we are exhorted to neutralize or destroy the leadership of the one nation which could point the way to some measure of fulfillment of the Atlantic Charter.

The natural question is, Why do nations other than the European empires subscribe?

There are two complete answers:

1. If the United States enters the compact, the rest of the world is leaderless.

2. For a time at least, and until the day of disillusionment, all member nations will have access to the most desirable currency in the world at a cheap rate—the American dollar.

Certainly, the prestige of London should be maintained, but it should be on a basis of reality and of present-day world conditions.

Quotas and voting features of plan

In discussing the monetary-fund plan as agreed upon with the American experts and subsequently adopted at Bretton Woods, Lord Keynes made an observation which is both interesting and important. He said:

"There were, it is true, certain features of elegance, clarity, and logic in the clearing-union plan which have disappeared. And this, by me at least, is to be much regretted."

All persons who had hoped for something better after this war than the conventional double-talking type of agreements which have been the curse of mankind will join in his regret.

While Lord Keynes' original plan was subject to criticism because of its revolutionary features and the inequitable distribution of advantages and disadvantages, it was a model of clarity and logic if you once accepted unsound premises.

As it emerges from Bretton Woods, the plan, with one exception, embodies all of the inequitable features, some of them mutually destructive, submerged under cross-references and ambiguities. It seems impossible all of these are attributable to accident or poor craftsmanship.

Possibly the key to some of this obscurantism is found in Lord Keynes' discussion of one of the major advantages of the plan from the British standpoint:

"That is to say," said Lord Keynes, "that those proposals are the exact opposite of the gold standard. They lay down by international agreement the essence of the new doctrine, far removed from the old orthodoxy. If they do so in terms as inoffensive as possible to the former faith, need we complain?"

In other words, the bad news about gold was to be sugar-coated for the American people.

The question naturally arises as to whether this type of treatment was also prescribed when it came to the matter of the original setting up and subsequent changing of quotas and the method of voting on the election of the real managers of the fund.

We are not advised as to how the original quotas were fixed. They are found in "Schedule A quotas," attached to the draft of the agreement, and a mere examination of the document will induce curiosity as to the relative amounts.

In connection with this examination, the student should keep in mind the provisions of article III, which govern the method of paying for these subscriptions, because the receipts for these subscriptions will constitute the capital of the fund.

One thing is crystal clear, and that is that one-fourth of the subscription of the United States will be paid in gold, to the amount of $687,500,000, and the balance in dollars, to the amount of $2,062,500,000.

The other nations will have the right to pay in one-fourth of their respective subscriptions in gold, or 10 percent of their respective holdings of gold and American dollars. The balance of the subscription in each case will be payable in the currency of the subscriber.

It takes little arithmetic and less imagination to ascertain the fact that the treasury of the fund, in addition to the United States subscription, is going to receive the minimum of gold and dollars and the maximum of all kinds of currencies of questionable value.

Certainly no enterprise, public or private, was ever launched on such a bizarre basis of contribution by the prospective partners.

The very weighting of the quotas and the method of paying subscriptions certainly substantiate the suggestion that the fund is a labyrinthine process of further handicapping the United States in post-war foreign trade while furnishing the other nations a means of getting American dollars at a cheap rate.

Is it any wonder that Soviet Russia demanded at Bretton Woods that her quota be increased by $300,000,000?

Is it any wonder that Lord Keynes secured a $400,000,000 quota for India, and, simultaneously, the adoption of subdivision g of section 2 of article XX, which enables Great Britain to join on behalf of herself as well as India?

The quotas form the basis for getting dollars and for voting.

Is it any wonder that American financiers and financial authorities almost unanimously condemn this elaborate and complex enigma?

In addition to the dollar-getting value of quotas the varied and complicated provisions for voting by quotas afford the student of puzzles a wide field for the exercise of his talents.

To follow through and analyze all voting provisions would require a separate voume.

There are provisions for votes on a majority basis, a four-fifths basis, a unanimous basis, a preferential basis, a sectional basis, a unit basis, a quota basis, a combined absolute plus-quota basis, and for votes based upon a combined absolute and quota basis plus or minus votes dependent on purchases and sales of currencies.

Articles XII, XV, XVI, XVII and schedule C are of special interest on the subject of voting.

In the board of governors consisting of 44 members, 1 appointed by each nation, are vested certain over-all powers which may not be delegated and in relation to which the voting rights of the United States and of the British Commonwealth of Nations, including India, are approximately equal.

In the creation of the board of executive directors, consisting of 12 members which will really be the governing body, the situation is extremely interesting.

Of the original board of 12 the United States, the United Kingdom—not as a member of the British Commonwealth—Soviet Russia, China, and France will each appoint one.

Of the remaining seven, five will be elected by the remaining members excluding the American republics and two will be elected by the American republics other than the United States.

Following is a list of the nations with the highest quotas—next to the Big Five—which will be eligible to the five elective places:

India	$400,000,000
Canada	300,000,000
Netherlands	275,000,000
Belgium	225,000,000
Australia	200,000,000
Czechoslovakia	125,000,000
Poland	125,000,000
South Africa	100,000,000

Under the system of voting provided by schedule C it is perfectly apparent that one of the British Dominions will elect an executive director.

Out of the four remaining executive directors in this group, does it seem cynical to suggest that Belgium and the Netherlands will each get one, and that the remaining two will be divided between the British and the Russians, one going to a British Dominion and one to a Russian-sponsored Poland or Czechoslovakia or, possibly Yugoslavia.

The remaining two places will be filled by the American republics other than the United States.

In all likelihood the board of 12 executive directors will consist of 1 United States director, a minimum of 2 and probably 3 British, a minimum of 1 Soviet and probably a Soviet sponsored director, 1 representing each of the Belgian, Dutch, and French Empires, 2 representing American Republics, and 1 representing China.

This is the board which will govern the fund and select the managing director, who will hire and fire the staff of the fund, conduct the ordinary business of the fund, and hold office at the pleasure of the board of executive directors.

Let us not speculate on the nationality of the managing director, but is it not permissible to speculate on what Lord Keynes meant when in addressing the House of Lords on the subject of management of the fund he said "that is perhaps a little better than appears"?

Also would it not be interesting to know exactly what he meant when, in summing up the advantages to England, he said:

"But it would require great fool-hardiness to reject it, much more fool-hardiness than is to be found in this wise, intuitive country."

Is it any wonder that the ambiguities, complexities, and interpretations of this document have caused an outstanding American scholar to remark:

"But there remains the fundamental fact that national attitudes are very far apart, so much so that in efforts to get their plan adopted the experts have to engage in what comes dangerously close to double talk."

Cooperation and isolationism

The pleas of Secretary of the Treasury Morgenthau and of his adviser, Dr. Harry D. White, for acceptance of the so-called Bretton Woods agreement by the United States, are extremely interesting.

Probably there could be no more enlightening study than a contrasting of the articles by the two American Treasury representatives in the January issue of the Foreign Affairs Quarterly Review, and the speech of Lord Keynes in the House of Lords.

Resorting to subtlety only when necessary to refrain from displaying too much of a sense of triumph the adroit coadjutor of Winston Churchill enumerated in clear and concise language five major advantages to his country, and swept away with incisive arguments suggestions that the agreement might subject his country to some compensating disadvantages.

This scion of a race, born and bred in the tradition of understatement, drives home with striking phrases the fact that he has been concerned with the future welfare of his own country, and that he has achieved concessions of epoch-making proportions from the United States.

In all fairness, Mr. Morgenthau and Mr. White had the difficult, if not impossible, task of justifying the same document to the people who are going to be called upon to make the epoch-making concessions on top of other staggering burdens assumed in the common cause.

By contrast, the Morgenthau and White presentations deal in platitudes and generalities. They present weak excuses for the abandonment of standards and fundamental principles which have had the sanction of generations in favor of experiments which have nothing to recommend them other than the hope of staving off the day of judgment on the bill for indulgence in the destruction of war.

Probably the most disheartening aspect of the entire presentation by the American Treasury is the absolute lack of any constructive suggestion or leadership toward getting the world to recognize the need for the nations to put their respective houses in order as a sound foundation on which all nations can initiate a new era of productiveness to overcome the wastage of war and pay something other than lip service to the pious pronouncements of the Atlantic Charter.

The Secretary and his adviser seem to be defeated and resigned to the conception that the primary objective should be the propping up of old regimes and old forms which have lost much of their significance.

Armed with the greatest gold holding in the history of finance, the greatest productive capacity any nation has ever known, and a national record almost free of traditional antagonisms, they emerge from an international conference with an agreement which discredits the prestige of gold, forges fetters for the national productive capacity, and lays the foundation for antagonisms when other nations realize that the post-war United States has grim and heart-breaking problems of its own to solve which will prevent it acting indefinitely as a grand almoner.

Perhaps the weakness of their presentation is most accentuated by their resort to threadbare political slogans to obtain approval. Secretary Morgenthau says:

"We must always keep in mind that other nations are anxiously asking whether the United States has the desire and ability to cooperate effectively in establishing world peace. If we fail to ratify the Bretton Woods agreement, they will be convinced that the American people either do not desire to cooperate or that they do not know how to achieve cooperation."

Treasury Adviser White admits that careful and responsible economists "whose objectives are admirable" have counseled delay, but he complains that theirs is the approach to perfectionism, and that they play into the hands of economic isolationists. Apparently, Mr. White has discovered some people who do not desire to have the United States sell goods abroad.

These two arguments by two gentlemen who represented the United States at Bretton Woods serve to create the suspicion that they succumbed completely to the charm and hypnotic influence of diplomats of other nations.

More than anyone in America they should know from the balance sheet of the United States Treasury the price in money the people of this Nation have paid in cooperating to save Europe not once but twice. They should know that Mr. Morgenthau has just submitted to the National Congress a bill to raise the national debt limit from $260,000,000,000 to $300,000,000,000 and that the end is not yet in sight.

They should know that the United States has given, under the euphonious designation of lend-lease, billions of dollars to arm and equip, feed and clothe every nation fighting Germany and Japan, and that the United States is financing her own armed forces, not on one front or two fronts, but on fronts all over the world where they are fighting to liberate territories belonging to others.

They could also learn from the War and Navy Departments that the incomplete American casualty lists now aggregate more than 750,000 of the finest men in the world, killed, wounded, or prisoner, some of them in prison camps conducted by inhuman and bestial captors.

They might read the communiques and listen to the stories of Guadalcanal, Tarawa, the Marshalls, New Guinea, New Britain, and other British, French, and Dutch possessions where American marines, soldiers, and sailors have died to restore these lands to empires that could neither defend nor retake them.

They might review the story of China and Burma, where American airmen and foot soldiers have fought and died to retrieve the horrible mistakes in imperial policies which alienated the loyalties of natives, in contrast to the attitude of the Filipinos toward the United States.

They might also give some thought to the front in Italy and to the landing on the beaches of Normandy, followed by the liberation of France, and the make-up of the western front, where four American armies have borne the brunt of the fight.

Even this partial review of the cooperative activities of the United States should be sufficient to stop the claptrap and demagoguery which manifest themselves in the statements of American public servants who presume to coerce the fathers, mothers, wives, and children of 12,000,000 men in the armed services into throwing away the heritage of these very fighting men and their children.

Apparently these Treasury officials give little thought to the fact that out of every billion dollars they dissipate an additional mortgage of $400,000,000 is piled on the backs of the 12,000,000 in the armed services and their families on top of the $120,000,000,000 mortgage already representing their burden of the national debt.

The very introduction of this sort of argument into the discussion of the Bretton Woods Agreement should put the American people on notice to be cautious.

Only "an iron ration"

In considering the fund agreement we must bear in mind constantly that it is only one step in some inchoate over-all plan of which we know nothing.

Perhaps nothing could be more indicative of the scope and implications of the over-all plan than Lord Keynes' outline of the relative position of the fund:

"I emphasize that such is the purpose of the quotas. They are not intended as daily food for us or any other country to live upon during the reconstruction or afterward. Provision for that belongs to another chapter of international cooperation, upon which we shall embark shortly unless you discourage us unduly about this one. The

quotas for drawing on the fund's resources are an iron ration to tide over temporary emergencies of one kind or another. Perhaps this is the best reply I can make to Lord Addison's doubts whether our quota is large enough. It is obviously not large enough for us to live upon during the reconstruction period. But this is not its purpose. Pending further experience, it is, in my judgment, large enough for the purposes for which it is intended."

"An iron ration"—

If the sacrifices to be made by the United States in this matter will afford only "an iron ration," has anyone the imagination to conceive what the full menu is to be?

This statement is not something conjured up by a nonccoperator or an isolationist. It is a deliberate appraisal by the author of the plan who was explaining why he had not secured even greater quotas than the amazing ones allocated to the British Commonwealth.

We are on notice that our concessions at Bretton Woods are not going to satisfy appetites or create any sense of gratitude.

Despite the fact that they would constitute the most amazing forbearance and generosity ever known in international dealings, they would be "an iron ration."

It would be deplorable to import into this discussion some of our sad experiences after the First World War, but it is well to bear in mind in general that after the fighting is over politicians in Europe will justify themselves to their constituents for the nonsolution of problems by finding a scapegoat.

I do not intend to labor this matter of "an iron ration," but a solemn responsibility rests upon us to take notice of the appraisal already made abroad.

Again it is interesting to note that Lord Keynes makes a cryptic reference to a feature of the fund which is certainly not clear from a reading of the agreement. I refer to the matter of supervision of capital expenditures.

"Not merely as a feature of the transition, but as a permanent arrangement, the plan accords to every member government the explicit right to control all capital movements. What used to be a heresy is now endorsed as orthodox. In my own judgment, countries which avail themselves of this right may find it necessary to scrutinize all transactions, so as to prevent evasion of capital regulations. Provided that the innocent, current transactions are let through, there is nothing in the plan to prevent this. In fact, it is encouraged. It follows that our right to control the domestic capital market is secured on firmer foundations than ever before, and is formally accepted as a proper part of agreed international arrangements."

There is a clear interpretation here of a permanent "planned economy" on a scale which has never been publicly admitted in the United States.

Coming, as it does, from Lord Keynes it may well cause inquiry as to whether there are other things concealed in this agreement which do not appear on the surface.

Is it an indemnity?

One of the most interesting features of this amazing project is the assumption that the United States has been the wicked Nation which has caused international economic turmoil, and should not only make a present financial reparation but give guaranties of future good conduct.

All other nations, which apparently have pursued an altruistic course, are to participate in this reparation and have the protection of these guaranties as a matter of right.

It seems impossible to conjure a more complete perversion of history and equity.

At least there is no intimation up to date that the United States was responsible for World War No. 1, and no man living or dead did more to expose the stupidities and the dangers incorporated in the economic clauses of the Treaty of Versailles than did John Maynard Keynes by his book, The Economic Consequences of the Peace, published in 1920.

Mr. Keynes had not yet been raised to the peerage, and had not yet conceived the possibilities of loading on to the United States the consequences of the fantastic and contradictory conceptions of European politicians.

Mr. Keynes savagely attacked the ranting of European politicians about levying $100,000,000,000 indemnity on Germany and simultaneously taking away her colonies, coal mines, railroad equipment, and practically all other means of earning the money to pay the indemnity.

The United States asked for no indemnity and refused to accept any territory. European empires expanded their territories enormously.

Keynes' predictions proved conservative because even he could not anticipate additional activities of European politicians, who immediately devised new methods of carrying out their own designs.

No one knows better than Lord Keynes that at the end of the present war there is going to be little to distinguish victor from vanquished in the matter of debt and economic hardship. Germany and Japan will be hopeless as sources of indemnity.

In looking around for a substitute he found the United States, and apparently is astonished at his own success.

The amazing feature, however, is that Lord Keynes seeks, in principle, to do the very thing he berated in 1920. He seeks to make the United States the pack mule for the financial and economic burdens of the world, and simultaneously tether the mule so as to cut down the grazing space necessary to keep it strong enough to carry the load.

But Lord Keynes is not the only forehanded member of the British Government in the matter of after-the-war trade.

At Bristol, according to the Associated Press, on January 20, 1945, Lord Woolton, Minister of Reconstruction, made a speech which should be instructive to those charged with the welfare of the United States.

He disclosed that governmental departments had made studies of economic conditions in 26 countries, that since July 1944 the British Government had granted exit permits to 1,512 businessmen for foreign travel, that some of the restrictions on exports would be lifted soon, and that the Government was prepared to increase its appropriation for backing export trade from $300,000,000 to $800,000,000.

This may be puzzling to Americans who have sons in the American armies on the western front, in Burma, in New Guinea, and in the air forces based in England, and on the seas all over the world. It may also puzzle those Americans who are being drafted to make munitions and planes and ships to carry on all-out war all over the world for several years if necessary.

However, it is exactly in accord with the plans and purposes of Lord Keynes and Lord Woolton, immediately on the collapse of Germany.

Urging a meeting of British businessmen to look ahead and be prepared to go out and fight for more trade immediately on the ending of the European war, Lord Woolton said:

"The world abroad is hungry for our products and we must not tempt our customers overseas to find other sources of supply."

Certainly, no American would deliberately cause disunity, but does it not seem reasonable to ask these other nations to go after trade if they want to but, at least, not bother us with all these new schemes and burdens while we are fighting to liberate their overseas territories? Conceivably, we may need this iron ration to keep our armies, fleets, and air forces supplied while these other nations are chasing trade.

The bank

I have refrained from a discussion of the bank section of the plan for the reason that although it may have many valuable features, its very existence is dependent on creation of the fund.

The projects have been tied together apparently with the purpose of forcing the United States to accept the fund if it desires to achieve the constructive purposes of the bank.

We have no option to subscribe to the bank's shares and reject the fund.

Conclusion

May I anticipate the criticism that those who advocate rejection of this plan are either perfectionists or advocates of isolationism.

Almost 6 years ago, before the world was devastated and millions of human beings were killed and maimed, I advocated in common with others an intelligent use of our stock of gold to stimulate world trade and stave off the horrors of war.

I suggested as an initial step that the United States offer as a free gift to nations of the world $5,000,000,000 in gold bullion to be used as a base for sound currencies and for the infusion of $50,000,000,000 of credit into world trade.

The plan provided that the gift should be administered by a commission composed of Secretary of the Treasury Henry Morgenthau, Jr., Secretary of State Cordell Hull, former President Herbert C. Hoover, former Chief Justice Charles Evans Hughes and the late James H. Perkins, chairman of the board of the National City Bank of New York, one of the most respected bankers in the world and a warm friend of President Roosevelt.

The plan received the endorsement of outstanding figures in private life including financiers and economists but was subjected to the one criticism that no one in political office would dare suggest giving away $5,000,000,000. The criticism proved to be sound.

For more than 5 years Winston Churchill and others had been warning the world of the deteriorating situation and of the rising tide of totalitarianism, but their warnings were ignored.

Nations had dishonored their signatures of and commitments under peace treaties which had been executed with pomp and ceremony and high-powered press-agentry.

The Treaty of Versailles had borne all the evil fruit predicted by Lord Keynes, the Locarno and Kellogg pacts proved to be mere scraps of paper, and when Secretary of State Stimson had sought to check Japan's initial crime against China, the other signatories of the Nine Power Treaty coldly refused to honor their bond.

All those nations which had benefited territorially after World War No. 1 busied themselves fencing in economically vast areas of the earth.

Two contemptible figures, envisaging themselves as reincarnations of Napoleon Bonaparte and Julius Caesar, were permitted to create a situation imperiling all civilization, and with a genius for imitation a group of oriental jingoes joined the parade.

The months and years preceding the fateful autumn of 1939 saw the world plunging toward war in the exact pattern that had preceded 1914.

Substantively the statements and speeches that crowded the international press and airways were reproductions of statements and speeches of early 1914. They were angry and provocative in context, tone, and background.

In common with others I feared another war would cost the United States 500,000 casualties and increase the national debt by $30,000,000,000. The casualties are already more than 750,000 and the increase in debt $200,000,000,000.

And before the slaughter ceases we are preparing devious methods of perpetuating all the old errors.

Instead of bold American leadership towards a sound economic basis all over the world, and implementation of the Atlantic Charter, we are listening to the siren song of those who would rebuild all the old artificial economic fences, encourage 5 years more of instability, and substitute inflationary theories for traditionally sound procedure.

Instead of a basis of hope for economic freedom and betterment, hundreds of millions are to be told the Atlantic Charter was a mere pious and informal expression and that the United States is to finance the same old imperialistic designs which have bred one war after another.

Instead of boldly leading the world in courageous reconstruction on a sound basis and in the light of twentieth century conditions, the attempt is being made to commit the manpower and resources of the United States to financing, underwriting, and perpetuating an eighteenth century European conception of economic domination of the human race.

It would seem the American delegates had forgotten that the economic policies of European empires had been responsible in greatest measure for the establishment of the 21 American republics, for the increasing independence of the overseas dominions and territories of these empires and for the unrest and revolutionary upheavals of the teeming millions of Asia during the last 30 years.

Even if the American people were willing to turn their backs on every principle that has made the Nation great and finance reaction, it would be futile.

It would simply mean that when our resources had been drained and we faced inevitable bankruptcy and disorganization, Soviet Russia would take over world leadership.

Thirty years ago the names of Hohenzollern, Romanoff, Hapsburg, and Bourbon connoted strength in more or less degree.

Nothing accentuates the change in human affairs more strikingly than the fact that these, today, are the names of discredited political refugees. They have scattered to the four winds, leaving in their wake a devastated Europe which can never again lead or dominate the world.

The so-called Bretton Woods agreement does not provide for a forward-looking or expanding economy. It is an expression of cynical and selfish determination to turn back human progress, level downward the American standard of living for the benefit of Europe, destroy the hope of hundreds of millions of human beings, and let economy expand only where and as it can be controlled by men who have an eighteenth century outlook.

It should be rejected and the United States should assume the leadership of a movement which will implement the Atlantic Charter and provide for sound currencies based on gold and silver, and improvement of standards of living—not only in Europe but all over the world—respect for the rights of small as well as large nations, the elimination of economic exploitation of the weak, and the encouragement of all people striving for political and economic freedom.

In a world half-slave and half-free, there can be no peace or progress.

The address of Lord Keynes was delivered in the House of Lords May 23, 1944.

Ostensibly the only agreement up to that time was set forth in the Joint Statement of Experts, issued by the United States Treasury on April 21, 1944.

Intrinsically, however, the Keynes address suggests the ultimate detailed plan adopted at Bretton Woods had already been agreed upon.

For instance, it is notable that while the joint statement of April only mentions the total amount of the fund capital, Lord Keynes had detailed knowledge of what the all-important quotas would be.

Other statements in the address which were cryptic and ambiguous as of May 23, 1944, are shown by subsequent events to have been based on absolute knowledge.

The address merits the careful study of every person who desires to form an intelligent judgment of this revolutionary proposal.

ADDRESS OF LORD KEYNES ON INTERNATIONAL MONETARY FUND, BEFORE THE HOUSE OF LORDS, MAY 23, 1944

Lord KEYNES. My Lords, it is almost exactly a year since the proposals for a clearing union were discussed in Your Lordships' House. I hope to persuade Your Lordships that the year has not been ill-spent. There were, it is true, certain features of elegance, clarity, and logic in the clearing-union plan which have disappeared. And this, by me at least, is to be much regretted. As a result, however, there is no longer any need for a new-fangled international monetary unit. Your Lordships will remember how little any of us liked the names proposed—bancor, unitas, dolphin, bezant, daric, and heaven knows what. Some of Your Lordships were good enough to join in the search for something better. I recall a story of a country parish in the last century where they were accustomed to give their children Biblical names—Amos, Ezekiel, Obadiah, etc. Needing a name for a dog, after a long and vain search of the Scriptures, they called the dog Moreover. We hit no such happy solution, with the result that it has been the dog that died. The loss of the dog we need not too much regret, though I still think that it was a more thoroughbred animal than what has now come out from a mixed marriage of ideas. Yet, perhaps, as sometimes occurs, this dog of mixed origin is a sturdier and more serviceable animal and will prove not less loyal and faithful to the purposes for which it has been bred.

I commend the new plan to your Lordships as being, in some important respects (to which I will return later), a considerable improvement on either of its parents. I like this new plan and I believe that it will work to our advantage. Your Lordships will not wish me to enter into too much technical detail. I can best occupy the time available by examining the major benefits this country may hope to gain from the plant; and whether there are adequate safeguards against possible disadvantages. We shall emerge from this war, having won a more solid victory over our enemies, a more enduring friendship from our allies, and a deeper respect from the world at large, than perhaps at any time in our history. The victory, the friendship, and the respect will have been won, because, in spite of faint-hearted preparations, we have sacrificed every precaution for the future in the interests of immediate strength with a fanatical single-mindedness which has had few parallels. But the full price of this has still to be paid. I wish that this was more generally appreciated in the country than it is. In thus waging the war without counting the ultimate cost we—and we alone of the United Nations—have burdened ourselves with a weight of deferred indebtedness to other countries beneath which we shall stagger. We have already given to the common cause all, and more than all, that we can afford. It follows that we must examine any financial plan to make sure that it will help us to carry our burdens and not add to them. No one is more deeply convinced of this than I am. I make no complaint, therefore, that those to whom the details of the scheme are new and difficult, should scrutinise them with anxious concern.

What, then, are these major advantages that I hope from the plan to the advantage of this country? First. It is clearly recognized and agreed that, during the post-war transitional period of uncertain duration, we are entitled to retain any of those wartime restrictions, and special arrangements with the sterling area and others which are helpful to us, without being open to the charge of acting contrary to any general engagements into which we have entered. Having this assurance, we can make our plans for the most difficult days which will follow the war, knowing where we stand and without risk of giving grounds of offence. This is a great gain—and one of the respects in which the new plan is much superior to either of its predecessors, which did not clearly set forth any similar safeguards.

Second. When this period is over and we are again strong enough to live year by year on our own resources, we can look forward to trading in a world of national currencies which are interconvertible. For a great commercial nation like ourselves this is indispensable for full prosperity. Sterling itself, in due course, must obviously become, once again, generally convertible. For, without this, London must necessarily lose its international position, and the arrangements in particular of the sterling area would fall to pieces. To suppose that a system of bilateral and barter agreements, with no one who owns sterling knowing just what he can do with it—to suppose that this is the best way of encouraging the dominions to center their financial systems on London, seems to me pretty near frenzy. As a technique of little Englandism, adopted as a last resort when all else has failed us, with this small country driven to autarchy, keeping itself to itself in a harsh and unfriendly world, it might make more sense. But those who talk this way, in the expectation that the rest of the Commonwealth will throw in their lot on these lines and cut their free commercial relations with the rest of the world, can have very little idea how this Empire has grown or by what means it can be sustained.

So far from an international plan endangering the long tradition, by which most empire countries, and many other countries, too, have centered their financial systems in London, the plan is, in my judgment, an indispensable means of maintaining this tradition. With our own resources so greatly impaired and encumbered, it is only if sterling is firmly placed in an international setting that the necessary confidence in it can be sustained. Indeed, even during the transitional period, it will be our policy, I hope, steadily to develop the field within which sterling is freely available as rapidly as we can manage. Now, if our own goal is, as it surely must be, the general interconvertibility of sterling with other currencies, it must obviously be to our trading advantage that the same obtains elsewhere, so that we can sell our exports in one country and freely spend the proceeds in any other. It is a great gain to us in particular, that other countries in the world should agree to refrain from these discriminatory exchange practices which we ourselves have never adopted in times of peace but from which in the recent past our traders have suffered greatly at the hands of others. My noble friend, Lord Addison, has asked whether such an arrangement could be operated in such a way that certain markets might be closed to British exports. I can firmly assure him that none of the monetary proposals will do so provided that if we find ourselves with currencies in a foreign country which we do not choose to spend in that country, we can then freely remit them somewhere else to buy goods in another country. There is no compulsion on us, and if we choose to come to a particular bargain in the country where we have resources, then that is entirely at our discretion.

Third. The wheels of trade are to be oiled by what is, in effect, a great addition to the world's stock of monetary reserves, distributed, moreover, in a reasonable way. The quotas are not so large as under the clearing union, and Lord Addison drew attention to that. But they are substantial and can be increased subsequently if the need is shown. The aggregate for the world is put provisionally at £2,500,000,000. Our own share of this—for ourselves and the Crown colonies,

which, I may mention, are treated for all purposes as a part of the British monetary system (in itself a useful acknowledgement)—is £325,000,000, a sum which may easily double, or more than double, the reserves which we shall otherwise hold at the end of the transitional period. The separate quotas of the rest of the sterling area will make a further large addition to this. Who is so confident of the future that he will wish to throw away so comfortable a supplementary aid in time of trouble? Do the critics think it preferable, if the winds of the trade cycle blow, to diminish our demand for imports by increasing unemployment at home, rather than meet the emergency out of this fund which will be expressly provided for such temporary purposes?

I emphasize that such is the purpose of the quotas. They are not intended as daily food for us or any other country to live upon during the reconstruction or afterward. Provision for that belongs to another chapter of international cooperation, upon which we shall embark shortly unless you discourage us unduly about this one. The quotas for drawing on the fund's resources are an iron ration to tide over temporary emergencies of one kind or another. Perhaps this is the best reply I can make to Lord Addison's doubts whether our quota is large enough. It is obviously not large enough for us to live upon during the reconstruction period. But this is not its purpose. Pending further experience, it is, in my judgment, large enough for the purposes for which it is intended.

There is another advantage to which I would draw Your Lordships' special attention. A proper share of responsibility for maintaining equilibrium in the balance of international payments is squarely placed on the creditor countries. This is one of the major improvements in the new plan. The Americans, who are the most likely to be affected by this, have, of their own free will and honest purpose, offered us a far-reaching formula of protection against a recurrence of the main cause of deflation during the inter-war years, namely the draining of reserves out of the rest of the world to pay a country which was obstinately borrowing and exporting on a scale immensely greater than it was lending and importing. Under clause VI of the plan a country engages itself, in effect, to prevent such a situation from arising again, by promising, should it fail, to release other countries from any obligation to take its exports, or, if taken, to pay for them. I cannot imagine that this sanction would ever be allowed to come into effect. If by no other means, than by lending, the creditor country will always have to find a way to square the account on imperative grounds of its own self-interest. For it will no longer be entitled to square the account by squeezing gold out of the rest of us. Here we have a voluntary undertaking, genuinely offered in the spirit both of a good neighbor and, I should add, of enlightened self-interest, not to allow a repetition of a chain of events which between the wars did more than any other single factor to destroy the world's economic balance and to prepare a seed-bed for foul growths. This is a tremendous extension of international cooperation to good ends. I pray Your Lordships to pay heed to its importance.

Fifth. The plan sets up an international institution with substantial rights and duties to preserve orderly arrangements in matters such as exchange rates which are two-ended and affect both parties alike, which can also serve as a place of regular discussion between responsible authorities to find ways to escape those many unforeseeable dangers which the future holds. The noble lord, Lord Addison, asks how the fund is to be managed. Admittedly this is not yet worked out in the necessary detail and it was right that he should stress the point. But three points which may help him, are fairly clear. This is an organization between governments, in which central banks only appear as the instrument and agent of their government. The voting power of the British Commonwealth and that of the United States are expected to be approximately equal. The management will be in three tiers—a body of expert, whole-time officials who will be responsible for the routine; a small board of management which will make all decisions of policy subject to any overriding instructions from the assembly, an assembly of all the member governments meeting less often and retaining a supervisory, but not an executive, control. That is perhaps even a little better than appears.

Here are five advantages of major importance. The proposals go far beyond what, even a short time ago, anyone could have conceived of as a possible basis of general international agreement. What alternative is open to us which gives comparable aid, or better, more hopeful opportunities for the future? I have considerable confidence that something very like this plan will be in fact adopted, if only on account of the plain demerits of the alternative of rejection. You can talk against this plan, so long as it is a matter of talking—saying in the same breath that it goes too far and that it does not go far enough, that it is too rigid to be safe and that it is too loose to be worth anything. But it would require great foolhardiness to reject it, much more foolhardiness than is to be found in this wise, intuitive country.

Therefore, for these manifold and substantial benefits, I commend the monetary proposals to Your Lordships. Nevertheless, before you will give them your confidence, you will wish to consider whether, in return, we are surrendering anything which is vital for the ordering of our domestic affairs in the manner we intend for the future. My Lords, the experience of the years before the war has led most of us, though some of us late in the day, to certain firm conclusions. Three in particular are highly relevant to this discussion. We are determined that, in future, the external value of sterling shall conform to its internal value as set by our own domestic policies, and not the other way round. Secondly, we intend to retain control of our domestic rate of interest, so that we can keep it as low as suits our own purposes, without interference from the ebb and flow of international capital movements or flights of hot money. Thirdly, whilst we intend to prevent inflation at home, we will not accept deflation at the dictate of influences from outside. In other words, we abjure the instruments of bank rate and credit contraction operating through the increase of unemployment as a means of forcing our domestic economy into line with external factors.

Have those responsible for the monetary proposals been sufficiently careful to preserve these principles from the possibility of interference? I hope Your Lordships will trust me not to have turned my back on all I have fought for. To establish those three principles which I have just stated has been my main task for the last 20 years. Sometimes almost alone, in popular articles in the press, in pamphlets, in dozens of letters to the Times, in textbooks, in enormous and obscure treatises I have spent my strength to persuade my countrymen and the world at large to change their traditional doctrines and, by taking better thought, to remove the curse of unemployment. Was it not I, when many of today's iconoclasts were still worshippers of the calf, who wrote that "Gold is a barbarous relic"? Am I so faithless, so forgetful, so senile that, at the very moment of the triumph of these ideas when, with gathering momentum, governments, parliaments, banks, the press, the public, and even economists have at last accepted the new doctrines, I go off to help forge new chains to hold us fast in the old dungeon? I trust, my Lords, that you will not believe it.

Let me take first the less prominent of the two issues which arise in this connection, namely, our power to control the domestic rate of interest so as to secure cheap money. Not merely as a feature of the transition but as a permanent arrangement, the plan accords to every member government the explicit right to control all capital movements. What used to be a heresy is now endorsed as orthodox. In my own judgment, countries which avail themselves of this right may find it necessary to scrutinize all transactions so as to prevent evasion of capital regulations. Provided that the innocent, current transactions are let through, there is nothing in the plan to prevent this. In fact, it is encouraged. It follows that our right to control the domestic capital market is secured on firmer foundations than ever before and is formally accepted as a proper part of agreed international arrangements.

The question, however, which has recently been given chief prominence is whether we are in any sense returning to the disabilities of the former gold standard, relief from which we have rightly learned to prize so highly. If I have any authority to pronounce on what is and what is not the essence and meaning of a gold standard, I should say that this plan is the exact opposite of it. The plan in its relation to gold is, indeed, very close to proposals which I advocated in vain as the right alternative, when I was bitterly opposing this country's return to gold. The gold standard, as I understand it, means a system under which the external value of a national currency is rigidly tied to a fixed quantity of gold which can only honorably be broken under force majeure; and it involves a financial policy which compels the internal value of the domestic currency to conform to this external value as fixed in terms of gold. On the other hand, the use of gold merely as a convenient common denominator by means of which the relative values of national currencies—these being free to change—are expressed from time to time, is obviously quite another matter.

My noble friend Lord Addison asks who fixes the value of gold. If he means, as I assume he does, the sterling value of gold, it is we ourselves who fix it initially in consultation with the fund; and this value is subject to change at any time on our initiative, changes in excess of 10 percent requiring the approval of the fund, which must not withhold approval if our domestic equilibrium requires it. There must be some price for gold; and so long as gold is used as a monetary reserve it is most advisable that the current rates of exchange and the relative values of gold in different currencies should correspond. The only alternative to this would be the complete demonetization of gold. I am not aware that anyone has proposed that. For it is only common sense as things are today to continue to make use of gold and its prestige as a means of settling international accounts. To demonetize gold would obviously be highly objectionable to the British Commonwealth and to Russia as the main producers, and to the United States and the western allies as the main holders of it. Surely no one disputes that? On the other hand, in this country we have already dethroned gold as the fixed standard of value. The plan not merely confirms the de-thronement but approves it by expressly providing that it is the duty of the fund to alter the gold value of any currency if it is shown that this will be serviceable to equilibrium.

In fact, the plan introduces in this respect an epoch-making innovation in an international instrument, the object of which is to lay down sound and orthodox principles. For instead of maintaining the principle that the internal value of a national currency should conform to a prescribed de jure external value, it provides that its external value

should be altered if necessary so as to conform to whatever de facto internal value results from domestic policies, which themselves shall be immune from criticism by the fund. Indeed, it is made the duty of the fund to approve changes which will have this effect. That is why I say that these proposals are the exact opposite of the gold standard. They lay down by international agreement the essence of the new doctrine, far removed from the old orthodoxy. If they do so in terms as inoffensive as possible to the former faith, need we complain?

No, my Lords, in recommending these proposals, I do not blot a page already written. I am trying to help write a new page. Public opinion is now converted to a new model, and I believe a much improved model, of domestic policy. That battle is all but won. Yet a not less difficult task still remains, namely, to organize an international setting within which the new domestic policies can occupy a comfortable place. Therefore, it is above all as providing an international framework for the new ideas and the new techniques associated with the policy of full employment that these proposals are not least to be welcomed.

Last week my noble friend, Lord Bennett, asked what assumptions the experts might be making about other phases of international agreement. I do not believe that the soundness of these foundations depends very much on the details of the superstructure. If the rest of the issues to be discussed are wisely settled, the task of the monetary fund will be rendered easier. But if we gain less assistance from other measures than we now hope, an agreed machinery of adjustment on the monetary side will be all the more necessary. I am certain that this is not a case of putting the cart before the horse. I think it most unlikely that fuller knowledge about future commercial policy would in itself make it necessary to alter any clause whatever in the proposals now before your Lordships' House. But if the noble viscount meant that these proposals need supplementing in other directions, no one could agree with him more than I do. In particular, it is urgent that we should seek agreement about setting up an international investment institution to provide funds for reconstruction and afterward. It is precisely because there is so much to do in the way of international collaboration in the economic field that it would be so disastrous to discourage this first attempt, or to meet it in a carping, suspicious, or cynical mood.

The noble lord, Lord Addison, has called the attention of Your Lordships to the striking statement made by Mr. Hull in connection with the National Foreign Trade Week in the United States, and I am very glad that he did so. This statement is important as showing that the policy of the United States administration on various issues of political and economic preparation forms a connected whole. I am certain that the people of this country are of the same mind as Mr. Hull, and I have complete confidence that he on his side will seek to implement the details with disinterestedness and generosity. If the experts of the American and British Treasuries have pursued the monetary discussions with more ardor, with a clearer purpose, and, I think, with more success so far than has yet proved possible with other associated matters, need we restrain them? If, however, there is a general feeling, as I think that there is, that discussion on other matters should be expedited, so that we may have a complete picture before us, I hope that Your Lordships will enforce this conclusion in no uncertain terms. I myself have never supposed that in the final outcome the monetary proposals should stand by themselves.

It is on this note of emphasizing the importance of furthering all genuine efforts directed toward international agreement in the economic field that I should wish to end my contribution to this debate. The proposals which are before Your Lordships are the result of the collaboration of many minds and the fruit of the collective wisdom of the experts of many nations. I have spent many days and weeks in the past year in the company of experts of this country, of the Dominions, of our European allies, and of the United States; and, in the light of some past experience I affirm that these discussions have been without exception a model of what such gatherings should be—objective, understanding, without waste of time or expense of temper. I dare to speak for the much-abused so-called experts. I even venture sometimes to prefer them, without intending any disrespect, to politicians. The common love of truth, bred of a scientific habit of mind, is the closest of bonds between the representatives of divers nations.

I wish I could draw back the veil of anonymity and give their due to the individuals of the most notable group with which I have ever been associated, covering half the nations of the world, who from prolonged and difficult consultations, each with their own interests to protect, have emerged, as we all of us know and feel in our hearts, a band of brothers. I should like to pay a particular tribute to the representatives of the United States Treasury and the State Department and the Federal Reserve Board in Washington, whose genuine and ready consideration for the difficulties of others, and whose idealistic and unflagging pursuit of a better international order, made possible so great a measure of agreement. I at any rate have come out from a year thus spent greatly encouraged, encouraged beyond all previous hope and expectation, about the possibility of just and honorable and practical economic arrangements between nations.

Do not discourage us. Perhaps we are laying the first brick, though it may be a colorless one, in a great edifice. If indeed it is our purpose to draw back from international cooperation and to pursue an altogther different order of ideas, the sooner that this is made clear the better; but that, I believe, is the policy of only a small minority, and for my part I am convinced that we cannot on those terms remain a great power and the mother of a commonwealth. If, on the other hand, such is not our purpose, let us clear our minds of excessive doubts and suspicions and go forward cautiously, by all means, but with the intention of reaching agreement.

Proposed Missouri Valley Authority

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 4 (legislative day of Friday, March 16), 1945

Mr. BUTLER. Mr. President, on January 20 there was a meeting of the Nebraska Reclamation Association held in Lincoln, Nebr., at which time distinguished speakers presented different phases of the problem that faces those of us who live in the Missouri River Basin with reference to the development of its water resources.

General Crawford, of the Army, Colonel Neff and Colonel Freeman, officers of the Corps of Army Engineers, were speakers, as were many others, including Commissioner Bashore, of the Bureau of Reclamation.

A few days ago I received a copy of the address delivered at this meeting by the gentleman who is now the speaker of the unicameral legislature at Lincoln, Nebr., the Honorable C. Petrus Peterson. Having already placed in the Appendix of the RECORD the addresses delivered by other distinguished speakers at that meeting, I now request that the address delivered by Mr. Peterson be printed in the Appendix.

I should like to mention that he elaborates in a very interesting and instructive manner on the three proposals which have been made as to the method to be followed in the development of the water resources of the Missouri River Basin. The first is that a State agency be set up by the States under an interstate compact; the second proposal, one which was made by the Congress in the passage of the flood-control bill and the rivers-and-harbors bill, is that existing Federal agencies, the Army engineers and the Bureau of Reclamation, in consultation with the States in the area, construct and operate any proposed facilities; and the third proposal, the one made by the President in a recent message, is that Federal cooperation be provided by act of Congress especially to take charge, construct, and operate the project.

Mr. Peterson concludes his interesting statement with these words:

In my judgment, the problem presented, particularly with regard to the operation of the enterprise after construction, will be best solved under the principles of area home rule through a specially established Federal agency, corporate in form, whether called Missouri Valley Authority, or, as I should prefer, Missouri Valley Cooperative.

I ask that the entire address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It was Bacon, I believe, who some centuries ago said that the first function of any governmental agency is to extend the scope of its own jurisdiction.

Someone more recently has said that government derives its just powers from the consent of the governed and its unjust powers from the demands of the governed.

In the development of our American institutions we observe the applicability of both statements. The struggle for jurisdiction has gone on since the early days of the Republic. In no sphere has this been more evident than in the field of water rights.

In Gibbon against Ogden, decided by the United States Supreme Court at the February term, 1824, the Court was called upon to decide the applicability of the commerce clause of the Federal Constitution to harbor waters which were in fact an extension of the ocean. It is significant that even this area was then in doubt.

In Oklahoma against Atkinson Co., decided by the same Court June 2, 1941, 117 years later, the issue was the authority of the Federal Government, over the protest of the State of Oklahoma, to construct a dam and reservoir which would impound the waters of the Red River, or its tributary, Washita River, inundating 150,000 acres of land, 100,000 acres of which were in Oklahoma, requiring the removal of 8,000 inhabitants of Oklahoma from the inundated area and the acquisition of the land, some of which was owned by the State, by the Federal Government. It was conceded that no part of the Red River in Oklahoma was in fact navigable.

The Court held that the Federal authority for flood control extends to the tributaries of the river, even though the tributaries are not navigable.

It follows that, as now interpreted, the commerce clause has vested in the Federal Government final jurisdiction of a river system from the ocean to the upper end of the last brook of the watershed.

But it is not only a question of Federal jurisdiction over all the waters of all of the rivers; the Federal Government also has jurisdiction to install and control hydro-electric systems and to sell the current to the ultimate consumer. To this may be added Federal jurisdiction in matters of soil conservation. We have recently discovered that a farmer milking his own cow and selling the milk to his neighbor is engaged in interstate commerce within the meaning of the Federal Constitution, because the milk he sells is in competition with condensed milk which moves in interstate commerce. In fact there has been a tidal sweep extending Federal jurisdiction in all areas of our activity.

Nor is this solely a matter of changed judicial opinion. Our undertakings have knit us into an inextricable Federal pattern. In my lifetime, I have seen the highway development go from the precinct, with its road boss, to county systems, to State highway systems, to Federal highways and, in recent weeks, we had an international conference to plan the international skyways.

Now it is not strange that these rapid developments have created problems. We have often sought to fit progress into old forms, the biblical "new wine in old bottles," with indifferent success.

A summer neighbor of ours in the north woods of northern Minnesota built over his model T Ford to give it four speeds forward and two in reverse. He made it work but not without a good deal of growling in the gears.

In governmental matters we have often sought to rebuild governmental machinery where new models were in fact called for.

In our own area, the Missouri Valley, we shall presently be engaged in discussion concerning the type of governmental mechanism best adapted to an undertaking the scope of which staggers the imagination. Something over $1,000,000,000 is estimated as the dollar cost of construction. It will call for 250,000 man-years of labor. If successfully completed, it will quite completely change the economic and social life of people in seven States and can have a very substantial influence on our national life and therefore on the life of the world. Gigantic as the project appears, it is estimated that the benefits, in dollars, is as two and one-half is to one when compared with the cost.

The plan contemplates a single assault on a large group of problems with the purpose of finding solutions for the various problems in a unified plan.

The problems concern—

1. Flood control.
2. Navigation.
3. Irrigation.
4. Power development.
5. Soil conservation.
6. Wildlife conservation.
7. Recreational facilities.
8. Sanitation.

Under the present Federal organization, items 1 and 2 are assigned to the Army Engineers and the remaining six items to the Bureau of Reclamation. These two agencies, after a good deal of difference of opinion as to proper emphasis, have developed an overall plan which has been approved by the Congress and the President.

While the plan has been so approved, the question of what agency or agencies shall put the plan into operation remains unsettled. The act of Congress known as the flood-control bill, signed by the President on December 22, 1944 (H. R. 4485), authorizes construction by the Corps of Army Engineers and the Bureau of Reclamation. The bill also declares the policy of the Congress to be that the States shall be consulted in the development and construction of the plan and the operation thereof. The President on November 27, 1944, recommended development and administration by a Federal corporation, modeled after the Tennessee Valley Authority, and referred to by the President as the Missouri Valley Authority. At the time the President signed the bill he said:

"My approval of this bill is given with the distinct understanding that it is not to be interpreted as jeopardizing in any way the creation of a Missouri Valley Authority, the establishment of which should receive the early consideration of the next Congress."

Another suggestion is made by ex-Governor Carr of Colorado, namely, that the agency for the development of the Missouri basin should be an agency of the states involved, resting on an interstate compact entered by the interested States.

We accordingly have three proposals.

1. That a State agency be set up by the States under an interstate compact.

2. That the existing Federal agencies—the Army Engineers and the Bureau of Reclamation,—in consultation with the States in the area, construct and operate the proposed facilities. (The proposal of Congress.)

3. That a Federal corporation be set up by Act of Congress specifically to take charge, construct and operate the project. (The proposal of the President.)

What the people in our Missouri Valley need to analyze is not whether a Federal agency, under Federal jurisdiction will be required—the issue is what kind of a Federal agency.

If we are to make an intelligent choice among these three alternatives as the agency to undertake the task of constructing the vast network of dams, hydro-electric plants, transmission lines, flood control structures and navigation facilities stipulated in the Congressional act approved by the President December 22, 1944, (H. R. 4485) and to operate the gigantic enterprise after its construction it seems desirable to try to understand each of these governmental mechanisms, how each is established, how it would probably function and how we would like to live with it.

1. INTERSTATE COMPACT

Except on the theoretical basis that the States should at all times endeavor to resist the extension of Federal activities, the interstate compact proposal seems the least feasible. The development of a compact, in any field, is, in itself, a tedious and difficult procedure; but as a basis for the proposed development, it seems well nigh impossible. When the concept is carried forward to an operating stage with necessity for managerial decisions promptly to be made, it seems well beyond the field of rational possibility. In any event, the compact, if developed and unanimously approved by the interested States, would still be inoperative except upon congressional approval in the form of an act of Congress approved by the President or passed over his veto. Since Congress, not the States, has the final word even under this proposal, the argument in support of the compact theory seems far from convincing. The only real argument for the interstate compact plan is the assumption that the States would function instead of the Federal Government. This assumption being itself invalid because of the necessity of Federal approval of any compact and of any change therein we may as well discard this proposal. Our real choice is between the plan of Congress and the plan of the President.

2. PRESENT FEDERAL AGENCIES

So far as construction of the physical structures are concerned, the Army engineers and the Bureau of Reclamation can well be entrusted with the task, particularly if the work is done under competitive bidding. Whatever agency is finally charged with the responsibility of construction, the basis of competitive bidding will be found the most acceptable to the people who finally will pay the bill.

But construction of the physical structures, important as that is, is only a part of the project. The successful continued operation of the project, with its direct contact with the patrons of the utilities developed, is the nub of the problem in controversy. That operation, if undertaken in all details by Federal agencies, such as the Army engineers and the Bureau of Reclamation, whose activities must be numberless, will place the patron of the utility, who has specific problems, so far from the seat of authority that understanding will be found totally impossible. Nor does that operation seem to square with our theories of representative government. The Federal Government needs to reduce its areas of friction with the citizen. This in no sense is a criticism of the Bureau of Reclamation which would have the largest part of the operational task. Few, if any, of the Federal agencies have won, now have and deserve to have as complete confidence and respect of the average citizen, particularly in this area, as the Bureau of Reclamation. Its leadership has consistently been of the highest order and its personnel both efficient and tolerant. The difficulty is inherent in the governmental structure itself. There is a fundamental difference between Government and management. When Government ceases to be government and undertakes management, those speaking for the Government become sergeants out of uniform. Every managerial activity of the Government results in an area of friction. Our people willingly obey the laws of the country. They resent being bossed by a Government manager.

It is not by mere coincidence that the agricultural Midwest is predominantly anti-New Deal. Nor is it because there have not been great sums distributed to the farmers by the Federal agencies—much at a time when the need was acute. The factor often overlooked is that every farmer is a manager, and managing managers, without friction, is a task which baffles the best. Whatever may or may not be true elsewhere, the Midwest still thinks of governmental agencies as servants of the citizen, and not as managers. If, however, the existing Federal agencies, the Army engineers and the Bureau of Reclamation, are assigned the task, not only of construction but also of managing the continued operation, the question arises as to how to minimize that friction. The answer would seem to be to find some practical method of State participation.

All of the States in the area have by appropriate legislation set up committees on intergovernmental cooperation. In the Delaware River Valley this mechanism has been used to establish cooperation between four States—New York, New Jersey, Pennsylvania, and Delaware. Manifestly, such an organization cannot take on any managerial responsibility nor have any control of the financial structure which may be involved. It is submitted, however, that if the work is undertaken as Congress seems to have provided, and if the proposal of the President for a separate authority is not established, then in the very near future the committees set up in the various States for intergovernmental cooperation ought to become active as a medium through which the States can collectively study the problem and advise with the Federal agencies. This would have, it seems to me, very important consequences; first, it would tend to obviate controversy among the States, which is bound to develop out of their wide diversity of interest; and, secondly, there would develop out of the experience so obtained

the beginnings of an interstate organization confined to the area involved. It might well be that from such experience an effective organization could be established on a basis of area home rule, which I shall later discuss. For the present, this group of committees seems to be the most practical and effective approach to a problem which requires rather immediate attention. Of course, if the President's recommendation is followed and a separate corporate entity is set up, the problem will immediately become totally different, and a different approach will be required. It may be that we ought now to determine which of the two actual alternatives we should support in this area in order that when the issue is presented in Congress relating to the establishment of a Missouri Valley Authority we have collectively determined our preference. Our preference may or may not have any important bearing on the final decision in Congress. Being in the position of desiring development and desiring the funds which Congress must yet make available, we cannot afford to be too critical of the methods involved in the execution of the plan.

When we try to visualize the full development of these river-valley activities spread over the United States to include, not only the Tennessee Valley and the Missouri Valley, but the Connecticut Valley in New England, and the Columbia Valley in the Pacific Northwest, the Red River Valley, the Ohio Valley, and a dozen others we readily sense the danger involved in the opproach made by Congress centering all of the detailed activity in the Washington offices of the Secretary of War and the Secretary of the Interior, and we come to a consideration of the President's proposal of M. V. A.

3. M. V. A.

There is left the third alternative—M. V. A. I am sorry the letters are "M. V. A." I should prefer "M. V. C." There is a quality about the word "authority" which suggests the policeman's club. In my judgment "cooperative" would not only be more palatable but it can be made to be more nearly accurate. The basic concept here is a specially chartered Federal corporate structure, either to construct and operate the project or to operate the project after the existing Federal agencies have built the physical structures. The one prototype is T. V. A. In our discussions we generally assume that M. V. A. will necessarily be like T. V. A. It need not be.

While the President has indicated a strong preference for that type of corporate structure, his statements have not indicated that suggestions for improvement of that type of corporate structure will not receive consideration.

Just what is the corporate structure of T. V. A.? Mr. Lilienthal, who is now head of T. V. A. (it might be argued that he is T. V. A.) states that it is a corporation with 130,000,000 stockholders. That is to say, the whole population of the Republic constitutes the stockholders and by a parity of reasoning the President of the Republic is president of T. V. A. Congress is the board of directors and the three-man managerial staff is the executive committee. The fundamental defect is that the President does not preside and the directors (Members of Congress) do not direct.

T. V. A. has served as a pilot plant—a demonstration. It may even be—though I doubt it—that for the area served it is in the best form. But the disunity which long prevailed in the managerial triumvirate would indicate that the corporate structure, as there exemplified, can be improved.

Everybody must agree that a project such as is here contemplated will require the highest available skill. It will require continuity of program for the development of long-range objectives. The difficulty with T. V. A. is not to be found in either of these categories. The fundamental defect in T. V. A. is that the corporation functions, in fact, if not in name, without either a board of directors or stockholders.

The ultimate question is—shall the President of the United States be the President, the Congress of the United States the Board of Directors, and the people of the United States the stockholders of the M. V. A.? Or, shall the patrons of the services, who pay the bills, be the stockholders and, in turn, elect a representative board of directors who will exercise some functions of control under the laws of the United States and to the extent applicable, in conformity with the laws of the States in the area?

We are fully familiar with the concept of home rule for cities within the sovereignty of the State. In like manner, it seems reasonable to seek area home rule within the structure of the Federal Government. The cardinal principle is that governmental activities which can be effectively administered locally should not be placed under centralized authority.

The corporation, if one is established, will need to possess attributes which only governmental agencies possess, such as

(a) Power of eminent domain to be granted by the Government of its creation and coextensive with the scope of its operation.

(b) It should be an agency suitable for expenditure of public funds in conformity with legislation making the funds available.

(c) It should be accountable to the Government of its creation.

If Missouri basin-wide development is undertaken, it will clearly be by a Federal agency, either now existing or specially created, but if the latter, that agency can be, and I think should be, given appropriate home rule powers.

The issue is not whether a Federal agency will be required. The issue is what kind of a Federal agency.

I am not suggesting that if a Missouri Valley Authority is established, it should be a corporate structure which is to make its own laws. It should be established under an act of Congress with its powers defined and subject, as all governmental agencies are, or should be, to such modification as experience and change will indicate desirable. It should operate in the several States in conformity with the laws of the respective States insofar as not in conflict with valid acts of Congress, particularly in the matter of water rights and the administration of irrigation laws.

This area of the Nation will not be happy with a managerial triumvirate such as is found in T. V. A., even if it be of the highest type, which will undertake the remolding of the economic and social life of the States in the Missouri Valley on its own initiative and without any voice in policy determination by the people directly affected.

There is a difference between a federal corporation, charged with specific responsibility, on the one hand, and a corporate autocracy superimposed on the present commonwealths in this valley. Our people will expect to have a voice in the determination of their destinies, more effective than that which is pictured by a corporation with 130,000,000 stockholders in which they at best would have only a small minority interest. They are not yet ready to consider that they are so incompetent as to require a national guardianship.

It can be made possible for them to have a voice even though the project transcends State boundaries. The M. V. A., if established, is concededly only one of a large number of similar agencies for the respective river valleys of the Nation. When and if such an agency is established for the Connecticut Valley, we shall fully recognize that the people in that valley will know their own problems infinitely better than we shall be able to know them, try as we will. The same will be true of every other valley. The problems with which we in this area, with its uncertain rainfall, must cope, are peculiarly our own. People in areas which do not have irrigation problems cannot sense either their complexity nor their intensity. Representatives of this area will bring to their task knowledge and sympathy which the representatives of the whole Nation cannot possess.

If I could have my way, local home rule powers would be vested in the patrons of the utility who pay the bills as distinguished from the general electorate. This would tend to take the function out of the area of partisan political activity and recognize the enterprise for what it actually is, a large cooperative economic organization, the stockholders of which are the people who pay the bills, who vote not according to economic strength, but as patrons with equal voice.

If I could have my way, the directorate of the enterprise would be chosen by a delegate assembly. During the period of repayment of Federal funds advanced, the actual management might well be selected, subject to approval by appropriate agencies of the Federal Government.

The extent and completeness of the home rule powers would be determined and modified by experience, but the principle of area home rule should implicit in the fundamental charter of the M. V. A. corporation.

In my judgment the problem presented, particularly with regard to the operation of the enterprise after construction, will be best solved under the principles of area home rule through a specially established Federal agency, corporate in form, whether called Missouri Valley Authority, or, as I should prefer, Missouri Valley Cooperative.

Commissioning of the U. S. S. "Missouri"

EXTENSION OF REMARKS

OF

HON. FRANK P. BRIGGS

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, April 4 (legislative day of Friday, March 16), 1945

Mr. BRIGGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two very excellent addresses delivered at the commissioning of the U. S. S. *Missouri* by former Senator Bennett Champ Clark and Capt. W. M. Callaghan, United States Navy.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

SPEECH OF THE HONORABLE BENNETT CHAMP CLARK AT THE COMMISSIONING OF THE U. S. S. "MISSOURI"

In this hour of destiny when our troops are landing in France under the guns of the Navy in the greatest military adventure of all time and when the Army, the Navy, and the Marine Corps are cooperating in the far Pacific and around the globe to a degree and with a success never approached in our history, the commissioning of this magnificent battleship is an event of extraordinary pride to all Americans and of the greatest importance and significance throughout the world.

It was my privilege to witness the launching of the old battleship *Missouri* in 1903, one of the finest ships of that day. Today to view this mighty floating fortress with its invincible armament is a revelation of the advancement in the art of naval architecture since those far days of 40 years ago.

The United States Navy in this war has gloriously maintained the bright and cherished traditions of its service from the time

of John Paul Jones and Barry down to the present day. Some of the most memorable and most cherished deeds in all the long annals of American heroism have been performed by our naval personnel in this war.

The imperial Commonwealth of Missouri and all of its people are deeply honored that as this splendid battleship—the most formidable engine of war on land or sea or air—in all the world is today added to the active list of the Navy. She bears the name of that great State. Our hopes and our prayers will go with you on every step of the great adventure. We vision you as shelling the coastal bastions of the Nazi defenses of Europe and ultimately of leading the way in the subjugation or destruction of Japan.

Captain Callaghan, we know that you and your officers and men will faithfully and gloriously uphold the stern and splendid traditions of our service. It is the wise and pleasant practice of our naval service to name our battleships after our sovereign States but the ship's company may be drawn from all of the States. You and all of the company of the battleship, wherever may be your actual residence, will always be honorary citizens of Missouri and will aways find a royal welcome there.

Every American follows the fortunes of every American ship of war with intense anxiety and with pride and affection. But we of Missouri shall in an especial degree follow the adventures of this great ship with all of our hopes and prayers and pride. We wish you Godspeed and safe return and fruitful accomplishment. We know that whatever may befall there will never be occasion for remorse or for regret upon the part of yourselves, your loved ones or your fellow countrymen as to your conduct in the use of the *Missouri*, which today becomes the pride of the American Navy.

ADDRESS OF CAPT. W. M. CALLAGHAN, UNITED STATES NAVY, TO OFFICERS AND MEN OF THE U. S. S. "MISSOURI" AND ATTENDING GUESTS

Mr. Secretary, distinguished guests, officers, and men, I am unable to compress into words and in the time allotted to us on this occasion a full appreciation of what the commissioning of this ship means to the people of the United States and to those of us who are privileged first to serve in the U. S. S. *Missouri*. Despite the handicap of time it would be unworthy of us not to take note of and pay our tribute to those whose minds, hearts, and hands have provided the Navy of the United States with such a magnificent new weapon. To them, therefore, to the designers and planners, the supervisors and workers of the New York Navy Yard and the many manufacturers and their helpers in all parts of the United States, who have built or contributed to the building of this ship, we sincerely and humbly acknowledge our inheritance. Our deepest respect we pay to them for their knowledge, their brawn, their sweat, and for that pride of workmanship with which the competent and faithful worker dignifies and raises a lasting monument to the labor of his hands.

The officers and men who are to man and operate the U. S. S. *Missouri* I must charge with a special responsibility. We must not only admire, but with all the intelligence and talents which God has given us, take this ship and in the shortest possible time develop its full potentialities for waging the wars which two principal and ruthless enemies have forced upon us. No greater honor and trust could be reposed in officers and men of the United States Navy than to be assigned such a duty during time of war. My instructions and advice to you in helping me to discharge our combined responsibilities are simple but basic. I ask that you be true: to the God who created you; to the parents who brought you into the world, raised you, and are proud of you; to the wives, families, or sweethearts you leave behind you; to the country you are privileged to serve; and lastly I ask that you be true to yourselves. If you follow these instructions with the same fidelity that I have every reason to believe you will, I will have no occasion to remind you again in future of what the Commander in Chief expects from every ship under his command—that it be clean, that it be smart, and that it be a fighting ship on which he can wholly depend to carry out his orders.

To the many officers and men of the ship's company who recently have entered the service and who now will be serving in a ship for the first time, I remind that the Navy accepts and welcomes you into a brotherhood afloat, rich in tradition, and rightfully proud of its history and accomplishments. Give it your best, that the Navy may also list you forever with honor and pride as having been one of its own during this hour of need.

With the hoisting of the commission pennant today, the *Missouri* has become something more than a complex assembly of steel, guns, and machinery. It now has the breath of life and your spirit—the same spirit by which it will become known and be spoken of wherever men of the Navy foregather. Make that spirit and reputation known by the results we achieve, and not by idle and futile boasting, the untruthfulness of which is so easily detected.

I do not suppose there are any in this distinguished gathering who imagine that a crew designated to man this ship could walk aboard and assume their duties without a great deal of preliminary training. While much remains to be done to make the *Missouri* an efficient fighting ship of the fleet, much already has been done to prepare us for the tasks ahead. To the officers and men, particularly the executive officer, the heads of departments and their assistants, both officer and enlisted, who have done such excellent work in preparing the organization bills and who have been responsible for the basic training of the *Missouri's* crew, I publicly acknowledge and express to them my appreciation and admiration.

It would be negligent of me not to recall to all of us with emphasis that we are carrying forth into history the name of a great State of our Republic—the third United States ship to be so named. By a happy coincidence in my own case, the previous battleship *Missouri* was the first ship of the Navy in which I served. It was also commanded at another time during a part of the last war by my godfather and uncle, the late Rear Admiral James J. Raby. While it is a characteristic of our national life that we are fiercely sectional in our sentiments and attachments, we are also fiercely loyal to the unity of our country against attacks from within or without. Though most of us cannot claim the privilege of being either native or adopted sons of the State of Missouri, we accept her banner with devotion and shall cast her gage into battle with a determination to win the distinction of becoming honorary sons.

National Program for Full Employment

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 5 (legislative day of Friday, March 16), 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and able address on the full-employment bill of 1945, delivered by Representative FRANK E. HOOK, of Michigan, to the Marine and Shipbuilding Workers of America on March 23, 1945, in Camden, N. J.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FULL EMPLOYMENT BILL OF 1945

We here in America, you and I, and the common people in all the countries of the world, but especially here in our own country, are faced with perhaps the greatest opportunity ever offered by history to mankind. It is true the opportunity grows out of a horrible and world-devastating war whose cost will be paid by generations unborn. But we do now have the chance, because of the lessons of the war and because we are beginning to understand the nature and causes of the war, to build a future for ourselves and for those unborn generations in which there will be no wars and no poverty which generates wars.

When I say we do have this opportunity to rescue the world from its own vices of poverty and war I mean it very sincerely, and I say it with utmost seriousness. I do not believe that the world as we have known it can survive another world-wide depression or another world war. This is the realization that motivates the plans for peace laid down at Dumbarton Oaks, at Bretton Woods, and at Yalta. It will be the background for the decisions at the San Francisco Conference.

While the results from these international conferences are not perfect, and while many may view them with skepticism if not cynicism, they do constitute a long step down the road of international accord which leads to permanent peace. But all of the plans for permanent peace, all the international agreements arrived at by our statesmen and diplomats, will mean nothing, will serve only as sore reminders of what might have been if the post-war planners do not include a blueprint for a sound domestic economy in this country.

We, in the United States, occupy a position of unique responsibility in shaping the course of world history after the war. Of all the nations involved in World War No. 2, we will emerge the strongest, the least injured by its ravages. Despite the enormity of our losses in manpower and materials, we will be in a position to serve as the democratic arsenal of peace as we have served as the arsenal of war. As a member of the society of nations, it will be our obligation to do this. This will not be international social work, as some of our allegedly hard-headed businessmen have said, it will be just plain horse sense.

We have demonstrated during the war period that our productive capacity can be expanded, can be shaped to fit the consumer needs of the country as a whole. During the war, the products of our tremendously expanded industrial capacity have been consumed in the national fight for survival against fascism. There were cynical and timid men, back in 1940 and 1941, who swore we could not meet the challenge, who called the President's staggering war production schedules fantastic. Who mocked that we were shooting at the moon. Well, you did it, you shot at the moon. You men in the shipyards, your brothers and sisters in shops and factories—and in the fields, too—throughout the country did it. The impossible production schedules were possible. The terrible necessities of war proved what all the years of peace had not done, proved what only a handful of men—called dreamers and idealists—believed possible. It proved that the American economic system could provide jobs for all, could support a program of full employment without abandonment of the fundamentals of democracy.

Right now, our country is turning out goods and services at the rate of $200,000,000,000 a year. Our total national income stands at about one hundred and fifty-six billions a year. The tax yield alone on our national income is greater than the total income itself was for the year 1932.

While this amazing growth is heartening, it is also terrifying when you realize that of the $200,000,000,000 worth of goods and services now being turned out by employed Americans, about ninety-five billions is being purchased by the United States Government for war purposes. The Government for war purposes. The Government's purchases for national defense purposes after the war can be expected to drop to between five and ten billion a year.

Now, these figures of total national income and tax yield and productive capacity may not mean too much to you. Another figure, really the basic figure behind all these billions of dollars, will, I am sure, be more meaningful, have a lot more personal impact than these astronomical terms. In 1932, the year when our total national income was $40,000,000,000, there were 28,000,000 people employed in this country. Today there are 55,000,000 people employed.

That contrast, the difference of more than 20,000,000 people employed, is the guts of the problem that faces us today. Leaving out the improved wage rates, which your unions have negotiated, the increase in the working week, and the other factors which have contributed to a higher income for the individual workers, the real factor in increasing the total national income is the number of people employed. This figure is the lowest common denominator in determining the national economy, in prophesying the national well-being.

If this country is to play its part in stabilizing peace, in contributing to international prosperity which is the only guaranty of peace, we have to see to it that the number of employed Americans does not fall below the 55,000,000 we now have. More than that, our economy must provide jobs for the men and women released from the armed services after hostilities. Taking into account those now employed only because of the war emergency who will voluntarily withdraw from the work force after the emergency, that means in the neighborhood of 60,000,000 jobs. It means that we cannot longer survive in an economic climate of widespread unemployment which we had in 1929, or even in 1940, the year before we entered the war. Another depression like that which grew out of the planlessness of the last armistice and another war the inevitable consequence of the next depression will wither the very roots of democracy, will blast our way of living from the face of the earth. To avoid this by planing now is a simple matter of national survival.

If the American people have the courage and the daring, we can survive, we can avoid World War No. 3 and the total destruction of democracy. We can lead the way out of the wilderness of economic insecurity into a promised land of jobs for all and peace for the world.

Whether we, as a nation, have that courage is another story. Certainly, all of us here want full employment after the war. Most Americans want full employment. But there is an all too widespread, and dangerously defeatist, attitude toward our chances of getting it. A recent Gallup poll showed that almost 75 percent of a cross section of Americans believed that there would not be enough jobs to go around after the war, believe that another depression, sooner or later, is inevitable.

Now, I don't believe that at all. I have every fatih in this country's ability to defend itself against the ravages of peacetime depression as it has defended itself against its enemies in wartime. Not only do I believe that we can do this, but I believe that it is the responsibility of the Government to put as much into the offensive against poverty and unemployment as it has put into the offensive against nazi-ism and Japanese imperialism. The two offensives are part of the same campaign strategy, for if we relax on the peace front after the war is over, we will be giving aid and comfort to the enemy our sons will be fighting in World War No. 3.

There isn't any way of writing a blank check for a rosy future. There isn't any single way we can achieve full employment after the war, no single factor which will compensate for the withdrawal of $95,000,000,000 worth of Government purchases from our economy. You would be rightly suspicious of any legislative plan I would offer you as a cure-all for our post-war ills. There just is no such thing. All the factors of our complicated society must be weighed if we are to have a balanced economy of abundance.

More than any other phenomenon that has been demonstrated by our war experience is the interdependence of all the parts of society—labor, management, Government, and consumer—to break it down only into its crudest economic segments. Whatever planning we do toward the objective of 60,000,000 jobs must take this essential interdependence into account.

There is now before both Houses of Congress legislation which does just that. The Senate bill, titled S. 380 and the House bill titled H. R. 2202, are essentially the same. There are differences in detail, but the objectives of the two bills are the same.

Let me read to you from the declaration of policy which prefaces both bills:

"All Americans able to work and seeking work have the right to useful, remunerative, regular, and full-time employment, and it is the policy of the United States to assure the existence at all times of sufficient employment opportunities to enable all Americans who have finished their schooling and who do not have full-time housekeeping responsibilities freely to exercise this right."

For the first time, the National Congress in the full-employment bill of 1945, states that gainful employment is a right of all people. It does not lay down the principle, as some of its opponents say, that the country owes anyone a living. It simply provides that the opportunity to work should be offered all who need and want to work.

This basic concept was expressed in the recent campaign in the slogan forwarded by President Roosevelt—"60,000,000 peacetime jobs." The idea of full employment behind that slogan was given lip service even by the President's opposition during the campaign. As you know, the most vigorous and courageous proponent of an economy of abundance, both during and after the campaign, was Secretary of Commerce Henry Wallace. He recognized that 60,000,000 peacetime jobs was not mere campaign oratory. He know, as he later described it that it would become "the economic battle cry of all the peoples of the world for the next 20 years."

The real test of the sincerity of the campaign allegiance to the concept of full employment came during the congressional battles over the confirmation of Henry Wallace as Secretary of Commerce, and over the George bill. I hope you followed those debates very carefully because there you had lined up the forces that will be with you, and those that will be against you in your fight for a job after the war. Just statistically, it may be interesting to you to know that in 1939, there were only 11,446 shipyard workers in this area. There now are about 110,000.

Don't think those debates in the House and Senate have no bearing on these figures. They have a very direct bearing because while political in nature, they were just the preliminary skirmishes of the protagonists of two fundamentally opposed economic philosophies, the economy of abundance with jobs for all after the war, and the economy of scarcity, with profits for the few.

I said that these congressional debates were preliminary skirmishes. We haven't seen anything yet. The real tooth-and-nail fight will come when such legislation as the full-employment bill comes up for debate. I don't believe any more important decision will be made by the Seventy-ninth Congress than with regard to this bill, and because of that, I want to discuss it in some detail with you.

The full-employment bill is not a guaranty that all workers will have jobs after the war. It is in no way an adequate post-war economic program in itself. We just can't pass the bill and sit back to wait for the millennium to arrive. As you will see, the bill in itself recognizes that there is no one cure-all for the problems of the post-war period.

Briefly, what the bill does is this. It gives the Federal Government the responsibility of cooperating with all the parts of our economic structure with the view to achieving full employment. Where necessary, it provides that Federal investment and expenditures would be used to this end where private business fails to do so.

The bill states that: "It is the policy of the United States to foster free enterprise and the investment of private capital in trade and commerce, and in the development of the natural resources of the United States."

No one in any walk of life, whether he clips coupons for a living or sweats behind a welder's mask, can object to that.

What some of the coupon clippers do object to is the language of the bill that provides "to the extent that continuing full employment cannot otherwise be achieved, it is the further responsibility of the Federal Government to promote such volume of Federal investment and expenditure as may be needed to assure continuing full employment; and such investment and expenditure by the Federal Government shall be designed to contribute to the national wealth and well-being and to stimulate increased employment opportunities by private enterprise."

If you just substitute the words "national defense" or "the war effort" for the phrases "full employment" and "national well-being—in this part of the full-employment bill, you will have a legislative expression of just what has been going on in this country for the past 4 years—the war years. Where private business was unable to carry the burden of financing war production, the Federal Government stepped in. Where more than financing was needed, the Army and Navy and other agencies built their own facilities and produced their own weapons. The coupon clippers certainly can't kick about their profits during the last 4 years (although of course they do just to keep their hand in), but when essentially the same procedure is proposed for national defense against poverty and unemployment, you hear screams of un-American and communism.

The candidate of these same people who fear that the full-employment bill will mean abandonment of the American system of government, said in September of last year, in the middle of the Presidential campaign—and here I am quoting Gov. Thomas E. Dewey, "Government's first job in the peacetime years ahead will be to see that conditions exist which promote widespread job opportunities," and further in the same speech, he said "* * * if there is one thing we are all agreed upon, it is that in the coming peacetime years we in this country must have jobs and opportunity for all. This is everybody's business. Therefore it is the business of government." Mr. Dewey said that.

In addition to stating the broad principle of governmental responsibility for the economic welfare of its citizens, the full-employment bill calls for an annual production and employment schedule, including not only anticipation of Federal investment and ex-

penditure but also that of all groups in the country. This economic schedule whose purpose is to appraise the number of jobs needed to provide full employment in a given period will be presented by the President every year at the same time he presents his annual budget message covering strictly Government expenditures. If the President, after his appraisal of the number of jobs needed, the total of expenditures required to provide those jobs, and the prospective volume of business, finds that there is unemployment or the threat of unemployment he is required, under the bill, to transmit to Congress his program for creating jobs through the stimulation of private enterprise and through necessary Government programs. This program would be accompanied by recommendations for such legislation as is necessary to carry it out.

At this point in the legislative process under the bill, the responsibility for creating full employment falls upon the Congress. And this is one among many regards where this legislation is unprecedented. It specifically directs the Congress of the United States to make a study of the national economy and on the basis of that study to pass legislation designed to maintain a healthy national economy. Now, during the past 12 years there have been proposed and passed many bills designed to promote a healthy national economy. But they have been piecemeal bills, dealing with this or that economic group—the industrial worker, the farmer, the small businessman, etc. And largely they have grown out of desperate immediate need. The difference between that kind of legislation, much of which I supported as necessary to bring the country back from the black depths of the thirties, and the full-employment bill is that it seeks to determine the need before it becomes desperate. I don't know whether the bill in its present form will actually serve as well as some other device might serve in anticipating our employment needs, but it certainly is a step in the direction of applying sound business practice to Government activities. No businessman who hoped to stay out of the red side of the ledger would neglect to very carefully survey the needs of his business before planning his budget. The full-employment bill proposes to apply this sound business axiom to the biggest business in the world—the business of keeping some 140,000,000 Americans well fed, well clad, and decently housed.

I am enthusiastic about the full employment bill not so much because I believe it is perfect—in fact, I expect in operation many defects will show up—but because it is a departure from the old hit-or-miss type of expediency legislation, and it does recognize the basic fact that without widespread purchasing power you cannot have a healthy economy, and that you cannot spread the purchasing power to enough consumers without jobs for those consumers.

I am not going into much further detail about the bill now. I hope I will be able to answer any questions you have after these remarks. But there is one aspect of this legislation that I do want to point out to you, because its proper functioning depends directly on you as working citizens. By working citizens I do not mean men and women who have jobs; I mean citizens who work at their citizenship, who take their democratic responsibilities seriously and who expect the men and women they elected to take their responsibilities seriously.

As I have said, the full-employment bill does provide for the encouragement of private enterprise to create employment, and where it falls down for the Federal Government to step in toward that same end. Obviously, the same conflicting economic interests that exist today will exist after the passage of the bill, assuming it is passed. There will be the widest divergence of opinion as to what expenditures will best create employment and serve the national welfare. There will be a wide cleavage in the ranks of Congress as to what role private enterprise should play in the program, what constitutes the national welfare, and to what extent Federal expenditures should be used. You will still have the boys who grow fat worrying about the national debt and the threat of communism. It is at this point that your responsibility toward the total national welfare comes in, at this point where you help make the decision for or against full employment.

I would like to quote to you a statement about this angle of the bill that Henry Wallace made. He said, "In actuality, the common man would have no guaranty of his right to a job unless he were politically organized to see to it that his President or his Congress adopted those specific policies and those specific programs that would actually assure full employment. Which is just as it should be."

I am sure I don't have to stress to you the necessity of political organization. You in labor showed that you had a pretty thorough understanding of that necessity during the last campaign.

Secretary Wallace, in the same speech, went on to say: "Under the bill * * * the proposed national production and employment budget would provide a method of political accountability to the people of our country, a yardstick by which the common man could measure the extent to which he has been properly served by his representatives in the Government."

You do have a responsibility in seeing to it that we in American don't let our opportunity slip by again. As citizens in the most vital democracy in the world, you have the responsibility to keep that democracy alive for your own sakes and for the sake of the future of the world.

Laws may be passed in Congress, but they are written in the meeting places of the people—the churches, the political clubhouses, the locker rooms of exclusive clubs—and in the union halls. I am not the lawmaker here tonight, all of you are.

I believe the full-employment bill has a good chance of being passed by Congress. If all of you and people like you throughout the country support it as vigorously as you can it will almost certainly pass. It is just one of the ways in which we can make amends for our tragic mistakes of the past. The toll of this war has been too great, the ways of the world have been too changed for us to ignore the signposts now up on the road. If we do not take the road to prosperity and peace, the time will come when we will look back with tender nostalgia for the good old days of World War No. 2. There is a better way to achieve full employment than through war. It is up to us to find that way, and we must find it before we are already on the road to war again.

Memorial Address by Chaplain Roland B. Gittelsohn at Fifth Marine Division Cemetery

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 5 (legislative day of Friday, March 16), 1945

Mr. THOMAS of Oklahoma. Mr. President, at the request of Marine Sgt. William E. Wright, a resident of my State who has served through the fighting on the island of Iwo Jima, I ask permission to have placed in the RECORD a copy of the memorial address delivered by Chaplain Roland B. Gittelsohn at the Fifth Marine Division Cemetery, located on the island.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is perhaps the grimmest, and surely the holiest, task we have faced since D-day. Here before us lie the bodies of comrades and friends. Men who until yesterday or last week laughed with us, joked with us, trained with us. Men who were on the same ships with us, and went over the sides with us as we prepared to hit the beaches of this island. Men who fought with us and feared with us. Somewhere in this plot of ground there may lie the man who could have discovered the cure for cancer. Under one of these Christian crosses, or beneath a Jewish Star of David, there may rest now a man who was destined to be a great prophet—to find the way, perhaps, for all to live in plenty, with poverty and hardship for none. Now they lie here silently in this sacred soil, and we gather to consecrate this earth in their memory.

It is not easy to do so. Some of us have buried our closest friends here. We saw these men killed before our very eyes. Any one of us might have died in their places. Indeed, some of us are alive and breathing at this very moment only because men who lie here beneath us had the courage and strength to give their lives for ours. To speak in memory of such men as these is not easy. Of them, too, can it be said with utter truth, "The world will little note nor long remember what we say here. It can never forget what they did here."

No; our poor power of speech can add nothing to what these men and the other dead of our division who are not here have already done. All that we even hope to do is follow their example. To show the same selfless courage in peace that they did in war. To swear that by the grace of God and the stubborn strength and power of human will, their sons and ours shall never suffer these pains again. These men have done their job well. They have paid the ghastly price of freedom. If that freedom be once again lost, as it was after the last war, the unforgivable blame will be ours, not theirs. So it is we the living who are here to be dedicated and consecrated.

We dedicate ourselves, first, to live together in peace the way they fought and are buried in this war. Here lie men who love America because their ancestors generations ago helped in her founding, and other men who loved her with equal passion because they themselves or their own fathers escaped from oppression to her blessed shores. Here lie officers and men, Negroes and whites, rich men and poor—together. Here are Protestants, Catholics, and Jews—together. Here no man prefers another because of his faith or despises him because of his color. Here there are no quotas of how many from each group are admitted or allowed. Among these men there is no discrimination. No prejudices. No hatred. Theirs is the highest and purest democracy.

Any man among us, the living, who fails to understand that will thereby betray those who lie here dead. Whoever of us lifts his hand in hate against a brother, or thinks himself superior to those who happen to be in the minority, makes of this ceremony and of the bloody sacrifice it commemorates an empty, hollow mockery. To this, then, as our solemn, sacred duty, do we the living now dedicate ourselves—to the right of Protestants, Catholics, and Jews, of white men and Negroes alike, to enjoy the democracy for which all of them have here paid the price.

To one thing more do we consecrate ourselves in memory of those who sleep beneath these crosses and stars. We shall not foolishly suppose, as did the last generation of America's fighting men, that victory on the battlefield will automatically guarantee the triumph of democracy at home. This war, with all its frightful heartache and suffering, is but the beginning of our generation's struggle for democracy. When the last battle has been won, there will be those at home, as there were last time, who will want us to turn our backs in selfish isolation on the rest of organized humanity, and thus to sabotage the very peace for which we fight. We promise you who lie here: we will not do that. We will join hands with Britain, China, Russia in peace, even as we have in war, to build the kind of world for which you died.

When the last shot has been fired, there will still be those whose eyes are turned backward, not forward, who will be satisfied with those wide extremes of poverty and wealth in which the seeds of another war can breed. We promise you, our departed comrades: this too, we will not permit. This war has been fought by the common man; its fruits of peace must be enjoyed by the common man. We promise, by all that is sacred and holy, that your sons, the sons of miners and millers, the sons of farmers and workers, will inherit from your death the right to a living that is decent and secure.

When the final cross has been placed in the last cemetery, once again there will be those to whom profit is more important than peace, who will insist with the voice of sweet reasonableness and appeasement that it is better to trade with the enemies of mankind than, by crushing them, to lose their profit. To you who sleep here silently, we give our promise: we will not listen. We will not forget that some of you were burned with oil that came from American wells, that many of you were killed by shells fashioned from American steel. We promise that when once again men seek profit at your expense, we shall remember how you looked when we placed you reverently, lovingly, in the ground.

Thus do we memorialize those who, having ceased living with us, now live within us. Thus do we consecrate ourselves the living to carry on the struggle they began. Too much blood has gone into this soil for us to let it lie barren. Too much pain and heartache have fertilized the earth on which we stand. We here solemnly swear this shall not be in vain. Out of this, and from the suffering and sorrow of those who mourn this, will come—we promise—the birth of a new freedom for the sons of men everywhere.

New Hampshire and Dumbarton Oaks

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, April 5 (legislative day of Friday, March 16), 1945

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "New Hampshire and Dumbarton Oaks," delivered by State Senator Earl S. Hewitt, of Hanover, N. H., before a meeting of the United States Department of Agriculture Extension Service, in Washington, D. C., April 3, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The article appearing in town warrants in the State of New Hampshire under date of March 13, 1945: "To see if the town will vote to support United States membership in a general system of international cooperation, such as that proposed at the Dumbarton Oaks Conference, having police power to maintain the peace of the world," was without precedent in the history of New England town meetings. The voting results were also without precedent in respect to affirmative action on an article which was given full and frank discussion before a vote was cast. That is the thing to remember about this New Hampshire town-meeting vote.

The tabulated vote in the secretary of state's office in Concord shows 16,825 votes for the article with 813 against. In the affirmative vote there are 31 towns voting unanimously who failed to tabulate the vote and are therefore counted as having cast 31 votes in the total.

The New Hampshire town meeting as an institution for sounding public opinion carries on the purer form of democracy under our representative processes. It reaches back into the colonial period and has been adhered to throughout the history of all New England. It is still the functional method of approaching financial and administrative problems, and town officials are subject to annual election. During the years the forms of procedure have changed, permitting use of secret ballot for election of officers, but even this method is not yet acceptable in many of the smaller towns. The citizens there walk up and place the name of the favored candidate in the box in full view of the candidate and then return to vote on other matters by acclamation, or by show of hands, or by standing to be counted. Discussion of each article in the warrant is always in order, though budget committees, legalized during the administration of Gov. STYLES BRIDGES—now United States Senator from New Hampshire—have the responsibility of projecting the financial picture for the town.

Arguments between voters on policy cover a wide range of human behavior and reveal at all times the character of the people. In the meetings this year, because of the article on international cooperation, many towns using the secret ballot preferred to discuss the subject in open meeting and vote in the traditional manner. The results now show that, had the secret ballots been used in every instance, the article would undoubtedly have received many more affirmative votes. I make this as an unqualified statement, having made a survey of the tabulations, and having conferred with representatives from the towns now in attendance at the legislature. Many citizens who came to the meeting to vote for officers were unable to stay when the article was under discussion.

The senate joint resolution which passed both houses of the New Hampshire Legislature without debate and with unanimous support was the method employed to project the article into the warrants. It received wide publicity from press services throughout the State. As sponsor of the resolution, I emphatically stated, before the committee hearings, that the phrase "Such as that proposed at the Dumbarton Oaks Conference" represented a challenge to our people to become informed on what those proposals were all about.

The senate resolution reads as follows: *"Resolved by the senate and house of representatives, in general court convened,* That the Governor, with the advice and consent of the council, is hereby authorized and directed to request selectmen of towns to insert an article in the warrant of the town meetings holden under date of March 13, 1945, to read as follows: To see if the town will vote to support United States membership in a general system of international cooperation, such as that proposed at the Dumbarton Oaks Conference, having police power to maintain the peace of the world.

"Each town clerk is directed to forward to the secretary of state the result of the vote in his town on this question. The secretary of state is hereby authorized and directed to canvass the vote on this article as returned to him and transmit his findings to the clerk of the United States Senate."

The efforts made for public education previous to town meeting were of tremendous significance in respect to the vote. Americans United for World Organization led the way, ably assisted by local chapters of the League of Women Voters. Ernest M. Hopkins, national chairman of the board of directors of Americans United, was particularly interested to have his native State organized into local chapters as soon as possible. When the idea of a town-meeting referendum was born at a meeting of the Dartmouth group universities committee on post-war international problems, Dr. Hopkins was present. He later appeared before the State senate in support of the resolution, which was adopted. A speakers' bureau made up of prominent New Hampshire citizens started going to town. They kept going and only the most isolated communities failed to receive a visitor well versed in the proposals of Dumbarton Oaks. The weekly and daily press, as well as the radio news commentators, ably and fully reported these earlier meetings, with emphasis on the Dumbarton Oaks article. During the 11 years I have been editing and publishing a weekly newspaper I have never seen more public interest in a subject, than was represented by this article appearing in the town-meeting warrants of New Hampshire.

The cities had to be left out of the voting, because under their charter forms of government no elections were provided for on this date, March 13. Gov. Charles M. Dale, when signing the engrossed bill, expressed his disappointment that the cities of New Hampshire could not have the same opportunity to test opinions of their citizens. What effect such a vote would have had on the total is of course impossible to know. In the judgment of most people the ratio would have been about the same.

My personal opinion as to the meaning of the vote in New Hampshire town meetings is something to this effect: It definitely reflects a changing attitude on the part of New Hampshire's people. It records their growing awareness of the hard work needed to arrive at our objective—world peace. I believe most of the voters were remembering their fairly recent experience with air-raid warnings and civilian-defense measures, with increasing awareness of the robomb and its threat to all civilized life. They were not forgetting our daily scrutiny of casualty lists, or the new gold star added to the town honor roll. In street conversations our citizens seemed to hold all aggressors strictly accountable for what has happened. No distinction was made between governments and peoples. Daily expressions of comment have carried the thought that one must be tough to wage war and equally tough and determined to maintain the peace. "Going through this business every 25 years is getting nowhere fast" is a fairly common remark from people of all walks of life. In this town meeting vote the people accepted the proposition that it takes more than one nation to maintain peace and that collective security is the only thing that will count from here on. The average voter was not

particularly concerned with the details of the set-up just so long as it got done. In short, trying to read too much into this vote about Dumbarton Oaks might well be mistaken evidence, but we do submit that it was enlightened and from a political minded people, accustomed to standing up and representing themselves publicly in their own affairs. The most discussed phrase in the article was "police power." Those who spoke to the voters in Grange halls and at other gatherings throughout the State were unanimous in reporting back to us the fact that the people wanted to satisfy themselves on the meaning of these words. They were satisfied that we should keep armed forces in readiness for immediate use under a joint command, not to make war, but to prevent it by timely police action. They wanted the war-making power to remain in the Congress, where it does remain under the Dumbarton Oaks proposals.

As sponsor of the resolution in the New Hampshire Legislature I am merely keeping faith with my son Richard. Under date of December 28, 1944, the lone editorial appearing in the Hanover Gazette read as follows:

RICHARD

Our third son, Pvt. (1st cl.) Richard Dole Hewitt, was killed in action December 3, 1944, in Germany. Our pledge to him has been and will be, as long as we shall live, to work for a system of international cooperation and the organization of a police force to maintain world peace.

Should Labor Unions Engage in Political Action?

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 5, 1945

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before Hartford Diocesan Labor Institute, Waterbury Chapter, at Waterbury, Conn., April 2, 1945:

When Abraham Lincoln, at Gettysburg, said ours is a "Government of the people, by the people, for the people," there were many who doubted and even some who sneered.

Time has vindicated the Great Emancipator, and today we can be sure that "Government of the people, by the people, for the people shall not perish from the earth" so long as the people—all the people, men and women, rich and poor, young and old, regardless of race, creed, and color—conscientiously exercise their rights and perform all that is required of them as free citizens.

If the tragic events of recent years have taught us one thing, it should be this—that democracy can only be defeated by itself, by its own carelessness, by its own failures and neglect of business that is essential to the public good.

The affairs of state in a demcoracy are properly everybody's concern and should engage the widest possible public participation. Every conceivable step should be taken to encourage this. And if any person, or group of people should attempt to curtail us by limiting one of the most essential of our democratic rights—the right of each and every one of us, or any combination of us, to name and work for the election of candidates of our own choice—we should examine them critically and suspiciously.

Public affairs cannot safely be left in the hands of a few. We Americans do not believe in government by a self-chosen, self-styled elite. That is a Fascist doctrine. One of Hitler's first moves, you will remember, was to break the labor unions, and in doing that he destroyed the only organized democratic group in Germany that might have successfully challenged his brutal tyranny.

Our country is—and should remain—a land of equal opportunity in all things, in politics as well as business. In our scheme of things there is no place for discriminatory legislation against labor unions in the political field. It would mean the virtual disenfranchisement of millions of citizens. There can be no justification or excuse for this, particularly when the combined labor-union membership represents the largest single social group and economic interest in the country—some 14,000,000 organized workers and their families, all told, approximately a third of the population.

The question under discussion here tonight is Should labor unions engage in political action?

Yes, I say; they should engage in political action of all kinds, and why not?

Everybody in a democracy should engage in political action, and the fact is that almost everybody does, both as individuals and in groups, so why discriminate against the unions? That would be class legislation of a peculiarly vicious kind.

Business engages in political action at all times and in many ways, not only at elections but in between. Its official spokesmen and agents are constantly in Washington and various State capitals, working to influence legislative matters and administrative policy, seeking through the organized pressure of the National Association of Manufacturers, chambers of commerce, various trade associations, and industrial councils to promote certain measures and block others that are not to their liking.

Farmers are similarly engaged in concerted political action at all times. If any of you doubt that, just come down to Washington and I'll introduce you to the energetic representatives of the Farm Bureau, National Grange, and other organizations representing agricultural interests.

Then there are consumer organizations, and many other groups, all of them taking an active and praiseworthy part in public affairs, constantly engaged in political action.

Yet there are some—fortunately, a dwindling die-hard minority—who almost get apoplexy at the mere thought of labor unions indulging in political action.

Their argument is, of course, that they are only interested in protecting the poor working man both from his fellows and himself. They are quite sure in their own minds that they know better than he does what he wants, and what is good for him—and that if he would only be patient and listen to them, everything would come out all right in the end.

Yet these same self-assured gentlemen would be the first to raise a cry to high heaven, and rightly so, if it was proposed that they should be forbidden to speak or take political action in their own benefit. They would stoutly demand their constitutional right to be heard, either in their own voice or speaking through their chosen agents.

And that right, you may be sure, would be granted them, and that is precisely as it should be.

Why then deny the working man the same right?

Let me illustrate by example how limiting the franchise—and that means limiting political action—plays viciously against democracy even in our country. In some of our Southern States public officials are elected by a small percentage of the citizenry because the laws are such that the rank and file of the people have been unable to exercise the vote. This sorry condition is being remedied, but the situation as a whole is still far from healthy. For many years Martin Dies held his congressional seat by being elected by less than 10 percent of the people in his district. I am sure that Martin Dies needs no explaining to this audience.

The war brought certain industries to Dies' district. And with these new industries came thousands of workers who were determined to vote. Dies saw the handwriting on the wall and withdrew from the race rather than face the defeat which surely would have come to him had he run again. But for some years he had been the symbol of the forces perniciously working against democracy—and need I add that he was one of the loudest labor baiters inside Congress and out—and that he was applauded for his stand by such men as William Dudley Pelley of the Silver Shirts and Colescott of the Ku Klux Klan.

Now, just what is political action?

To clarify the discussion this evening, it is necessary to break down the general phrase, "political action," and define it specifically in terms of its more vital aspects.

First, there is the political action involved in nominating candidates for office.

Second, there is the business of campaigning and electing chosen candidates to office.

Third, there is the continuous process of keeping public servants informed of the needs, desires, and interests of the people who put them in office.

Now, let us consider each of these in turn.

First, the nomination of candidates for office through direct primaries, by convention, by petition, or in any other way.

So far as the Federal law is concerned, there is nothing in the Hatch Act, the Corrupt Practices Act of 1925, or the Smith-Connally amendment to prevent a labor union or any other group from promoting the nomination of any candidate it sees fit, subject to a limitation on the size of contribution that can be made to any individual candidate, or party, or party committee.

Who are the people who urge that labor unions be singled out and prohibited from engaging in such political action?

You know them as well as I do—these so-called friends of the workingman, usually operating from Wall Street, whose hearts bleed for him every time he puts up a dollar to nominate some liberal candidate.

But their crocodile tears deceive no one and fail to cover up their antilabor antipathies and social prejudices. These are the men who mistake the clamor of a professional claque of labor-baiters for the thunder of genuine popular applause. These are the men—to think back only to last November—who are always so confident of victory at the polls until the ballots are actually in and counted. Set back on their heels, they start looking for a scapegoat to explain their own failures, the greatest of which is the plain fact that they have lost touch with the people. And most of these bitterly disappointed men usually hit upon the same scapegoat—the labor unions—and begin clamoring for a law to exclude them from politics.

Make no mistake about it—the purpose of their drive is to make it easier for them and their candidates to be nominated and elected by hamstringing democracy and paralyzing effective political action by a large part of the electorate.

Here again I can see no legitimate reason why labor unions should be deprived of any rights to political action which they enjoy under the present law. Let's take a look at the Hatch Act, which lays down certain rules and regulations governing elections to Federal office. The act forbids any individual or organization to contribute more than $5,000 to a political party in any calendar year, or to any committee or club supporting

that party or that candidate. This limitation does not apply, however, to contributions made to State or local political committees.

One other point about the present law should be noted. Under the Smith-Connally amendment to the Corrupt Practices Act it is illegal "for any national bank or any corporation organized by authority of any law of Congress, to make a contribution in connection with any election to any political office, or for any corporation whatever, or any labor organization, to make a contribution in connection with any election at which Presidential and Vice Presidential electors, or a Senator or Representative, are to be voted for."

On the face of it that seems fair enough. But let's see just how this works in practice. The big-money boys were quick to discover that it is quite easy to get around the limitations on individual contributions and easy enough, too, to achieve the ends formerly gained through corporate contributions.

If you have the wherewithal, it's really quite simple—you merely give $5,000 to any number of different political committees and clubs and organizations, all of them campaigning for your chosen candidate or party, or both. And if the family bank roll is big enough, you can have your wife and your children, and your sisters and young cousins and your aunts, do the same thing.

For example, take the contributions hopefully poured into the Dewey-Bricker campaign by the family of Joe Pew, "Lord of the Sun Oil Co." and Republican boss in Pennsylvania. According to the recently published report of the Campaign Expenditures Committee of the United States Senate, various Pews—nine in all—made 45 contributions to the Republican cause, for a total of $96,999.76.

Their generosity, I must say, was not confined to Pennsylvania. It seems they are interested in Connecticut—at least in election years—and decided the poor Republicans in the State needed a helping hand. Joe Pew gave $500 to the Republican State Central Committee, as did J. Howard Pew, Miss Mary Ethel Pew, and Mrs. Mabel Pew Myrin. They also took to heart the plight of poor Republicans in Florida, Maryland, Missouri, Wyoming, New Jersey, New York State, New York County, and Queens County. They also gave generously to the Republican National Committee, National Republican Senatorial Committee, and National Republican Congressional Committee.

Now don't misunderstand me, all of this was perfectly legal. No single contribution exceeded $5,000, and the money came from the Pews and not directly from the Sun Oil Co. and affiliated corporations. But we should keep in mind just how the present law works.

Nor were the Pews the only suckers for Republican propaganda. Six of the Mellons put up $59,000, while one of the du Ponts and his wife contributed almost $35,000 between them. Other members of the du Pont clan chipped in for a grand total of $109,832.83.

All of this, as I say, was perfectly legal, and I haven't heard any particular criticism of it in the press, on the radio, or in conservative circles generally.

But just let a group of trade-union members get together, as the Pews obviously did, and decide to make a modest contribution of a dollar apiece for the support of their candidates and there is an immediate howl from the fat cats. There is a great hue and cry that the foundations of democracy are crumbling—that the country is going to the dogs—that dictatorship, like Mr. Hoover's prosperity, is just around the corner.

Now, let's be quite frank and get this discussion down to brass tacks. The question before us tonight would not be under discussion, and it would certainly not be phrased as it is, if it had not been for the activities of the C. I. O. Political Action Committee during the last campaign. That's really what we are talking about tonight: Should there be a law to put the Political Action Committee out of business?

The answer will be "yes" on the part of those who look back with nostalgia to the good old days when money—and money alone—talked. They like to think of the time when only their voice was heard, and the workingman was humble and deferential and knew his place, leaving public affairs to those who could better afford the time and money for political action.

For myself—and I am sure I reflect the opinion of the great majority of Americans who believe in progress and the principles of fair play—I say "no." There is no necessity whatever for such a law. What's more, such discriminatory legislation would strike a deadly blow at democracy.

Because there has been so much misrepresentation about it, let me tell you briefly just how the C. I. O. Political Action Committee worked. All that I tell you comes from the official published reports of the House and Senate Campaign Expenditures Committees, which went into the subject very thoroughly and satisfied themselves that the Political Action Committee had stayed well within the existing laws. Just for this reason, it seems, there has arisen in certain quarters a demand that it be penalized under additional legislation aimed specifically at outlawing its activities. I wonder if there would be such a demand if the P. A. C. had been for Dewey instead of Roosevelt?

The Political Action Committee was established on July 7, 1943. Its purpose was to interest all workers, organized and unorganized, in taking an active part in the public life of the country at the hour of its greatest crisis. It aimed at promoting and consolidating national unity under a progressive program leading along the road to peace and plenty—a program that could be accepted by all who were devoted to winning the war as quickly as possible, securing a strong and lasting peace, and providing jobs for all in post-war America.

Some people—and I need hardly name them—tried to represent this as dangerous business, as if political action on the part of organized labor was an alien practice and inconsistent with the democratic process. The arguments of these people were rather strained, it must be said, and they simply didn't know their American history. Like farmers and businessmen and every other group, workers have long been participating through their organizations in the political life of the country. Some 75 years ago they began forming groups to procure better working conditions, better social conditions, safety and health measures for all the people, democratic rights for consumers, arbitration instead of strikes. They have necessarily had to interest themselves in political action to achieve legislation in regard to wages, hours, workmen's compensation, child labor, and related matters. They have necessarily had to interest themselves in political action in such broader social fields as education, public health, taxation, and general economic and business development.

Back in the campaigns of 1908, 1910, and 1912 labor was active as a group, and because they made themselves felt, the Clayton Act of 1914 provided that labor was not a commodity or an article of commerce, such as it was regarded during the slave owning days. It was the persistent activity of labor during the years which preceded the Roosevelt administration which brought forth the progressive measures which have benefitted not labor alone—but the rank and file of the Nation, and have strengthened the foundation of a really vital democracy. For during the years that labor was urging these measures, other progressive thinking people were urging them too. It was necessary only to have progressives in office to put these measures into effect. But the piecemeal legislation that had been enacted in the several States and in the Nation before 1933 had labor's urging—and hence labor's political action. Make no mistake about that. The impetus for legislation—good and bad—comes from without the legislative halls. Never forget that.

And let me say this in passing. The people who now oppose political action by labor are the very people who, just a few years ago, were violently opposed to collective bargaining. There is a basic pattern in all this anti-labor prejudice and agitation.

After the Political Action Committee's program and plans had been approved by a democratically elected convention of the C. I. O., the trade unions in the organization decided how much each should contribute to the work of the committee. All told, $631,214.11 was paid in from this source. The committee wisely decided to concentrate on the registration of voters—whether Republicans or Democrats. They were vitally concerned, about the decline of the total vote from 50,000,000 in 1940 to less than 30,000,000 in 1942, and were determined to do all they could to reverse the trend, which was certainly good Americanism, although there were a number of people interested for obvious reasons in a light vote. They were hoping to sneak into office by democratic default.

The Political Action Committee, as a national organization, endorsed the candidacy of only one man—President Franklin D. Roosevelt. It left the endorsement of senatorial and congressional candidates to the committees in the various States and districts. All it did, when asked, was to furnish the local people with a complete voting record and background of the candidates, and I can well understand why certain people were so upset by this. But remember that the P. A. C. supported and opposed both Democrats and Republicans.

Altogether in the preelection campaign the Political Action Committee spent about half of its funds, or $371,186.56. On July 23, 1944, just after the renomination of President Roosevelt and the naming of the Democratic ticket, the balance of the funds was frozen to obey not only the letter but the spirit of the law and hence that money was not used for the election campaign itself.

From this time forward and all through the election campaign the committee relied entirely upon voluntary contributions from individual members of the unions and anyone else interested in contributing a dollar or more. This dollar contribution did not come out of union dues. It was not an assessment in any form. Men and women were free to give or not, as they wished, a fact conclusively established in the hearings before the House and Senate Campaign Expenditures Committees.

A total of $380,306.45 was raised by individual voluntary contributions for national use and most of it was spent in urging citizens to register and vote—certainly not a dangerous or un-American practice. Yet there were cries in the press and elsewhere about a great "slush fund" being raised to subvert American democracy. As a fund, it was peanuts. Various Republican committees raised and spent almost $15,000,000. The Democrats raised and spent about half that amount. The total amount of money raised by the National Citizens Political Action Committee among the 14,000,000 organized workers and their friends was only slightly more than the contributions of just three families—the Mellons, the du Ponts, and the Pews.

Which, I ask you, is more in keeping with democracy?

Lastly, there is political action involved in pressing for legislation in all fields of particular interest and general welfare. The American Bankers Association has never shown any hesitancy in making its views known and taking political action in defense of its own

interests or what it deems to be desirable public policy. The United States Chamber of Commerce does likewise. So do the farmers, the merchants, and the manufacturers.

Our boys are fighting and dying overseas in defense of our free way of life, resolved to crush the antidemocratic forces in the world forever. Let us make sure that we do not give way to any antidemocratic forces here at home. It would be tragic if our boys came home to find that this was no longer a land of equal opportunity in all fields, that short-sighted men had chipped away part of the freeom for which they had gladly undertaken to sacrifice their very lives.

Electrified Vermont—90 Percent of Vermont Farms Can Be Electrified After the War; 68.8 Percent Already Are

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 5, 1945

Mr. PLUMLEY. Mr. Speaker, may I call attention to a newspaper article relating to the opportunity afforded which the farmers in Vermont may hope to enjoy and are enjoying so far as rural electrification is concerned.

Incidentally, we have sufficient sources of supply of electrical energy to meet all the demands which may be made in the future to make the program work. There is no necessity for imposing any tax on the people of Vermont in rural areas to meet the expense incident to the construction or erection of tremendous power plants to supply a demand which can and will be met by existing facilities.

The farmers should not be fooled into contributing to mortgage their farms, indirectly, to make a Roman holiday for anybody. "The voice is Jacob's voice, but the hands are the hands of Esau."

The extracts from the report which I am putting into the RECORD should satisfy every farmer in Vermont that his needs can and will be met without the imposition of any additional tax burden upon him in that regard.

That taxes will be higher, post-war, is probably true. Else how will we ever get out from under the load of debt we shall have incurred, part of which was to win the war and part of which was superinduced by the wasteful, wanton spending prior to the war in which the administration of those days so blindly indulged? We will have to tighten our belts to keep from starving and to hold up our pants so that the last nickel we have will not roll out of our pockets to meet make-work programs to help clean up a mess the like of which is not spoken of in recorded history.

We will have to deny ourselves many things. On the other hand, we will have many things which except for the war we would not have had, if we have the money to spend.

So, if Vermonters and the people generally can recover from the orgy of spending and keep at least one foot on the ground, there is a way out. It is going to be hard going, and we will not walk on two feet for a long, long while.

Thrift and common sense applied to national problems reduced to the States' capacities to take care of themselves, as indicated, will help.

The States have shown what they can do despite Federal interference. There is no telling what the States will and can do for themselves when, after the war, they are foot-loose and fully free from Federal domination.

The article from the Burlington (Vt.) Free Press of April 4, regarding rural electrification in Vermont, follows:

NINETY PERCENT OF VERMONT FARMS CAN BE ELECTRIFIED OR AT LEAST HAVE POWER AVAILABLE WITHIN SHORT TIME AFTER THE WAR ENDS—AN ELABORATE AND DETAILED REPORT ON RURAL ELECTRIFICATION IS LAID BEFORE THE LEGISLATURE AT MONTPELIER

MONTPELIER, April 2.—The graphic story of rural electrification in Vermont has been laid before legislators in individual town maps, which result from the first complete mapping survey of the State, and which supplement the public-service commission's biennial report.

The maps show who has electricity available and how electric lines may be extended house by house, illustrating the commission's belief that over 90 percent of Vermont farms can either be electrified or have power available within a short time after the war's end.

The survey discloses that 68.8 percent of Vermont farms are now served with electricity, according to Commission Chairman Fletcher Plumley.

Thousands of Vermont farms now unserved are within reach of electricity, the maps indicate. The survey has been the major activity of the commission during the past 2 years in order that the position of every farm in relation to electric power could be locally ascertained. The maps have already been used.

The biennial report contains data on electrification of each county and town, the number of farms electrified, and those to which power is available, as well as the miles of line necessary for extensions.

RANK BY COUNTIES

The comparative rank by counties shows Grand Isle County leading the rest, with 86.4 percent of its farms electrified or "available" in 1944. Franklin County was second, with a figure of 85.9 percent, and Orleans third, with 85.8 percent electrification or available. Essex County ranks last, with 56.9 percent. These figures are compared with the results of proposed extensions and with the county ranking in rural importance with respect to area suitable for cultivation.

The commission has reported rate reductions resulting in savings to customers for the biennium lacking 1 month totaled $50,740.

Rate reductions as a result of new retail schedules totaled $3,500 in 1943 (water and telephone utilities), while reductions for the past year totaled $47,240, and were filed by electric, telephone, and gas companies.

COMPARE ELECTRIC BILLS

The report contains table comparing electric bills for various monthly uses filed with the commission for all systems serving residential and farm customers within the State. The amounts have been tabulated according to size of bill on a 100-kilowatt-hour basis for residential and 1,000-kilowatt-hour basis for farm use.

On this basis Morrisville Village shows the lowest average residential bill as of October 1, 1944, a municipal system, while Shrewsbury Light and Power, a private system, has the highest residential rate. The lowest farm bill is the Morrisville municipal system, while the highest is Plymouth Electric, a private system. Both the Shrewsbury and Plymouth companies have since been acquired by the Central Vermont Public Service Corporation and Vermont Soapstone, a private system, now has the highest rate on the basis taken in both residential and farm bills.

PROPERTY, OPERATING FIGURES

Complete tabulations are given of property and operating figures reported by all electric utilities during the years 1942 and 1943. They are classified according to three groups, those with average electric operating revenue over $100,000, those between $25,000 and $100,000, and those with less than $25,000.

The greatest percent return for the three classifications, respectively, were reported by the Burlington Electric Light Department, 19.15 percent; the village of Ludlow, 31.07 percent; and the village of Johnson, 260.77 percent. Next to the village of Johnson in the unclassified category was Stowe Village, with 19.07 percent.

In connection with its report and distribution of town electrification maps, the public-service commission is holding a display in the statehouse reception room. The display shows the 14 county maps with the distribution of power lines by company in colors.

AREAS SERVED

Colored State maps indicate areas served with electricity, those which are unserved, and those to which, because of lack of habitation, no service is contemplated. There are also illustrated town maps indicating lines in relation to each farm similar to those given representatives.

The commission's expectation of 90 percent electrification is gained on the basis of 68.8 percent present electrification and 6.3 percent of the total number of farms located within a quarter-mile of existing lines. To this would be added 4,000 farms "as soon as the manpower and material restrictions imposed by the war are removed." The mapping survey was supervised by G. W. Clewley of the staff and the field work was done by Lee B. Bates, engineer on loan to the commission by the highway department.

The commission suggested that the public make greater use of its services for the direct solution of individual problems over which it is given jurisdiction. In this connection the statement is made by Commission Chairman Plumley:

"If you have problems involving the services over which the public-service commission has jurisdiction, bring them to us. If you have suggestions as to how we may render an enlarged service to the people of the State, please let us know what your suggestions are. If you have any questions concerning the public-service commission—its power, duties, or function—let us know what they are and we will try to be of assistance to you."

The report was delayed in publication to permit it to be made public with completion of the maps. It is signed by Plumley, E. B. Cornwall, and Charles C. Morse, commissioners for the past biennium.

Problems and Objectives of American Foreign Policy

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 5 (legislative day of Friday, March 16), 1945

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a very important and informative address delivered last evening by our able and distinguished Secretary of State, Mr. Stettinius, at Chicago, Ill., before the Council on Foreign Relations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I welcome this opportunity to come to the Middle West to talk over with you some of the problems and objectives of United States foreign policy.

My father was brought up in St. Louis and began his business career in Chicago. I was born in Chicago and began my own career in business in the automobile industry.

I feel that here I am among old friends and in familiar territory. And I know also what a tremendous contribution the Middle West is making in this war. From your homes, and from your factories and farms, has gone forth a vast outpuring of men and weapons and food to help win victory on battle fronts nearly halfway around the world from Chicago.

We are fighting this war in order that all Americans may gain the opportunity to live securely and in peace. I say "opportunity," for victory in itself, as we all know but sometimes forget, will not be enough. Victory is the essential condition of our success but not the assurance of it.

The foreign policy of the United States is directed toward providing that assurance, in combination with domestic policy. Our objective in all our relations with other nations is to prevent aggression abroad from again disturbing the peace of the United States and to develop those conditions of international life that will make it possible to maintain high levels of productive employment and farm income and steadily rising standards of living for all the American people.

This is a tremendous undertaking. We face difficulties and dangers whose magnitude it is hardly possible to overestimate. Idealism and good intentions will not be sufficient. Our only chance of success is to face squarely the realities and to pursue a course of action firmly based upon these realities. Without bold, realistic, and effective action it will not be possible to prevent this war from being followed by economic collapse and economic anarchy far more disastrous than the depression of 1929; nor will it be possible to prevent another war from bringing bitter sorrow and suffering to every American home.

Of one reality I believe the great majority of the people of the United States are now wholly convinced, and I do not believe the people of the Middle West are any different in this matter from people in other parts of the country. After two world wars and a terrible world-wide depression, all within the space of 25 years, we are convinced that political isolationism and economic nationalism are utterly unrealistic and can only lead on to complete disaster for our country and for the world.

So our foreign policy is based upon the hard facts that if we are to prevent the disaster of another war for the United States we must find the means to act effectively with other nations to prevent aggression anywhere in the world; that we cannot have prosperity in the United States, if the rest of the world is sunk in depression and poverty.

In other words, since we live in a world where every nation has become virtually our next-door neighbor, we cannot achieve our objectives alone, but only in the close cooperation that neighbors in any American town are accustomed to practice in settling affairs that mutually concern them.

Upon these facts the United States Government has based its foreign policy program to help achieve security and prosperity for the United States after the war is won.

The United Nations Conference at San Francisco later this month will mark a critical turning point in the history of the United States and of the world. For at San Francisco it is the purpose of the United Nations to write the charter of a world organization which will become strong enough to maintain peace for generations to come.

I know that many of you would like to hear from me tonight a discussion of temporary difficulties of a political nature that have recently arisen in connection with the San Francisco Conference. I regret that I shall not be able to do so, because the United States Government is at this moment engaged in very active efforts to resolve these difficulties and there is little that I can add tonight to the statement which I made yesterday in reference to some of them.

I do, however, want to say this much. I have full confidence that we shall be able to resolve these difficulties—and others of this nature that will inevitably arise as we approach the end of the war.

We are going right ahead with our plans for the San Francisco Conference and we are resolved to make it the success that it must be. I ask you to remember: first, that the United Nations have repeatedly overcome other difficulties and dangers far more serious in the past 3 years; second, that the vital national interests of the United States and of each of our allies are bound up in maintaining and cementing in the peace our wartime partnership; third, that the extent of our agreement is far wider and more fundamental than the extent of our differences. If we keep these facts constantly in mind, we shall be able to keep our sense of proportion.

Tonight I want to speak to you about other issues that are of fundamental and long-range importance to the future well-being of the United States and to the success of the world organization. They are issues that call for the utmost that we as a people can give to their successful resolution.

Most of the public discussion of the Dumbarton Oaks proposals upon which the charter of the world organization will be based has centered upon the security aspects of the organization—upon its power to prevent or to suppress aggression through the security council.

That is a vital part of the plan, but I wish to remind you that it is, in fact, only half of the task that the world organization must accomplish if it is to be successful. At the conclusion of the Crimea conference President Roosevelt, Marshal Stalin and Prime Minister Churchill declared that the earliest possible establishment of the world organization was, and I quote, "essential both to prevent aggression and to remove the political, economic, and social causes of war through the close and continuing collaboration of all peace-loving peoples."

It is the second part of that statement to which I refer and about which I wish to speak to you particularly tonight—the removal of the political, economic, and social causes of war. That is the responsibility which will fall principally upon the assembly and the economic and social council of the organization, rather than upon the security council. That is the task to which the energies of the United States and the other members of the world organization must be principally directed now and in the years following the war.

This is so, because no machinery for combined action to prevent or suppress aggression will work for any length of time in a world in which the causes of war, particularly the economic causes, are permitted to poison relations between countries.

Economic warfare, depressions, hunger, poverty, and despair—these are the conditions that undermine democracy and block its development, that breed tyrants and aggressors and that turn nations one against the other. These are conditions that we must fight to master if any international organization is to succeed in preserving peace.

That is another of the realities upon which our foreign policy is based.

As I have said, we face a task of extreme difficulty.

The battles of this war have left in their wake destruction of factories and homes and transport that is unparalleled in history. This damage has to be repaired.

The demands of war production have distorted the economies and the economic relationships of all nations as never before and have made necessary restrictive Government controls of all sorts on normal business and agriculture. The transition from war to peace economy will challenge our patience and ingenuity to the utmost.

We and our fighting allies alike have enormously increased our national debts and our allies have, in many cases, incurred heavy new international debts as well.

Add to all this the fact that when this war began we had an inheritance of years of economic warfare among nations and that we have this earlier damage, as well as the damage caused by the war, to repair. This earlier economic warfare took many forms—restrictive Government monopolies and private cartels, artificial restrictions on exchange, currency manipulation, high tariffs, quotas, and other artificial barriers to profitable foreign trade and investment.

Finally, we have to face the fact that never before in our history, even in the periods of our greatest prosperity, have we attained a volume of production, trade and employment and a national income that came even close to what we have achieved in response to the demands of this war.

In order to achieve high levels of employment after this war—and to make sure that the men who return from the battle fronts will have secure jobs and good wages—it is estimated that we shall have to reach and maintain a national income in the neighborhood of $150,000,000,000, compared to the highest figure we ever reached before the war—less than eighty-five billions in 1929. This, we hope, will provide close to 60,000,000 jobs, year in and year out, compared to the previous peacetime peak of 47,000,000 in 1929.

Our problem thus adds up to this:

We know that we have the physical ability to reach the higher level of production that we must have, because we have done it in this war. We have added enormously to our productive capacity and unlike many of our allies, our factories and farms have escaped entirely the destruction of war. But in peacetime we cannot reach this high level of production unless we can find markets abroad as well as at home for our investment and our goods and services.

We know also that much of the world will emerge from this war in desperate need of supplies and equipment from us to get their own economies going again, but that they will often not have the money to pay for what they need until they have succeeded in restoring their own productive economic life.

We know also that short-sighted economic nationalism, either on their part or on ours, would prevent any real recovery and would therefore destroy the markets we need and lead to unemployment and depression in our own country.

What we have to do is to match our need for full production with the world's need for our products in such a way as to reach and maintain over the years a permanently higher level of international trade—and to maintain it on a sound and profitable basis.

I have already stressed the difficulty of doing this. But I have seen too much of the achievements of American industry, both its management and its workers, and I have too much faith in American enterprise and initiative to think that it is impossible. On the contrary, I believe we as a Nation have before us the greatest opportunity in our history to achieve in this generation the sub-

stantial fulfillment of the purposes of the American way of life.

Once in a while one of my business friends speaks to me of Government planning as if it were either ridiculous or dangerous. I reply that when I was in business, planning was fundamental to successful management and I don't suppose things have changed since. It seems to me that to assemble all the pertinent facts, analyze them, and then plan ahead on the basis of these facts is merely the most elementary common sense. If those of us who are in positions of responsibility did not plan ahead, we would be guilty of criminal negligence.

The United States Government has a well-rounded and carefully prepared program to achieve the results we seek in our foreign economic relations. We have been working actively on this program right through the war, and developing it step by step in consultation with our allies and with the Congress and people of the United States and preparing to put it into effect. The Atlantic Charter; the United Nations Declaration; the meetings at Moscow and Teheran, at Dumbarton Oaks, and in the Crimea; the establishment of U. N. R. R. A.; the conferences on food and agriculture at Hot Springs, on the International Bank and the Monetary Fund at Bretton Woods, and on international aviation here in Chicago; and the Inter-American Conference at Mexico City—these have all been steps in the development of this program.

It is a program that is aimed at expansion, not restriction. It is rooted in the American traditions of freedom and enterprise.

You already know a good deal about this program, but you may not all have seen how each part was related to the other and to the whole, nor how closely linked this program is to steady jobs and better pay and higher farm income in this country and to the assurance that your sons and mine will not have to fight another and greater war 25 years from now.

We begin with U. N. R. R. A., which is an emergency and temporary agency created to assist in meeting the urgent needs of relief in liberated countries. It is already functioning.

The U. N. R. R. A. program is a modest one. Probably four-fifths of the relief job will be done by the liberated countries themselves.

The purpose of U. N. R. R. A. is to help the liberated peoples get enough food to eat, clothes to wear, and a roof over their heads—relief which will make it possible for them to start earning a living again. It will not, however, meet the enormous problems of reconstruction—the rebuilding of destroyed or damaged factories and homes, the provision of raw materials and industrial machinery, and the supplies required for the restoration of agricultural production.

I should like at this point to state again what the President and other officials of the Government have often stated before.

It has never been intended to use lend-lease for post-war reconstruction or for any other purposes except those concerned with fighting and winning the war, and these are the only purposes for which lend-lease has been used. Lend-lease is solely a war measure.

I make this statement because of the repeated distortions and misstatements that continue to be made on this subject. The core of our whole post-war foreign economic program is the expansion of private trade and the encouragement of private enterprise, with such assistance as is required from the Government to maintain high levels of production and employment.

We are resolved that the terms of the lend-lease settlement shall not be such as to endanger this program by placing unnecessary and restrictive burdens upon our commerce with other countries. We do not want war debts to smother trade this time, as they did after the last war, and to poison relations between countries.

On the contrary, article VII of the lend-lease agreements with our principal allies in this war provides that the terms of the settlement shall be such as to expand production, employment, the exchange and consumption of goods, to eliminate all forms of discriminatory treatment in international commerce, and to reduce tariffs and other trade barriers.

To meet the urgent needs of reconstruction, many of the countries which have suffered from the war will be able to buy a part of what they need out of their current resources. But the dollars and the gold that they now have or can acquire through their exports in the immediate future will be wholly inadequate to the dimensions of the task.

It is clearly evident that international credits in large volume and at reasonable rates of interest will be necessary to tide them over the next few years. It is also clearly evident that private investment cannot do a job of this magnitude unaided by the Government, especially in the unsettled conditions that will follow the war.

To help meet this and related needs—the plan for an International Bank for Reconstruction and Development and an International Monetary Fund was agreed to by the United Nations delegates at the Bretton Woods Conference and is now before Congress for approval.

The principal purpose of the bank is to guarantee loans made by private investors for sound foreign projects of reconstruction and development and thus to extend the scope of private international investment.

Without the bank, I do not believe it will be possible to bring about the economic recovery of some of our best potential customers abroad and the development of the resources of other countries which can also buy products from us in large quantities if they have the money. China and many of the American republics are outstanding examples of countries in this latter category.

This is an important point which is often overlooked or misunderstood. Sound industrial and agricultural development abroad does not take customers away from us. On the contrary, past experience has proved time and again that the countries which buy the most from us are those whose economies are the most highly developed. Great Britain, for example, was our best pre-war customer. Canada, with a population of less than 12,000,000, bought more from us before the war than all of South America with a population of almost 90,000,000.

Economically undeveloped countries are not good customers because they do not have enough income to pay for purchases from us. Therefore the influence of the bank in advancing industrial and agricultural development in such countries will be of direct advantage to our export trade. The more wealth they produce and the higher their national income, the more they will wish to buy from us and be able to pay for.

The essence of the plan for the International Monetary Fund, which your fellow townsman, Mr. Edward Brown, had a part in drafting, is an agreement on rules governing foreign exchange which will provide some assurance in international traders and investors of the value of the money they are dealing with and to exporters that they will get paid for their exports in their own money and not in some blocked foreign currency they cannot use.

The proposed fund will not provide loans for reconstruction. But the substantial stabilization of the world's currencies which it will make possible when it goes into effect will be essential to sustaining a high volume of international investment and trade.

As a supplement to the International Bank and to private capital in the tremendous task of restoring peacetime production and trade in a world exhausted and bled white by war, we plan also to ask Congress in the near future to expand the lending authority of the Export-Import Bank. This Government institution has a 10-year record of profitable operations. It operates principally through private banks, manufacturers, and exporters. Its capital is already largely utilized. It will have to have substantially increased capital to help meet the urgent needs for economic reconstruction and for rebuilding trade. And obviously, if lending by private investors or the Export-Import Bank, or by private investors with the guaranty of the International Bank, is actually to take place, Congress must remove the restrictions of the Johnson Act and similar legislation.

Thus we have U. N. R. R. A. and other emergency relief measures, which prepare the way for the tremendous tasks of reconstruction.

We have the International Bank and other financial measures to make possible the financing of this economic reconstruction and of further economic development in the immediate post-war years. And we have the Monetary Fund providing for stabilization of currencies on a basis of gold and for ending economic warfare in the form of currency manipulation and exchange restrictions.

These are the foundations for building up the extensive and profitable international trade which is essential to high levels of production and employment in the United States.

Last year our wartime exports were valued at more than $14,000,000,000. Our greatest previous volume of peacetime exports was scarcely more than one-third of that figure. I do not suggest that it will be possible, or that it will be necessarily desirable, to export $14,000,000,000 worth of products a year in peacetime. But specialists in this field do estimate that it will be necessary to approach the figure of $10,000,000,000 a year if we are to maintain our production and employment at the levels we seek.

Only the most vigorous measures to remove artificial barriers to trade will make it possible for us to reach this goal after the war. We have, first of all, to remove wartime restrictions as rapidly as the paramount requirements of defeating Japan, as well as Germany, will permit.

We have also to work toward a general lowering of the tariff barriers which prevailed before the war.

I hear it often said that high tariffs protect the American living standard. If there are any tariffs that really do that, I favor maintaining them. I also believe in looking at the record in these matters. What does the record show?

It shows that, actually, high tariffs today act as a depressing influence upon the living standard of the American people. The record shows that on the average the wages paid by the highly protected industries are lower than the wages paid by those industries which have little tariff protection or none at all. Our most efficient industries pay the highest wages and need no tariff protection.

The record also shows that consumers—and every American is a consumer—have to pay more for products manufactured by highly protected industries than they would if more of these products were imported. This means they have that much less money to spend for other products they would like to buy.

In thinking of tariffs, we have also to bear this in mind: Our exports are the imports of other countries just as our imports are their exports. If we impose unfair tariff barriers that prevent Americans from buying from other countries products they would like to buy if they could, then we invite retaliation by these countries against our exports of products that we would like to sell to them.

It was this sort of competition in tariffs that strangled trade, restricted production, and stimulated economic warfare before the war. We cannot afford to let it happen again.

We do not need to fear imports. On the contrary we need imports of many commodities in order to live, because we do not produce them ourselves. We need more imports to replace some of our own raw material resources that we have consumed in such tremendous quantities in fighting this war. More imports mean not only more goods for American consumers, but more jobs and income for Americans engaged in the processing and distribution of imports. Finally, without more imports other countries will not be able to pay us for the increased exports that we seek.

For every reason of our own national interest, it is my firm conviction that tariffs must be further lowered in the next few years, both by other countries and by ourselves.

In the last 5 years before the war we sought through the reciprocal trade agreements program initiated by my great predecessor Cordell Hull to repair some of the damage done to our economy by the Hawley-Smoot tariff bill. We made considerable progress in spite of the economic warfare which Germany and Japan were then pursuing and the generally unfavorable conditions which prevailed. Recognizing its efficacy, Congress has three times renewed the Trade Agreements Act since it was first passed.

Now it is necessary to move further. The act is again before Congress for extension. As it stands it authorizes reductions in our tariffs up to 50 percent of the excessively high rates in effect in 1934. A good part of this authorization has been used up in the negotiation of the 28 trade agreements now in effect.

We need more bargaining power in persuading other countries to reduce their tariffs against our exports. We have therefore asked Congress to authorize an amendment which will apply the 50 percent limit to the tariff rates as they stood in 1945 instead of the higher rates of 1934. This will give us a new quid pro quo in negotiating new agreements with other countries.

In addition to restrictive tariffs, there are other obstacles to wider trade and an expanding economy for the United States and the rest of the world. Preferences and quotas, for example, are artificial restrictions on trade between nations and export subsidies encourage uneconomic production, upset the world market and invite retaliation. In agreement with other countries we must seek the means by which we can substitute for these practices other measures better calculated to maintain a healthy and expanding international trade.

We must also deal vigorously and effectively with international cartels. These restrictive and monopolistic agreements among private business interests fix prices, limit production, prevent the use of new inventions and productive techniques, arbitrarily divide markets and have in general a dangerous and throttling effect upon international trade. The evil effects of international cartels can be prevented only by supplementing national by international action against them and by taking the other measures which I have outlined to ensure that all nations will be able to live better without such practices than with them.

Some of our most serious economic problems arise out of chronic world-wide surpluses of such commodities as wheat and cotton. You in Chicago remember what happened to wheat farmers in this country after the last war when the bottom dropped out of the market for wheat and tens of thousands of farmers lost their homes and their livelihood. We do not want to see a repetition of that.

It is important that governments act together to deal with the problem of such surpluses primarily by cooperative measures to expand consumption, such as I have outlined tonight. In the exceptional cases where commodity agreements are necessary, they should be directed toward shifting excess productive resources into more profitable lines, and both consuming and producing countries should be fully represented. Otherwise individual governments will continue trying to deal with them by such deceptively easy routes as artificially supported prices and competing export subsidies. As we have learned from bitter experience, these can only lead to economic warfare and in the end make the problem worse instead of better for all concerned.

These problems and others like them can be faced and handled in time only by calling a conference of the principal trading nations of the world. We shall do all in our power to have such a conference convened within the next year. This conference would also prepare the way for establishment of a permanent trade organization within the framework of the world organization, to deal with these problems on a continuing basis.

In the field of food and agriculture, we are further advanced. The President last week asked Congress to approve United States participation in the United Nations Food and Agriculture Organization. This Organization results from the conference at Hot Springs in 1942. Eighteen nations have already ratified the agreement for membership. We should do so, too.

The food and agriculture organization will have powers of recommendation only, not of control or command, but I believe with the President that its work can do much to raise the standards of nutrition of all peoples and to establish and maintain expanding prosperity for agriculture in our country and in all countries.

The food organization, like the other postwar international agencies to which I have referred this evening, would all eventually come within the framework of the world organization when it is established.

I think you will agree that the program upon which we have begun is of great scope. It must be so if we are to deal successfully with problems and difficulties of equal magnitude.

The close cooperation of the United Nations in a program for economic reconstruction and expansion such as I have outlined to you tonight is fundamental to the success of the world organization. Without it the world will be able neither to recover from the effects of this war nor to prevent the next war.

There are many pitfalls ahead of us. So closely is each part of the program interlocked with the other parts that if we fail to carry through on any important sector of this peace front, the whole program and our over-all objectives will be placed in gravest jeopardy.

If we fail, we are not likely to get another chance to fulfill the purposes for which we have fought—the assurance of a secure peace and a decent life for all Americans.

The task will require the utmost of us as a people in clear thinking, in understanding of where our real interests lie, and in the ability to act courageously and wisely—and in time.

I return to the point at which I began. The preservation of peace requires something more than a desire for peace, no matter how strong that desire may be. It requires, in a world as complicated and as closely interknit as this modern world of ours, a great design. It requires, in other words, the same courage, the same boldness and realism in the field of international affairs which the citizens of this Republic, and of this great central valley, have so often demonstrated in the past.

If we Americans are proud of one thing more than of any other, we are proud of the fact that our forefathers were willing to face tremendous and complicated problems and to bring to them new and daring solutions. And there are no Americans who take more pride in that tradition than the Americans of these great Central States.

Believing in America as I do, I am confident that we will meet this greatest crisis of our modern history as we have met all the crises of our history before. I believe that we will act with understanding of where our real interests lie—wisely and courageously and in time—and that we will force the difficult circumstances of our time to yield up to us the sure and enduring peace which we are determined to leave to those who will follow us in this country we love so well.

Global Phonetic Alphabet

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 5 (legislative day of Friday, March 16), 1945

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a letter dated March 29, 1945, from former Senator Robert L. Owen to Miss Alice Paul, national chairman, National Women's Party, on the subject of a global phonetic alphabet.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WORLD LANGUAGE FOUNDATION,
Washington, D. C., March 29, 1945.

Miss ALICE PAUL,
National Chairman, National Woman's Party, Washington, D. C.

DEAR MISS PAUL: Please accept my thanks for your invitation to speak at the April meeting of the National Woman's Party.

I am passionately interested in the mothers of the world for whose rights you fight. I am deeply interested in the children of the world as well as in the mothers to whom they must look for guidance. The education and emancipation of the women of the world are vitally necessary for the establishment of the great new era we hope to see in the near future. I shall be glad to present to you a plan of effective world-wide communication which will promote the objects to which you are devoting yourself.

As your meeting precedes the meeting of the United Nations representatives at San Francisco, I shall call your attention to the importance of the World Language Foundation as a means of establishing English as the language of the world.

The records of the French Academy disclosed 2,796 known languages and dialects for 2,200,000,000 people. Few people know more than 2 or 3 of such languages and there is urgently needed 1 language through which the people of all languages and dialects can converse with each other. Many efforts have been made trying to accomplish this through Esperanto, Volapuk, Romano, Interlingua, and last but not least, Basic English. These artificial languages have failed in their benovelent purpose because, except Basic English, they were without any world-wide backing and involved serious difficulty because unphonetically spelled with one common alphabet.

Basic English failed to realize the supreme difficulty of foreigners spelling English words, but it had merit in selecting some 850 words of common use with which, by the use of adjectives and adverbs, great flexibility was obtained. The great difficulty of spelling such words remained.

The Ministers of Education of the European nations represented at London on July 26, 1943, passed resolutions urging one language be made a world language as a means of enabling all nations of all languages and dialects to converse with each other, and to have books which could be read by all people in the world.

The enormous advantage of one world language as a means of bringing together the mutual understanding and good will and cooperative production and commerce is perfectly obvious to all statesmen. The idea has been approved by President Roosevelt, by Mrs. Roosevelt, by Winston Churchill, Joseph Stalin, and Chiang Kai-shek.

The World Language Foundation, organized by my friends, has available a mechanism for the first time in human history by which every language in the world can be written, and stenographically written, printed by modern machinery, and pronounced at sight through the global alphabet.

My office is sending you Senate Documents 133 and 250, of the Seventy-eighth Congress, and other literature showing you how completely and perfectly this can be done. The records show that the use of the phonetic alphabet in a less desirable form has enabled Russia to increase its production over 400 percent and abolish illiteracy in the entire territory occupied by the Soviet Republics—about one-sixth of the habitable surface of the earth.

The Russian alphabet can be learned in 1 day. All phonetic alphabets can be learned within a day or two. There are 350 phonetic alphabets which have come into existence during the last 30 years.

They are in conflict with each other. They use the same identical forms of letters in very many cases with different meanings attached to the forms. The forms are usually based on the Roman letters, Greek letters, or Arabic.

The global phonetic alphabet consists of letters entirely new in form, but of the simplest form humanly possible. Each letter represents one sound only and is immutable. No global letter is ever silent. The letters can be stenographically written.

Every language in the world can be written, printed, and pronounced at sight with the global alphabet.

We advocate the English language for the world language and we agree with the advocates of basic English that it requires only a small number comparatively of words to enable an intelligent conversation to be carried on in any language.

The basic English advocates 846 selected words. Professor Pei and his associates thought 1,200 selected words would be better. The World Language Foundation employs about 1,500 words. One thousand five hundred words, when combined into sentences, can present millions of thoughts of all shades of meaning and are abundant to enable people to converse freely on social, commercial, and political subjects. The English language represents the highest culture and the accumulation of unlimited knowledge in its libraries, laboratories, and museums. It is excellently adapted to be employed as a world language because of the simplicity of its declensions, conjugation, and syntax.

There has been one very great obstacle to the learning of the English language by foreigners. That obstacle is the unphonetic, antiphonetic, archaic, inherited spelling which President Roosevelt in 1906 called foolish and fantastic. English spelling, although unphonetic and antiphonetic, was inherited from our ancestors and has served magnificently in the glorious past. The weak spot in English spelling, however, can be easily healed with the global alphabet.

In current English, probably between 30 and 40 percent of English words contain 1, 2, 3, or more silent letters. They contain antiphonetic letters pronounced differently from what the spelling would indicate, as in the word "cough." The "gh" is pronouced like "f." Very many such cases occur, and the letters of the alphabet, instead of being confined to one sound and one sound only, have multiple sounds.

I received only yesterday from the Simplified Spelling Society of England a commentary on this subject, in which the circular said:

"The letter a in bat, bath, ball, wash, about, any, and navy has 7 sounds. Similarly the letter e has 5 sounds, i has 3, o has 6, and u has 5. * * * In addition the digraph oo has 5 sounds, ou has 7, ea has 5, and ei 5. * * * The sound a in eh, aid, lady, may, they, weigh, great, grate, gaol, and gauge is spelled in 10 ways. Similarly the sound e is spelled in 10 ways, i in 11, o in 11, and u in 11. This muddle in spelling and pronunciation is the despair of foreigners and the confusion of our children."

All of these difficulties immediately vanish by the use of the global alphabet, where one sound is always represented by one letter or one digraph.

The vocal chords of all human beings have the same structure as much as the human eyes and the human ears and human arms and legs. Therefore, it is natural that the primary sounds of which words are composed should be substantially the same.

No language in the world needs more letters than those presented by the global alphabet. Moses wrote Genesis with 23 letters.

In phonetic writing, all that is needed is that the symbols employed in connection with the sentence and subject matter should bring to mind the meaning and sounds of the words.

The micrometric labors of the professional phonetic experts of the International Phonetic Association have failed to realize this important matter and as a consequence have developed so large a number of symbols as to deprive the masses of the people of the benefits which easily come from symbols restricted to the actual necessity.

You will find from the record sent you that the greatest linguists in the world have given a cordial endorsement to the global alphabet.

Under the guidance of the World Language Foundation, textbooks are now ready for the compositor, teaching English, Spanish, Portuguese, and German. There will soon be ready a trilingual book teaching Russian, English, and Chinese to write, print, read and correctly pronounce the language of each other. These books at present are contemplated being put in the pocket-book form, which would make a volume of about 270 pages. The volumes will include a glossary of 1,500 words arranged in topics. The languages will be taught by suitable phrases, not discussing syntax but teaching the language as children learn it in the family by talking and correctly pronouncing words and phrases.

In addition to these books, it is proposed to have a special book of instruction in English teaching English children to write in global letters phonetic English, and also to write English stenographically using the global letters as a base and the usual abbreviations needed in shorthand systems.

This shorthand will not be competitive with professional shorthand, but will be found useful for letter writing with those who are familiar with the alphabet.

Our great objective is to make war on ignorance and poverty; to open to human beings everywhere in the world through books printed in global English and in global for all languages the accumulated knowledge of mankind.

Through such means the world will discover that other people consist of fathers and mothers, brothers and sisters; that they have the same affections and emotions. They will discover the truth of our adage:

"All men are kin and should be kind,
Let each teach each, and friendship find."

Thanking you for your interest in the matter and hoping to be with you at your meeting in April, I remain,

Most respectfully yours,

ROBERT L. OWEN.

Voting in the Proposed World Organization

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, April 5 (legislative day of Friday, March 16), 1945

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Disturbing," published in the Concord Daily Monitor, of Concord, N. H., on April 2, 1945. It is an extremely interesting editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DISTURBING

The belated revelation that Russia at the Yalta Conference asked for three votes in the proposed world organization and that the President countered by saying that then the United States would wish three votes has added another tough issue to those which must be considered and settled at San Francisco. The revelation also has produced a feeling of uneasiness, because it is not known what else may have been discussed at Yalta about which the nations of the world have been kept in ignorance.

The smaller nations which will be represented at the San Francisco Conference are protesting the Russian demand. The result has been the organization of considerable opposition to the Soviet request, with the American delegation left in the position of having accepted appointments to represent this country without having been told about the voting issue. The American delegates will probably feel that under these circumstances they are not bound to go along with whatever it may have been the President agreed to at Yalta in respect to votes for Russia and so this country is likely to line up at the Conference with the smaller states.

The voting system worked out tentatively at Dumbarton Oaks would give five big powers special privileges in the organization proposed. Under a compromise to which the President agreed, also belatedly revealed after Yalta, each of the big powers could veto United Nations action taken against it. Russia would be one of the big powers and was the nation which urged the veto power, apparently successfully. With this power the reasons for wanting three votes is not evident, if Russia at the same time wishes to cooperate in creating a world organization which will have a chance of being effectual.

The whole process of international dealing with the Russians has been very much the proposition of yielding to things Russia wants. Stalin has stayed home and Roosevelt and Churchill have had to do the traveling. Russia has had its way with Poland, and though nothing has been said by the

Big Three, probably expects to absorb Estonia, Latvia, and Lithuania. Russia has pretty much excluded Britain and the United States from the Balkan States, and has made unilateral treaties with Finland, Rumania, Hungary, Bulgaria, and Czechoslovakia, as well as with France.

The Russian attitude seems to be that whatever is done, Russia's own desires must first be attended to; either that or Russia feels that she has had her demands so often satisfied that she may as well keep right on demanding. The American concern is of a different sort. We want a workable world organization through which the nations of the earth can cooperate toward the perpetuation of peace and prosperity. To that end we expect other nations to be impartially treated in setting up the world organization and to be able to obtain justice in its deliberations.

The satisfaction of these desires, not only on our part, but on the part of most of the smaller nations and some of the large nations, we still hope to obtain at San Francisco. To obtain them, however, the nations other than Russia must secure from Russia a greater degree of cooperation than is yet observable, for there will be demands by the nations to which Russia must yield if the sense of justice of the other nations is to be satisfied.

Possibly the whole conflict simmers down to the varying concepts of international morality entertained by the nations. These concepts have their foundation in the political philosophies by which the various peoples are governed and in their attitudes toward such things as the place of religion in this life. That the Russians think differently than the Anglo-Americans has long been obvious. Yet in a bona fide world organization there must be a point of view common to all the nations, if the organization is to work.

The meeting at San Francisco is portentous. It will not be simply another preliminary debate as to possible ways and means but an attempt to actually bring into being the framework of a world organization, and some of the delegations can commit their nations to whatever is devised on the spot, though in this country we must delay final approval until the United States Senate acts on whatever is proposed. The United States delegation should know what it wants when it goes to San Francisco, and it should stick to what it wants to the best of its ability.

Necessity for Retaining Key Bases in Pacific

EXTENSION OF REMARKS

OF

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 5, 1945

Mr. MAHON. Mr. Speaker, I secured unanimous consent in the House this afternoon to place in the Appendix of the RECORD a copy of a communication which I addressed today to the President and to the Secretaries of State, War, and Navy. My letter makes reference to the warning which Fleet Admiral Ernest J. King made in a speech in New York last night regarding the retention of key bases in the Pacific and contains the following paragraphs:

As a Member of Congress, and as an American citizen, I respectfully urge that our Government make no commitments which would preclude our retaining after the end of this war the necessary bases which have been bought by American blood and money—bases like Iwo Jima. I certainly feel that the American people want the American flag never to be hauled down from essential bases now being won.

This is certainly my view, and I hope it is the official view of the Government.

I now quote excerpts from the address made by Fleet Admiral Ernest J. King in a speech last night in New York City before the Academy of Political Science.

But more than an adequate merchant marine, we must have bases. Of all the elements of sea power, the United States Navy suffered most at the war's outbreak from the lack of overseas bases. We lacked operating bases in the Alaskan area; had none in the Far East, except for isolated and inadequate Cavite; none in the central Pacific, except Pearl Harbor, and only those recently acquired in the north and central Atlantic outside of Cuba and continental United States. The bases we did possess were not equipped with the requisite guns and planes and men to stem the enemy's initial onslaughts.

I make this point because it is well to remember that the mere ownership of outlying bases means little, if these bases are not maintained and implemented by an appropriate fleet ready for action.

Up to the present, the Pacific war has been largely a battle for bases. Our primary efforts so far have been directed toward wresting from the enemy advance territory from which our naval and military forces can rain body blows upon the inner Japanese Empire. At the war's termination we shall have bases serving our task forces in most areas of operations.

These atolls, these island harbors, will have been paid for by the sacrifice of American blood. They will have been scooped out of sand and rock, coral and volcanic ash, by a generation of Americans giving their service, their ingenuity, and their money.

Failure to maintain these bases essential for our defense raises the fundamental questions: How long can the United States afford to continue a cycle of fighting and building and winning and giving away—only to fight and build and win and give again? Rich as we are, we do not have the human or physical resources to dissipate our patrimony, generation after generation, in this manner.

* * * * *

Possessed as we are for the moment with naval greatness, it is difficult to believe that we will permit this power to be squandered or bartered away thoughtlessly. We will never do this, I am sure, if we understand what it might mean in terms of America's future in the world of tomorrow.

America cannot afford to disregard these words from Fleet Admiral Ernest J. King.

Maintenance of Coal Production

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 5, 1945

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

UNITED STATES DEPARTMENT OF THE INTERIOR, SOLID FUELS ADMINISTRATION FOR WAR,
Washington, D. C. April 2, 1945.

Hon. BEN F. JENSEN,
House of Representatives.

MY DEAR MR. JENSEN: At the hearing before the House Subcommittee on the Interior Department Appropriation Bill, I promised you we would issue a statement concerning the necessity for maintaining coal production.

I am attaching a copy of the statement issued by Secretary Ickes and also a copy of his statement requesting the parties to the joint wage conference to maintain production. Both were made available to the press.

Sincerely yours,

C. J. POTTER,
Deputy Solid Fuels Administrator for War.

Following his appeal yesterday to the National Bituminous Joint Wage Conference for uninterrupted coal production, Solid Fuels Administrator Harold L. Ickes announced today that a new survey shows that if war activities continue at their present rate industry faces a heavy cut in coal supplies even though full-mine operations are maintained.

The survey, made by the Solid Fuels Administration for War, indicates that the 20-percent reduction in deliveries to householders and other domestic users next winter will still leave a 10,000,000-ton gap in supplies which cannot be met under present conditions, he said.

Despite the liberalization of draft deferment policy for war-essential coal miners, the lack of mine manpower is expected to restrict bituminous coal production to approximately 575,000,000 tons during the ensuing fuel year. This estimated output is based on full running time by the mines.

A revision of estimates indicates that the Nation will require 615,000,000 tons of bituminous coals during that period.

"These figures indicate an over-all deficit of 40,000,000 tons of soft coal for the new fuel year even if there are no interruptions of production," Administrator Ickes said.

"The 20-percent reduction in deliveries of solid fuels for heating homes, offices, and other buildings is expected to save around 15,000,000 tons of precious fuel. We can look to our diminishing soft-coal stock piles held by industrial consumers for another 15,000,000 tons without disrupting vital industrial operations.

"This points to a gap of 10,000,000 tons in bituminous coals which we lack the means of closing. Any disruption in mine operations or in transportation affecting mine operations will increase the size of this gap. Since the deficit applies mainly to eastern soft coals, including the special-purpose fuel for making steel and other vital war goods, it presents a formidable problem in keeping war activities going ahead at the present rate. Even on the basis of the present size of the impending shortage, industries are faced with the very real threat of having to curtail operations in the months ahead.

"The 20-percent reduction in domestic heating fuel is the most severe cut we can expect the public to withstand without impairment of health and welfare next winter. To meet minimum fuel needs will require the most rigorous conservation of fuel by every user.

"This reduction applies to anthracite users as well as to those who burn bituminous coal, byproduct coke, briquets, and other heating fuels made from coals. We are short of all types. Although we are still studying the anthracite situation, the figures indicate that the production of domestic heating sizes of this fuel is expected to be about 6,400,000 tons short of requirements, and that the buckwheat size will be short an additional 1,900,000 tons.

"At this time we cannot foresee any diminution of war activities which would materially reduce fuel requirements or ease mine manpower. Although the new deferment policy of the Selective Service System deals liberally with mine manpower, present trends indicate that we shall lose an additional 15,000 soft-coal miners during the new coal year. The major portion of this loss will result from natural attrition, such as deaths, accidents, sickness, and retirements because of age. Men entering military service and others drifting away from the mines into other industries will account for the remainder.

"We cannot count upon immediate relief from any early end of the fighting in Europe. The effect of Germany's military defeat on the coal supply problem cannot be accurately foreseen at this time, but it is reasonable to believe that it would not wipe out the impending fuel deficit.

"By April 1 the Nation's coal stock piles will be at the lowest level since Pearl Harbor. A good guess is that they will total about 40,000,000 tons. A great part of this coal is of a type not suited to the special needs of such war industries as the coke and steel plants.

"We not only must get along with less coal but a great section of industry and the public will have to take whatever usable types and sizes of fuel their suppliers can let them have.

"The new distribution program instituted by the Solid Fuels Administration for War was designed to give essential war industries and the public generally the greatest possible protection. Its success will depend upon the cooperation of the producers, wholesalers and the public alike.

"Every fuel user, either in industry, or in the home or other buildings, owes it to his own interests and to the interest of the Nation at war to use his fuel as sparingly as possible and to cooperate to the limit in the successful execution of the new fuel program.

"All means of increasing coal production, except that of taking men away from our military forces and the war industries, have been about exhausted. The total of some 453,000 miners currently employed is the smallest since 1902. The American coal miner is working longer hours and is producing more coal per man than in any other nation. The excellent job he is doing is worthy of the highest recognition.

"What the miner can do to increase his output still more remains to be seen. We must remember that the average age of a miner now exceeds 45 years, a considerable increase over the average age prior to the war. The fatigue factor in such a dangerous, arduous occupation as coal mining has a highly important bearing on production. We cannot expect the mine worker to stay on the job as steadily as is customary with men who are employed in many other industries. However, there is still room for improving the absentee record in some instances, as well as for improvement in the relations between labor and management in some operations. Every man concerned should seek diligently to make good use of every opportunity to increase his production."

Congress and People

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 5, 1945

Mr. PRIEST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of April 4, 1945:

CONGRESS AND PEOPLE

No conclusions are drawn in the first report of the Joint Committee on the Organization of Congress. The reason is obvious. The committee has been organized only a few weeks. It is still in the early stages of its study, having taken testimony from only a fraction of the Members of Congress who wish to testify. When all Members of Congress have had a chance to express their views, the committee will hear from various officers of Congress, executive officials, members of the Senate and House press galleries, representatives of civic and professional organizations and private citizens.

The scope of its study will include the staffing of Congress, committee structure and operation, relations between the Senate and House, liaison between Congress and the President, congestion of legislative business and various similar aspects of the subject. We are especially pleased to note that it will give attention to the relations of Congress to the electorate. This phase of congressional duty is often overlooked or misunderstood. There is much complaint about the influence of special interests but not much thought about contact between Congressmen and their constituents, which may often have the effect of undercutting the influence of Washington lobbies.

The necessity for Congressmen to maintain ample contact with the people they represent was appropriately emphasized recently by Representative BROOKS HAYS. The war has kept Members of Congress in Washington most of the time. Their opportunities to learn what the home folks are thinking have been meager. Mr. HAYS thinks that such long absence leads to misunderstandings and loss of confidence by citizens in their representatives. He suggests that the work of Congress be arranged so that Members may make definite plans for sojourns in their districts to answer questions, discuss policies, and establish closer contacts.

It seems to us that some arrangement of this sort is vital to our democratic system. The power of the lobbies is likely to be weakened as the influence of the people is increased. Nor can we forget the great responsibility of Congressmen to educate their constituents as to the value of national policies that may not be properly understood in areas distant from Washington. Incidentally, any plan to facilitate their relations with their constituents should give the reforms which the Committee on Congress is expected to propose a strong appeal for the rank and file of legislators.

Let's Try Capitalism

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mr. HAYS. Mr. Speaker, under leave to extend my remarks, I include the following excellent statement by the editor of the Memphis Press-Scimitar:

LET'S TRY CAPITALISM

(By Edward J. Meeman, editor, the Press-Scimitar)

It has been said that Christianity has never been tried.

This saying does not mean that there have not been Christians who have practiced the faith so faithfully and consistently that their lives are above criticism. There have been such people.

What is meant is that there have not been enough people who have understood Christianity clearly enough and practiced it consistently enough, over a long period, to make a Christian society.

Yet, despite this imperfect practice, the teachings of Jesus Christ remain the finest thing we know. We can find nothing better; we can only practice these teachings better.

CAPITALISM, TOO

In the same way, it can be said that capitalism has never been tried.

Yes, we have had its theory with us a long time, but we have departed from the theory so often and so generally that we cannot truly claim to have ever had a capitalist society.

Seeing the evils in society, people have condemned the theory of capitalism, rather than placing the blame where it belongs, on the failure to practice capitalism consistently. They have deserted the theory of capitalism, and rushed off into the madness of communism and fascism. These new systems already stand condemned in theory and practice, for they clamped tyranny on the world, struck it with terror, and then plunged it into the bloodiest and most destructive war it has ever known.

The way to peace and freedom is through the rediscovery of capitalism and its practice in honesty of mind and generosity of spirit.

CAN'T DO WITHOUT IT

You can't do without capital. Capital is stored wealth and the means of producing wealth—mines, factories, trade, and money. Communism and Fascism have not been able to do without capital. Under communism the capital is owned by the state—and the state is run by a gang. Under fascism, the capital is nominally in the hands of individuals and groups, but those individuals and groups are bossed by a gang which runs the state.

Under capitalism the capital is owned by individuals and groups. These individuals and groups are not controlled by the state or bossed by a gang governed by laws which they themselves have made through their representatives. Only under capitalism is there freedom and democracy.

SOMETHING WAS WRONG

Yet something was wrong with the practice of capitalism or people would not have turned to communism and fascism—remedies which proved worse than the diseases of capitalism.

What was wrong with the practice of capitalism?

To work, capitalism must have a market. The owners of capital should get a good return so they can buy goods and services. The managers of business should get good salaries so they can buy goods and services. The workers should get good wages so they can buy goods and services. In the past capital and management have usually been well compensated. But until recently workers have not received a sufficient wage to buy the goods which capitalism is capable of producing in such plenty.

Workers must be employed at a fair wage, and they must be continuously employed, if the market is not to break down. Workers have not been assured of steady employment.

THE WAY IT OPERATES

Capital is invested in a business. It prospers. It makes so much money that the profit on the original investment would be an enormous percentage. So the valuation of the business is arbitrarily increased. Fair enough. The owners who took a risk should be rewarded for their creative enterprise with a capital dividend. But not to the extent that the dividend has often been taken. The workers should share in it. They should share in it by the setting up of employment

reserves, so that when business falls off the business can afford to continue them on the pay roll and they can continue to spend money in the market for the goods produced by industry. Not only should there be reserves for continuity of employment but there should be special funds for profit-sharing, further increasing the purchasing power of workers.

BUYING POWER REDUCED

The purchasing power of workers, managers, and even capitalists was reduced by shoddy goods, adulterated food, and prices that are too high. Laws have begun to cope with such cheating. Savings were dissipated through worthless stocks and bonds until President Roosevelt got the truth-in-securities law; and through bank failures until Senator VANDENBERG got the law guaranteeing bank deposits. Yes; we are slowly but surely making capitalism honest.

TARIFF INCONSISTENT

The chief inconsistency in the practice of capitalism has been the tariff. Capitalism depends on a wide market, with goods flowing freely over national boundary lines. But we have built high tariff walls that stopped the flow. We must buy the products of other nations so they will have money to buy our products. Capitalism can work on no other basis.

THE OLD IDEA

In the old days most capitalists thought of capitalism as something for their benefit. Workers were just employees, something to be used. If they weren't useful, why then, turn them out. Is it any wonder that workers didn't always see the virtues of capitalism but sometimes turned to quack remedies like communism and fascism?

WORKERS ON MARCH

The workers of the world today are awake and on the march. Where they want to go, we will all go, for they are the controlling majority. Where will they want to go?

This writer believes that if capitalism is honestly and intelligently practiced, it is the best system for the good of the workingman that can be devised.

Therefore, let us practice it honestly and intelligently. Since it is the working people we must sell on the virtues of capitalism, let's put the interest of working people first in making any business decision.

If that is done, I predict that not only the workers but managers and capitalists will have a bountiful prosperity such as we have never before enjoyed. And it won't end in a depression.

If workingmen see businessmen practicing that kind of capitalism, they'll run the Reds out of the unions so fast it will be funny to watch.

Capitalism has never been really tried. Let's try it.

Let's move toward plenty for all—and peace.

Let's not make the rich poorer. But let's make the poor a great deal richer.

The Battle for the Agreements Has Begun

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 5, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Export Trade and Shipper for March 26, 1945:

THE BATTLE FOR THE AGREEMENTS HAS BEGUN

Last Tuesday we heard James A. Farley talk to the Foreign Commerce Club of New York about the future of our international commerce and how to keep its wheels busily turning forward. Parts of his address appear in another part of this issue.

Mr. Farley clearly demonstrated his ability to discuss this subject, even before such a trade-wise group as makes up this club. He spoke not only from his own practical experience as head of Coca-Cola's export activities but as a former member of the President's Cabinet. That is why his talk is of more than casual interest to all exporters, particularly when he said:

"It is a hopeful sign that in both political parties there is developing an increasing interest in foreign trade and, in consequence, a recognition that the modern position of the United States in the world makes it necessary that we reconsider many of the tariff policies of the past.

"Under the great leadership of Secretary Cordell Hull, this change of attitude has taken form in our reciprocal trade policy. That policy was sound, but in its beginning it was experimental, tentative, and modest. But now that American prejudices in favor of higher tariffs are subsiding before the great facts of American efficiency and necessities, we may more resolutely proceed in the direction of enlarging our imports.

"A test of opinion on this subject will come later this spring, when the Reciprocal Trade Agreements Act comes up for renewal. If the vote is close, it may mean that the administration will hesitate to move resolutely toward a larger exchange of goods. If the vote is by a wide margin, we may expect sentiment in both parties to move progressively toward a real reconsideration of our tariff policies."

It is to be assumed that Mr. Farley, long a member of the President's Cabinet, knows the administration's mind and reaction to the public—in this case, congressional—sentiment. This being so, the former Postmaster General has set the target for all foreign traders—to obtain the largest possible majority vote in favor of the renewal of the Reciprocal Trade Agreements Act, an overwhelming majority preferred.

Congressional approval of renewal of the act isn't going to be easy to obtain this year, for the Department of State not only is asking for renewal but for authority to further reduce the tariff rate, a reduction of 75 percent below the Smoot-Hawley levels, or 25 percent below existing rates. The Department's request is contained in the so-called Doughton bill, introduced into the House of Representatives on March 16.

Republican Members of the House, and some Democrats, immediately marshaled their forces to defeat the bill. Representative HAROLD KNUTSON, Republican, Minnesota, declared that "Republicans in the House will fight it to the last ditch."

In senatorial circles one Member of that august group predicted that unless Mr. DOUGHTON agreed to a compromise, meaning presumably the elimination of the amendment concerning lower tariff rates, the old opponents of any sort of trade agreements made by the Department of State on its own would gather strength from those solons who did not oppose renewal as long as tariff rates were not disturbed.

Of course, the old fight to transmute agreements into treaties, with the Senate as the overlord, will come up again, this time probably with greater vigor and from greater numbers. Senator O'MAHONEY, Democrat, of Wyoming, referred to this in a newspaper interview by saying that to him the request for additional powers to cut tariff rates "makes it clearer than ever that Congress ought to review these agreements before they go into effect."

Reverting to Mr. Farley's foregoing statement about the need for a favorable vote with a wide margin, exporters should not rest complacent over the results of the last renewal vote in Congress. That was in 1943, when the United States was desperately struggling to get its full military might in action against the Axis and to demonstrate to the world that we are a united nation, even when such a question of policy as reciprocal trade agreements with other nations is under consideration.

This impelling motive, militarily considered, is missing this year, and also there are many new noses in Congress to be counted in the balloting for the agreements program.

The battle has begun, and every foreign trader should enlist every vestige of his strength in the fight, not only to preserve the old agreements program but also the new amendment designed to lower our unduly high tariff walls so that foreign trade will truly be two-way trade.

Bad Bill No. 1

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 27, 1945

Mr. LUDLOW. Mr. Speaker, as a newspaper correspondent and a Congressman I have been around this Capitol Building 44 years, and it is my considered opinion that this compulsory labor bill is the worst bill that has been introduced in Congress in my time. If this bill becomes a law and is enforced as it could be enforced, it would be the champion home-breaking measure of all time.

A bureaucrat in Washington could say to John Citizen, of Indianapolis: "You are needed to work in an airplane factory in Seattle. Your wife is needed to work in a soap factory in Cincinnati. Your daughter is needed to take a riveter's job at Scranton. Close your happy home and scram."

What will the boys who are fighting and dying in the foreign theaters of war think when they learn what can be done to their fathers, mothers, and sisters under this bill?

This bill would establish right here in America the kind of regimentation and totalitarianism our boys are giving their lives to eradicate from this earth. It would amount to the infliction of involuntary servitude on our people for private profit.

This must not happen. What is needed in this country is more government by the people and less government by bureaucracy. America must remain forever a free country based on law and not bureaucratic ukase.

If the House passes the bill, I hope the Senate will bury it too deep for resurrection, leaving only a bitter memory that such a thing should ever have been proposed.

Words

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 5, 1945

Mr. BECKWORTH. Mr. Speaker, I desire to extend my remarks and place in the RECORD an article written by Mr. Hubert M. Harrison, manager, East Texas Chamber of Commerce, Longview, Tex.:

WORDS

Words are more powerful than dynamite for good or for evil. Perhaps there is less known about words, and more of them used by everybody every day, than any other commodity on earth. Most of the disputes in business over contracts and in diplomacy over treaties arise from confusion about the meaning of words. Scientists say that there is no way to tell whether the color red looks the same to everybody. So how do we know that we are talking about the same things when we say "home" and "liberty" and "cooperation"? Each of us colors the meaning of a word by his own experience.

Every writer and speaker regards words as tools of his trade and he tries to use them well, yet he is in constant fear that his meaning will not get through. There is never much doubt of what a speaker is talking about as long as he uses simple words. The short and stubby four-letter Anglo-Saxon words name simple, intimate things near and dear to us, such as love, home, good, roof, fire, and food. This is the diction of the Bible. It has never been improved upon. Some speakers like to show off their vocabularies and lose their hearers in a maze of polysyllabic persiflage and alliterative arrogance. Short words were good enough for Milton, Shakespeare, and Emerson. They are quite adequate for smaller men if they have anything to say. One of the most terrifying statement in the Bible is that we shall be held acountable for every idle word. A man on fire with an idea can find old familiar words upon which to drape the fabric of his thoughts so that all may see and know.

Semantics, the science of the meaning of words, is not well known. Some politicians know the importance of the names we call things by. We have seen clever examples of the choice of words to sell ideas in this country lately. Social security and client sound so much nicer than public charity and pauper.

Kipling called words "the most powerful drug used by mankind." Disraeli said, "With words we govern men." Lord Chesterfield termed words "the dress of thoughts" and Will Carleton wisely wrote: "Boys flying kites haul in their white-winged birds: You can't do that way when you are flying words. Thoughts unexpressed may sometimes fall back dead; but God Himself can't kill them when they're said."

Words can stir anger, inspire hope, bring a laugh or a tear. Words can make men win battles or scale the heights of success. Words can sear like a hot iron and hurt the heart like a knife, or they can bind up wounds and soothe like a healing balm. Words can ruin a reputation, undermine credit, divide a community into factions, destroy public confidence, wreck a business, or break a bank. Words can leave a trail of smiles and hope or spread fear and bitterness like a plague.

Every user of words might well pray: Lord, help me to bring a simple, helpful, hopeful message that any child can understand. Help me to think of the message and not of myself.

HUBERT M. HARRISON.

The Haul of the Wild

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 5, 1945

Mr. MUNDT. Mr. Speaker, under the intriguing title of "The Haul of the Wild," Arthur Hawthorne Carhart, of Denver, Colo., has an interesting article appearing in the April issue of Nation's Business which I am inserting in the RECORD as a part of these remarks. Mr. Carhart significantly points out that hunting and fishing are not only great recreations but that they definitely also come under the heading of big business.

With the greatest pheasant hunting in the world, South Dakota, for example, sold over $1,000,000 in out-of-State hunting licenses last year despite shell shortages and difficulties of travel. The first normal year after the war should see this amount doubled or trebbled and in addition many visitors come to South Dakota each year to enjoy big-game hunting in the celebrated Big Hills or to fish in our streams and lakes.

In planning for our post-war economic picture, Americans will do well to keep in mind the potentialities of the recreational industry as they blueprint the future and prepare to provide employment and opportunity for the millions now in uniform or engaging in 100-percent war work.

THE HAUL OF THE WILD

(By Arthur Hawthorne Carhart)

AMERICA'S 20,000,000 ANGLERS AND HUNTERS, WITH SOME $2,000,000,000 A YEAR TO SPEND, WILL PLAY A BIG PART IN JOB MAKING WHEN PEACE COMES

Take a small fishhook and a .22 caliber cartridge. You have about two and a half cents' worth of merchandise. In these two symbols of fishing and hunting, there's little hint of any great field of business. Yet in peacetime these simple articles represent a business of nearly $2,000,000,000 a year. Postwar, it may be up to $3,000,000,000.

Seems almost unbelievable that each year sane people would spend $1,200,000,000 on fishing and $650,000,000 on hunting.

Sounds crazy.

There's something to that. Anglers and hunters are rabid devotees to their hobbies. Instead of sitting in the grandstand, munching peanuts, drinking pop, and yelling at players and umpires, the outdoorsmen personally participate in their sports. That gives a hint as to why the fish and game sports create a business reaching to such high totals.

A ball fan may spend $30 a year for admission tickets. A fisherman, on the other hand, may spend $30 for a new rod without batting an eye—and he goes on from here to buy armfuls of other equipment. Then he pays for rail or auto travel to his favorite streams—and for room and meals. Perhaps he even hires a guide.

You see fishermen as lone individuals on lakes and streams. Or you see three hunters crossing a stubblefield, shotguns ready, dogs working the fence-line thickets for pheasants or quail. You never visualize the millions of other fishermen or hunters on the tens of thousands of streams and hunting ranges.

The Federal Fish and Wildlife Service tallied the Nation's hunting and fishing license sales between July 1, 1941, and June 30, 1942. In that period—including the 7 months of heaviest annual license sales after Pearl Harbor—8,423,218 persons bought angling permits, and 8,532,354 bought hunting licenses. That approaches 17,000,000 licenses. Some are duplications. Certainly many sportsmen bought both hunting and fishing permits.

Just how many duplications occur is not known. But compensating numbers of others who fish and hunt are not included in the license totals. In many States women, veterans, pensioners, and youths need purchase no licenses. None is required for salt-water angling, and surf and deep-sea fishermen comprise an army. In some States, if one hunts and fishes in his home county, no license is required. It is estimated there are as many in this group as there are licensed sportsmen.

In peace years, at least 20,000,000 hunt and fish in the 48 States or angle along our ocean shore lines.

Actually, we need not discount too heavily the duplications when estimating the purchasing potentials of the entire sportsmen's group. Anyone who is both angler and hunter buys equipment for each sport. He is a double customer. Clothes, boots, tents, boats, and camp duffel may serve for either sport, but a rod and reel will not shoot ducks or deer, and a rifle or shotgun will not cast a trout fly or lure a bass.

War work and restrictions have reduced the number of licenses sold, but only some 7 percent. It hasn't actually reduced the number of sportsmen. War merely keeps them from going into the field.

What happened to license sales during and after the First World War indicates what lies ahead. A recent survey shows that in the 25 States where records were complete enough to provide exact data, total license sales actually increased 1.6 percent from 1916 to 1917; 2.6 percent from 1917 to 1918, and then, after the armistice, in 1919, yearly license sales swept up nearly 30 percent. The boys who had been introduced to outdoor life in the armed forces turned to hunting and fishing in civilian life as a natural field of recreation.

Proportionately more men of the hunting and fishing ages are in the armed forces today. At least a 30-percent increase in license sales may be expected when victory comes. That means at least 27,000,000 customers for outdoor equipment post war.

In addition, a tremendous backlog of replacement and new equipment sales is in prospect for the millions of sportsmen not in the armed services. Practically every fishing-tackle manufacturer is in war production. No tackle has been made for civilians for several years and reserve stocks are exhausted. Arms and ammunition plants are totally devoted to war goods. Meanwhile, rods break, lures are lost, lines wear out, and guns get older. The war experience will produce new tackle and such advanced models of guns that perhaps half of the sportsmen will want to replace old equipment. That is the waiting market.

Expenditures are large

Any analysis of what this market may mean in total expenditure simmers down to what each sportsman, on the average, will spend annually for his favorite sport.

One angler may spend relatively few dollars a year; the next may spend several thousand. That is also true of the hunters. The question is, "What is the average outlay?"

When I consider the average hunter and fisherman I think of the four mechanics at the garage where my car is serviced. These men are in the moderate-income brackets. Their annual bill may suggest what the average per person might be.

They spend from $15 to $30 a year for new fishing tackle and ammunition. They take at least five fishing trips into the mountains each season, travel a minimum of 200

miles per trip, spend a full day and parts of two others each time. They camp, cook their own meals, but certainly spend $8 each per trip.

They all go big game hunting, too. Travel, food, shelter, horse hire, and other costs of this trip would average at least $30 each. They hunt pheasants and rabbits twice each fall and ducks three times. That would cost $5 per trip per person.

We have as minimums, $15 for tackle and ammunition, $40 for fishing trips, $30 for big game, and $35 for small game hunting. That totals $120 a year. If you told those fellows they spent that much they'd deny it—but if they figured all costs they'd probably find ours is a short estimate.

By contrast, before the war, a group of Texans, traveling to Colorado with house trailers and a refrigerator truck, had a big game season budget of $500 each. It was put in a jackpot and had to be spent. That was only one annual hunt for those Texans. They hunted and fished on other trips, too.

Analyzing all figures available, Frank G. Menke, author of the Encyclopedia for Sports and a national authority, has estimated that the average annual bill of each sportsman in peacetime is $143. Any inclusive figure for outdoorsmen would cover not only tackle, arms and ammunition, but clothing, flashlights and camp lanterns, bedrolls, camp axes and knives, travel, lodging, meals, guide services, and other comparable items. The sportsman buys some equipment and services every time he goes into the open. He goes several times a season if he can make it.

The annual expenditure of $143 a person appears conservative. Let's discount that figure and accept an average of $100 per sportsman per year, all costs. If we do that, 20,000,000 sportsmen will spend at least $2,000,000,000 a year.

If you doubt this figure, take yourself to any sporting-goods store, price equipment you must have either to fish or hunt, figure the number of trips you could take each season, add up the total of all costs—well, try it if you disbelieve. You'll spend $50 for bare necessities for trout fishing; $150 if you get better-quality equipment. When you've done that, you've just started. A hunter's outfit costs more than a fisherman's.

The cash outlay resting on the foundation of ample supplies of game and fish has a place in the critical reconversion period. It means lots of jobs.

If technological advancement and volume production developed during the war is applied to sporting arms, if sportsmen can get good guns at low prices, literally millions of men who are single-gun owners today will be two- and three-gun sportsmen tomorrow. Not all arms and ammunition plants can, of course, keep their war workers busy producing sporting arms, but this approach to volume production and sales, with 5 to 10,000,000 rifle, shotgun, and pistol purchasers in prospect, with volume sale of ammunition to follow, can ease reconversion problems in that field.

Fishing-tackle factories show a much wider spread both by location and size. Here is a little shop in Montana, producing a special trout fly, employing a dozen people. A shop in Denver making fine fishing-rod fittings employs a dozen more. A concern also in Denver making fishhooks on automatic machines and tying trout flies now employs 300 workers. They are all set to make plastic bass lures after the war. The big plants at Akron, or at Utica, or at South Bend, or Geneva, will support a pay roll of at least 1,000 names each.

Many fields are helped

All these are set to turn swiftly to civilian production, and practically no labor will be drifting on the market from their conversions. Here is a sizable buffer against unemployment.

Moreover, the ramifications of business underwritten by the wildlife resources go on into many fields. Outboard motors, boats, canoes, even such items as pack sacks, must be manufactured to meet demands. Or, taking another trail, there will be increased demands for private cottages on lakes and streams. Many ex-servicemen, handy with tools, could find employment in just that one field. There will be need for new and increased facilities at resorts.

There will be work on structures, on plumbing installations, on unit electric plants for these establishments, and a demand for furnishings to equip them. The further one goes, the more the outlook of goods and services that hunting and fishing underwrite enlarges.

Just where, as a matter of interest, will this sportsmen's business stand in comparison with manufacturers we have regarded as important in post-war business?

Repeatedly, we have heard of the tremendous demand for electric refrigerators and home air-conditioning units as one type of product of which the manufacture will absorb post-war labor. Let's glance at the record of where these stood just before the war. The Department of Commerce census of manufacturers gives the 1939 figure for total finished-goods value of refrigerators and air-conditioning units as $278,645,540. In the same year all electric appliances, fans, irons, toasters, driers, domestic cooking and heating units, all products in this class, totaled $145,696,194. The two together, much discussed as "buffer" backlogs in post-war economy, totaled $424,341,734—less than a fourth of a total of the sportsman's annual bill in 1939.

Admittedly some segments of post-war business will be much larger than that based on our stock of wildlife. But equally certain is the fact that few in business have realized the magnitude of annual expenditures resting on fish and game.

Hunting and fishing are actually big business.

While Mr. Carhart's article does not draw the moral, the facts which he has marshaled clearly indicate that Congress and American industry should keep in mind the following points as they tussle with problems having a bearing on fishing, hunting, and the other aspects of outdoor recreation to which our citizens are so rightfully devoted.

First. Uniform pollution control made effective enough so that our streams and lakes are preserved in their natural beauty is not only good national hygiene but it is good national economics because it perpetuates the attractiveness of areas which are basically essential if the multi-billion-dollar business of supplying outdoor equipment to sportsmen and recreationists is to continue to employ people and pay taxes.

Second. Money prudently appropriated by Congress to provide efficient operations by our Fish and Wildlife Service, the National Park Service, and kindred agencies is an investment which earns a profit for the Government rather than a net expense to the taxpayers of this Republic.

Third. Recreations such as hunting and fishing which attract the participation of over 20,000,000 people a year are of such widespread appeal that they should be kept available for the underprivileged and the common man as well as for the well-to-do. Thus public shooting grounds and fishing opportunities should be preserved and private clubs and individuals should never be permitted to monopolize these great pastimes in America.

Fourth. Conservation, which in times of war frequently must give way to expediency, should become a national watchword with the advent of peace. Our forests, our wildlife, our fish, our soil, our wildflowers, our migratory birds, and our clean waters should be conserved with scrupulous care so that present generations while enjoying their blessings can pass them along as an American heritage to future generations.

Fifth. State governments would do well to examine their game and fish administrations and their park and natural-resources boards to be sure that politics is not being played with natural recreational resources. South Dakota phenomenal success with the Chinese ring-neck pheasant is largely because our State has what is perhaps the model game and fish department regulations of the entire country. Politics has for many years been kept completely banned and our recreational facilities are administered by a strictly bipartisan board, serving without pay, and representing equally at all times the two major parties of the State. Game wardens—conservation officers, we prefer to call them—are selected strictly on merit and are promoted according to performance and political affiliation plays no part in their selection or advancement.

Public hunting and fishing comprise a great American tradition. Vigilance is needed, however, to protect this tradition, and our country owes much to the Izaak Walton League of America and similar national conservation groups for their unselfish and effective work in standing guard against the forces of selfishness and despoliation so that today's opportunities may be preserved for tomorrow's citizens.

"Applied conservation" means simply "consideration for others." It is an art the whole world sorely needs today. Here in America let us demonstrate fully the true values of conservation.

Farley Plainly Tells What Is Wrong

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 5, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Elmira Star-Gazette, Elmira, N. Y., on March 22, 1945:

FARLEY PLAINLY TELLS WHAT IS WRONG

"In our preparations for post-war responsibilities, we must break off the habit of delay," declared James A. Farley in one of his few but pointed speeches made this week. He added:

"Too much of our financial machinery consists of an apparatus for putting things off. A great part of our credit system consists of

means of postponing payments through notes, mortgages, and the like. The financing of foreign trade seems to be arranged in the same spirit of delay. And in that trade the parties are farther apart.

"Decisions are postponed, procrastination governs our actions, and all too often we postpone settlements until they can no longer be made without defaults. These delays in the past, which were largely due to the complicated machinery of international finance, resulted in some very serious international problems. The weight of our trade balances became so heavy that collapse finally resulted. Depression swept the world and war came in its wake. There is nothing new in this deadly cycle.

"We must, as Americans, resolve to walk squarely up to these questions of how we are going to be paid for our exports and face them honestly."

If we sell or lend abroad, we must accept goods in return. That was the nub of his argument; that and his reiteration of the old truth that money borrowed must be repaid, or ruin results.

Eyes on the Ball

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 5, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Plain Dealer, Cleveland, Ohio, on March 22, 1945:

EYES ON THE BALL

James A. Farley, former chairman of the Democratic National Committee, has been known for political acumen rather than clear comprehension of important national issues.

However, in an address before the Foreign Commerce Club the other day Farley made some observations on the post-war economy and this Nation's responsibilities for it that deserve a careful hearing in quarters where much of our planning for the post-war period is being done.

Note the following clear-cut observations on foreign loans and related policies:

"Let us make loans to Europe, not necessarily out of our generosity, but out of our business sense * * *. A Europe rising from her ruins will be a good customer and a good supplier of valuable products to us, if we are willing to accept them in payment for what we sell.

"We must, as Americans, resolve to walk squarely up to the question as to how we are going to be paid for our exports and face them honestly. If we are going to sell abroad we must buy abroad * * *. Let us put our tariffs in such order that we can accept payment in the only way in which payment can be made."

And on the topic of employment which is in the forefront of so much of the discussion of the post-war era, Farley said:

"We need not spend our time and energy talking of employment first. Employment is a result, and not a cause. Employment will come from increased confidence among the nations, from a sound maintenance of international credit, and, above all, from the promise of a lasting peace."

Farley's comment, it seems to us, is particularly timely because of the heavy emphasis currently placed by the administration on adoption, without amendment, of the Bretton Woods proposals, sponsors of the international monetary fund and of the international bank of reconstruction and development would have the Congress and the public believe that adoption of their program is the first important step in a program of sound world reconstruction and effective international collaboration, that after Bretton Woods everything else would follow as a matter of course.

There is no foundation in fact, we believe, for such an assumption. Currencies will not be made sound and kept sound by international agreement or by fiat of the American Congress, nor will sound debtor-creditor relations be established among the nations by the creation of a world bank.

Very possibly the Bretton Woods agreements would contribute something to international financial stability, but under no circumstances must they be regarded as a synonym for it. Scund international economics in all the nations, with balanced budgets, and the maintenance of conditions under which the energies of all people may be profitably and productively employed, will contribute more to exchange stability and the restoration of normal trade relations than all the agreements that can be entered into and all the money that can possibly be appropriated for banks and stabilization funds.

By the same token there need be little concern lest serious unemployment situation develop in this country if in our domestic economy capital can safely be invested and labor profitably employed in the production of goods for domestic and foreign markets.

Farley's speech ought to be required reading in the Department of Commerce and in the Treasury and elsewhere in Washington for the weeks immediately ahead. Widely read and understood it could not fail to redirect our planning into clear channels and to advance enormously the cause of sound post-war reconstruction.

Let's Prevent Chaos in Cotton

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Friday, April 6 (legislative day of Friday, March 16), 1945

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Let's Prevent Chaos in Cotton," written by the able junior Senator from Mississippi [Mr. EASTLAND], and published in the April 1945 issue of Country Gentleman.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Cotton, America's greatest business and agricultural crop, upon the growing and handling of which more than 10,000,000 Americans depend for their livelihood, is in imminent danger of collapse, with disastrous repercussions upon the prosperity of Americans in practically every section of the country.

Not only cotton growers but all Americans must face realities and act sensibly if we are to avert such a calamity.

Until the 1930's more than half of our cotton crop was grown for export. Earlier still—prior to World War No. 1—two-thirds of our cotton was exported. In fact, much of the European capital borrowed for the building up of our country was paid for by the export of American cotton. When we became a creditor nation after World War No. 1, we maintained our cotton export business largely by loans to foreign nations. When the effect of these wore off in the late 1920's, cotton exports began to sag. Then came the Hawley-Smoot tariff of 1930. Cotton, always the chief casualty of a high-tariff policy, soon reacted. Our export market was largely swept away.

Farm legislation raising the American cotton price above the world level, though essential for the economic salvation of our cotton farmers at the time, served further to intensify the difficulty of our export situation. As a result of these succeeding developments, foreign cotton production increased from seven to fourteen million bales a year between 1920 and 1942, while our own exports fell to 1,000,000 bales a year—the lowest since the blockade days of the Civil War. Indeed, what we have done in recent years is to create by Government policies an economic blockade around the cotton export business of the South.

Meanwhile, rayon and other synthetic fibers have captured a substantial portion of the domestic cotton market and threaten to capture more. Rayon staple fiber, once a competitor of silk, today sells for 25 cents a pound, being actually lower than cotton when the cleaning wastage of the latter is considered. If rayon goes to 16 cents a pound in the after-war era, as predicted, how much will be left of even the domestic cotton business?

In 1929, 43,000,000 acres were planted to cotton in America. That acreage has now been reduced to 20,000,000. In the after-war era, when lend-lease markets are gone and American consumption falls to its natural level of around 6,000,000 bales a year, then six to seven million selected acres in the South can supply the entire American requirements for cotton. Millions of cotton growers would be thrown into unemployment and bankruptcy. Meanwhile there still hangs over our heads the largest accumulated cotton surplus in history.

When has a major American industry faced a darker future?

Is there any solution to a situation which has become so serious and so complex? Unless it is solved the industry is certain to collapse, thereby setting the stage for another serious Nation-wide depression.

Many people, recalling how the tractor, the combine, and the corn picker have revolutionized the growing of grains, wonder whether mechanization will not work a comparable revolution with cotton and, by lowering costs, automatically solve the cotton problem.

There seems to be no doubt that the mechanical cotton picker is a success. One machine can do the work of approximately 60 men. Only wartime restrictions on the use of metal are now holding up quantity production.

Equally revolutionary in economic effects are the new flame thrower and four-row tractor-cultivators for eliminating hand chopping and mule cultivation of cotton. These new mechanical pickers and cultivators will, it is estimated, reduce the cost of growing cotton in certain well-adapted areas 60 to 80 percent.

But, although mechanization may save cotton from the domestic competition of rayon, it will not of itself, by reducing costs, insure a foreign market for American cotton. No matter how low American cotton is priced in the world market, foreign nations cannot buy it if they do not have dollar exchange. If we are to grow cotton for the domestic market only, it is inevitable that in the long run this cotton will be produced on a few million selected acres in the low-cost, mechanized areas, resulting in ruin to those sections not adaptable to mechanized farming. Only by getting volume consumption and

volume production can the Old South stay in cotton, yet there is an acute world need for volume production of cotton on every adaptable southern acre.

If mechanization will not of itself solve the cotton problem, what other alternatives are there?

Some thoughtful people advocate diversification as a solution. They suggest that the South devote its millions of acres, heretofore planted to cotton, to small grains, fruits, vegetables, livestock, and dairy products, pointing out that the southern per-acre production, due to the long growing season, is equal to, and in many cases is greater than, that of the Northern or Western States.

The program of gradual diversification now in progress in the South is sound. But a sudden and enforced shift of millions of acres, now devoted to cotton, would bring a tremendous overproduction of these other commodities, with resulting disaster to all farm price levels. It must not be forgotten that, under the A. A. A. program when cotton acreage was restricted by Government fiat, southern farmers were prohibited from selling in competitive markets the corn or wheat grown on these acres. If the South is to grow more of these products permanently, southern farmers will necessarily have to sell them on the open market, regardless of the calamitous effects they may produce.

Under the A. A. A. program in the Cotton Belt, wheat acreage increased 180 percent, the second largest cotton-producing State harvesting more wheat per acre than any major wheat State; milk production jumped 130 percent, cattle 40, and egg production 80 percent. Last year there were more acres in corn on the average cotton-growing farm than there were in cotton. All of these increases in diversification so far are beneficial. They raise the standard of living and increase the prosperity of southern people. But a sound diversification and a wholesale diversion of cotton acreage to competive crops are two different things. The one means better living for the South, the other means bankruptcy for American agriculture from even more overwhelming surpluses than existed before the war. For the welfare of all, whether on farm or in factory, the South must remain in the cotton business.

There is a solution, and a practical one.

Before going into it we must note that there are two schools of thought in the cotton business today. The cotton merchants and the cotton trade generally desire to see the price of cotton reduced to the world level. They say that this is necessary if the vast export portion of the industry is to be saved. The cotton farmer's answer is that to meet world prices his standard of living would be reduced far below the American standard. He says, and justly so, that he should not be expected to starve out foreign competition at great suffering to himself and family. The cotton farmer advocates a parity price, or prices high enough to enable him to support his family at a decent American standard.

To the farmer's argument the cotton trade replies, and with reason, that if the American cotton grower's prices are higher than the world price, then the cotton will be bought from our foreign cotton competitors. It is pointed out that, by artificially holding up our prices, we hold an umbrella over the foreign producer and permit him to expand his acreage, grow more cotton in competition with us, and further depress our prices.

Both producer and merchant are right. Yet each overlooks an important point. The cotton producer overlooks the fact that parity price does not mean parity income if the export part of his business is relinquished for good. The cotton merchant overlooks the fact that low prices do not insure export when there is a lack of dollar exchange to finance it.

To surmount this dilemma we must both pay the American grower the artificial price to which he is entitled and yet maintain the export business, which is vital. One must remember that two things are necessary for the producers of any commodity—price and consumption. One cannot long maintain price unless he also maintains consumption, for surpluses destroy prices. The solution, if it is a solution, must be based on the realization that cotton is grown to be spun into textiles and consumed so that the cotton grower can produce more cotton.

Our present Government cotton program, while temporarily very beneficial because of what it has done for price, has failed as a long-run program because it has not succeeded in moving cotton into consumption. The cotton-exporting business of this country once gave more employment than both W. P. A. and P. W. A. at their peak—and it was wealth-creating and not tax-consuming employment. The more than 105 laws passed since 1933 to assist the cotton farmer and nearly $2,000,000,000 spent by the Government to tide him over failed to solve the basic cotton problem because they never affected the fundamental cause. This cause is the protective tariff.

While a high tariff protects the manufacturer and some important branches of agriculture from foreign goods produced by cheap labor, it does so at the expense of American farmers who produce for export such products as wheat, pork, cotton, fruit, and tobacco. They must meet low-priced foreign competition in agricultural commodities while paying high tariff-protected prices for American manufactured goods. This means that the export-producing farmer has high costs of production but often a net income too low to buy American industry's goods. The protective tariff is the chief cause of the abject poverty of the southern tenant farmer.

Fully as serious as its direct effect on the southern standard of living is the indirect effect of the tariff on that standard, resulting from the drying up of foreign purchasing power. Trade is a two-way proposition. When by high tariff walls we prevent other nations selling us their products, we make it impossible for them to buy our products. Trade is simply an exchange of commodities, and our tariff policies have hit the cotton grower harder than any other group because his product is the one most dependent on the foreign market. We of the South know we cannot repeal the tariff. The answer is compromise—find a way through the tariff wall which will not injure American industry or business, yet will restore the cotton farmer's export market.

Aside from the lack of dollar exchange on the part of foreign nations, with which to buy our cotton, the other factor that has caused the loss of our export market is the necessarily higher-than-world price of American cotton. To restore the export market for cotton we must therefore do two things:

1. Establish a gateway through the tariff wall.

2. Devise a way to bridge a gap between American and world prices of American cotton.

Let us say that a Dutch cotton spinner wants to buy $100,000 worth of American cotton. At the same time a Dutch manufacturer of woven-wire fencing may be seeking to sell $100,000 of his manufactured product to a dealer in America. If the Dutch manufacturer can sell his fencing in America, there will be created $100,000 worth of dollar exchange in Holland, which can be used in payment for the American cotton.

But there is an import duty of $50,000 on $100,000 worth of this type of fencing, which is so high as to make its importation unprofitable to dealers here. To make the importation of this fencing profitable we must reduce the tariff to, say, $35,000. The fencing is then imported for $100,000 plus the $35,000 tariff duty. This $35,000 is put into a special fund known as the Agricultural Export Compensation Fund.

The cotton, worth $100,000 at the world price, would come to $135,000 at the artificially higher American price. How can the American cotton exporter sell this quantity of cotton to a Dutch spinner for $100,000 and yet pay the American cotton producer $135,000 for it? Simply by going to the Agricultural Export Compensation Fund and being permitted by law to take the $35,000 worth of duties segregated there from the tariff collected on the incoming woven-wire fencing. The difference between American and world prices of agricultural products is substantially the same as the difference between American and world prices of industrial commodities, and one difference can be used to balance the other.

But won't American fencing manufacturers suffer a loss of market in America because of this importation of Dutch fencing?

Not at all. It could work out that way, but we shall prevent it by setting up a system of prorated import quotas so that, when the import picture is viewed as a whole, only a comparatively small amount of any one product—as fencing—may be imported. The small amounts of all manufactured products imported in this way will be so limited that they can be paid for solely by America's surplus cotton and other surplus agricultural products. The cash-buying, home market for fencing and for every other type of manufactured product in America will be left undisturbed. Actually, it will be greatly increased by eliminating the price-and-income-destroying effect of surplus farm products.

Specifically, if the American people have annually in the after-war era $100,000,000,000 of cash, with which to buy manufactured goods, and also have an annual cotton or other farm surplus worth $1,000,000,000, we will allow only one one-hundredths or 1 percent as much fencing or other industrial products to come in from abroad as is sold for cash by American manufacturers in America. Thus the imported 1 percent will be over and above the $100,000,000,000 of cash-buying power.

In practice the American manufacturer will not only lose nothing by such a surplus-cotton-Dutch-fencing exchange, he will actually gain. Once the surplus cotton is sold and its price-depressing effect is removed from the American cotton market, our southern farmers will have an income that will enable them also to buy more American fencing for cash. It is rather ironic for our manufacturers to be scanning the foreign horizon for new customers when additional markets can be developed right here at home by raising to normal the buying power of the now artificially impoverished farmers of our own South.

This tariff-gateway plan is not barter. Import and export will take place through private trade channels just as today. We shall simply require evidence of a sale of American farm surplus to a foreign country before permitting a partial tariff lowering on certain items of that country's manufactured goods, such a tariff concession being necessary to stimulate the flow of foreign goods to our shores. Management of the plan will be under a United States surplus export board. Since every nation will be permitted to profit by the plan in proportion to its capacity to use our agricultural surpluses, no nation can view it as discriminatory. It will contribute to an expanding world trade, not hinder it.

This, then, is the plan in a nutshell. Note that it answers all the requirements of a satisfactory solution to the agricultural surplus problem:

1. It benefits both farmer and manufacturer and does not benefit one at the other's expense.

2. It preserves free enterprise.

3. It removes all danger of a cotton cartel.

4. It obviates all need for further regimentation of the farmer.

5. It eliminates all further need for subsidies out of the American Treasury.

6. It is a one-price system for both the domestically consumed and the exported portions of the crop.

7. It gives the American farmer parity for all that he produces.

8. It insures absolute and permanent control of farm surpluses by export to raw-material-hungry nations.

9. It will work for every other surplus farm crop as well as for cotton.

At the International Businessmen's Conference at Rye, N. Y., last November, Robert Gaylord, an official of the National Association of Manufacturers, openly acknowledged that in order "to export goods we must receive payment for them in raw materials and the manufactured goods of other nations."

This is statesmanship. In practice, however, many manufacturers—and organized labor—are not going to advocate any general tariff lowering that would open the way to an unlimited influx of foreign goods manufactured by 80-cents-a-day labor in the Orient and $2-a-day labor in Europe. Such a compromise proposal as this tariff-gateway plan, should, however, meet with the joint approval of American manufacturers, labor, and farmers.

If we can put such a plan into operation immediately following this war—and it may be our last chance to recapture America's one-time export-cotton market—we will raise the farm income of the South from $150 per capita to levels that prevail in our industrial areas. New southern buying power will give a tremendous impetus to factory employment in the North and East, benefiting all by creating better markets for all.

At the same time, the export of American surplus crops will play a vital part in after-war international affairs, constituting an insurance of lasting peace. Destructive economic policies following World War No. 1 had a lot to do with the oncoming of World War No. 2.

If instead of plowing under or piling up our surplus crops we export them, and instead of raising our tariff walls to impossible heights we provide a gateway through them for expanding commerce, we should escape World War No. 3. We need such far-seeing economic statesmanship.

Taxes After the War

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, April 6 (legislative day of Friday, March 16), 1945

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Taxes After the War," delivered by Beardsley Ruml in the nonpartisan forum before the National Republican Club, New York, on March 31, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am particularly pleased to have been invited to speak once again to this nonpartisan forum of the National Republican Club. Evidently my comments of a year ago passed your test of nonpartisanship, and today I shall attempt to discuss taxes after the war in the same spirit.

We have a primary post-war national objective on which there is general agreement, namely, high employment under a democratic private enterprise system, and it is appropriate that national fiscal and monetary policy, including taxation, should contribute to our attaining this objective. But we should not overlook the fact that the basic objectives of fiscal and monetary policy lie elsewhere.

The two essentials of national fiscal and monetary policy are: First, to provide the means of meeting the financial requirements of the Government in such a way that we shall have a reliable money system—a money system that will give the people a stable medium of exchange and store of value; and, second, to provide a system of financial institutions that will give the people a sound banking structure and a satisfactory credit mechanism. These two essentials of fiscal and monetary policy are of themselves of the first importance to the maintenance of continuing high employment under a democratic private enterprise system.

We must recognize that a sound fiscal and monetary policy is not the only condition necessary for attaining high prosperity. We must have Government stability; satisfactory relations between costs and prices; confidence in the outlook generally for business volume and profits; clear and simple laws and regulations; protection against illegal acts of all kinds; fair access to markets, to processes, and to raw materials; and favorable terms on which loan and equity capital are made available. These, and other considerations, determine in any specific instance whether or not employment-creating activities will be undertaken. However, appropriate fiscal and monetary policies will aid strongly in achieving the conditions that will make for high employment.

And so, the question before us is, What fiscal, monetary, and tax measures, consistent with maintaining a reliable money system and an efficient system of financial institutions, would, in addition, promote high employment under private enterprise?

Since taxation is one of the most important parts of fiscal policy, let us discuss basic policy for Federal taxation. The idea behind our tax policy should be this: That our taxes should be high enough to protect the stability of our currency, and no higher. Putting it another way, our taxes should be as low as they possibly can be without putting the value of our money in danger of inflation. The lower our taxes are, the more purchasing power will be left at home in the hands of the people—money that can be spent by them for the things they want to buy, or that can be saved and invested in whatever manner they choose.

Now it follows from this principle that our tax rates can and should be lowered to the point where the Federal Budget will be balanced at what we would consider a satisfactory level of high employment. If we set our tax rates any higher than this, we are reducing unnecessarily the money that private individuals will have to spend and to invest; and, therefore, we make it more difficult for ourselves to get to high employment and to stay there.

Accordingly, in order to set our tax rates, we must have some general idea of what a satisfactory level of employment in peacetime would be. Some people call such a level "high employment"; others prefer to use the term "full employment," although they are careful to point out that there will always be a certain number of people unemployed at any particular time in a country where men and jobs are not strictly regimented.

There is much agreement, fortunately, that a satisfactory level of employment means about 55,000,000 people at work on an average work week of about 40 hours in ordinary peacetime occupations. It might be a little less or it might be a little more; but this standard is close enough to the realities to give us a start on our thinking.

The question is frequently asked, "How do you reconcile these figures, calling for 55,000,000 people employed in ordinary peacetime occupations, with the President's figure, "close to 60,000,000 productive jobs?" I do not presume to give an authoritative reconciliation, but for my own part it does not seem difficult. The 60,000,000 figure may well include two and a half million men and women in the armed forces, since if any jobs are productive, these certainly are. Then too, there must always be more jobs than there are people actually employed. There are jobs that are not yet filled; part time jobs and seasonal jobs. So when we take all these considerations into account, I think there is very little difference between "close to 60,000,000 productive jobs" and "55,000,000 people at work in ordinary peacetime occupations."

If we have 55,000,000 people employed on a 40-hour week, and if the price level is about where it is today, we will have a national income of about $140,000,000,000. I am not predicting that we will in fact have a national income of $140,000,000,000, or any other figure. What I am saying is that if we have a satisfactory level of employment and the present price level, the arithmetical consequence is a national income of $140,000,000,000. It is against this level of national income that our peacetime tax rates should be set.

It would be unwise to rely on tax policy alone to bring us to a high level of employment. Private individuals and public agencies must cooperate all along the line.

Private businessmen in their own companies and in their local and national associations are actively at work on plans for reconversion and expansion. One organization of businessmen of which I am sure you all have heard, the Committee for Economic Development, has as its single purpose the achieving of a high level of productive employment after the war. The committee recognizes that if we are to have jobs at all, the job makers have to go to work first.

The agencies of government are active, too. Federal, State, and local Governments, the executive and the legislative branches are concerned with the problem; and things are beginning to happen. Our tax policies must take these other plans into account.

One measure in particular must be carefully studied. This is the proposed Full Employment Act of 1945, commonly referred to as the Murray bill.

The Murray bill is not a legislative accident. It did not suddenly spring from nowhere on to the floor of the Senate. As a matter of fact, the Murray bill has a long and respectable intellectual and political history.

One of its early beginnings was in September 1921, when a conference on unemployment, of which the then Secretary of Commerce, Herbert Hoover, was chairman, made some very explicit recommendations favoring the use of public works as a means of attacking unemployment. The language of the recommendations which were adopted at that time is interesting.

"Public construction is better than relief. The municipalities should expand * * * to the fullest possible volume compatible with the existing circumstances. The Governor should unite all State agencies * * * in expedition of construction of roads, State buildings, etc. The Federal authorities should expedite the construction of public buildings and public works covered by appropriations. A congressional appropriation for roads would make available a large amount of employment.

"The conference under existing circumstances, notwithstanding various opinions as to the character of the legislation and the necessity for economy, recommends congressional action at the present session in order that work may go forward."

Curiously, no reference to taxation is made in the report of this 1921 unemployment conference.

The unemployment crisis of 1921 proved to be a short one; but the danger of unemployment lived on, and reappeared once more in 1929. This time Federal action became imperative, and in February of 1931 President Hoover signed the Employment Stabilization Act of 1931, which was sponsored by Senator WAGNER, of New York.

The Wagner Act of 1931 also contains some language with a curiously modern flavor. I quote from the act:

"Whenever the President finds that there is likely to exist in the United States or any substantial portion thereof a period of business depression and unemployment, he is requested to transmit to the Congress by special message such supplemental estimates as he deems advisable for emergency appropriations * * *. It is hereby declared to be the policy of Congress to arrange the construction of public works so far as practicable in such manner as will assist in the stabilization of industry and employment. * * * The President is requested * * * to take into consideration the volume of construction in the United States, the state of employment, and the activity of general business. The Board shall collect information concerning advance construction plans and estimates by States, municipalities, and other public and private agencies."

Again, in the Wagner Act of 1931, no reference is made to taxation.

The Murray bill, coming some 14 years later, reflects the experience of the depression of the 1930's and our growing knowledge of the factors that are relevant to the maintenance of high employment. Much more explicit reference is made to the stimulation of private enterprise, no longer are public works the exclusive method of attacking the danger of underemployment, and now we find mentioned among other things, as part of the program, "Federal policies * * * with reference to * * * taxation."

Thus the Murray bill is an evolution from earlier American thinking on the subject of unemployment. It is in the groove. The basic ideas of the Murray bill have had bipartisan sponsorship and deserve nonpartisan standing.

The Murray bill is the American expression of a world-wide recognition that the people, working together through their national government, must protect the individual against the hazard of undeserved unemployment.

The Murray bill should be widely discussed, subjected to every kind of honest criticism, and strengthened and improved in every section, paragraph, and sentence. But it should not be interpreted as a step toward totalitarian regimentation nor as an inspiration of the New Deal to be opposed as such.

My own feeling about the Murray bill is that, standing alone, it attempts to do too much. It should be buttressed by other measures in the areas of public works, social security, and taxation that will tend automatically to bring the economy into reasonable stability at high levels of private, productive employment. With these other measures operating automatically, the problem remaining to be attacked by the methods of the Murray bill will still be difficult, but not, in my opinion, insoluble.

We can now see more clearly the place of Federal tax policy in the over-all picture. Federal taxes must protect the currency against inflation and deflation. But they should also help us get to high employment and should operate as one of the automatic instruments that help stabilize the economy. That is why we can and should adopt as our basic Federal tax policy the reduction of tax rates to the point where the budget at high employment will be balanced at high employment.

Under this policy, what taxes should be reduced, and how much? These questions are matters of both tax policy and public policy. In general, however, it can be said that taxes should be reduced where it will do the most good in increasing the standard of living and stimulating the flow of savings to private investment.

Today, it is generally recognized that taxation has something to do with high levels of production and employment. This is a great gain. It increases immeasurably the strength of the weapons which we can use to achieve prosperity under a private enterprise democracy.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, April 6 (legislative day of Friday, March 16), 1945

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Jay Franklin, in his column We the People, entitled "St. Lawrence's Case Bad Pre-War Error—A Pistol at Hitler," published in the Cleveland (Ohio) Plain Dealer of March 23, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE THE PEOPLE

ST. LAWRENCE'S CASE BAD PRE-WAR ERROR—A PISTOL AT HITLER

(By Jay Franklin)

The visit to the White House of Canada's Prime Minister, McKenzie King, undoubtedly has political meaning in terms of Canada's approaching general elections. With the outcome of those elections, we have no legitimate concern aside from our friendly interest in the maintenance of close and self-respecting relations with whatever government is in power in Canada.

More to the point is President Roosevelt's reference to the St. Lawrence seaway and power project at his press conference during Mr. King's visit. Our failure to implement our agreement with Canada on this score is perhaps the greatest single indictment of congressional failure to foresee the present war.

Part of this failure can be measured by recent admissions regarding such wartime enterprises as the Canol oil project on the McKenzie River and the Alcan Highway. The cost of these projects was immense and it now seems probable that they must be discontinued because they are entirely uneconomic.

The same amount of money invested in the St. Lawrence project would have converted that river into a pistol pointed at the heart of Hitler's Europe and would have released floods of hydroelectric power for war industries within easy economic reach of the east coast ports.

Might have kept Hitler from war

If Congress had agreed to the St. Lawrence project at the time it was first asked to do so, it might even have stopped Hitler from declaring war in 1939, as it would have constituted evidence of the marshaling of North American power, while our failure to develop that power certainly aided the Nazis in reaching their low estimate of the will and ability of democracy to function effectively against the totalitarian system.

No one has ever satisfactorily explained the curious reluctance of the Congress to increase the natural wealth of the St. Lawrence River and thereby to increase employment, production, and taxable values. Granted that certain privately owned electric utilities were opposed, the experience of the T. V. A. has shown that, in the long run, private utilities would have benefited.

Granted that certain east-coast ports feared loss of shipping traffic, national experience has shown that every increase in industrial facilities and shipping has been shared and that in the end the threatened communities would not have lost, although other communities would have gained.

The plain truth of the matter is that, in the long struggle between the private utilities and the T. V. A., a struggle which ended only with the election of 1940 and the advent of the war, a stalemate position has been established in which nothing new or important could be started. When that struggle ended—as it has with the conservative newspapers defending the T. V. A. against the attacks of Tennessee's senior Senator MCKELLAR—the war was already on us and it seemed unlikely that the St. Lawrence projects could be developed in time to have value in the fight against Hitler.

Laid aside because of labor shortage

As a matter of cold fact, President Roosevelt reluctantly agreed to lay the project aside because it would absorb too much labor and too many materials that could be more swiftly utilized elsewhere.

With the approach of VE-day and the resulting period of readjustment, the St. Lawrence project once more is becoming practical politics and practical economics.

That is why the dust is going to be blown off the blueprints and the St. Lawrence is going to be revived in the forefront of the post-war file of deferred "life, liberty, and pursuit of happiness" for the people of North America. Once the Mexican agreement concerning the Colorado River is out of the way, it may be time to take up the St. Lawrence project with the Congress.

"Victory" Dinner in Honor of Aubrey Williams

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, April 6 (legislative day of Friday, March 16), 1945

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article written by Gould Lincoln, author of the column The Political Mill, published in the Washington Evening Star of April 5. This is a thorough and very timely analysis by Mr. Lincoln of

the so-called victory dinner held at a local hotel celebrating the defeat of Aubrey Williams. Mr. Lincoln discusses in detail the launching of a campaign by the P. A. C. and the Farmers' Union, in which many Senators will be interested.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POLITICAL MILL

(By Gould Lincoln)

The 1938 "purge" of Democratic Senators who have displeased the White House and the radicals represented by the P. A. C. and the Farmers' Union is already under way. It had its launching last week at the "victory" dinner in honor of Aubrey Williams, defeated by the Senate for appointment to be director of the Rural Electrification Administration. This dinner, organized by James G. Patton, head of the Farmers' Union, was attended by Mrs. Roosevelt, wife of the President; Jonathan Daniels, one of the secretaries to the President; James M. Barnes, administrative assistant to the President, and by two members of the President's Cabinet, Secretary of Commerce Wallace and Secretary of Agriculture Wickard, not to mention a crop of the more ardent New Deal Senators. Mr. Patton previously had made it clear that he and his organization were after the scalps of Senators who voted against Mr. Williams. Nineteen of them were Democrats. Most of them were from the "solid South" and the border States, although Senator MCCARRAN of Nevada and Senator GERRY of Rhode Island were in the list.

Mrs. Roosevelt and Mr. Wallace both made speeches at the dinner, not only extolling Mr. Williams but also breathing the fire of future attack upon the men who turned him down. The President's wife said she refused to consider Mr. Williams' rejection a defeat because "it has just put before the country a situation. * * * We don't realize until it is forced upon us that we have to fight—we have to fight every step of the way. We can't leave it to others—we have to do it ourselves."

Certainly this dinner was tied in closely with the White House, in view of those who participated. Democratic Senators opposed to Wallace now consider that they have been placed on a "purge" list. Individually they are ready, they say, for any fight which may be made on them.

They do not intend to take attacks on themselves lying down. They recall that President Roosevelt himself, 8 years ago, personally entered into primary contests to defeat some of them who had opposed his Supreme Court packing bill.

The Williams dinner and its implications indicate, on the other hand, that the New Deal administration does not intend to overlook such rebuffs as the defeat of the former National Youth Administrator at the hands of the Senate and stripping of Mr. WALLACE of control over the great lending agencies of the Government. It looks, therefore, like a real fight is on which may tear the Democratic Party still further apart. Further, the more the New Dealers hammer at the group of Senators and Members of the House whom they consider backsliders, the more difficult it may become for the administration forces to control on Capitol Hill.

One of the Democratic Senators who voted against Mr. Williams said frankly he expected the New Dealers to attack him when the time rolls around for his renomination next year. "We will meet the situation when it comes," he said. "It will be a fight between the real liberals in the Democratic Party and the radicals."

The attempted 1938 purge of recalcitrant Democratic Senators failed miserably. Senators GEORGE, of Georgia; TYDINGS, of Maryland; and the late Senator Smith, of South Carolina, all especially listed for the political ax, were triumphantly renominated.

Democratic Senators who voted against Mr. Williams and who come up for renomination and reelection next year are BILBO, of Mississippi; BYRD, of Virginia; CONNALLY, of Texas; GERRY, of Rhode Island; MCKELLAR, of Tennessee; and RADCLIFFE, of Maryland. Mr. CONNALLY is chairman of the Senate Foreign Relations Committee, and Mr. MCKELLAR not only is President pro tempore of the Senate, but also the ranking Democratic member of the Appropriations Committee and its acting chairman. Two years later, eight more of these Williams opponents are to run again—Senators BAILEY, of North Carolina; BANKHEAD, of Alabama; CHANDLER, of Kentucky; EASTLAND, of Mississippi; MCCLELLAN, of Arkansas; O'DANIEL, of Texas; RUSSELL, of Georgia; and STEWART, of Tennessee.

Attention will be centered on the 1946 senatorial elections. If the purge fails again next year, it will scarcely be attempted in 1948, when a Presidential election is coming up.

The San Francisco Conference

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, April 6 (legislative day of Friday, March 16), 1945

Mr. SMITH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Dr. Philip Marshall Brown, formerly professor of international law at Princeton University and now president of the American Peace Society, dealing with the forthcoming conference to be held at San Francisco, which was published in the Washington Evening Star of yesterday, as well as an editorial published in the same issue of the Evening Star commenting on Dr. Brown's letter.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

PLEADS FOR MORE TRUST IN LEADERS SEEKING SECURITY AGREEMENTS

To the EDITOR OF THE STAR:

Why all this excitement and uproar about Yalta?

Has it not long been evident that serious differences of views between the great powers have had to be adjusted?

Is it not clear that such complicated and delicate diplomatic negotiations cannot be conducted in the market place?

Surely, never were statesmen confronted with more difficult and dangerous contentions than at this time of the crisis of civilization.

Surely, we owe every gererous consideration to Roosevelt, Churchill, and Stalin in their efforts to adjust these serious diferences and to prepare the ground for the success of the San Francisco Conference.

The physical and nervous strain imposed on these men in the midst of a stupendous war by their conferences at Teheran, Cairo, Moscow, and Yalta has been extreme. It is a wonder that President Roosevelt has been able to stand up to this relentless strain so amazingly well. It is no wonder that Secretary Hull with selfless devotion and heroism was unable to endure it. It is earnestly to be hoped that Secretary Stettinius may be enabled to carry on successfully in the face of the violent and intemperate barrage of newspaper criticism and questionings which amount virtually to a hostile inquisition.

Surely, this is a time for patriotic self-restraint and generous consideration on the part of the American public.

Surely, we have no desire to embarass our responsible leaders up on the bridge of the ship of state during this international hurricane.

Surely, we have no desire by word or act to wreck any architectural plans for world peace and security.

Surely, we desire the success of the San Francisco Conference.

What justification, therefore, can there be for this general assault by editors, journalists and commentators on the negotiations now going on between Roosevelt, Churchill, and Stalin? Have they not by and large deserved our admiration for their conduct of the war and their labors for peace?

Must the conscientious preparatory negotiations of Dumbarton Oaks and Yalta be undone in order to satisfy demands for full information concerning efforts aimed to forestall dangerous disagreements and antagonisms?

Good sense as well as fair play surely requires of us all that we should continue to repose generous confidence in our leaders, who thus far have brought us well along the road to international safety.

Let us have an end to ill-considered and ungenerous criticism. Never did we need a genuine unity among the United Nations more desperately than at this moment in order that the San Francisco Conference should not be wrecked in advance and all hope for world security abandoned.

PHILIP MARSHALL BROWN.

A NECESSARY DISTINCTION

Dr. Philip Marshall Brown's good letter, printed elsewhere on this page today, is a timely warning against giving way to cynical doubt in connection with the Yalta and other understandings. Such a tendency can easily prejudice the San Francisco Conference by creating an antagonistic public sentiment in America.

It is true that the element of the American press which is hostile to the principle of international collaboration, hostile to Great Britain or hostile to Soviet Russia, seizes avidly on every opportunity to discredit the good faith and the motives of our own and the Allied leaders to an extent which indicates a deliberate intent to wreck any effort which does not conform to the particular philosophy of the critics.

Yet it seems to the Star that Dr. Brown and others for whom he speaks should draw a precise distinction, in their generalized references to "editors, journalists, and commentators," between an obviously hostile approach and the plain duty of responsible publicists to bring to public attention facts which demand frank explanation. Especially is this true of facts deliberately withheld from the American people.

The constituted authorities in Government who seek to forward their laudable efforts by creating an impression in the public mind of unanimity and accord, when this impression is disputed by the unofficial revelation of stark fact, can endanger the success of the San Francisco and other such conferences even more than those who deliberately and openly practice their sabotage.

It goes without saying that intelligent Americans have some appreciation of the enormous responsibility of the President as well as the difficulties which he and his advisers must overcome in their attempt to

reach a workable understanding with Russia. We have our own conceptions in this country of some of the ideals which underlie international accord and justice and they do not always conform to those held by the Russians. One nation is a democracy while another is a dictatorship. One has been blessed throughout its history with relative peace and plenty. The other has undergone in recent times one of those internal convulsions which occasionally change the course of human events. One has enjoyed comparative security in this war. The other has been invaded and ravaged by a ruthless foe.

These things are not beyond the comprehension of most Americans and there is no reason why they should believe that the course to perfect understanding is a smooth one. But without accepting the theory that diplomatic negotiations can be conducted successfully in a gold-fish bowl, it still remains that the safest and the best policy to pursue in the long run is one which enables the public to understand the nature of the differences between the Allies in their approach to a common problem instead of minimizing the fact that there are differences.

For one policy leads to the creation of an intelligent and discriminating public opinion. The other leads eventually to inevitable disillusionment far more dangerous and insidious in its effects than the openly hostile attacks of critics.

Mark Clark Lauded for Skill, Tact

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 2, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by the gentlewoman from Massachusetts, Mrs. CLARE BOOTHE LUCE:

[From the Hartford Daily Courant of March 30, 1945]

MARK CLARK LAUDED FOR SKILL, TACT—CLARE LUCE CITES HIS ROLE AS CHIEF OF GREAT INTERNATIONAL ARMY

(By CLARE BOOTHE LUCE, Representative in Congress from Connecticut)

FIFTEENTH ARMY GROUP HEADQUARTERS, ITALY, March 30.—Gen. Mark Clark commands, without any doubt, the most international and democratic force of seasoned veterans in the world today.

When the history of this war is written by the biographers and military experts, and by the poets and novelists too, the Italian campaigns will certainly prove to have a far greater world interest and significance than they seem to have now, for they will be seen to be the greatest military experiment in history of the welding of fighting men of many countries in the great common cause of freedom.

FROM MANY LANDS

Clark's two armies, the American Fifth and the British Eighth, include, in addition to United Kingdom, Dominion, and white and colored American units, Indians, Poles, Italians, Brazilians, and a newly activated Jewish brigade, recruited in their historic homeland to fight against Hitler under the flag of Palestine.

The 120-mile front that these heterogeneous troops hold is as varied in terrain as are the men in nationality. Troops fight up and down some of the steepest mountains in Italy and across some of the widest, flattest, and dustiest of plains.

The human as well as the technical and tactical problems presented by this varied terrain offer an immense challenge to both the military and diplomatic skill of a commander. Clark's troops speak five or six different languages and probably some 60 dialects. Their customs are infinitely different, and their equipment and supplies are often not interchangeable. Their diverse eating habits alone are a quartermaster's nightmare.

YALTA POSED PROBLEM

An example of the delicate diplomatic victories achieved by Clark was seen in his application of one aspect of the Yalta decisions to the Italian front. That decision concerned Poland, and it was a black and heartbreaking day for Gen. Wladislaw Anders, Polish commander in chief, when the news reached him. That news meant for Anders and his men the hard and bitter knowledge that Yalta had destroyed for many of them the very aim for which they had been fighting for 6 terrible years—to return to their homes under the Polish flag.

It must be remembered that most of Anders' men were Poles who had been deported by Russia when it moved into Poland when the Hitler-Stalin nonaggression pact was in force and that, therefore, they are the very ones partitioned out of their homeland by the Yalta acceptance of the Curzon line.

General Clark talked to General Anders in an interview which must someday make good historical reading, for when Anders returned to his troops, the crisis had been averted. He bore the conviction to them that Poles had not less but more to fight for and that in the eyes of the civilized world the way Poland's fighting men took this last most savage blow to their hopes might provide the most conclusive argument of all for Poland's cause at the San Francisco conference.

To restore to the Italian cobelligerent forces a truly offensive spirit against the Germans in the absence of any certainty concerning defeated Italy's position at the peace table was also as much of a diplomatic as a military task for Clark.

To preserve harmonious morale in the headquarters of such an army group and among the men from one end of the line to the other while maintaining complete military flexibility has been no easy job for Clark, and yet today anyone who visits this front is soon aware that he has met that challenge and done that job, for he has forged a striking force which has held and will soon destroy Germany's twenty-five-odd divisions on this side of the Po River.

Polish Representation at the San Francisco Conference

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, April 6 (legislative day of Friday, March 16), 1945

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a letter I have addressed to Hon. Edward R. Stettinius, Jr., Secretary of State, with reference to the Polish representation at the coming San Francisco Conference.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 4, 1945.

Hon. EDWARD R. STETTINIUS, Jr.,
Secretary of State,
Washington, D. C.

MY DEAR MR. SECRETARY: For some time I have been concerned over the fact that there will be no Polish representatives at the Golden Gate Conference in San Francisco.

The Russian request that, in the absence of any other representation, the Lublin Poles be given this recognition has been correctly opposed by our Government. In view of the agreement which was reached at Yalta for a reconstruction of the Polish Government, the fact that no positive steps have been taken should not be construed to mean recognition of the Lublin Poles. That would be an injustice to the London Government, which our Government recognizes.

It may be that the creation of the provisional government specified in the Yalta agreement cannot be achieved by April 25.

For that reason, I suggest to you that the sponsoring governments extend an invitation to both the Lublin Poles and the Polish Government in London to send delegations to attend the Golden Gate Conference as observers without vote.

I make this suggestion in the hope that these two delegations having, for the first time, the opportunity to sit down at a conference table, could satisfactorily resolve this pressing and vital problem. I know the value of meeting face to face and discussing a problem over the conference table. What seem today to be insuperable barriers to agreement might very well be resolved if such a meeting could be held. If an agreement was not reached nothing would be lost.

I am confident that such a means of endeavoring to reach a solution to the critical Polish problem would find substantial agreement with the Poles in Poland itself, the London Poles, and among the friends of Polish independence in our own country.

Sincerely yours,

BRIEN MCMAHON.

Lippmann Commends President's War Strategy

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. JOHNSON of Oklahoma. Mr. Speaker, Walter Lippmann is not a New Dealer. The well-known columnist and author has in the past been a severe critic of the present national administration, especially some of its domestic policies.

Mr. Lippmann's recent column in the Washington Post, in which he reviews high lights of the international situation, and especially the war strategy of President Roosevelt, Mr. Lippmann's discussion of the roles played also by the State Department and the Chiefs of Staff is likewise interesting and illuminating.

The Lippmann article is one of the best answers I have observed of late to the increased and carping criticism against the administration's international policy,

as well as America's part in the conduct of the war.

The article in question follows:

TODAY AND TOMORROW

(By Walter Lippmann)

THE PRESIDENT AS STRATEGIST

In the highest quarters, the White House, State Department, and the Chiefs of Staff, a principal anxiety has long been that the Soviet Union would be drawn into the Pacific war prematurely. Two weeks after Hitler attacked Russia and 5 months before Pearl Harbor (July 6, 1941) Ambassador Grew delivered a statement to Prince Konoye asking for "an assurance" that "the reports of Japan's decision to enter upon hostilities against the Soviet Union are not based upon fact."

The President, who has proved himself to be a remarkable strategist, saw then that if Japan struck at Russia in Siberia while Hitler was striking in Europe, it was more than probable that Russia would be knocked out of the war. Had that happened, the task of liberating Europe and of ejecting Japan from China and the mainland of Asia would have required forces greater than Britain and the United States could hope to raise. In fact, if Germany and Japan had succeeded in making a junction across a prostrate Russia, it is hard to see how they could ever have been defeated decisively.

Fortunately, the Japanese laid their plans on the mistaken assumption that Hitler would take Moscow and thus paralyze the Soviet power, a few days after they attacked Pearl Harbor and paralyzed our capacity to take the offensive.

But even after that lucky break, the dominating consideration has continued to be how to keep the Germans and Japanese from fighting a combined war, and to gain time until Russia, Britain, and the United States were prepared to support one another both in Europe and in the Far East. In the days when we were fighting with relatively weak forces way down around Guadalcanal and the Soviets were fighting for their lives around Stalingrad and the British were in dire peril at the gates of Cairo and the Suez Canal, it would have been a disaster, not an advantage, as some over here imagined, if, in one way or another, the much-talked-about Russian bases in Siberia had become involved in the war.

For not at that time, and indeed at no time until now, was it certain that the Soviets could defend those bases; it was absolutely certain that we could not make the slightest use of them. We could not have used them because there was no way to get to them with the gasoline, the bombs, and all the heavy ground equipment that an air force must have.

What had above all to be prevented was that the Japanese would seize the bases while the Soviets were so busy with Hitler that they could not defend them, and while we were so far away that we could not use them. This can all be said now because Stalin would not have denounced the neutrality pact unless he felt reasonably certain that he is now strong enough, that the American forces at Iwo Jima and Okinawa are now near enough to deal with, and that the Japanese are now too weak to undertake, a preventive war against the Soviets.

The management of this whole affair by Churchill, Stalin, and Roosevelt is as fine an example of military-diplomatic strategy in global war as one could imagine. They have succeeded in dividing our enemies and in driving them to fight separate wars while they gathered and advanced their own forces, with well-nigh perfect timing, for a unified conclusion to the whole war. In Europe the junction of Eisenhower's armies with the Red Army, and, let us not forget, with Alexander's, is imminent and will destroy the possibility of a prolonged organized German resistance; in Asia the stage is set for another junction which will make it impossible for Japan to make a successful stand either in her islands or on the Asiatic mainland.

Here is the real accomplishment of the conferences at Casablanca, Quebec, Moscow, Cairo, Teheran, and Yalta; the forging of a concerted strategy in war and for the period of pacification which we must pass through before the nations can hope to enjoy a settled and ordered peace. There has been some misunderstanding, friction, and compromise. But there is probably no example in history of a coalition managed so successfully on so vast a scale and where there were so many complex and incalculable elements. Here rests the best hope of mankind that we may be able to manage a cooperative peace.

We shall advance that hope if in this country we explode the myth that the President and his responsible lieutenants have been amiable weaklings, suckers, and Santa Clauses, in the hands of stern, shrewd realists, Churchill and Stalin. For cool, objective realism about what really matters most, the President has been quite the equal of the other two. The President has his failings as an organizer and administrator of his policies and he has made mistakes of judgment, and has listened to poor advice, and has indulged his temperament. But taken all in all, and measured by the results achieved, since the summer of 1940 his estimate of the vital interests of the United States has been accurate and farsighted. He has served these interests with audacity and patience, shrewdly and with calculation, and he has led this country out of the greatest peril in which it has ever been to the highest point of security, influence, and respect which it has ever attained.

If we do not recognize that he is a great war President, history will. But we need to recognize it now, not for his sake perhaps, though it would be gracious, not in order to condone complacently his failings and the exasperating errors that occur so continually in his administration of the Government, but for our own sakes in the trying days to come. We have power. We have wealth. We have glory and honor and prestige. But we can squander them again as we did after 1918 if we do not have the self-confidence that gives to a nation steadfastness and resolution. For that we have to believe, and are entitled to believe, that we, too, can find statesmen who are equal to the times in which we live.

Address of Gov. John J. Dempsey, of New Mexico

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. ANDERSON of New Mexico. Mr. Speaker, on March 8, 1945, Gov. John J. Dempsey, of New Mexico, a former Member of this House, made a talk at the University of New Mexico strongly favoring the setting up of a world organization whose duty and responsibility it is to see that future wars do not occur, and urging the preservation of American democracy.

Because of the timely material in Governor Dempsey's speech, I thought it would be well to make it part of the RECORD and include it in full at this point. The Governor's speech follows:

Judge Bratton, members of the faculty, and students, it is a real pleasure for me to have an opportunity to visit with you again on the campus of the university. I have a warm spot in my heart for the university which dates back to the years when I had the pleasure and the privilege of serving as a member of the Board of Regents.

The wartime progress of the university has been outstanding. Much credit for the growth and development of this university belongs to members of the faculty and the administrative staff.

The university has made, and is making, a great contribution to the war effort, and I want to take this opportunity to compliment everyone who has helped to make that record possible.

It is perhaps in its service to the Navy, and for a period to the Army, that the university has done its outstanding work as a unit.

Young men and women from the university are fighting in all theaters of war throughout the world. More than 2,800 former students are now in the armed forces, and it will not be long before this figure passes the 3,000 mark.

All citizens of New Mexico can be very proud of these men and women, more than 50 of whom have been awarded every type of citation from the Purple Heart to the Congressional Medal of Honor.

The university has already been approved by the Veterans' Administration for the training of men and women who are released from the armed forces, and who are provided with educational opportunities under the GI bill of rights.

One of our greatest obligations is to see that young men and women whose educational training has been interrupted by the war, are encouraged to return to our schools and colleges to receive their diplomas and their degrees, or to receive specialized training.

Here in New Mexico we have been so bountifully blessed by nature with a healthful climate and beautiful scenery that many servicemen will want to come here to complete their education. They will come because of the State's sunshine, our mild winters and long and healthful summers, our dry climate and our mountain playgrounds. But for whatever reason they come, we will always be glad to welcome them.

In providing its course of instruction in the post-war period, as well as while the war is still in progress, our institutions of higher learning have a great obligation to perform.

Recently the press carried a report on the action of Congress in increasing our national debt limitation to $300,000,000,000.

Had the people of America, and especially their elected Representatives in the Congress, had the wisdom and the foresight to outlaw war 25 years ago, our national-debt limitation would not exceed $50,000,000,000.

At the close of the last war Woodrow Wilson was President. He visioned recurring wars unless a security council of nations was set up to preserve the peace. Had America followed his lead, there would not have been a Second World War.

In the years immediately following the last war most of the nations of the world wanted peace. We even scrapped much of our Navy. But Japan did not scrap her Navy. Had we built and maintained our Navy at full strength, instead of sinking our own ships, the cost would not have run our national debt limitation beyond $50,000,000,000. By this action we would have saved $250,000,000,000. And what is far more important, we would have been spared 1,000,000 or more casualties in the present war. Had we been prepared, Japan would not have attacked, and neither would Germany.

I am strongly in favor of setting up a world organization whose duty and responsibility it is to see that future wars do not occur. And I am in favor of giving this organization

all the power it needs to enforce its decisions.

Individually, human beings have learned to live together as good neighbors. Nations can do the same. They are not much different from individuals. But friendships don't just happen. Among individuals friendships are cultivated and nourished and treasured. It should be the same among nations. You can't buy friendship; you have to earn it.

Modern transportation has brought the nations of the world closer together than the cities within nations were only a few years ago. Unless we make provision now to preserve world peace, by force if necessary, then we must rebuild our cities in preparation for the next war, which will be so terrible that no city existing today could survive its devastation.

It is time that the world comes of age. It has lived through its turbulent adolescence and should now assume the responsibilities of mature years. And the foremost responsibility is preservation of lasting peace.

We have learned that wanting peace is not enough. We must not only want peace—we must be prepared to force peace on any nation that wants war.

Right now, while the guns are still sounding, most of the nations of the world talk of devising a plan which will make war impossible in the future. That is something new in this world. It gives us cause for hope.

Formulating world peace plans is primarily the job for our national leaders, with the moral backing of every citizen. Preserving democracy at home, while we discharge our responsibilities as the greatest of the United Nations, is the obligation of each of us.

At the present time the world is undergoing a radical change. We hear of new political philosophies. There are some individuals within our own Nation who would change our form of government. Others have gone abroad and have returned loudly praising the particular type of government practiced by the nation they have visited.

We have several millions of our finest young men fighting on the soil of a score of foreign countries. They have an opportunity to see at first-hand the workings of various foreign governments. We do not need to have any fear of the opinions which will be brought back by our veterans. They will come home convinced that American democracy is the finest system of government ever devised by man.

It is the obligation of those at home, and it is the special obligation of our colleges and universities, to protect and defend our form of government here, as our fighting men are defending it on the battlefields.

We do not want to let any foreign isms infiltrate the home front while the battle is still going on abroad. The only ism that we should be interested in is Americanism.

Occasionally we hear people praising the militar, might of some of our allies. Such a praise is justified, but we should always bear in mind that it was the greatness of our industrial production, the greatness of America, which made it possible for our allies to keep on fighting this war. Without the benefit of the vast stores of military material and supplies which we transported across the ocean and delivered to our allies, we would not today be seeing the final drama of this war enacted on the German homeland.

It is our system of free enterprise, our belief that every man is entitled to make a profit from the fruits of his own efforts, and our encouragement of individual initiative, which has made America the greatest Nation in the world. Nothing should ever be permitted to happen in this country which will deprive the individual of freedom of thought and freedom of action, or stultify his ambition.

It is to all these things that our servicemen want to return.

It is to the America that they remember that they want to come back. And the kind of America they remember is the kind of America they want in the future.

The voice of 12,000,000 young Americans will be a powerful voice.

It is a voice that will not stand for any foreign ism in the democracy they fought to save.

The regimentations of fascism, the phony ideologies of the other isms are not for Americans.

Every American still cherishes in his heart the spirit of the pioneers, and so long as that spirit remains alive regimentation will not take root in this country.

People who protect a free press, freedom of assembly, freedom of religion, and freedom of speech will always be capable of doing their own thinking and of making their own decisions. So long as Americans preserve their liberties, our democracy is safe.

In shaping post-war plans of a global nature some people have envisioned a modern utopia for the world. They would have an equal standard of living for all. That is a fine thought, but these people look to America to make this possible. If America should attempt to bring this about, it would undoubtedly impoverish us, and still not bring the world standard of living up to what we enjoy. It would only lower our standard of living to the level of less fortunate nations.

If world peace is to mean that we must feed the nations of the world, then I believe that charity begins at home. Let us be sure that we take care of our own.

Had we been Santa Claus to the world before the war, we would not have been in the excellent position we were in to help win the war. We have financed, fed, clothed, and provided munitions for every Allied Nation. We were able to do that because of our great strength. It should be the aim of each of us to keep America strong in the post-war years. We must keep America armed. That is insurance against future wars.

These things are brought to your attention, not by way of criticism but as matters that need your thought. These are things that you are going to be confronted with—things that you, as future leaders, are going to have to decide. Because of your training and experience, you will be extremely well informed to make decisions. Our vision was so bad in the past that we failed to prevent the present war. It will be criminally inexcusable to make the same mistake again.

If we have the obligation to administer to the ills of the world, we certainly have the right to keep the world at peace.

You young men of the armed forces will soon be assigned to duty in many parts of the world. I know that you will want to come home to the same kind of America that you left. I know that the people here at home will make certain that our way of living does not change while you are gone. While you are away, we at home will discharge our obligations to see that provision is made for your welfare when you return. That we have promised, and that promise will be kept.

Tariff Based on Living Standards

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. CARLSON. Mr. Speaker, the following interesting article based on tariff standards appeared in the Bridgeport (Conn.) Post on April 1. This article was called to my attention by Hon. CLARE BOOTHE LUCE, Representative from that district.

Mr. Charles A. Moore, chairman of the board of directors of Manning, Maxwell, & Moore, outlines a plan which, if adopted by Congress, would protect the living standards of the American workers against the low wages and the low living standards of other nations. The Ways and Means Committee will being hearings within the next 10 days on a proposal to not only extend the present Reciprocal Trade Agreements Act, but also give the Tariff Commission authority to reduce tariffs 50 percent more.

The article follows:

TARIFF BASED ON LIVING STANDARDS ADVOCATED BY MANNING, MAXWELL & MOORE CHAIRMAN

Commenting that "we appear to be committed to a program of giving to all the rest of the world which may well bankrupt us," Charles A. Moore, chairman of the board of directors of Manning, Maxwell & Moore, last week advocated the adoption of a tariff system based on the relative wage scales of the various countries.

Mr. Moore believes that such a system would protect the living standards of American workers against the low wages and low living standards of other nations.

Before settling down to developing the activities of Manning, Maxwell & Moore, Mr. Moore lived an adventurous life. Born in Lynn, Mass., in 1880, he attended St. Paul's in New Hampshire and was graduated by Yale in 1903. He has been a resident of Fairfield County for many years, living on a farm near Greenwich.

SAILED WITH PEARY

The wanderlust and search for adventure seized him at an early age and when 17 years old he was a member of Robert E. Peary's trip to the Arctic. It was on this trip that the expedition found the famous meteorite now in the American Museum of Natural History, New York. A few years later he chartered a boat and with Capt. Robert Bartlett, of Arctic fame, as first officer, traveled up the Labrador coast, on through the Hudson Strait into Hudson Bay.

The original object of the cruise had been to try and discover a graphite mine, and while no mine was found, plenty of adventures were recorded.

Shortly after he was graduated from Yale, Mr. Moore, accompanied by the late Homer Davenport, then one of America's outstanding cartoonists, decided to go to Turkey to buy Arabian horses for breeding purposes. While in that section of the world they decided to do some real roaming and visited Asia Minor, north Africa, and various European countries.

Some years later Mr. Moore made several expeditions to South America and also explored the mountains of British Columbia, where he did a lot of hunting. One of his kills was of a rare type of goat, which, when mounted, was presented to the American Museum of Natural History. Mr. Moore is a life member of that organization.

SERVED IN WORLD WAR

During the First World War Mr. Moore served at the front as a member of the Fifty-sixth Artillery. He participated in four engagements, including the Meuse-Argonne and Oise-Aisne operations.

Since the World War, Mr. Moore, has devoted his time to the growing activities of the Manning, Maxwell & Moore Co. His beliefs on the necessity of establishing a new type of tariff follows:

Mr. Moore said:

"I have for several years been of the opinion that a tariff system based upon relative wage

scales of the various countries would be workable and beneficial to the United States. I believe that now, more than ever before, such a base for our tariff would be helpful to this country.

"We appear to be committed to a program of giving to all the rest of the world which may well bankrupt us and lower standards of the other nations of the world. Yet our first duty should be to maintain our own standards of living, which have for two generations been the highest in the world, not only for our own advantage, but as a continuing example and inspiration for all other nations.

"It is obviously impossible for us to maintain our high wages in this country, on which our national wealth and living standards have always been based and always must be based, in a world of complete free-trade.

"There are many serious problems of fairer distribution amongst ourselves of our national income. These problems must be met and solved. But without a large national income to be better distributed no benefit to the Nation can accrue to American citizens. So it seems to me that the preservation of our collective national income is the first duty of all American citizens and must always be our first duty.

"The basic plan, therefore, must be protection of our wage scale and living standards against the low wages and low living standards of all other nations.

"If at the same time an incentive could be offered to other nations to raise their wage scales and living standards we would be doing the best service possible to the entire world.

"In a tariff system based on relative wage scales I believe we have the means to protect ourselves, stimulate other nations to aspire to our standards of wages and of living and supply a world commerce with new life.

"Here is a sample outline of the plan:

"The Congress should create a commission to study and set up a relative wage scale for each nation seeking to trade with us. The standards set up would have to be somewhat arbitrary at first. But our American decision would have to stand as arrived at with no modifications for several years.

"Our maximum tariffs would be levied on all imports from nations whose wage scales were under a certain percentage of our own. As a nation's wage scale approximated our own less tariff would be levied. If any nation's wage scale equaled our own no tariff would be levied, or a nominal one only.

"In order to aid the nations to raise their living standards and wages (which go always hand in hand) the entire revenue from tariffs (or any portion decided upon as just to ourselves) would be loaned at a low rate of interest to the nation paying the tariff for the purpose of buying in this country products of American manufacture—preferably machinery and equipment which would tend to make labor more productive and therefore deserving of higher wages.

"Periodically tariffs would be readjusted. The success of the plan would be measured by such readjustments.

"I can think of no way to offer to the labor of all nations hope, inspiration, and assistance of a practical sort comparable to such a plan carefully worked out. It puts a heavy financial burden on us. But it leaves to each nation the job of helping itself and not to be pauperized by charity.

"The influence of such a program upon American standing in the world would be, it seems to me, very beneficial.

"The above is a simplified outline of a very big and far-reaching plan."

Radio Frequency Modulation

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 9 (legislative day of Friday, March 16), 1945

Mr. TOBEY. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a telegram received by me today, and which I understand was sent to all Members of the House and Senate, by E. F. McDonald, Jr., head of the Zenith Radio Corporation. It sets forth the serious attempts being made to transfer frequency modulation from lower range on the dial to the upper register. Such a transfer, in the considered opinion of the best experts, would impair the efficiency of FM and entail great financial loss to present holders of that facility. Frequency modulation, the invention of Dr. Edwin H. Armstrong, is such a boon to listeners on the radio, giving a reception entirely free from static, that nothing which threatens its benefits should be permitted. I ask that the telegram be printed in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

CHICAGO, ILL., *April 9, 1945.*

Hon. CHARLES W. TOBEY,

United States Senate, Washington, D. C.:

I am sending this telegram to you and other Members of the Congress because a new development in radio that is now ready to bring great benefits to your constituents, and provide tens of thousands of post-war jobs, is being threatened by ill-advised Government action.

Radio broadcasting is the paradox of modern inventions. We had long-distance radio service before we had purely local service. It is the baby that ran before it could walk. Our first American broadcasting station, KDKA, could be received all over the United States and sometimes in Europe. It is as though we had long-distance telephones before local exchanges were established.

In 1925 I personally sent the human voice half way around the world from my ship in north Greenland within 11 degrees of the North Pole to Admiral Koontz on the U. S. S. *Seattle,* flagship of the Pacific Fleet, then cruising off Tasmania.

Let's take a look behind the scenes and see what this paradox of radio, which at present is known and appreciated by a relatively few people, means to the American public, to you, and to me.

In the short period from 1921 radio has unfolded its influence in civic and cultural fields as much as did the printing press during its first 200 years.

Now comes the latest invention, frequency modulation, which is purely a local service. It only radiates from the transmitter to an horizon, usually under 100 miles. It creates another paradox by being the only great invention in radio that has not been financed by stock promotion to the public. It has come forward on its merits and was accepted by the public and by many companies already established and adequately financed.

This new frequency-modulation service provides the public not only with its first local service but its first high fidelity and relatively static-free reception. It fills the same position as the home-town newspaper and gives as much better reception as the local telephone gives compared with long distance.

Entirely without stock promotion, frequency modulation made more progress in public acceptance in the first 2 years of its public use, from 1940 to Pearl Harbor Day, than television has in 17 years of existence, even though few cities today enjoy the benefits of frequency modulation service.

Present standard broadcasting, because of limited wavelengths, only allows about 900 stations in the whole United States. These stations are the property of a fortunate few. Some have been sold at high premiums because of the limited number possible. Frequency modulation will make possible 2,000 to 5,000 additional frequency modulation local stations which definitely promise to be a greater menace to the relative monopoly enjoyed by the chains and some present clear-channel broadcasters than anything they have heretofore encountered.

I can well understand opposition of the national chains to this terrific new competitor, and I have sympathy for their position, but I also remember that the stage-coach drivers didn't like to see the coming of the railroads, and in turn our railroad systems did not welcome the coming of good roads and trucks with door-to-door service. Naturally the chains see in frequency modulation not only a serious competitor but also a great additional expense to which they will be put in competing.

A similar situation to that now existing in broadcasting would have developed if the printing press had originally been available only to the national magazines and the supply of paper limited. Naturally these magazine owners would resent the coming of presses and sufficient paper for printing the home-town paper which would dilute and subtract from their national circulation. Here in America the local papers have always been much closer to their people than the national publications. Frequency modulation provides the equivalent of additional presses and additional paper to make the local newspaper possible.

Many small-town standard amplitude modulation broadcasters now have unsatisfactory wavelengths and suffer from interference. Most of the good station wavelengths are in the big cities. Through frequency modulation small-town broadcasters can now have an efficient interference-free station which will cost less money, operate more efficiently, and adequately cover their local service area. One hundred and twenty-five home-town newspapers, realizing the value of frequency modulation, have already made application for permits to erect frequency modulation broadcasting stations post-war. Frequency modulation can provide an interference-free station in every city in the United States over 2,500 population.

In the past, many prominent speakers on important subjects of interest primarily to local communities, have been relegated to the use of day-time radio which has limited their local audience. They have been deprived of the great night audience because of high cost of time and too great an area covered. Frequency modulation cures this.

The chains have rendered a splendid service and they could continue to broaden their system and serve the small town even better by hooking up with these new local frequency modulation stations.

The Federal Communications Commission has proposed to move frequency modulation from its present position in the broadcasting spectrum, where it has given unexcelled service for 5 years, to the proposed hundred megacycle band, which is untried and unproved for broadcasting service. This would obsolete all present frequency modulation broadcasting stations and destroy the frequency modulation value of many millions of dollars' worth of radio sets in the hands of the public.

The record of the F. C. C. hearings indicates this move is unnecessary and undesirable.

The only argument advanced for moving frequency modulation to this proposed untried area is the highly technical theory developed by a former F. C. C. employee that in the present wave band frequency modulation will experience interference.

At both the public and secret hearings held by F. C. C. on the subject of whether or not frequency modulation should be moved because of alleged interference, 7 of the 8 propagation experts, who after all are the only ones qualified to pass on the technical phase of this question, indicated the disturbing of present frequency modulation channels is unnecessary. Of the whole industry, including the broadcasting chains, only 11 individuals or corporations were for disturbing frequency modulation in its present satisfactory position and moving it to the untried and unproved hundred megacycle band against 43 who are for leaving it undisturbed where it is.

Nevertheless the Commission's recent correspondence with frequency modulation set owners protesting the change and its recent theatrical demonstration of converters to members of the press indicate that some of its members are determined to move frequency modulation regardless of the weight of the qualified evidence.

Manufacturers universally concede that if frequency modulation is moved to the higher channels the public will have to pay more money for frequency modulation receivers which will function properly in the hundred megacycle band. This will cause the public to pay to radio manufacturers many additional and unnecessary millions of dollars. Moving frequency modulation to this proposed untried and unproved channel would also set frequency modulation back from 2 to 5 years at a cost of tens of thousands of jobs, because frequency modulation is the one new thing in radio that is ready to go and provide new employment during and after reconversion.

It is the considered judgment of the General Electric Co., the Stromberg-Carlson Co., and our people here at Zenith, the three manufacturers who have had the greatest experience in the building of genuine frequency modulation receivers for the public, that moving frequency modulation to the untried and unproved hundred megacycle band is unnecessary and undesirable and will deliver a deadly blow to the entire frequency-modulation program from which it will take years for it to recover and regain its present position of public service.

If not crippled and delayed by the proposed move, frequency modulation is destined to wield a great influence in America as the local papers have always been closer to their people than the national publications. Frequency modulation, because of the superior service it renders, may even be destined to replace many of the present-day broadcast stations, especially in the smaller towns.

Frequency modulation, if allowed to proceed, will be a great leader in the orderly reconversion from war to civilian production.

Chairman Porter, who inherited this momentous problem when he assumed the chairmanship of the Federal Communications Commission in January, has definitely stated within the past week that he has reached no conclusion himself. In the public interest I believe that Congress should satisfy itself that the entire Commission and their engineers give proper and full consideration only to the qualified evidence that is before them. No one should be swayed by any interests who through fear of competition may seek to cripple an already established great new public service.

If you feel that you would like further and more detailed information on this subject before taking action, I shall be very glad to furnish it to you upon request.

E. F. McDONALD, Jr.,
President, Zenith Radio Corporation, Chicago.

Enforcement of O. P. A. Regulations

EXTENSION OF REMARKS
OF
HON. WAYNE L. MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Monday, April 9 (legislative day of Friday, March 16), 1945

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three editorials in regard to the enforcement of O. P. A. regulations. I make these comments and submit the editorials pursuant to some remarks I previously made on the floor of the Senate. Following those remarks, I carried on correspondence and held conferences with representatives of the O. P. A. That correspondence and those conferences convinced me all the more that the problem of improving the procedure in hearing O. P. A. cases is of paramount importance. I serve notice that when the O. P. A. Act is before the Senate I shall press for necessary amendments to insure that the people of our country shall have proper trial by due process of law, whereas at the present time I do not think they receive it.

The editorials to which I refer, and which I ask unanimous consent to have printed in the Appendix, are as follows: One, entitled "The O. P. A. 'Trials'," from The Dalles (Oreg.) Chronicle, of April 2, 1945; another, from Crow's Pacific Coast Lumber Digest, written by C. C. Crow, is entitled "Persecuting America's Best Citizens"; the third editorial is entitled "Judge Tocze's O. P. A. Decision," and was published in the Oregonian for April 4, 1945.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From The Dalles (Oreg.) Chronicle of April 2, 1945]

THE O. P. A. TRIALS

Investigator, prosecutor, judge, and jury. That's the status of the O. P. A. Enforcement Division, as demonstrated in hearings held in The Dalles Friday and Saturday.

Little wonder, then, that several local attorneys who attended the trials as spectators were heard to remark as they left the room, "Is this the United States?" The defense attorney angrily charged that Gestapo methods had been employed by the O. P. A. in its handling of one local case.

"Well, that's what the people voted for, when they returned the New Deal to power," a black Republican, who was a bystander, retorted.

"Yes; it looks like we are headed for the very totalitarianism our boys are fighting in Europe and Asia," another spectator declared. "Petrillo and his gang can get away with anything, but let a businessman slip over a bit, intentionally or not, and he's in the clutches of the bureaucrats."

Some of this corridor criticism probably was unfair, but it just about epitomized the reaction of spectators at the trials, which soon took on the aspects of a legal farce, insofar as accepted court procedure is concerned. Instead of being assumed innocent until proved guilty, the various defendants obviously were assumed to be guilty—and "try and prove your innocence."

Consider the stage as it was set. First, O. P. A. investigators moved into town. They were not invited in by the local war price and rationing board, which understands conditions in The Dalles and which has been making a sincere attempt to enforce the multitude of orders and regulations promulgated by the O. P. A. As a matter of fact, John Sell, chairman of the local food panel, testified that he resigned this position when the district O. P. A. office refused to heed his suggestions, which were based on a thorough knowledge of local conditions.

These investigators, we are informed, acted in an arbitrary manner. In one instance they seized the food ration points at a local grocery store, while the proprietor was absent. They took these points to Portland, sorted them, and returned valid points later by registered mail.

In another instance, when a local restaurant proprietor explained his point difficulties by saying that the Army "virtually had taken over his establishment," an investigator advised him not to serve meat to servicemen; that they "got their points at camp" and should eat there. This was testified under oath at Saturday's hearing, and was not denied by the investigator, who was present at the time.

Yet many of the men from Camp Rufus were from foreign battlefields. Some had been on Attu. Others were home from action in the Pacific, instructing other Army engineers in the technique of building bridges. What restaurant proprietor would have the heart to tell a soldier, under such circumstances, to get his meals at camp; that he could not order a steak because steaks were reserved for civilians?

In any event the investigators found quite a few food handlers short of points. Regulations admittedly had been violated, but there was no deliberate attempt at dishonesty. And if the matter had been left to the local rationing board, these points would have been made up, paid in full after the Army moved on from Camp Rufus.

Having found violations of O. P. A. regulations, at least from a technical standpoint, the district O. P. A. next preferred charges. From Portland came an O. P. A. enforcement attorney with the reputation of being "plenty tough" in the prosecution of her cases. From San Francisco came the "judge and jury," in the person of a hearing commissioner. In court were the witnesses for the Government, ready to testify against the defendants.

Notice anything unusual about this arrangement? Well, the witnesses, the "prosecuting attorney," and the "judge," who also serves as a jury, all are paid by the O. P. A.

We asked the hearing officer if the rules of evidence were supposed to apply to such hearings. He assured us that this was the case. Possibly they were "supposed to apply," but many years spent in covering court actions convinced us that we knew nothing about the "rules of evidence," as interpreted by the O. P. A. For instance, when the "district attorney" submitted evidence not even remotely connected with a formal complaint, this evidence was admitted—over the protest of the defense attorney who insisted that his case was being prejudiced.

Furthermore, the "judge" interrogated witnesses frequently, and even called a witness to the stand to clarify points in testimony that were not always pertinent to the charges. He frequently was brusque in his question-

ing. Only twice during the 10 hearings did he seem to think that the O. P. A. had overstepped the bounds of legal propriety and in one of these instances he reversed an original ruling in favor of the defense after he had remarked—audibly—that to take the case off the present calendar might necessitate another trip to The Dalles, and he didn't know when he would be able to come here again.

If local violators of O. P. A. regulations are found guilty, they face suspension of their right to deal in the rationed commodities involved for various lengths of time. This was admitted by O. P. A. officials at the hearings. In the case of restaurants and meat markets that will mean they must close their doors

What this could mean to the community is obvious. Local restaurants and meat markets, attempting to give service despite help shortages, already are swamped. Close some of them up and the situation could become chaotic.

Furthermore, consider the degree of punishment in view of the degree of the offense charged. Close up a restaurant for 10, 20, or 30 days, and the help disappears, to other communities or other jobs. Close up a meat market and the same is true. Deny a large grocery store the right to deal in sugar or butter, and think of the farmers—many of whom drive from 50 to 100 miles to shop in The Dalles. True, other stores will be open, but consider the congestion, yet the O. P. A. declares that public inconvenience is not taken into account in such closures—only public hardship.

And all of this could have been avoided if the district O. P. A. had permitted the local rationing board to handle the situation in its own way instead of moving in with the obvious determination to set an example.

[From Crow's Pacific Coast Lumber Digest, Portland, Oreg., of February 28, 1945]

PERSECUTING AMERICA'S BEST CITIZENS

(By C. C. Crow)

Like Hitler's expiring Gestapo, the Enforcement Division of the Lumber Section of O. P. A. in Portland is now bringing into final play all of the ruthless vindictiveness that has characterized its high-handed career of persecution.

For complete indifference to the established processes of administering justice, the history of the activities of the enforcement division of O. P. A. is a record of abuse of authority and the exericising of punitive judicial power which has made this organization a constant liability to the war program as it has run amuck in the ranks of those engaged in doing something genuinely constructive. From the unfortunate victims of the coercive blackjacking of this O. P. A. enforcement division huge sums of money have been taken in the form of fines for loosely established and more loosely calculated, alleged evasions of the terms of price ceilings. Often intricate and complicated in their draft, clear interpretation has not been possible even by the original authors after other legal crackpots have put into words and phrases a conglomeration of meaningless and disconnected provisions that have opened wide the gate for administrative impositions on the unfortunate and busy groups of our citizens engaged in the production and distribution of timber products.

Staffed for the most part by men whose limited experience has deprived them of the responsible jobs in private industry this O. P. A. band of time teredos has come to learn that as a bureau they are held in low esteem and consequently this realization has developed an esprit de corps that has carried them to great extremes.

Busy men and concerns engaged in producing and getting to our fighting forces needed lumber supplies have in cases too numerous to mention here, submitted to outrageous impositions from these New Deal axmen and have paid kangaroo court fines for baseless charges, not due to any sense of guilt but because they could not afford the time and expense to go into court over the amounts involved. In instances without number lumbermen have been told by their attorneys, "From the standpoint of constitutional law these charges are without foundation and you can go into court and beat the O. P. A., if you can get into a court which is not presided over by another New Deal appointee and in this connection the higher up you go the poorer your chances are and we advise paying the extortion and going about your business, because they are out to get you one way or another and the soundness of their accusations is the least important."

Now as time has moved along the attitude of intolerance in the O. P. A. enforcement division has grown with it. When the worst scrub in this marauding organization comes back to the office and reports that he has been offended by some hounded executive, that unfortunate individual is due to get a working over.

The above statements are best proved by reciting a specific case. The Goose Lake Box Co. at Lakeview, Oreg., operated by Sam Jaksick, stepped out of the ranks of mediocrity and into the spotlight by being awarded the Army and Navy E for "practical patrotism" and "distinguished service" in supplying the Government with lumber required in carrying on the war. This aroused jealousy of another Government employee in another entirely different department contacting the pine manufacturers and soon an automobile, burning scarce gasoline and wearing out scarcer tires, was on its long way to the Goose Lake plant to dig up something, somehow.

To make a long story short, an O. P. A. field man slipped into the Goose Lake plant one day like a skunk crawling into a poultry house full of laying hens and proceeded to hunt for something wrong. Without any permission whatever he shut down various parts of the operation so that he might query the employees, who were busy trying to make lumber to help support the boys in the foxholes. Finally, when his arrogant obstruction became unbearable, he was summarily ordered from the property, something that should have been done 5 minutes after he entered. What did this do? When the supersnooper returned to headquarters and reported the temerity and insubordination of Sam Jaksick in insisting that he and his men be allowed to produce lumber for the Government, Goose Lake's fate was sealed.

Recently the O. P. A. filed charges against Goose Lake Box, assessing a triple fine and asking the right to impose a further penalty on another separate charge involving some 280 carloads of lumber and a correspondingly large sum of money.

In the meantime, what has happened? Out of a clear sky the Army and Navy has awarded the Goose Lake Box Co. a second E, and written them as follows:

"To the Men and Women of the Goose Lake Box Co., Lakeview, Lake County, Oreg.:

"I am pleased to inform you that you have won for the second time the Army-Navy Production Award for meritorious services on the production front.

"You have continued to maintain the high standard which you set for yourselves and which won you distinction more than 6 months ago. You may well be proud of your achievement.

"The White Star, which the renewal adds to your Army-Navy production award flag, is the symbol of appreciation from our armed forces for your continued and determined effort and patriotism."

Who is best qualified to appraise the service and lumber which has been supplied to the Government during this emergency, a small group of nondescript bureaucrats or the Army and Navy heads who have been using this lumber?

In receiving the second "E" award the Goose Lake Box Co. stands by itself, as this recognition for service performed and the good quality of material supplied has been given to no other manufacturer of pine in the entire West and that is a real record.

The youthful attorney who heads the enforcement division's office of O. P. A. in Portland is the same man who was caught redhanded last summer on a long fishing trip which he made that involved traveling over 400 miles in an automobile operated by one of his field men, who was paid for its use by the Government Fine sense of honor by a man who is receiving his monthly stipend for the purpose of enforcing the law and war regulations instead of deliberately doing something widely publicized as forbidden.

Sam Jaksick has made a contribution to his country in helping to win the war and has gone far beyond his outstanding record of supplying lumber for the Army and Navy, which has been publicly proclaimed as a top job. Sam Jaksick has also given to the war his 19-year-old son, a promising lad who was late last year so seriously wounded while serving with the Army in Europe that he will be a cripple the remainder of his life. While the head of the enforcement division of the O. P. A. office was on a fishing trip being made with Government-bought gasoline this boy of Sam Jaksick's was in the service of his country, working for a mere pittance and his reward is a shattered body. Would you enjoy this if you were Sam Jaksick? Would it kindle love and kindness in your heart to know that your own son was lying in a hospital in France terribly crippled while a band of able-bodied O. P. A. employees, all of whom should have long since either been working in the shipyards or serving in the Army, was descending upon you purely for spite and pique, trying to intimidate you into paying a fine on a charge of which you were not guilty?

War Mobilization Director, James F. Byrnes, should order the Portland office of the enforcement division of O. P. A. closed at once and the men and women employed there placed on essential jobs, preferably in the Army, Navy, or the shipyards. Sam Jaksick should be immediately relieved of the persecution of boondoggling imposers, who have from the start been a liability to the war program, having done nothing but annoy and delay those patriotic men like Sam Jaksick and hundreds of other producers of lumber who, in spite of O. P. A. snoopers and not with their aid, have made a maximum contribution toward winning the war.

[From the Oregonian, Portland, Oreg., of April 4, 1945]

JUDGE TOOZE'S O. P. A. DECISION

In a voluminous and thoughtfully considered opinion, Judge Tooze, of the Multnomah circuit court, has held that Congress had no constitutional power to vest State courts with jurisdiction in O. P. A. penalty cases instituted in behalf of the Government itself.

The layman's interest in the matter is not in a legalistic presentation of Judge Tooze's reasoning, but in its bearing on enforcement of O. P. A. price ceilings, if the decision shall be affirmed by the State supreme court.

Briefly stated the decision is founded primarily on the doctrine supported by a fairly long line of decisions that only in courts established by itself can Congress vest any portion of the judicial power of the United States. The State circuit court is a creation of the State legislature, not of Congress. Thus, recourse by the Price Administrator must be to the Federal district court when the Government seeks to recover treble the amount a dealer has charged in excess of his price ceiling, or when the O. P. A. seeks injunction to restrain a dealer from exceeding the price ceiling.

The attempt of Congress to confer jurisdiction on State courts in these matters no doubt arose from a desire and need to facilitate enforcement of the law. Sessions of the State circuit court are held in every county in the State, and in Oregon there are 29 circuit judges. There are but two judges of the Federal district court, who preside mainly in Portland, but conduct terms at intervals in Pendleton and Medford. Under O. P. A.'s universal coverage, price violations may occur in every section of the State, and a consequence of the decision, if it be upheld, will be that these enforcement cases will all have to go before the two Federal district judges, with congestion and delay likely, and also with inconvenience to defendants and counsel in numerous instances.

So far as we know, no State court of final adjudication has passed on the issue considered by Judge Tooze. But in every State a relative situation as respects the greater convenience of State courts exists. The supreme court of one State is not bound by the decisions of a supreme court of another State, but it is the practice to give them consideration. Hence, it may be that the Oregon Supreme Court will have first say on a subject of widespread importance.

While it is expedient that State courts have jurisdiction in the cases in question, expediency does not fall within the purview of a court in making a decision. The court is guided by the law and the facts as he understands them and by naught else. Judge Tooze has based his opinion on careful reasoning and on exhaustive examination of authorities. His is not a court of last resort, however, and the higher court may hold that he is in error in his conclusions. This is not a forecast. It is but mentioned as a possibility.

So long as we must have price controls, it is to the general interest that these controls be observed. But actions instituted by the Price Administrator are not the only way of penalizing the ceiling violator. The consumer who has been charged more than the maximum ceiling price may sue for up to three times the sum of the overcharge, plus attorney's fees and court costs. Judge Tooze holds that the circuit and district courts must assume and exercise jurisdiction in all cases brought by consumers in their own names to recover overcharges for their own use and benefit. It is in actions instituted for the exclusive benefit of the United States that, in his opinion, the State courts have no jurisdiction. There is probably widespread unawareness of the consumer's right to recover for overcharges; also he is generally overcharged without his knowledge, and sometimes he knowingly pays more than ceiling prices to obtain scarce commodities in what is comprehensively called the black market. Enforcement procedure has consequently devolved almost wholly on the Price Administrator.

The O. P. A. and the Meat Situation

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. MILLER of Nebraska. Mr. Speaker, private enterprise can put meat on the American table if freed from Government regulations. So long as the O. P. A. and War Food Administration continue their many silly and unnecessary regulations, they will continue to drive meat producers out of business. Black markets now flourish everywhere. They exist because under Government regulations it is impossible for men to continue business and make a legitimate profit. Black-market operators pay no taxes.

Subsidies are not the answer. In the first 17 months of Government operation of subsidies, the packers and slaughterers were paid $592,100,000. The consumers benefit by getting meat on a deferred-payment plan at a time when they are able to pay for their meat. The stigma of taking a subsidy rests with the producer while the consumer gets the benefit.

Government regulation and meddling in the hog business has reduced the hog population from 122,000,000 in 1943 to less than 80,000,000 today.

If the Government really wants the farmer to produce pork, they should immediately increase the selling price for fat hogs. They should stop issuing confusing and conflicting orders. The dismal failure of the O. P. A. and the W. F. A. poor case for Government planning as to regulate the pork industry makes a permanent policy. Government planning is a poor substitute for the remarkable record which has been made by the industry in the past. The production of meat should be turned over to the people who know how to produce meat. A reasonable profit must be insured and then there will be no question about the supply. The Government cannot continually make regulations and rules and then change them in the middle of the feed lot or at marketing time and expect the farmer to continue to produce beef and pork.

The ceiling prices on live cattle will do to the cattle industry what was done to the pork industry. The regulation may send more cattle to the slaughtering pens but less meat will be produced because the cattle are lightweight. These cattle should be in the feeding pens gaining two to four hundred pounds in weight. The past 3 months have witnessed the largest run in history of cattle to terminal markets. The country may expect a lessened supply of beef until the grass-fat cattle are ready for the market in the early fall of 1945. The regulations issued by the O. P. A. and the War Food Administration, if continued, will make beef a seasonable item like vegetables and fruit.

The total meat production for March 1945 was 20 percent less than in March 1944. There was 50 percent less pork during this same period.

Mr. Speaker, Washington regulations do not encourage production. The answer is found on the farms of the Midwest. The feeding pens are empty.

Mr. Speaker, I include a letter which I am sending to the Economic Stabilizer, the War Food Administration, and the Office of Price Administration:

APRIL 9, 1945.

WILLIAM H. DAVIS,
Director, Economic Stabilization, Federal Reserve Building, Washington, D. C.

DEAR MR. DAVIS: I have just recently returned from a 10-day visit in my district, which is one of the great food-producing areas of the United States. I desire to pass along to you some of the impressions which I have received from the producers of cattle and hogs.

The number of brood sows being retained by the farmers is about 30 percent of what it was last year. You will remember the farmer was urged to produce more hogs. This he did in an overwhelming number. Then came regulations, ceilings, and confusion. The farmer marketed his hogs and went out of the hog-producing business.

When I visited your predecessor, Mr. Vinson, just before ceilings were placed on cattle, I told him that the ceilings on live cattle would produce less meat and encourage the black market. I think that even he will now agree that that has been the result. The cattlemen, the auctioneers, and the feeders insist that if the regulations relative to ceiling prices on the various grades of cattle continue to exist that you will produce the same result in cattle as you have in hogs. Since the ceilings have been placed on live cattle, there have been the biggest runs ever known at all of the terminal markets. These cattle are lightweight and should have been retained in the feed yards for another 3 or 4 months in order to produce the several hundred pounds more per animal which is now needed to relieve the shortage of beef.

There is ample corn in Nebraska. Much of it is spoiling on the ground that ought to be fed to the cattle and to the hogs. A very good suggestion came from John B. Cook, a member of the meat board, in which he felt that inspection of cattle for the military forces should be relaxed. There are not enough Federal inspectors to properly inspect the meat on a uniform basis. He suggested that Federal inspectors should be moved around frequently in order to get a uniform inspection of carcasses. There is a vast difference between the inspection in the Corn Belt of the Midwest as compared to the South, the West, or the Eastern districts. Another suggestion was that the military be permitted to pay a dollar or two more for Federally-inspected meat. Also, that the State inspectors' record should be taken and the meat from other slaughter houses should be included in the military buying program. This would help eliminate the black market and there would be a smaller set-aside order necessary for the military.

The question of weighing cattle and hogs at farm sales and auction sales is still in existence. When farmers, 10 or 15 miles from town or a scales, hold an auction, it is utterly impractical and, in some cases, impossible to weigh these animals. The ceiling price on feeder hogs should be eliminated up to 180 pounds. This will permit the

farmer to buy these light hogs, to which he may feed his wet corn and thus produce more pork.

Everyone I contacted was bitterly opposed to the Government taking over the packing and meat industry. Such a move would certainly not produce more meat.

I am sending these suggestions to your office, the War Food Administration, and the O. P. A., in the hopes that you may consider them constructive and will, in the future, take the advice of the men in the meat industry, which includes the growers, the feeders, and the slaughterers of live animals.

The Congress set up these committees in order to give the Government agencies the proper advice. I am sure, Sir, that you will agree that their considered judgment and advice in the past has not been followed.

I understand that an important meeting is being held this week between the Government agencies and the men who grow, feed, and slaughter live animals. I am hopeful that your office will see fit to take the considered judgment and advice of these men who know the answers to the problems of producing meat.

Yours very truly,

A. L. MILLER,
Member of Congress, Fourth District, Nebraska.

The Fight Against Farmer Cooperatives

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. CANNON of Missouri. Mr. Speaker, under leave granted I desire to insert in the RECORD a statement to the Missouri delegation in Congress by F. V. Heinkel, president of the Missouri Farmers' Association, as follows:

MISSOURI FARMERS ASSOCIATION, INC.,
Columbia, Mo., April 3, 1945.

To Missouri Congressmen and United States Senators:

Certain misguided people have been waging a vicious attack upon cooperatives, chiefly through disseminating misinformation in a wholesale manner. We feel sure that Missouri Congressmen and Senators have received their share of this propaganda and, since we anticipate that questions about cooperatives will be raised in Congress from time to time, we are anxious that Missouri Congressmen and Senators have the facts.

Missouri is one of the leading States in farmer cooperative activities. There are no accurate figures, so far as we know, which show how many Missouri farmers participate in cooperative activities of one kind or another, but we estimate the number at around 200,000 of the State's 250,000 farmers.

The Farm Credit Administration, for example, estimates that 173,000 farmers are engaged in cooperative marketing and purchasing in Missouri. Another 153,000 belong to mutual fire insurance companies. There are 86,000 members of the Missouri Farmers Association. Thousands more belong to milk marketing cooperatives in the Kansas City, St. Joseph, and St. Louis milksheds, and to the Missouri Farm Bureau Federation. Another 64,700 belong to one or another of the R. E. A.'s 38 cooperatives, while no one knows how many operate their own telephone systems. Obviously there are some duplications—some farmers belong to more than one cooperative—but it would seem reasonable that at least 200,000 Missouri farmers are cooperators.

What is the objective of these cooperatives in Missouri? They are organized for the purpose of increasing the farm income. And what do farmers do with this increased income? They spend it in town. They use this income to clothe their children, to pay dentists' bills, to buy hardware, lumber, and farm implements, to pay taxes, and to maintain their schools and churches. Wide-awake businessmen in Missouri towns have observed this, and that's why most rural businessmen approve of farmer cooperatives. In numerous towns businessmen have helped organize and finance M. F. A. cooperatives, and there are businessmen and bankers who own farms who are members of our various boards of directors.

The enemies of farmer cooperatives—and, frankly, we believe most of them are uninformed and have been misled—make certain charges. They are saying blandly that farmer cooperatives pay no taxes, that they go "scot free," as they put it. And they charge that the Federal Government has been giving cooperatives special privileges; they say the various banks for cooperatives lend cooperatives money at very low rates of interest and without security. Such charges are false.

The St. Louis Bank for Cooperatives, with which we in Missouri are the most familiar, charges 4-percent interest on facility loans, 2½ percent on operating-capital loans, and 1½ percent on short-term commodity loans. This bank secures its loans with mortgages, and will not lend money without ample security. If we found fault with it, it would be on the grounds that it is too conservative. The truth is, M. F. A. cooperatives can very often, and do, borrow money from local banks on more favorable terms and with interest rates just as low as the bank for cooperatives. It is true, however, that the bank for cooperatives, having been established for this special purpose, understands cooperative problems and can usually be more helpful to cooperatives for that reason than other banks. For your information, also, the St. Louis Bank for Cooperatives during its 10 years of service has never lost a cent in principal or interest on any loans made to M. F. A. cooperatives, and we have borrowed millions of dollars from them.

Also for your information, we of the Missouri Farmers' Association feel that the entire Farm Credit Administration is the finest thing Congress ever provided for agriculture. It is founded upon the principle that it is a proper function of the Government to help people to help themselves. We believe in this principle, and that's why we find no fault with the Federal Deposit Insurance Corporation which Congress established to help banks, or with the Reconstruction Finance Corporation to help business.

And cooperatives do pay taxes. They pay every single kind of tax that all other business concerns pay except income taxes. Some of them even pay income taxes, preferring to do so in order that they may be free to do business with all comers rather than being restricted to doing 85 percent or more of their business with farmers. In 1913 Congress exempted farmer cooperatives which comply with the requirements from payment of income taxes because agriculture was suffering from economic ills, and Congress knew that only through cooperatives could farmers help themselves economically. The truth is that farmers as a class pay more taxes than any other in America because they have no opportunity to pass on the burden in their prices or wages as other classes do.

But a recent court decision (*United Cooperatives, Inc.* v. *Commissioner*, 4 T. C. No. 12, decided Sept. 29, 1944) indicates that even without the specific exemption, cooperatives, or any other kind of business whose bylaws require the allocation of savings and payment of same to their patrons, may deduct such patronage refunds from gross income, and need not include them in taxable income. This is just, because any savings a cooperative makes do not belong to the cooperative—they belong to the patrons, and the patrons do pay income taxes on the money they receive.

Profits made by a privately owned business, on the other hand, are profits which belong to the corporation, and if and when they are disbursed, they are paid to a select few who own the stock. These profits, or overcharges, are divided up among stockholders on the basis of stock ownership. None of the money is ever paid to customers, except they be stockholders.

Cooperatives must keep extensive and exact records, since the law requires them to treat all patrons alike. Any savings, or overcharges, are allocated to the patrons on the basis of patronage. Any privately owned business, according to the court decision mentioned, could conceivably do the same. This being, so, where is the inequality that our enemies speak of?

I should like to invite your attention to the fact that when the Nation was young farmers were self-sufficient and they were also much nearer the consumer than they are today. They produced their own cream, manufactured it into butter, and sold it in town. They butchered and cured their own meat and marketed it. In selling their produce, meats, vegetables, and fruits, they reached the consumers directly through established markets in the cities and by peddling their products from house to house. They also produced their own farm power and the fuel for that power. They even made their own tools and farming implements.

Finally, entrepreneurs appeared on the scene. Some took the farmers' poultry, cream, grain, and other processing and marketing away from them. Others manufactured his farm implements. Tractors and trucks have been replacing the farm power, and oil companies have been furnishing fuel for this power. The farmer has at last been left with only one function—production, and as a result he has been maneuvered into a position where he is compelled to sell at wholesale and buy at retail. He has had to accept whatever price is offered for his products, less freight to market, and to pay whatever price is asked for farm supplies plus freight. No other business in America could withstand such an economic onslaught as the farmer has been subjected to during the past 25 years.

I feel that this is one reason why Congress provided the Farm Credit Administration and the tax exemption, to help the farmer to help himself out of economic doldrums into which he has sunken. Moreover, while it is true that farm income is now the highest on record, according to I. W. Duggan, Governor of F. C. A., the rural population is 25 percent of the total population, and at this time receives only 11 percent of the national income. So it is clear that agriculture is by no means out of the woods yet, and will probably face an economic catastrophe after the war.

Because farmers are now a minority group it will be difficult to obtain a high price level for their products in the future, however strongly they might organize themselves.

Organized business and labor and the resistance of the more numerous consumers will prevent it. Hence, the only way left for farmers to increase their income is to extend their farming enterprise upward, vertically, and recoup some of the margins lost to them in processing and marketing. That's why during the past few years farmers have been acquiring feed mills and oil refineries, and creameries and milk plants of their own. These functions are, as mentioned, historically a part of farming and it is perfectly legitimate for them to make such acquisitions.

The invasion of this sacred field of the monopolies and big businesses has seemingly frightened some people and, I think, unduly so. We of the M. F. A. remember that when we began organizing and establishing farmers exchanges in Missouri towns shortly after 1914 local merchants became alarmed and waged war upon us. They had visions of farmers taking over virtually every business in town. But businessmen in Missouri towns have been living alongside M. F. A. cooperatives for 31 years now and the world hasn't come to an end. The same thing will happen in the processing field.

As mentioned previously, hundreds of businessmen in Missouri towns are friends of M. F. A. cooperatives, and for selfish reasons. Cooperatives put money into farmers' pockets, and farmers spend this money in town, and in cities like St. Louis and Kansas City and St. Joseph. It is axiomatic that when farmers have money to spend the whole country is prosperous, and I know that thousands of businessmen, large and small, realize this truth.

The M. F. A. is strictly a self-help organization. We have never received one cent from the Government. We have never accepted, nor been offered for that matter, one gratuity of any kind. If we have been successful thus far, it has been the result of downright hard work—this, plus the tears, heartaches, sweat and toil and sacrifices of thousands of Missouri farmers and their families.

We repeat: The M. F. A.'s cooperatives exist for only one purpose—to raise the level of living of farm families to a higher plane. Upon this premise we rest our case, and we will welcome any inquiry any Congressman or Senator may care to make, and we invite you to pay us a visit and see Missouri cooperatives at first hand for yourselves.

Renegotiation Returns $5,800,000,000 To Treasury in 2 Years

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 22, 1945

Mr. CASE of South Dakota. Mr. Speaker, today the chairman of the War Contracts Price Adjustment Board, Col. Maurice Hirsch, is announcing the actual cash results from the renegotiation of excessive profits in war contracts for 1942 and 1943. The renegotiation of the 1944 contracts has just begun.

The total amount thus far refunded or agreed to be refunded to the Treasury amounts to more than $5,802,452,000. The work for 1942 is practically completed; about 15 percent of 1945 is still in process.

And Colonel Hirsch states that vast additional savings, but impossible to estimate accurately, have come from the operation of the law in the reduced prices on subsequent contracts, or even from reduced prices in the portions of contracts to be performed after renegotiation had demonstrated proper pricing. As the one who introduced the word "renegotiation" into Federal legislation dealing with war contracts, naturally I am gratified with this evidence that Congress has done something toward controlling excessive profits in this war.

Under Secretary of War Robert P. Patterson, in discussing the matter with me, yesterday stated that the savings in forward pricing would probably equal or exceed the direct refunds. Mr. Patterson further remarked, that were it not for the renegotiation statute, he would not want to handle procurement for the Army in this war. He felt that the risks to the Government in the procurement of new articles from firms without production experience or price history would be too great.

Soon the question will be before the Congress of extending the renegotiation statute to the end of the calendar year 1945, to accomplish which I introduced a bill in the latter part of the Seventy-eighth Congress, and reintroduced as H. R. 376, in this Seventy-ninth Congress. And, I believe, similar bills have been introduced by others. The results accomplished and the state of the war justify extension of the act to the end of the calendar year at least. I hope that the Committee on Ways and Means will consider and report the appropriate legislation promptly.

Renovating Congress

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. CANNON of Missouri. Mr. Speaker, with the permission of the House, I desire to include in the RECORD a timely and pertinent editorial from Labor on the proposal to streamline Congress, as follows:

LET'S LOOK BEFORE WE LEAP

A joint committee of House and Senate, headed by Senator BOB LA FOLLETTE, continues to receive suggestions for streamlining Congress. Senator FULBRIGHT, of Arkansas, would like an arrangement by which Congress, when it finds itself at cross purposes with the President, could call an election and give the voters a chance to decide the issue.

As a rule Labor is in favor of enlarging the jurisdiction of the people. It has been championing the initiative and referendum for many years. As everyone knows that system enables the people to write their own laws and to block obnoxious laws which may be passed by State legislatures.

Perhaps the initiative and referendum would work on a national scale. It would be worth trying. However, Senator FULBRIGHT'S suggestion is entirely different.

He's evidently thinking of the British parliamentary system, which makes the legislative branch of government supreme. It has its good points but also its bad points. Down through the years it hasn't worked any better than our own system.

There is a good deal in getting acquainted with a system of government. The people of a country learn how to secure results. The British and the Canadians have done this. We know a little something about managing our system. We shouldn't make radical changes without mature reflection and until we are sure we have a better system.

Labor still believes that the best way to streamline Congress is to elect the right kind of men to House and Senate. They'll find a way to enact desirable legislation.

Keeping Pay Rolls in Seattle

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. DE LACY. Mr. Speaker, I desire to call attention to an action of the Pacific Telephone & Telegraph Co., in Seattle, Wash., in my congressional district, which does injury to that community, to its industry, and its workers.

This company derives its profits from the people of Seattle. In fact, before the war, the Seattle telephone system comprised the greatest bulk of the telephone business in the State of Washington, and 75 percent of all profits came from that area.

Yet, this company has decided to take away publication of its Seattle directory from the community of which it is a part and from where its profits come to Los Angeles. This action is unsound business. And it cannot be separated from the fact that the concern which is to be given this large printing business is nonunion.

We are proud of our labor relations in the Pacific Northwest, of the degree of management-labor cooperation we have achieved, or our lack of major strikes and controversies to disrupt our great record of war production. It is inevitable that the selection of an open-shop firm will lead to labor difficulties.

It is with regret that I report this situation within my community, but it is with hope that the Pacific Telephone Co. will conduct itself in the traditions of that great city and correct this mistake.

I would like to include, as part of my remarks, an editorial from the March 30 edition of the Washington Teamster, official publication of the Joint Council of Teamsters, which presents this matter in an excellent manner:

TIME TO FIGHT FOR PAY ROLLS

It is of first importance to all of us to keep Northwest pay rolls in the Northwest, Seattle pay rolls in Seattle. Any concern that does business in any northwestern community has a duty to the people of that district, the duty to help safeguard the business in which it shares. Any firm that fails, or refuses, to recognize that duty is unworthy of cooperation.

Printers of the city of Seattle are protesting now against the decision of the Pacific Telephone & Telegraph Co. to transfer the publication of its Seattle directory from this community to Los Angeles. A great many Seattle printers and their families have depended for years upon this pay roll. They, and Seattle business, have a right to expect the telephone company to keep that pay roll in Seattle.

By the arbitrary transfer of this Seattle business and pay roll to Los Angeles, the telephone monopoly strikes a blow at the largest Northwest city from which it draws revenues and profits. Being a monopoly public-service company, it may not care about civic duty. Perhaps it thinks it is big enough to do as it pleases.

This is not a problem that concerns the printers and their families alone; it should be the concern of all civic-minded Seattle business leaders. Certainly it is in the interest of Seattle's welfare to keep this city financially healthy, to see that its people are employed and prosperous. Looking ahead to the post-war period, Seattle should be aroused at the danger of losing such pay rolls.

Seattle needs, Seattle must have, more and more people, and more and more steady pay rolls in the future. The action of the Pacific Telephone & Telegraph Co. in this instance is a heavy blow to the Northwest, not alone to Seattle. It is not to be tolerated.

The fact that the Pacific company has transferred this large printing business to a nonunion concern in Los Angeles adds to our concern. We know that out of such unfair procedure, labor trouble inevitably develops.

As to World Peace

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. HÉBERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Item:

AS TO WORLD PEACE

We are happy to oblige the New Orleans League of Women Voters by summarizing our views on world peace and kindred subjects.

The Item is opposed to world wars and favors permanent peace for all mankind everywhere. We believe that every possible effort should be made to achieve these objects. Certainly the best way to do this is to form international organizations. To the best of their ability these should eliminate the causes of war, settle disputes, punish offenders, and use force when necessary.

We are tired of our being idealistic in a realistic world. We are impatient with rosy promises of all sorts of good things for future delivery. We are sick of the Government's policy of buying alleged good will abroad with vast outlays of credits and materials. We are nauseated and frightened by any prospect of post-war lend-lease or something similar under another name.

We are happy to restate our opinion as to our reason for being in this war. We are fighting because we were attacked. We would have been forced into the war subsequently anyway, because of the ambition of the Germans and the Japanese to conquer and dominate the world.

We fight them to avoid subjugation. All of our allies are fighting for that same reason. Every one of them is fighting primarily for itself. So are we. The better we can work together the more advantageous it will be for all.

What we want is for our Government to be as tough, practical, and realistic as the people with whom we are dealing. We admire charity and idealism, but want them combined with frugality and practicality. We are tired of Uncle Sam doubling for Santa Claus. The time to stop being a sucker is now. Our people should be told the truth instead of being misled by propaganda. The path to world peace is full of pitfalls and booby-traps. But it must be trodden. The alert will arrive nearer the destination at less cost to themselves.

First for Freedom

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. DE LACY. Mr. Speaker, anti-Semitism is a crime against American democracy. It is the most important weapon in the Hitler propaganda arsenal against democracy. We have Hitler's own word for that, and I quote him:

Anti-Semitism is a useful revolutionary expediency. My Jews are a valuable hostage given to me by democracy. Anti-Semitic propaganda in all countries is an almost indispensable medium for the extension of our political campaign. You will see how little time we shall need in order to upset the ideas and the criteria of the whole world, simply and purely by attacking Judaism. It is beyond question the most important weapon in my propaganda arsenal, and almost everywhere of deadly efficiency. (Quoted in Hermann Rauschning's book, Hitler Speaks.)

As Hitler, the master anti-Semite, makes amply clear, those who use anti-Semitism strike at all minorities, at all democracy, at the very heart of America.

One of the basest canards of the anti-Semites is the lie that Jewish soldiers are not fighting and dying in this war. I have seen several examples of the gutter verse which is circulated to perpetuate this vile Hitler lie.

It is with this in mind that I am happy and proud to include, as part of my remarks, a survey made by Mr. Bernard Postal, director of B'nai B'rith information entitled "First for Freedom."

Certainly Mr. Postal would agree that Protestants and Catholics and men of all races and of all possible national origin have as many "firsts" to their credit, yet I believe this is not only an answer to the anti-Semites but a document worthy of the attention of every Member of Congress:

FIRST FOR FREEDOM

(By Bernard Postal, director of B'nai B'rith information)

Because the spirit of freedom and liberty for all is an integral part of the religious and cultural tradition of Israel, the Jewish people is probably the only one that has converted a historic event associated with human freedom into an annular major religious festival. Passover, which is known as the Festival of Freedom, not only commemorates the liberation of the Jews from Egyptian bondage, but is symbolic of the Jew's age-old defense of the rights and liberties of all men.

Today, when millions of Jewish men and women in uniform are fighting in the armies of the United Nations to free all peoples from oppression and slavery, it is appropriate to record the list of "firsts" credited to Jewish men and women in the armed forces of the United States to date in World War No. 2. This list of those who have been first for freedom is, of course, but a preliminary compilation, based on material collected only by this writer.

First to raise the American flag on pre-war Japanese territory was Lt. Col. Melvin Krulewitch, of New York City, who hoisted the Stars and Stripes on Namur Island during the invasion of the Marshalls.

First American penetration of German soil was made by Third Armored Division commanded by Maj. Gen. Maurice Rose, of Denver.

First three Americans to enter Aachen, the initial German city captured by the Americans, included Pvt. Max Fingelstein, of Brooklyn.

First American assault boat to hit the shore of France on D-day was commanded by Lt. Abe Condiotti, of Brooklyn.

First Nazi plane shot down for Uncle Sam is credited to Lt. William S. Beck, of Nashville, Tenn.

First American Red Cross nurse killed in World War No. 2 was Esther Richards, of San Francisco, who died of wounds received at Anzio beachhead.

First American Army nurse killed on western front was Lt. Frances Slanger, of Boston, who died of wounds received in Belgium. The Lieutenant Frances Slanger Chapter of the B'nai B'rith Young Women in Washington is named in her honor.

First B-29 raid on Japan included bombers on which Capt. William C. Goldstein, Indianapolis; Sgt. Morris Kramer, Pittsburgh; and Capt. Stephen Silverman, of Boston, served.

First American unit to break through to relieve the trapped American garrison in Bastogne was a tank unit commanded by Col. Creyton Abrams, of West Newton, Mass.

First American enlisted man to receive the Purple Heart in continental Europe was Sgt. Irving Allen, of Union City, N. J.

First American officer killed in the Philippines was Lt. Henry D. Mark, of Los Angeles.

First American killed in action on North American continent was Pvt. Joseph Sharp, of Philadelphia, who died at Dutch Harbor during a Jap air raid.

First American to kill a Jap in the Burma campaign was Corp. Werner Katz, of New York, a former refugee.

First crew of Army airmen to land in Aleutians included Lt. Harold Weisman, of the Bronx.

First man to bomb Rome was Lt. Sidney D. Gerstenfeld, of New York, who released the first bombs to fall on the Italian capital.

First American League baseball player to joint the armed forces was Hank Greenberg, now a captain, of the Detroit Tigers.

First all-American air raid on Europe, over occupied Holland on July 4, 1942, was made by squadron in which Sgt. Chester Davis, of New York, served as a gunner.

First four-medal winner in American Army in World War No. 2 was Lt. Morris Berenson, of Garfield, N. J.

First American troops to enter Algiers were led by Lt. Col. A. H. Rosenberg.

First member of the WAVE's to be killed in line of duty was Elizabeth Korensky, of Philadelphia, after whom the Elizabeth Korensky B'nai B'rith women's unit in Philadelphia has been named.

First American tank to enter Oran during invasion of north Africa was led by Corp. Bernard J. Kessel, of New York.

First American air raid on Rumanian oil fields at Ploesti was made by squadron in which Sgt. Robert Kessler, alumnus of A. Z. A., B'nai B'rith organization for high-school boys, from McKeesport, Pa., served as radio operator and gunner.

First man killed in action from Minneapolis was Ensign Ira Weil Jeffery, a member of B'nai B'rith, who died at Pearl Harbor.

First American flag planted in the city of Algiers at the start of the north African invasion was carried by Corp. Hyman I. Shakin, of New York.

First soldier from Delaware killed in war was Sgt. Harry Fineman, of Wilmington, Del., who died in the defense of Corregidor.

First war casualty among membership of the American Bar Association was Ensign Robert L. Leopold, of Louisville, Ky., who died at Pearl Harbor.

First Japanese battleship sunk in the war was the Haruna, sent to the bottom by plane piloted by Capt. Colin Kelly whose bombardier was Sgt. Meyer Levin.

First man from Connecticut to be killed in the war was Kenneth H. Messenger, of Bridgeport, who died in the Philippines.

First Gold Star Mother of World War No. 2 was Mrs. Gertrude Kram, of New York, whose son, Seaman Leonard Kram, was killed in action at sea.

First American soldier brought home for burial on American soil was United States Marine Sgt. Herbert Keilson, of Long Island, who was killed in the raid on the Gilbert and Marshall Islands.

First two war deaths from Philadelphia were Pvt. Jack Feldman, an alumnus of A. Z. A., and Corp. Theodore J. Lewis, both of whom gave up their lives at Pearl Harbor.

First alumnus of City College killed in the war was Lt. Monroe Franklin, of New York, who died in the Philippines.

First American soldier to land on Australian soil with the American Expeditionary Force was Pvt. Ernest Yurman, of Brooklyn.

First American soldier to die on the Australian front was Lt. Milton Kaslow, of Brooklyn.

First boy from Newark, N. J., to lose his life in the war was Pvt. Louis Schleifer who was killed at Pearl Harbor.

First casualty from Hudson County, N. J., was Pvt. Joseph Guttman, Union City, N. J., who was killed in the early fighting in the Philippines.

First man from New Brunswick, N. J., to die in the war was Corp. Carl Schwartz, killed in the Philippines.

First war casualty from Hazleton, Pa., was Sgt. Harry Cohn, alumnus of A. Z. A., who was killed in the Southwest Pacific.

Filipino Bolo Brigades

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. STEFAN. Mr. Speaker, the high rate of Japanese casualties in the Philippines—over 308,000 since the Leyte landings—is directly attributable to the efficient cooperation of Filipino guerrillas with all branches of the American armed forces.

During the 3 years of Japanese occupation, the Filipino "bolo brigades" accounted for numerous unlisted Japanese casualties while breaking down the morale of the survivors. In the same period of trial, the Filipino guerrillas were in frequent communication with General MacArthur by means of American submarines. They supplied information which led to the sinking of Japanese ships and to the bombing of strategically important Japanese military installations.

This exchange of intelligence was augmented after the arrival of American ground forces on Leyte, Samar, Mindoro, and Luzon. It has been maintained in the operations of Mindanao, Panay, Cebu, and Negros.

One of the most recent instances of Filipino-American cooperation against the Japanese has come to light in the joint campaign to strike at enemy command posts in the central Philippines, Filipino guerrillas informed Thirteenth U. S. A. A. F. bombers of vital enemy objectives. Filipino guerrillas rode with American pilots at low levels to direct them to specific sites. The effectiveness of this combined operation caused Brig. Gen. Paul Wurtsmith of the Thirteenth U. S. A. A. F. to say:

It is no exaggeration to say that the most unpromising job in the Jap Army in the Philippines was being a staff officer in the Visayas. We gave them every attention we possibly could.

The American people are aware of the vast extent of the participation of Filipino guerrillas in our common battle against the common foe. The length of time required to liberate the Philippines largely depends upon the continuation and acceleration of this splendid human relationship within the sphere of military action.

An International Office of Education To Help Train Citizens To Live in a World at Peace

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. MUNDT. Mr. Speaker, I have today introduced a resolution which if enacted will place the House of Representatives on record in support of participation by the Government of the United States in the organization of an international office of education for the purpose of promoting a better mutual understanding among citizens throughout the world as an essential in the preservation of a just and lasting peace.

Since the resolution is not long, I am incorporating its text in the RECORD at this point.

Whereas the achievement of a peaceful and orderly life among the peoples of the world has become critical as a result of the war;

Whereas the future peace and security of the American and of all other peoples rest upon the achievement of mutual understanding among the peoples of the world, the universal application of the principles of the Golden Rule, the application of reason and knowledge to the solution of domestic as well as international problems, and effective education at all levels;

Whereas the Axis countries have pursued a deliberate policy of destroying the technical, professional, and teaching personnel of the countries they have conquered and have encouraged hatred and misunderstanding between nations, peoples, and cultural groups;

Whereas these circumstances present a persisting problem which, if not solved, will result in the perpetuation of conditions of life most likely to cause peoples to resort to violence and war; and

Whereas it is essential to collaborate with other nations to promote educational advancement and at the same time to direct education toward the achievement of mutual understanding among the nations: Now, therefore, be it

Resolved, That the House of Representatives of the United States urges the participation by the Government of the United States in the organization of an international office of education by the nations of the world for the purpose of advising together and to consider problems of international educational and cultural relations throughout the world and more particularly to organize a permanent international agency to promote educational and cultural relations, the exchange of students and scholars, and the encouragement within each country of friendly relations among nations, peoples, and cultural groups;

Provided, however, That such agency shall not interfere with educational systems or programs within the several nations or their administration.

Mr. Speaker, international political organizations and an international police force can be developed to enforce peace for a time but in the long run a lasting peace must be reenforced by enlightened mutual understandings, appropriate concepts of equity and justice, and by the application of the principles of Christian brotherhood. Education and religious training are therefore vital factors if peace is to rest on a firm foundation and if selfishness, greed, ambition, and disregard for the rights of others are not again to plunge the world into war at some awful future date. My resolution proposes, simply, to create an agency for the purpose of facilitating the development of appropriate cultural, moral, spiritual, and educational concepts among the peoples of the world.

It is important that statesmen and military leaders work together to prevent war and to that end on January 6, 1943, I introduced in the House the first resolution (H. J. Res. 28) designed to bring together such a conference in this country on a strictly nonpartisan basis. It is equally important that the world's educators work together to set in motion training programs which will promote peace. Such an international office of education as I propose, Mr. Speaker, would do precisely that and nothing more. It is something to which the San Francisco Conference should give attention and if it fails to do so another and

separate United Nations conference should be called for that purpose.

If school children throughout the world can be taught the virtues of human decency and the idealism expressed in the Atlantic Charter, the Ten Commandments, the American Bill of Rights, and other great patterns for correct human behavior instead of being trained to suspect their neighbors and to worship their States, it will give peace a sound foundation supported by church and school and thus make easier the success of international courts of justice and world-wide leagues of peace.

Such an agency as I conceive, Mr. Speaker, should form a basic part of the functioning of any world organization for the preservation of peace which may grow out of the sad sacrifices of this war. Whether such an organization is a closely knit assembly of nations or a loosely drawn association, the needs and the opportunities for an International Office of Education are equally great.

On January 24 of this year I introduced H. R. 1740 for the purpose of providing exchange scholarships among this country and the pan-American republics for use by the student teachers of the Western Hemisphere. The resolution I have today introduced carries this same philosophy another great step forward and expands it to include more than exchange students. I have held several conferences with representatives of the State Department and of the Office of Inter-American Coordinator on these matters, and it is expected that hearings will soon be started to consider H. R. 1740. I hope that the same or subsequent hearings before our Committee on Foreign Affairs will also consider my proposal for advocating the establishment of an International Office of Education.

Mr. Speaker, for a time I was myself a teacher in the public schools of South Dakota both at the secondary and at the college levels. I know from personal experience that the force of education is impossible to overestimate Let us resolve to direct this force insofar as possible throughout the world to the ways of peace and to the activities and attitudes which make peace possible and permanent.

A group known as the American Association for an International Office of Education has for some time been working on the development of such an office. Its president is Dr. Harlow Shapley, of Harvard College Observatory, and its secretary is Miss Mary Stewart French, of New York City. I have had several conferences with Miss French, and she has left with me a list of organizations interested in the development of some type of organized international effort in the field of education. For the information of the Congress and the country, I am including this list as a part of these remarks. The list follows herewith:

M. S. Cartwright, American Association for Adult Education, 525 West One Hundred and Twentieth Street, New York, N. Y.

Roscoe L. West, American Association of Teachers Colleges, State Teachers College, Trenton, N. J.

Katherine McHale, American Association of University Women, 1634 Eye Street NW., Washington, D. C.; alternate: Esther Caukins Brunauer.

Mrs. Marguerite Ann Stewart, American Council, Institute of Pacific Relations, Inc., 129 East Fifty-second Street, New York, N. Y.; alternate: Bruno Lasker.

Waldo G. Leland, American Council of Learned Societies, 1219 Sixteenth Street NW., Washington, D. C.

David Segel, American Educational Research Association, United States Office of Education, Washington, D. C.

Bess Goodykoontz, observer, United States Office of Education.

John Patterson, observer, United States Office of Education.

C. O. Arndt, observer, United States Office of Education.

Harry M. Lydenberg, director, Board of International Relations of American Library Association, study room 251, Library of Congress Annex, Washington, D. C.

Guy E. Snavely, executive director, Association of American Colleges, 19 West Forty-fourth Street, New York, N. Y.

Rayford W. Logan, Association of Colleges and Secondary Schools for Negroes, Howard University, Washington, D. C.

John Childs, chairman, Commission on Post-war Planning of American Federation of Teachers, Teachers College, Columbia University, New York.

Donald DuShane, Commission on Defense of Demrocracy Through Education of the National Education Association, 1201 Sixteenth Street NW., Washington, D. C.

Ben M. Cherrington, Committee on International Relations of National Education Association, University of Denver, Denver, Colo.

Pault H. Sheats, director, New Tools for Learning, Department of Adult Education of National Education Association, 280 Madison Avenue, New York.

Eva G. Pinkston, Department of Elementary School Principals of National Education Association, 1201 Sixteenth Street, NW., Washington, D. C.

Paul J. Leonard, Department of Supervision and Curriculum Development of National Education Association, Office of Price Administration, Washington, D. C. Alternate: Harold Fox.

Herbert S. Houston, Institute for Advancement of Visual Education and Vocational Training, 70 Fifth Avenue, New York, N. Y.

Stephen Duggan, Institute of International Education, 2 West Forty-fifth Street, New York, N. Y.; alternate: Edgar Fisher.

Selma M. Borchardt, World Federation of Education Associations—American Federation of Teachers, Homer Building, Washington, D. C.

Joseph F. Landis, American Federation of Teachers, 506 South Wabash Avenue, Chicago, Ill.

Kenneth Holland, observer, Office of Coordinator of Inter-American Affairs, Commerce Building, Fourteenth Street and Constitution Avenue NW., Washington, D. C.

James Marshall, American Association for an International Office for Education, Inc., 135 West Forty-fourth Street, New York, N. Y.

Ralph Turner, observer, Division of Science, Education, and Art, Department of State, Washington, D. C.

Charles Thompson, observer, Division of Science, Education, and Art, Department of State, Washington, D. C.

John W. Studebaker, observer, Commissioner of Education, United States Office of Education, Washington, D. C.

Robert H. Fife, Modern Language Association, Philosophy Hall, Columbia University, New York, N. Y.

Paul R. Hanna, Commission on Resources and Education of National Education and Progressive Education Associations, School of Education, Stanford University, California.

Mary E. Leeper, observer, Association of Childhood Education, 1201 Sixteenth Street NW., Washington, D. C.

Roy G. Ross, general secretary, International Council on Religious Education, 203 North Wabash Avenue, Chicago, Ill.

Henry Gratton Doyle, Modern Language Association of America, study room 128, Library of Congress Annex, Washington, D. C.

Paul Elicker, National Association of Secondary School Principals, 1201 Sixteenth Street NW., Washington, D. C.

Monsig. George Johnson, National Catholic Educational Association, 1312 Massachusetts Avenue, Washington, D. C.; alternate: James E. Cummings.

Harry A. Domincovich, National Council of Teachers of English, Germantown Friends School, Coulter Street, Philadelphia, Pa.

I. James Quillen, National Council for the Social Studies, School of Education, Stanford University, California.

Erling Hunt, National Council for the Social Studies, Teachers College, Columbia University, New York, N. Y.

William G. Carr, National Education Association, 1201 Sixteenth Street NW., Washington, D. C.

Vinal H. Tibbetts, Progressive Education Association, 221 West Fifty-seventh Street, New York, N. Y.

George F. Zook, American Council on Education, 744 Jackson Place, Washington, D. C.

Mrs. Alice Ewen, observer, Association of Childhood Education, 1201 Sixteenth Street NW., Washington, D. C.

Our Latin Heroes

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following article which appeared recently in the Los Angeles Times:

OUR LATIN HEROES

(By Frank Finch)

You have only to scan the battle casualty lists that appear in the daily newspapers of southern California to appreciate the magnificent contribution being made in this war by our fighting men of Mexican descent. Day in and day out such Latin names as Rios, Marquez, Castellano, Luna, Guerrero, Garcia, Calderon, Macias, Valles, Ortiz, Olivera, Vasquez, de la Cruz, and Chavez are liberally sprinkled through the ever-lengthening tabulations of dead, wounded, and missing.

Their blood has stained the beaches at Iwo Jima and Saipan and mixed with the mud of Aachen. They have shot Japs on Bataan and bombed Berliners. They performed countless deeds of derring-do in Burma, Tunisia, Sicily, and France.

IN TOUGH OUTFITS

Many are with our toughest fighting units—the Marine Raiders, Army Rangers, and paratroops—outfits in which casualties are inordinately high. Others have bravely manned every conceivable kind of fighting ship afloat.

Actual statistics are not available from the War and Navy Departments, but a well-informed Los Angeles Mexican estimates that there are 200,000 young men of Mexican descent now wearing Uncle Sam's uniform. Some 100,000 of these warriors are from California, with the Southland claiming a substantial majority of that number. Many Mexican nationals have joined the United States service, so keen are they to keep the torch of liberty aflame.

AN EXAMPLE

A striking illustration of the sacrifices they are making is to be found in the casualty list printed in the Times March 22. This list bore the names of 133 wounded soldiers from southern California, names like Dudley, Standerfer, Goldberg, Barnum, Wheeler, and Mitchell. But it also contained 34 names like Obregon, Tapia, Contreras, Quesada, and Dominguez—better than 25 percent of the total number listed.

Out of curiosity I have been watching the official lists of decorations for the last few days. During that time I noted that Staff Sgt. Oscar J. Alvarez, Sgt. Almundo A. Torrez, and Pvt. (1st cl.) Pedro Hernandez had been awarded the Silver Star, the Nation's fifth highest decoration.

OTHER DECORATIONS

Sgt. Jesus M. Luque, Pvt. (1st cl.) Rudolph Rodriquez, and Pvt. Pedro M. Ramirez in the meanwhile have won the Bronze Star, and Technical Sgt. Daniel G. Leyva has had the Distinguished Flying Cross pinned on his tunic. The French Government recently awarded the Croix de Guerre with Palm to Sgt. Edward M. Figueroa, Staff Sgt. Faustino Bandurrago, Sgt. Albert M. Garcia, Sgt. Pedro Manriquez, and Corp. Eusebio J. Garcia in a mass presentation ceremony. There are many others who have received recognition for heroism and bravery—some of them posthumously—but the above list will give you a faint idea of their part in the war.

SEVEN SONS

This piece would not be complete without mention of Rev. and Mrs. Francisco Nevarez, of Los Angeles, whose seven sons all volunteered for Navy duty. Samuel is in the Marines, while Daniel, Frank, Felix, Manuel, Gilbert, and Encarnacion wear the Navy blue.

A prized possession of their proud parents is this letter from Secretary of the Navy James V. Forrestal: "The splendid manner in which your seven sons have responded to the colors and the fine records they possess reflect the sense of loyalty and patriotism they have learned at home."

Black Hills of South Dakota Proposed as Permanent Home for International Peace Capital

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. MUNDT. Mr. Speaker, under leave granted me by the House, I am including in the RECORD at this point a letter of which I have sent identical copies to Senator VANDENBERG and to Representative SOL BLOOM offering the suggestion that the Black Hills of South Dakota be selected as the permanent home for the capital of the international world organization to preserve the peace which right-minded citizens everywhere are hoping will emerge from the sacrifices of this war.

The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 7, 1945.

Senator ARTHUR H. VANDENBERG,
Senate Office Building,
Washington, D. C.

DEAR ART: In addition to my suggestion concerning the international peace patrol of the air machinery to be developed at the San Francisco Conference, which I have discussed at length in the accompanying letter, I want to pass along to you this other suggestion for you to carry along to San Francisco with you in your portfolio.

The new world organization will require an international capital somewhere. I have noticed comments in the newspapers indicating that it might be relocated at Geneva or in Prague and that Mexico City is offering to make facilities available. Permit me to add this additional suggestion.

This time let's work to bring the international capital to the Western Hemisphere, where we have such a long and rich tradition of international tranquillity. Let us strive to locate it in the United States, where the world has been accustomed to look successfully for unselfish international behavior and a sincere desire to preserve and perpetuate a peace which is just alike to great nations and small and which is devoid of all vicious expectations of imperialism.

Where in the United States you ask: The people of South Dakota speak with one voice in proposing that this international capital be located among the majestic mountains of the Black Hills, of South Dakota, somewhere in the vicinity of Rapid City. In this age of air travel, South Dakota's Black Hills lie near the center of the universe, equally accessible to all, and completely removed from any possible scene of international conflict or attack by land, sea, or air. In this congenial climate surrounded by the beautiful lakes and mountains of the Black Hills and cradled in an environment of peace and solemnity, the statesmen of the world should approach their labors in an area smiled upon by God and fashioned by the Creator for the greatest task of all humanity—the business of making wars impossible.

Certainly, these statesmen would be inspired and awed by the great statues on Mount Rushmore and these vast works of art would be an object lesson to the good counselors of peace that the workings of justice and of international good will are those which endure throughout eternity.

When President Calvin Coolidge spent his summer in the Black Hills he was inspired to make his historic statement, "I do not choose to run."

Here, indeed, is an environment in which the statesmen of the world can carve out a program which will demonstrate by its effectiveness that the peoples of the world have made a choice not to war again.

If opportunity presents itself, Art, I hope you will call to the attention of the proper authorities the availability of the Black Hills, of South Dakota, as a location for the international peace capital of the world.

With kindest personal regards, I am,
Cordially yours,

KARL E. MUNDT,
Member of Congress.

Young Infantry Officer Who Routed 200 Nazis Awarded Honor Medal

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. GATHINGS. Mr. Speaker, I include the following article which appeared in the Washington Evening Star on April 3, 1945:

A 23-year-old infantry officer who used his fists as well as his weapons in putting five German machine guns and many of their crewmen out of a desperate fight near Pompey, France, on September 14, posthumously has been awarded the Medal of Honor, the War Department announced today.

Apparently unwounded in the melee of fists and grenades, during which 17 members of his platoon finally joined him in routing 200 Germans, he was killed in another fight on November 16.

He was First Lt. Edgar H. Lloyd, of Blytheville, Ark., who graduated from the University of Arkansas in 1943 to go into the Three Hundred and Nineteenth Regiment of the Eightieth Infantry Division. Altogether, he and his small platoon destroyed 12 machine guns and killed more than 100 German soldiers in that bit of action in France. At that time he was a second lieutenant.

PINNED DOWN BY FIRE

Lieutenant Lloyd's company, ordered to take the German machine-gun nests, was pinned down by cross-fire 50 yards from the fortified position.

The young platoon leader ran forward alone and jumped into the first machine-gun position.

Knocking out the gunner with a single blow of his fist, he dropped a hand grenade and jumped out before it exploded, destroying the enemy weapon. He moved from one weapon to another, pinning the Germans down with accurate fire from his tommygun until he was close enough to hurl hand grenades. With unerring aim, he put four more guns out of commission.

Inspired by the valor of this one-man attack, and with deadly cross-fire eliminated by Lieutenant Lloyd's actions, Staff Sgt. William B. Humphrey, of Rochester, Ky., led 16 men in a bayonet and grenade charge. They killed and routed the rest of the enemy.

How Lieutenant Lloyd met his death in the subsequent action was not disclosed today.

The Nation's highest award "for conspicuous gallantry and intrepidity at the risk of his life above and beyond the call of duty," will be presented to the lieutenant's father, Edgar B. Lloyd, of Blytheville, Friday, at a Second Army headquarters, Memphis, Tenn.

Lieutenant Lloyd was commissioned a second lieutenant at Fort Benning, Ga., on November 9, 1943, and went overseas as a platoon leader. He was promoted to first lieutenant last October 29.

The Royal Johnson Memorial Veterans' Hospital

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. MUNDT. Mr. Speaker, as a part of these remarks I am including the text of a brief bill which I have today introduced in the House for the purpose of naming the new veterans' hospital in South Dakota, for which construction bids are now being secured, the Royal Johnson Memorial Hospital.

Many of you who are now serving in the House remember with fond recollections the great service which the late Royal C. Johnson rendered in this body for a long series of succeeding Congresses. You will remember, especially, the Trojan work he did as the first chairman of the World War Veterans' Com-

mittee, which is now so ably headed by the gentleman from Mississippi, Congressman JOHN E. RANKIN. Under the leadership of Royal Johnson, this Nation began its great construction program of veterans' hospitals.

In the Seventy-sixth Congress, when in 1939 I first introduced a bill to construct a veterans' hospital in South Dakota, my proposal carried with it the suggestion that it be named the Royal Johnson Memorial Hospital, and many colleagues spoke to me about the matter at that time saying they felt this would indeed by a fitting tribute to the untiring service which Royal Johnson, of South Dakota, rendered the veterans of the First World War.

However, approval for the building of this hospital—which has now been located in Sioux Falls—was finally covered in as part of an omnibus construction bill, so a separate act of Congress is required to officially designate it in memory of Royal Johnson. I am sure that those of you who served with Royal Johnson will join me in my efforts to have this great new facility dedicated to his memory and his service. Your support of this legislation will be deeply appreciated.

A bill to name the Veterans' Administration facility to be constructed at Sioux Falls, S. Dak., the Royal Johnson Memorial Veterans' Hospital

Be it enacted, etc., That the Veterans' Administration facility under contract for construction at Sioux Falls, S. Dak., shall be known and designated at the Royal Johnson Memorial Veterans' Hospital.

The Benefits of Irrigation

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, I want to call to the attention of the House of Representatives an address made by Charles S. Hazen, an engineer of the Bureau of Reclamation, before the Rotary Club of Whitefish, Mont., on March 12, 1945, on the subject The Benefits of Irrigation. Mr. Hazen has active charge of the investigations by the Bureau of Reclamation preliminary to the preparation of the report on the irrigation phases of the Hungry Horse project. This project was approved by the enactment of the Hungry Horse Authorization Act on June 5, 1944, which I had the honor of introducing and sponsoring before the House.

Mr. Hazen has stated very clearly the reasons why the Hungry Horse irrigation project is of major interest to Montana:

When Mr. Arnold wrote and requested me to appear before your club, he suggested as a topic the Benefits of Irrigation, and suggested some discussion of what was necessary to be done in order to secure the project here in upper Flathead Valley.

As Regional Director Banks told the Flathead Valley Citizens' Committee, the Bureau of Reclamation is not a promotion agency. We cannot force irrigation on anyone; we cannot give it to anyone; as a matter of fact, most people have to work like the devil to get it, and must be willing to contract for repayment of the reimbursable cost of their system before they get it.

Before discussing this subject, or subjects, further, I would like to say that I do not think that most people realize just how important and valuable water resources really are. When you compare them to other physical resources such as minerals or timber, only then do they take on the aspect of the true value that they really have. When you have cut off a stand of timber or worked out a mineral claim, those resources are gone, but a water resource is permanent and perpetual—it is good forever; you cannot destroy it or wear it out. Therefore each and every community should look toward the ultimate use of their just share of this perpetual source of wealth and think in terms of ultimate use of this resource. We hear time and again that the farmers in the valley do not want irrigation at this time; that may be true, but we, as a water-planning agency, would certainly be remiss in our duty if we did not work out plans for using a share of the water resources of the Flathead River and tributaries in this valley. Eventually the farmers will want irrigation, and they will be appreciative of the fact that someone had the foresight to earmark a few hundred thousand acre-feet of water for them.

Originally any group that wanted a project contacted the Bureau and made a formal request for an investigation and a report. If found feasible then Congress was asked to authorize the project. If repayment contract negotiations were successful then Congress was asked for money with which to build the project works. Nowadays things are different. Instead of each project being planned separately and individually, without regard to its relationship to other developments, it is the general policy of all of the agencies dealing with water to work out the complete plan of ultimate development for an entire river basin. Thus all projects are studied collectively as well as individually, and a plan for over-all development is evolved. In this manner all interests are safeguarded. Hence, many projects are being investigated in advance of a concerted demand for such investigation, in order that a reservation for future use of water will be assured. As far as the Hungry Horse project is concerned, it has been authorized for construction, and there has been congressional authorization for such appropriations as may be necessary to carry out the purposes of the authorizing act. This project consists of two units: a storage-and-power unit and an irrigation unit. Construction of the first unit may proceed as appropriations are made available. However, for the irrigation unit it will be necessary to present a feasibility finding and report before any appropriations will be made for it. Even then no construction will be done before a repayment contract from the water users is assured. This repayment is based on a 40-year period, without interest. That is about the size of the legal and financial aspects of what must be done to secure final congressional approval and action; of course, there still remains the educational and promotional work that must be done by private local interests. The Flathead Valley committee has made a fine start on this program, but there remains much hard work to be done.

As to the benefits of irrigation, first of all I would like to say that irrigation is not a panacea or cure-all for all of the ills of agriculture. The farmer is often beset by two main evils, crop failure and low prices. Irrigation cannot do anything about low prices, but it can end the evil of crop failures due to insufficient moisture.

It is self-evident that irrigated agriculture enjoys three favorable conditions—certainty, abundance, and variety; certainty in that a crop is assured; abundance because the water can be applied at the proper time to insure bumper crops; and diversity because with controlled moisture any crop that will tolerate given climatic conditions can be grown. In this last respect irrigation helps best the evil of low prices due to a one-crop economy and resulting glutted markets.

From certainty of crops come two direct benefits: increased yields and elimination of fallowing. Fallowing has no place in irrigation except as a weed-control measure. The increase in crop values from these benefits is great, often doubling or trebling the income per acre. During the recent drought years it was not uncommon for many farmers to get together and pray for rain. With irrigation, the farmer is assured his run of water, and his activities can be planned accordingly. Also, marketing opportunities are better where crop production is stabilized and yields are assured.

From abundance of crops come greater returns per acre and per farm. After all, the cost of cultivation and harvest is very little more for a bumper crop than for a short one, hence the added increment of crop yield and return tends to make operations more profitable, and allows utilization of smaller farm units, which makes settlement opportunities, in turn.

From variety of crops comes the chance for a farmer to grow not only the ordinary farm crops, but where climatic and soil conditions are favorable, specialty or noncompetitive crops, as well. A whole new field of enterprise may be opened to him through use of irrigation.

Probably the greatest intangible benefit is that soil-building and conservation practices go hand-in-hand with irrigation. The one-crop dry-land type of farming is purely a wearing-out process, as far as the soil fertility is concerned; and there is little incentive or opportunity for soil-building practices with this system. However, with irrigation, conservation of land and water go hand-in-hand. Use of cover crops stops surface erosion and helps build an organic mulch that helps conserve water. Since livestock raising is usually an integral part of irrigation farming, the use of animal manure is almost required as a sanitation measure. Use of these manures and commercial fertilizers is also encouraged by the greater returns from more intensive farming. Crop rotation and diversification results in soil-building, rather than soil-depletion. The soil-building crops usually do very well under irrigation, and, therefore, fit in perfectly under a rotation program. Recent scientific experiments have shown that it is possible to add chemicals, particularly ammonia, to irrigation water, thus making it easier to get the necessary nitrogenous materials into the soil. This field is new, and will doubtless produce some amazing results some day.

In general, where a new project goes in, a family of five can be supported on 80 to 100 acres instead of the usual 160 to 200 acres on dry-farmed land. Thus the farm population of an area can often be doubled through use of irrigation. It has also been the experience on reclamation projects that for every new person on the farm there are two new persons supported in cities and towns serving the area. For each of these new persons in the area the assessed valuations will increase about $1,000. This broadening of the tax base, due to increase in population and the increase of land values themselves is quite an important benefit in itself.

Greater farm incomes on more farms and larger urban populations make added business through increase of local purchasing power. It is estimated that about three-fourths of

the cash income on irrigated farms in the West finds its way east of the Mississippi River, going for manufactured products, insurance, etc. As the irrigated acreage is expanded, this purchasing power will increase, opening up new internal markets.

Franchise values of railroads and other public services are increased, and the spread of benefits from irrigation farming is so great that it is impossible to trace it clear out.

Last year's crop values on the 4,000,000 acres of land that are furnished water by or are included in reclamation projects were just under $400,000,000, or about $100 per acre. In many cases the crop return of last year alone from a single project exceeded the original construction cost of the project. For instance, crop values on the 400,000-acre Yakima project last year were $65,000,000, or $160 per acre. The entire cost of that project was $32,000,000, or about half of last year's crop values.

You often hear the question, Why irrigate more land? The best answer is that in general irrigation does not compete with the agriculture of the Midwest and East; it is complementary to it. The major surplus crops of ordinary times—corn, cotton, wheat, and tobacco—are not raised in quantity on irrigated land. Over half of the irrigated land in the West is used for raising hay and pasture for livestock feed. Other specialty crops such as sugar beets, beans, fruits, nuts, dates, winter vegetables, mint, and many others too numerous to mention, are not in direct competition with other sections of the country. The livestock raised on irrigated land go in part, at least, to the Midwest and the coast for fattening or finishing, and thus irrigated farming and dry-land farming are complementary to each other.

There are 20,000,000 acres in the West now irrigated. Existing unused water supplies will allow—through multiple-purpose development—irrigation of about an additional 20,000,000 acres. Some 14,000,000 persons are supported in the States where irrigation is practiced on a large scale. There is no reason to believe that this population could not be doubled through development of the remaining irrigation possibilities and natural resources of the West. The development of low-cost power will play a large part in this expansion. Today it is said that the reclamation twins—irrigation and power—are inseparable. Tht potential project right here in the valley bears that out.

In conclusion, I think that probably the greatest benefit from irrigation is the establishment of permanent, self-sustaining farms and homes. That was the original purpose of the Reclamation Act and it is the guiding principle of reclamation activity today. Sound and permanent development in the West has always been based on irrigated agriculture, and it is safe to predict that the future growth and development of the West will be ever more dependent on the reclamation twins—irrigation and power.

I thank you.

Liberty Betrayed

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. REED of New York. Mr. Speaker, it was Machiavelli, I believe, who in his famous book, The Prince—about 1513—defined the state as sheer political power. He declared that the sole function of princes and rulers was to acquire and to use power, and that in using their power they were the sole judges of the ends to be attained by it, and need not be restrained by the rules of morality and religion that were binding upon private individuals. This ancient and immoral rule has been revived and invoked by the three great rulers of modern time to enslave Poland and to betray the small nations which from the first put their trust in the supposed integrity of at least two of the Big Three rulers. Through the intrigue of three rulers in applying the doctrine of Machiavelli, Poland and her neighboring small countries have lost their liberties which, as in the case of individuals, is equivalent to death. No matter to what extent pious phrases may saturate the atmosphere of the San Francisco Conference, the dark, malignant spirit of Machiavelli will be at the elbow of each delegate reminding him that neither the rules of morality nor religion are binding upon him in dealing with Poland and the small nations. There was a time when our delegates to any international conference could say:

That which raises a country, that which strengthens a country, and that which dignifies a country—that which spreads her power, creates her moral influence, and makes her respected and submitted to, bends the hearts of millions, and bows down the pride of nations to her—the instrument of obedience, the foundation of supremacy, the true throne, crown, and scepter * * * is character.

In the light of the secret commitments made at Yalta, some of which have now come to light, the declaration of the supreme board of the Polish Women's Alliance of America relative to the Crimean conference can be appreciated by liberty-loving people. Under leave to extend, I insert as a part of my remarks the appeal made by these patriotic women of Polish extraction to the people of the United States, as follows:

THE DECLARATION OF THE SUPREME BOARD OF THE POLISH WOMEN'S ALLIANCE OF AMERICA RELATIVE TO THE CRIMEAN CONFERENCE

After a careful study of the policies agreed upon at the conference at Yalta, we women of Polish extraction approaching this subject from an American point of view cannot understand how a country as liberty loving as the United States of America could agree to the overwhelming demands of Russia for Polish territory, and through this directly aiding and abetting her in extending her influence throughout Europe and the world.

If we study the map of Europe after taking into consideration a defeated Germany and the occupation of the Reich by the American, English, and Soviet Armies, we can see from a geographic position a Poland firmly in the clutches of Russia. This position is as dangerous as was her German neighbor, and starts her off to slow extermination.

We are profoundly disturbed by this gross injustice to the people of Poland not because we share a common heritage of blood, but because like the average American woman we demand a better solution to this problem which we believe as it stands now will plunge the world into another war. We ask, Is this the reward that awaits the Polish soldier for his daring on all the fighting fronts?

Is this the reward that awaits the Polish mothers for sending their men to battle in defense of the rights of others?

We ask again, is this the reward awaiting the Polish Nation for defending her lands and other lands at all times when freedom was at stake?

The Polish people fought their German aggressor; can it be that the world now condones the invasion from the east, and at the same time condemns the invader from the west?

Our position is very clear. We shall never acknowledge the aggression and the outrages committed upon the land of our forefathers, nor upon any other lands. In anticipation of any changes favorable to the Polish Nation, we are at the same time prepared for even a greater disenchantment—to which we shall react—not with tears and supplications for mercy—but shall expend our energies in building a resistance with such strength of character that even the mightiest enemy cannot tear down.

We admit today we are weak and are no match for brutal force; but we solemnly promise the American Nation, though they deal us even a deadlier blow than this, that we shall not waver in our obligations as pledged in the allegiance to her flag, under whose stars and stripes millions first saw the light of day, and under whose stars and stripes countless numbers of our members and their loved ones are fighting all over the globe.

We implore our women in this time of sorrow and national mourning to persevere in dignity. Teach the children to love the United States of America as the land of liberty, and spread this gospel of love until it permeates the hearts of all Americans who believe in the principles of freedom from want, freedom from fear, freedom of speech, and freedom from superior forces in religious, political, and moral life.

Tell the children that these ideals must serve as a beacon light to this Nation, or else she will become a tool for hidden crimes and a bargainer for evil.

Tell them "to err is human" and that the Nation eventually will follow in the footpaths of her founders and makers of the Constitution, and that in love, great love beyond measure, there is also strength.

Teach the little ones to love truth, freedom, and beauty though there be none around them.

Teach them to sacrifice their blood and fortunes for their country. Tell them of our flag—that the lights in the stars have not gone out—that they are dimmed—and that great love and devotion will make them more brilliant again.

Teach the children thrift; tell them to save their pennies and dollars for bonds to win the war, and when they ask innocently if these bonds will purchase bullets to strike at the hearts of our loved ones across the ocean, assure them that he who breaks faith with our American ideals shall be judged by history and future generations for this treacherous act.

Preserve dignity and honor to the end, and let not malice enter your hearts. The destiny of this world is in the hands of God, and not in the hands of the dictators.

POLISH WOMEN'S ALLIANCE OF AMERICA.

The Missouri River Authority

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, April 6 (legislative day of Friday, March 16), 1945

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address

delivered by Jerome Walsh in connection with a joint discussion with Hon. John B. Gage, mayor of Kansas City, before the open forum of the All Souls Unitarian Church, Kansas City, Mo., Sunday evening, March 25, 1945.

This is a scholarly review of the history and problems of the Missouri Valley and deserves the thoughtful study of the people of that area.

An estimate from the Public Printer indicates that the address will occupy in the RECORD more space that the two pages allowed by the rule of the Joint Committee on Printing without a statement of cost, which is estimated to be $169.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SUBJECT

The subject for discussion, when broken down, implies a problem calling for the creation of an authority to deal with it and seeks to determine if the so-called Murray bill is the answer. I will deal with my analysis of the question in that order.

THE PROBLEM

The Missouri River is the most valuable asset the State of Missouri possesses. About a fourth of its length touches or lies wholly within our borders. We, as a people, have done little about it. Looking up the river to its source and viewing its basin as a whole, we, of the Missouri Valley, should admit frankly we have done practically nothing about it.

It has been said that of all the variable things in creation, the most uncertain are the actions of a jury, the state of a woman's mind, and the condition of the Missouri River. The Missouri has troubled and challenged men since the first white man, the Jesuit explorer, Father Pierre Marquette, first saw its mouth in June, 1673, in his travels down the Mississippi. He was frightened by it then, just like so many men today are frightened of its proper development for selfish or other reasons. The navigational problems presented by our river are almost as perplexing now as they were to the man who first charted its course above the Grand—the Frenchman, Etienne Venard de-Bourgmond. It is recorded that he left St. Louis, March 29, 1714. He probably paddled his way to a point a little above Kansas City. After his exploit, he triumphantly returned to France and reported his conquest to the French monarch Louis XV and was promptly given the commission of establishing a fort on the river and to make treaties with the Kansas and Padouca Indians. After much tribulation, he again fought his way up the Mississippi and into the Missouri with 40 men and commenced the construction of a fort, so it is thought, in the vicinity of Waverly in Carroll County.

In connection with his endeavor, I very much fear a precedent was established by the French monarch which has plagued the river and what to do with it ever since. It seems that the French Government conducted its affairs in much the same way as our own Government has conducted its efforts in seeking the solution of the Missouri's problems, for it is historical that when the French monarch commissioned de Bourgmond, he sent two other commissions along to keep him from accomplishing it. The enterprise ended in disaster.

I very much fear, too, that Lewis and Clark, when they went up the mighty stream in 1804 in their mapping of the way to the Northwest country, found the Missouri to be in not much better shape than it is today so far as its usefulness to the people is measured. Eliminate Fort Peck, a dike here, a dam there, and sparse revetment works along its course and I suppose it is just about the same. It is still unruly and unharnessed.

The Missouri Valley problem is vast in its proportions and stupendous in its scope. The river, finding its source at the juncture of the Jefferson, Madison, and Gallatin Rivers at Three Forks, Mont., flows east and south for 2,424 miles with its watershed draining partially the States of Missouri, Kansas, Iowa, Nebraska, North Dakota, South Dakota, Montana, Wyoming, and Colorado. Four State capitals are on its banks. There are 529,350 square miles in its shed, embracing the easterly slopes of the Rocky Mountains, the Great Plain States, and the territory more familiar to us in this great midwestern territory. Sixty percent of the watershed is north and west of Sioux City. The river cuts through some of the world's most fertile agricultural territory and could be made the useful servant of rich industrial development extending from Omaha to St. Louis. At times the upper reaches of the river and its tributaries above Sioux City are so short of water that life is difficult to sustain. The proper accumulation and fair diversion and distribution of available waters is of the very essence of the problem. Adequate flood control, soil conservation, power development, erosion, and silt control, and many other desirable social and economic ends are equally important elements of it.

The region was devastated by severe floods from Sioux City downward in 1844, 1881, 1903, 1908, 1919, 1927, 1935, 1942, 1943, and another of some proportion in 1944. Floods usually occur twice a year. It is said these floods are characteristic of the Missouri.

Very little rain precipitates these annual floods. The March rise is generally due to the melting of snow above Sioux City and the break up of river ice, while the June floods are occasioned by snow thaws in the mountains. It is estimated that the floods of 1943 alone caused damages in the sum of $35,000,000 in the main stream of the river alone. In short, the Missouri has been a rolling, devouring monster that has been the engine of the people's destruction, spiritually and materially, since the hand of God first carved its turbulent course. The Congress has spent great thought and millions upon millions of dollars for many years, but neither it nor the War Department have controlled the periodic flood stages of the river or even flash floods of local origin which themselves cause great damage.

The great proportion of the expenditure has been in the main stem extending from Sioux City to the mouth 17 miles north of St. Louis. Vast sums of public moneys have been expended, theoretically to control floods and to provide an adequate channel for navigation. To date, neither has been accomplished. We know floods have not been controlled but it is true there are occasional trips of water-borne commerce up and down the Missouri, but those instances represent token navigation and no more. At present there is supposed to be a guaranteed six-foot channel in the main stream, and theoretically, a 9-foot channel is 97 percent complete.

The agricultural lands of the valley are wasting in frightening proportions. The Missouri carries to the Mississippi and into the gulf a ton of soil every year from each of the valley's 400,000,000 acres. There is an urgent need for adequate and scientific soil conservation. The tools are present to work with. Ninety percent of the phosphate supply of the United States is located at the head water of the Missouri and a little beyond. Fertilizer is in abundance with which to remake the soil.

The Missouri Valley covers one-sixth of the Nation's area, but its population is only about 7,000,000, or one-twentieth that of the Nation's. The population has steadily decreased for 20 years. Tested under stress of war, the basin's ability to hold population is weak. It is estimated that 1,000,000 people have left the basin since 1940. For the decade 1929-39 the Missouri Valley group of States declined in a very material degree in the value of its manufactured goods, in wages and salaries paid, in retail trade, and in many fields of commerce. I will detail the figures later.

The development of hydroelectric power is practically nonexistent. It is estimated by the Federal Power Commission on the basis of preliminary surveys that at least 10,000,000,000 kilowatt-hours of hydroelectric energy per year would be developed in connection with the presently contemplated storage dams without sacrifice of other benefits which th river can give to the growth and welfare of the region. Contrast this with the 35,000 kilowatt unit installed at Fort Peck in June 1943.

Concerning the use of electricity, the United States as a whole produced 96,000,000,000 kilowatt-hours of electrical energy in 1930. In 1940 it produced 145,000,000,000 kilowatt-hours, a national gain of 51 percent. In 1930 the Missouri Valley group of States produced 6,600,000,000 kilowatt-hours, in 1940 they produced 9,500,000,000—a gain, yes, of 42 percent, but less than the national average.

I think it is safe to say that by all accepted Government and private indices, the valley shows substantial retrogression in place of progress. That situation just has to be arrested.

The solution proposed to date is found chiefly in Public Law 534, Seventy-eighth Congress, approved December 22, 1944, and 14 of the Seventy-ninth Congress, approved March 2, 1945. Both are purely make-shift. The act of December 22, 1944, is calculated to head off the enactment of the Missouri Valley Authority legislation. It is a hodgepodge that will foster in place of suppress the jealousies, rivalries and animosities of the War, Interior, Agricultural, and other departments that have so long frustrated sound development of the river and its tributaries. It embraces the so-called comprehensive, step-by-step Pick plan, which is no plan at all. It is but a statutory recognition of the controversies and the spurious thinking that for so long has been applied to the valley, and its needs.

Certainly if the plan was a sound one, it would have been decided ere this what best use and control could be made of the waters arising west of the ninety-eighth meridian and how much east. Adequate engineering studies conducted by a unified agency with fixed responsibility, disinterested in the development of any one theory to the exclusion of its concomitants, certainly should be able to determine whether or not there is sufficient water available to serve adequately the needs of irrigation, navigation, and flood control, to say nothing of power development.

Cries of socialism, imposition of superstates upon the people by social dreamers and other untruths will not thwart the advancement, socially and materially, of the people in this valley. The chief cry raised against this far-seeing legislation emanates undoubtedly from the spokesmen for the private electric-light interests of the country. In ostrich-like fashion, the electric industry seems dead set against progress if the methods to be employed suggest interference with its decadent business practices or its profit margin. The success of the Tennessee Valley Authority is living proof in the short space of 10 years that development of a great natural resource aids, not impairs, the private utility interests located in its territory.

A recent issue of the Electrical World, the accepted apologist for the private electrical industry, had this to say:

"Legislation for the creation of additional valley authorities has again come before Congress. That the development of a watershed by a multipurpose project produces benefits for the people in the area can hardly be disputed in the light of past experience with both T. V. A. and Bonneville.

"In fact, if it were not for the constant threat of loss of territory, it might be said that the Federal power competition was not

without value to utilities, for it has resu .ed rather generally in a more aggressive load-development program. And even where the competition has brought very low rates in its wake, there is as yet no indication that they have proven ruinous, even with high taxes. * * *

"It should be clear to the industry by this time that these valley authorities are here to stay. * * *

"The most elementary thinking, then, would seem to indicate that the successful utilities will be those which help these projects to move their power.

"In some areas, forward-looking operators are planning on exactly that procedure. They are likely to have far less difficulty with their Federal competition than operators who employ different tactics.

"Of course, it is not always as easily done as said. When the local authorities are not self-governing but must follow philosophies of anti-utility Washington officials, it is not easy to cooperate. On the other hand, autonomous valley authorities should present an entirely different situation because they want to live in peace in their area.

"It need not be thought, however, that an independent authority will be easy to handle. It will be just as firm and just as hard a bargainer, but it will bargain. Under such circumstances, businessmen come to an agreement that is mutually beneficial. * * *"

If what I say here this evening falls upon the ears of those irreconciliably opposed to Government development of our natural resources because of a fatuous belief that there is already too much Government abroad in the land, then my effort fails, but if there are those present who believe in progress and in the revitalization of our democracy, the facts are present to aid you in formulating the right conclusion.

The story of the Tennessee Valley points the course the Missouri Valley should follow. An infant of 10 years, so far as Government activities go, it has succeeded to the utter amazement of its most forthright enemies and beyond the hopes of its friends. It has converted the Tennessee Valley area, comprising the States of Virginia, North Carolina, Georgia, Alabama, Tennessee, Kentucky, and Mississippi from a denuded backwoods section of the United States to empire proportions.

It has transformed the Tennessee from a rampaging monster to a stream of beautiful lakes, and in its bed a controlled 9-foot channel will be a fact this spring. In 1944 the Authority produced 9,000,000,000 kilowatt-hours of power. Its program for the production of and application of phosphate fertilizer to the soil is a real national achievement. Thirty thousand farms in 28 test States are harvesting the benefits. Three thousand farmers in Missouri have adopted the Authority's recommendations for soil rebuilding. Siltation has practically disappeared due to the adoption by farmers of soil conservation measures arresting surface run-off. The waters of the Tennessee are now blue, not muddy. These are but a few of the Authority's accomplishments.

The Missouri Valley can find new frontiers too.

While the Missouri Valley States with a population of 7,000,000 from 1929 to 1939 showed a loss of 30 percent in manufactured goods from four and eight-tenths billions to three and three-tenths billions, the Tennessee group with 4,500,000 gained 5 percent from four and seven-tenths billions to five and forty-six thousandths billions. Again, during that same period in wages and salaries paid, the Missouri group showed the astounding loss of 21 percent from 631,000,000 to 496,000,000. On the other hand in the decade 1929 to 1939, the Tennessee group increased 5 percent from 828,000,000 to 870,000,000. You will note all figures I use exclude any year that has felt the impact of war.

The success of the Tennessee Valley is acclaimed by the majority of independent thought everywhere. It has been a laboratory for students and government commissions from every section of the earth, including China, India, Chile, and Peru. They have gone there and studied its accomplishments and potentialities. But more important than any other factor, it has the enthusiastic approval of those it was built to serve—the people of the Tennessee Valley. The following is one sample of what the business people think of the Authority's accomplishments to date. I wish time permitted quotations from scores of similar endorsements. It is written by Clifford Penland, executive vice president of the Chamber of Commerce of Memphis, Tenn. It is this:

"There have been no harmful effects on this community from the operation of T. V. A. On the contrary, the program for flood control and betterment of economic conditions throughout the valley and adjoining areas, along with the expansion in river traffic which is beginning to result in a substantial way from the establishment of a year-around navigable series of lakes in place of a doubtful and capricious river, have, all of them, tended to do much for this area. The benefits of cheap power are immediately to be seen. The benefits from flood control, navigation, and betterment of farm conditions of the State move more slowly, but the Tennessee Valley and adjacent areas are growing in prosperity, which is attributable not only to cheap electric power but to these other phases of T. V. A.'s big program."

In Memphis, for instance, since T. V. A. power first started to flow in June 1938 residential rates have been reduced 45 percent and commercial rates 37½ percent on the average, so says the chamber of commerce of that city. Here is a contrast in electrical rates: In Kansas City for the first 25 kilowatt-hours for residence use, you pay $1.25 and for 250 kilowatt-hours, $7.50. In Knoxville, Tenn., you pay 75 cents and $5 for similar service. On the latter figure the difference is $2.50. To a householder of limited income or to a farmer's wife, the saving is a good start on the purchase of electric refrigeration or an electric pump. The rate for commercial light service in Kansas City starts at $2.70 for 50 killowatt-hours and ranges to $29.70 for 750 killowatt-hours. In Knoxville, it is 50 cents against $14. For commercial power service in Kansas City 375 killowatt-hours costs $16.78 and goes to $179.45 for 6,000 kilowatt-hours. In Knoxville, the range is from $9 to $78. As a reward for serving the cause of free enterprise in Kansas City, industrial service users (the manufacturers, if you will) pay $495 for 30,000 kilowatt-hours and $2,978 for 200,000 kilowatt-hours of power. Knoxville pays $360 and $1,810 for similar service.

Looking briefly to the experience of the private power companies in the Tennessee Valley after the impact of lower T. V. A. rates, five of the six companies in the entire United States which reflected the greatest increase in electric growth were in the southeast. The sale of electrical appliances skyrocketed. For instance, the Georgia Power Co., though twenty-third in size of the country's private utilities, during the first year of its rate reduction, sold more electric refrigerators than any other company in the country, regardless of size. It was the first in the sale of electric water heaters and second in the sale of electric ranges.

The Tennessee Electric Power Co., thirtieth in size in the country, sold the largest number of electric ranges, the second in number of electric refrigerators, and the third largest number of electric water heaters. The Tennessee Electric sold more home appliances than companies in the more populous and richer States of New York and Illinois.

Public Law No. 534 does not require the War Department or any other agency to build penstocks or other facilities whatsoever for the generation or transmission of hydroelectric energy in connection with any dam to be constructed under the supervision of the War Department. Yet spokesmen for the Corps of Army Engineers frankly admit that to build dams along the Missouri or her tributaries without complementary programs of soil conservation, control of water run-off, erosion, and siltration would cause those dams to become "completely silted up within 50 years * * *" and thus rendered worthless. I have never heard of a more uneconomic approach to the solution of a major public necessity. If hydroelectric facilities are made an equal consideration in the construction of the dams now proposed their cost could be amortized in a period somewhat in excess of 50 years with a fair return on the investment and at rates 50 percent less than we are now paying, if the T. V. A. experience in these respects can be employed as a yardstick. It appears that the benefits of low-cost power to our people is in the distant future if the decision is left to the Corps of Army Engineers.

In 1944 the Tennessee Valley residential user purchased his electricity at 1.88 cents a kilowatt-hour, as against a national average of 3.55 cents. The same Tennessee Valley householder used an average of 1,707 kilowatt-hours as against the national average of 1,117. The T. V. A. consumer used 53 percent more electricity, yet his average annual bill was $32.16 compared with the national average of $39.65.

I shall never subscribe to the proposition that our natural resources from which so much of the wealth and power of this country are derived, should be the subject of private exploitation by a powerful few at the expense of the public good. Let me make myself clear; private ownership and operation of private enterprise is right and proper and is an American doctrine that makes our Nation strong. But private ownership and operation of public resources for private profit is another matter. The manifold resources of the Missouri Valley belong to us all. Properly administered for the public good, it can bring the blessings of scientific advance; the elimination of daily personal drudgery to thousands of men and women in scattered and remote towns and farms with resulting enrichment to the lives of numberless of our citizens. Privately owned and operated, they will, it is true, bring tremendous wealth to a fortunate few. But the benefits to be gained by the extension of our public resources by the private operator will be made only on the basis of our ability to pay the private corporations' exorbitant, and in many instances, extortionate fees and not upon the basis of the greatest good to the greatest number.

Let me emphatically repeat—for it is fundamental to our American way of life—the Nation's public resources are a public trust to be administered by public servants for the public good.

David Lilienthal, Chairman of the Tennessee Valley Authority, who has magnificently discharged his great trust, flatly lays down the proposition that a river basin should be developed as a whole. In his great book, T. V. A.—Democracy on the March, he says:

"For the practical purposes of Federal legislation, this is a country of regions, not States. * * *

"Modern regionalism, by contrast, rests squarely upon the supremacy of the national interest. It admits that there are problems and resources common to areas larger than any single State—a river basin, for example. It recognizes that certain points of view develop in some portions of the country and are not shared by the Nation as a whole. It affirms and insists, however, that the solution of regional problems and the development of regional resources are matters of concern to the whole country. It proposes to harmonize regional advancement with the national welfare. That concern for and supremacy of the national interest distinguishes 'region-

alism' from 'sectionalism.' Under the banner of sectionalism, States throughout our history have combined to support or to oppose Federal action. Under the modern concept of regionalism, the Federal Government acts to meet regional needs to the end that the entire Nation may profit."

Having thus considered some of the high lights of the problem, let us now explore the possibilities of an answer.

THE ANSWER

What is the answer then to the problem I have attempted to detail? Where is the solution to the mighty turbulence, the social and economic questions of the great Missouri? I repeat, is it to be found in piling Government bureau upon bureau, agency upon agency, and trusting to luck upon the human vagaries and jealousies of the human beings that run them or is there a simpler and more flexible mechanism available. I believe there is. I think it is found in the proposal now pending before the Senate of the United States in the form of Senate bill No. 555, introduced by the junior Senator from Montana, Mr. MURRAY. Remembering the point of discussion here this evening, "Shall a Missouri Valley Authority be created as proposed by the Murray bill?", we must know what the Murray bill provides in testing the question to see if it affords the answer our subject seeks.

The bill's preamble is this:

"To establish a Missouri Valley Authority to provide for unified water control and resource development on the Missouri River and surrounding region in the interest of control and prevention of floods, the promotion of navigation and reclamation of the public lands, the promotion of family-type farming, the development of the recreational possibilities, and the promotion of the general welfare of the area, the strengthening of the national defense, and for other purposes."

The touchstone of the act, yes, the very heart of it is the proposal to "provide for unified water control and resource development on the Missouri River." Unification of the various elements necessary in licking the Missouri is the essentiality.

Briefly, what do the 55 pages of the bill seek to achieve? It wants the Federal Government to establish and maintain a broad program of unified water control and resource development for the entire river, its tributaries and watershed, and such surrounding territory as may materially be affected thereby; a special regional agency would be entrusted with the administration of a multipurposed program for the prevention of floods, reclamation of land, use of the waters of the river for irrigation, and other useful purposes to insure navigation, to promote family-type farming, industrial development, and in fostering further utilization of the resources of the region for promoting the general welfare of the United States.

Its headquarters must be in the region and be fully responsible to the President and the Congress. The Authority must utilize to the fullest extent the advice and cooperation of the people of the region, their local, State, public, and private organizations, together with the advice and counsel of existing operating agencies of the Government.

The Corporation must maintain its principal office in a convenient place in the territory. What a grand opportunity for Kansas City lies in this section of the proposal. Lying strategically, you might say, midway along the navigable portion of the river, here at her great right angle, where she bends toward St. Louis, is the strategic, the logical, and the economical place for the headquarters of a Missouri Valley Authority. It's too bad our policy-making city officials and the powerful civic forces of the community are not forward-looking enough to envision the possibility.

The Corporation would be managed by a board of directors appointed by the President with the advice and consent of the Senate to serve from 3 to 9 years. They must be citizens of the United States and would receive a salary of $15,000 per annum. They must not have a financial interest in any public utility company nor any business that may be adversely affected by the success of the corporation. The Board has a right to appoint its own employees without consideration of civil service requirements. No political test or qualification for employment would be countenanced and for violation of the rule dismissal is provided. Any member of the Board who exacts them would be subject to the penalties of law.

Section 6 of the act contains a most interesting and revolutionary innovation in government. It provides for an advisory and consultive committee of the principal officers of the Departments of Interior, Agriculture, Commerce, Justice, War, Federal Power, Federal Security and the Board of Governors of the Federal Reserve System, together with 9 persons resident in the area of the Authority to be appointed by the President to represent the interest of agriculture, commerce and labor in equal numbers. I believe that the advisory committee, if strongly staffed, would be a powerful instrument in the formation of the broad public policies of the Missouri Valley Authority if it becomes a reality. It would be the answer to the specious charge that M. V. A. is a device of the dreamers to remake the lives of our people.

The corporation would have the usual incidents of corporate life and would be, by law, an inhabitant and resident of the judicial district in which its principal office is located. If in Kansas City, Judges Reeves, Collet, Duncan, and the prospective new Judge Ridge, would be the men who would judicially guide the authority's fortunes and those aggrieved by its action would have recourse to them, together with the other district courts of the United States where proceedings would be instituted. However, if the headquarters were located in Kansas City, these judges would have exclusive jurisdiction in proceedings involving the validity of the act, or of the conduct of its employees under color of the act. In any event, the district court of the residence of the Corporation would have that exclusive jurisdiction.

Getting down to the question of finances, section 8 requires that its funds be obtained by ordinary Budget appropriations; that it make usual financial statements and reports on its business during each fiscal year and its affairs must be audited by the Comptroller General of the United States at such times as he shall determine. The Comptroller General must make a separate report of the authority's operations to the President and to Congress. All net proceeds each year derived from the sale of power, water, and other products manufactured must be paid to the Treasury of the United States. Admitted then a going corporate concern, to what business must the corporation get down to make effectual the provisions of the Murray Act? It is summarized thus:

It would acquire and dispose of real and personal property at any point within its jurisdiction with the exception that the corporation could not sell any real property upon which is located a permanent dam, hydroelectric plant or munitions plant owned by the United States or the Corporation.

In the acquisition of supplies and services obtained by contract, usual advertising must be resorted to with minor exceptions.

Up to this point, we see that there is yet nothing for the Corporation to do. It can't control a flood. It can't provide for navigation on the river. It can build no dam or hydroelectric site. It, in fact, is an impotent and sterile instrumentality. However, section 11 of the Murray bill, the very heart of the legislation, begins to unravel our dilemma. It is so important that I had better give you that one in full.

"(a) The Corporation is hereby authorized and directed to formulate and report to the President and Congress with the utmost expedition, and in any event not later than 2 years from the enactment of this act, its recommendations for the unified development of the Missouri Valley region in accordance with the purposes and policy of this act. Such recommendations shall include a complete plan for the unified control and utilization of the waters of the Missouri River system, which will reconcile and harmonize the requirements for flood control, navigation, reclamation, agricultural purposes, power, and other needs in such a way as to secure the maximum public benefit for the region and Nation: *Provided, however,* That if the board determines that there is or will be an insufficient stream flow from waters arising west of the ninety-eighth meridian to satisfy both the beneficial consumptive uses of such waters for domestic irrigation, mining, and industrial purposes west of such meridian and navigation requirements for such waters east of the meridian, the plan shall give priority to the satisfaction of the said beneficial uses of such waters west of said meridian. In formulating such a unified plan and recommendations, the Corporation shall give particular consideration to the general plans contained in the public documents described in section 12 (b) of this act and shall conduct such additional surveys and investigations as it deems necessary or proper, and shall enlist the advice and assistance of appropriate local, State, and Federal governmental agencies, educational institutions, and private organizations. Particular consideration in such a plan and recommendations shall be given to projects and activities which shall serve the following purposes:".

The section then goes on through four additional subsections delineating the considerations that must be given to the multipurposes of the act, flood prevention, navigation, improvement of the soil, erection of dams, reservoirs, reclamation of arid and semiarid lands, and a world of other minutia, which for years have been points of jurisdictional turmoil and strife between the Corps of Engineers of the Army, the Director of the Budget, the Bureau of Reclamation, the Federal Power Commission, the Department of Agriculture, and Lord knows how many more. The division of opinion and authority has been so sharp that even section 11 takes note of the claims for priority between the Bureau of Reclamation fighting for water for irrigation in the upper reaches of the river and the War Department just as tenaciously striving for flood control and navigation. The act makes it the Board's duty to determine the deficiency of flow of waters arising west of the ninety-eighth meridian so that the most "beneficial consumptive uses of such water" shall be made. The ninety-eighth meridian runs just about at Mitchell, S. Dak., and if extended on a line southward, would strike at about Hutchinson, Kans. At the point where the meridian cuts the Missouri above Sioux City is about where irrigation ends, and flood control and navigation begin. How can antagonistic government agencies solve who gets how much water at that point?

As I have mentioned heretofore, if the matter becomes controversial between the War and Interior Departments, what will be the substance of the reports each will make to Congress in conformity with the provisions of the river-and-harbor bill? When the issue is thrown into the lap of Congress, how will it decide the controversy? Will it be done upon engineering, and the region as a whole basis, or will a majority of congressman decide it, because they like Henry L. Stimson better than they do Harold L. Ickes?

One thing is certain, the situation will afford the Congressmen with sectionalized viewpoints a wide range within which to roll out the old pork barrel.

A unified authority not bound by thoughts of agency aggrandisement guided exclusively by the common good could, and I feel would, do it in the best interests of the country and of those our river should serve.

The plan must give due consideration to existing recommendations of governmental departments and must be filed in both houses of the Congress and remain there for its study for a period of 120 days and for a like period should Congress adjourn before the expiration of the first 120-day period. If it is not affirmatively disapproved after such period, it becomes law.

The Fort Peck Dam, now under control of the War Department could be entrusted to the Corporation by the President under prescribed circumstances.

Until a multipurpose unified plan is adopted, only such projects shall be constructed as had been heretofore recommended to Congress by the War and Interior Departments.

The Corporation has wide power to acquire and construct electric energy production facilities by water, steam, and otherwise not inconsistent with the other principally desired ends of navigation and flood control. Of course, it would have the right, after consultation with public business and private corporations, to make contracts for the relocation of existing public and private facilities.

Elaborate provisions are provided for the delivery of surplus water to public and private agencies but whenever any lands are to be benefited within the Federal ownership, the Corporation shall survey, plat, and analyze the land and divide it into units consisting of family type farms. Such farms will include no more than 160 acres of irrigable land and no person would be permitted to own in excess of that figure.

To me this is a most desirable objective. As the excessive concentration of industrial and financial power of the Nation in the hands of a few is destructive of democracy, so is the concentration of the land in large corporate and individual ownerships dangerous to a well-balanced society. Fair and just provision for adequate appraisal of all lanlds to be bought and sold is provided.

Section 14 permits the Corporation to dispose of surplus power generated by it to public and private corporations and to individuals, but the preference is given to public bodies. Its rates should be such as will attract and provide adequate markets for its electric energy so as to encourage the widest possible use thereof. The Corporation's powers in connection with the distribution of its waters are equally elastic and helpful to its widest dissemination and use and at low cost to its purchasers.

In all respects standards of cost accounting consistent with the best practices employed by private business are required and the acquisition cost of such properties as dams and other similar improvements must be allocated to the purpose it subserves.

The Corporation must pay the States whose lands and other facilities have been acquired and removed from the rolls for local taxation purposes, at least 5 percent of the gross proceeds derived from the sale of power by the Corporation upon a proportionate basis among the States affected. Congress must have a full report within 5 years as to the adequacy of the 5-percent payment to the States so that it may be determined that those States have not been deprived of their normal revenue.

Section 20 of the act envisions an orderly, proper development of the natural resources of the valley and gives it the right to establish laboratories and experiment stations for the promotion of its studies and plans for the widest approved use of electric power and water for irrigation and other purposes.

Of course, the Corporation has the right of eminent domain and provision is made for the appointment of the usual court commissioners in the fixation of value of lands condemned by the district court in which the land is located. The Corporation is given access to the Patent Office of the United States so as to enable it "to use and employ the most efficacious and economical processes in the course of its operations," with the right to recovery of damages by the owner of any patent for the infringement thereof.

Section 26 grants the preference in the disposition of any land which the Corporation offers for sale to the veterans of our military service.

The demand for a unified plan in the development of the river, with the possibility of sectional and agency differences eliminated, is thus afforded in the M. V. A. legislation. That the plan is workable is made clear by the experience of the T. V. A. Maybe not today nor tomorrow, but the establishment of a Missouri Valley Authority is as inevitable as the onward march of man to a richer life, both spiritually and materially.

Social Security for Domestic Employees

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, April 10 (legislative day of Friday, March 16), 1945

Mr. WAGNER. Mr. President, I have long advocated the extension of social security to cover domestic employees. Such employees were excluded from the original social-security law because it was felt in 1935 that the administrative difficulties involved would be so great as to make it impractical to cover them. Since that time we have had 9 years of experience with social security, and have had the opportunity to develop practical and convenient methods for covering workers in household employment. The entire subject of social security for domestic employees and the development of feasible methods for administering such a program are very ably discussed in an article by Arthur J. Altmeyer, Chairman of the Social Security Board, which appeared in the January issue of the Social Security Bulletin. I ask unanimous consent to have Mr. Altmeyer's article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOCIAL SECURITY FOR DOMESTIC EMPLOYEES

(By A. J. Altmeyer)

From the very beginning of the social-security program, it has been recognized that domestic employees needed the protection of social insurance just as much as industrial and commercial employees. Because general administrative experience was lacking, however, special problems in including domestic employees seemed much more forbidding then than now. Coverage of such employment is complicated by the fact that many persons employed in private homes receive part of their pay in the form of room and board, laundry, and similar wages in kind. More important, relatively few households have more than one paid worker, and a large proportion of the employees work for two or more families in the same week and often in the same day. Employing households therefore may nearly equal, if not exceed, the number of employees. The employment relationship also is frequently brief, and housewives generally keep no record of the wages they pay.

It therefore did not seem wise to attempt to bring household workers into old-age and survivors' insurance under the quarterly payroll reporting plan adopted for obtaining wage records and collecting contributions in industrial and commercial establishments. Housewives could not be expected to make quarterly reports to the Government. The inclusion of household workers in the program was therefore deferred until experience had been gained in administering the program for industrial and commercial employees, and until the special problems of household employment could be studied more fully. As a result, the general houseworkers, cook, scrubwoman, or chauffeur who works in a private home has been excluded, though men and women who do exactly the same kinds of work for business concerns—often with better pay and working conditions—have been covered from the beginning.

HOUSEHOLD WORKERS NOT COVERED BY LABOR LAWS

Domestic workers are included under the old-age insurance systems of Belgium, Bulgaria, Chile, Costa Rica, Czechoslovakia, France, Germany, Great Britain, Italy, the Netherlands, New Zealand, Poland, Rumania, Spain, Sweden, Uruguay, the Union of Soviet Socialist Republics, and Yugoslavia. In America, by contrast, they have been excluded not only from social insurance under the Social Security Act but also from nearly all other social legislation. The Federal laws governing wages, hours, and working conditions do not apply to them. Wisconsin is the only State which has a minimum-wage law covering household employment, and Washington has the only State law regulating hours of work in private homes. With few exceptions, the protection of State workmen's compensation laws does not extend to household employees. New York includes household workers among those covered by its unemployment compensation plan, but only where four or more are employed by the same employer. All other State unemployment compensation laws exclude employment in "domestic service in a private home."

The need for social insurance among household workers is particularly acute, because their wages usually are lower than those of any other major occupational group. "There need be little hesitation," the Women's Bureau reported with respect to pre-war wages, "in putting household employment at the bottom of the list of nonmanufacturing employment on the basis of cash wages."

Surveys of household employment by the Social Security Board bear out this statement. A survey of Negro domestic workers in Baltimore in 1941 revealed that the average cash earnings of the women interviewed were only about $330 in 1940. Even the women who had worked throughout the year averaged only $497 in cash. Lack of full-time jobs, as well as inability to work because of illness or home duties, severely reduced the earnings of the women—more than one-third of the group—who worked by the day or had part-time jobs.

A survey of white women working in private homes in Chicago in the winter of 1941–42 found their earnings little higher than those of the Baltimore group. The average cash earnings for the entire group were about $415 for the 12 months from July 1, 1940,

to June 30, 1941. The 780 women who were employed in Chicago households throughout that period averaged only $485.

Even these low earnings were somewhat higher than those reported for the country as a whole by the population census of 1940. Experienced women working in domestic service throughout the year 1939 reported average cash earnings in that year of only $312. This low national figure is in part accounted for by the extremely low level of earnings reported by household workers in Southern States. In Mississippi, for example, the average was just under $150 per year and in South Carolina, Georgia, Arkansas, and Alabama it ranged from $158 to $164. The highest earnings were reported by the women household workers employed full time and continuously in Connecticut; they averaged $566 in cash. In only five other States—California, Massachusetts, New Jersey, New York, and Rhode Island—did workers with 12 months of employment average annual cash earnings of more than $500.

With earnings at these levels, it is extremely difficult for women household workers—and nearly 90 percent of such workers are women—to lay aside anything against the hazards of unemployment, illness, disability, and old age. Nor can the married women, who comprised slightly more than a third of the household workers enumerated in the 1940 census, expect to get much protection under the present old-age and survivors' insurance program through their husbands' employment in jobs covered by this program. In the Baltimore survey, only about 28 percent of the married Negro women had husbands who were insured under the program at the end of 1940. In the Chicago survey, slightly less than half of the married white women in household employment had some protection through the insured status of their husbands.

Despite the fact that domestic service is, in normal times, one of the lowest-paid occupations and one of the few occupations for women which are still generally unprotected by social insurance and other social legislation, household service still attracted, according to the latest census, nearly 18 percent of all women in the labor force. In 1940, about 11 percent of all white working women and nearly 60 percent of Negro working women were in household employment. Sixteen percent of the single women in the labor force, about 18 percent of the married women, and more than 27 percent of those widowed and divorced were household workers. Nearly 35 percent of the working married women whose husbands were not living with them were in household service. Household service is thus an important source of livelihood for women of every marital status, especially those who are or have been married. It is also normally a principal occupation for girls under the age of 20 and women beyond the age of 55. In 1940, slightly more than 26 percent of household workers were in these age groups, as compared with 17 percent of all working women.

Although the occupation is excluded from coverage under old-age and survivors' insurance, household workers frequently make contributions under that program when they shift temporarily to covered employment. Though they then pay for old-age and survivors' insurance at the same rate as other workers, their periods of covered employment are generally too short or too infrequent to enable them to meet the requirements for insured status and only rarely do they obtain protection under the program. In the Chicago survey of white household workers, for example, about 17 of every 100 women had some earnings in covered employment in the period January 1937–June 1941, but less than 2 in each 100 were insured under the program at the end of that period.

The war has sharply increased the extent to which household workers entered covered employment. Perhaps a million such workers such workers have now been drawn into wartime factory and commercial jobs through which they are acquiring rights toward insurance benefits. Those who return to household work after the war, however, will find that, unless coverage has been extended to household has been extended to household service in the meantime, their potential benefits under the program will gradually diminish, and perhaps lapse altogether.

ADMINISTERING SOCIAL SECURITY FOR HOUSEHOLD WORKERS

Since 1935, 9 years of experience have been accumulated in the administration of social security, and studies have been made of the best way to introduce a feasible and convenient method of obtaining wage records and collecting contributions from workers in household employment. If the stamp plan were adopted, for example, the housewife would not have to keep any records or to fill out a quarterly wage report on the earnings of her maid or cook. Instead, she would go to any post office and buy social-insurance stamps in convenient denominations, just as she now buys postage stamps and War Savings stamps. When she paid her household help, she would place a stamp or stamps in a booklet belonging to the worker and bearing her name and social-security-account number. Thus, a wage payment of $12 might be indicated by three stamps—each representing $4 or one representing $10 and two, $1 each. The total cost of these, at present contribution rates, would be 24 cents. Half the cost would be deducted from the worker's cash wages as her social-security contribution. The stamp booklet would be turned in periodically to the Board, and the wages indicated by the stamps would be credited to the worker's record by the Social Security Board, just like other wages. In this simple and convenient way the housewife could help to provide the same social-security protection for household help as for other workers.

Because noncash remuneration, such as meals, room, and laundry privileges, is an important part of the household worker's real income, as the Baltimore and Chicago surveys show, these wages "in kind" should be included in the earnings credited to her in the Board's records. To help the housewife set a value upon them, and to avoid the possibility of disputes as to their value between housewives and workers, an official scale of values for wages in kind might be used. Such a scale could readily take account of urban-rural differences in the cost of living.

NEED FOR SOCIAL INSURANCE PROTECTION

Domestic workers have lost much of the older form of security which, at its best derived from the relationship between the family and the hired girl who was a member of their household. Conditions of household employment have necessarily changed to accord with the mobility of present-day American life, and especially to accord with living arrangements in large cities. But so far, the women who cook and clean and launder and care for children in private homes have failed, almost without exception, to gain any of the social safeguards commonly recognized as necessary for other present-day workers. Nor can the conscientious employer, even if she wishes to, herself assure that the people who work for her will have adequate care if they are sick or injured or become old.

Protection under old-age and survivors' insurance, desirable as it is, would only partly solve the security problems of household workers. They, as well as other workers, need insurance against the costs of medical and hospital care and against unemployment. Unprotected by workmen's compensation and working, as they so frequently do, for a number of families, none of which feels responsibility for their care in case of illness, household workers particularly need insurance against the costs of treatment for illnesses and accidents; they can seldom put aside any savings against such contingencies. Like other workers, they face the hazard of involuntary unemployment. The Board's Baltimore and Chicago surveys indicated that regular continuous employment is not characteristic of the work histories of household workers. Those who work by the day are particularly likely, in normal times, to have long periods when they are partially unemployed.

The Social Security Board believes that coverage under a comprehensive social-security program would safeguard household employees from the fear of want in unemployment and old age, and relieve them of the necessity of asking for public care when they need medical or hospital treatment. As workers recognized and protected by a governmental social-insurance program, household employees would then no longer feel themselves ignored or forgotten among America's working millions.

Hon. James V. Heidinger

EXTENSION OF REMARKS

OF

HON. EVAN HOWELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. HOWELL. Mr. Speaker, on March 22, 1945, the Honorable James V. Heidinger, Representative in Congress for the Twenty-fourth District of Illinois, passed away. At that time many of his colleagues paid tribute to his splendid character and the wholesome influence which he exerted wherever he was known. In his own community where he had spent his entire lifetime, the high regard in which he was held is truly expressed in the following article which appeared in the Wayne County Press, Fairfield, Ill., on March 29:

James Vandaveer Heidinger, son of William B. and Elizabeth Vandaveer Heidinger, was born on a farm near Mt. Erie in Wayne County on July 17, 1882, and passed away at the age of 62 years, 8 months, and 6 days.

He was united with the Methodist Episcopal Church at Mt. Erie in early life and retained his membership in that church until on last Easter Sunday he transferred his membership to the First Methodist Church of this city. He has ever lived an upright and exemplary life.

Initiated into the Fairfield Lodge of Ancient, Free, and Accepted Masons on January 19, 1914, he was a thirty-second degree Mason, a member of the Mississippi Valley Consistory and Ainad Shrine Temple of East St. Louis.

His mother passed away when he was but 6 years of age, leaving a family of five motherless children to the care and responsibility of the father in meager circumstances. With a firmness of purpose, the deceased mastered the difficulties of his circumstances and the hardships common to the life of a rural boy with limited opportunities. He attended the common schools and was licensed to teach. After teaching 4 years in

the rural schools of Wayne County, he attended the Valparaiso University at Valparaiso, Ind., and the Northern Illinois College of Law at Dixon. By his own effort and arduous tasks he supported himself during his college years, graduating from the Northern Illinois College of Law at Dixon in 1908 with a degree of Master of Laws, and was admitted to the practice of law in Illinois the same year.

On his admission to the bar he immediately began the practice of his profession in the city of Fairfield, and shortly thereafter became a member of the law firm of Boggs, Boggs & Heidinger, of which the Honorable Carroll C. Boggs, a former member of the Illinois Supreme Court, was the senior member.

In 1911 he married Bessie Summers, who survives. One son, James S. Heidinger, was born to this union.

In 1914 Congressman Heidinger was elected judge of the county court of Wayne County and served in that capacity for 3 consecutive terms of 4 years each. On retiring from the county court, he reentered the active practice of his profession and became interested in and connected with a number of the city's substantial business institutions. For many years he and Judge Virgil W. Mills operated a law partnership of Mills & Heidinger.

He served as a member of the board of directors of the Fairfield National Bank from 1919 to 1933, inclusive, and has been a member of the board of directors of the Southern Illinois Lumber Co., for more than 25 years. His has been a large part in the growth and development of both the civic and business interests of Fairfield and Wayne County in the past quarter century.

Congressman Heidinger made five races for Congress in this district, and was elected the last three times. In his first race in 1930, he lost the election by only 28 votes to his opponent, the late Congressman Claude V. Parsons, who took the seat in the House formerly held by the late Thomas S. Williams, who had resigned to accept a Federal judgeship. In his second race, in 1934, Judge Heidinger lost to Congressman Parsons by 2,571 votes. But in his third campaign in 1940, he defeated Mr. Parsons by a majority of 6,741. In 1942 he was opposed by LeRoy Barham, of Eldorado, but was reelected by 10,762 votes. In the last campaign, in November 1944, although he was able to do very little campaigning Judge Heidinger was returned to Congress by the largest majority ever given him—a margin of 12,119 votes over his opponent, Early C. Phelps, of McLeansboro.

At the time of his death he was a member of the very important House Naval Affairs Committee.

Although quiet in manner and unassuming, his common sense, nobility of character, and natural dignity immediately won for him the high esteem and general confidence of the leaders of both the Senate and the House of Representatives in Congress and others in high authority in the National Capital. Those associated with him in the National Legislative Halls pay tribute to the deceased as a great tsatesman and legislator, but his acquaintances and friends here at home remember him best as a home-loving citizen and a devoted husband and father. They pay him tribute for these fine qualities, for his noble character, sincerity of purpose, and the warmth of his feeling for his fellow men in the common and lowly walks of life with and about him here.

He is survived by his widow, Bessie Heidinger; his only son, Lt. James S. Heidinger, now serving in the United States Navy; his daughter-in-law, Thelma K. Heidinger; two grandchildren, Sharon Elizabeth and James Vandaveer Heidinger III; two sisters, Mary Long, of Hoopeston, Ill., and Katie Ray, of Oxly, Mo.; two brothers, George Heidinger, of Oxly, Mo., and William Heidinger, of Tacoma, Wash.

Radio Forum on National Housing Program

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, April 10, 1945

Mr. WAGNER. Mr. President, on March 11 the Senator from Louisiana [Mr. ELLENDER], as the guest speaker on the America United Radio Forum, conducted by the American Federation of Labor, delivered a very interesting and informative address on the need for a national housing program. Following the Senator's address the subject was discussed by a panel consisting of Mr. Boris Shishkin, representing the American Federation of Labor; Mr. F. S. Fitzpatrick, representing the United States Chamber of Commerce; and Mr. Paul Sifton, representing the National Farmers Union. I ask unanimous consent to have the address by the Senator from Louisiana and the discussion which followed it printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

ANNOUNCER. America united!—united for victory in the war and in the peace. The National Broadcasting Co. makes its facilities available for another in the series of public forum programs designed to unite the workers, the farmers, and the employers of America with their Government for the solution of the basic problems of the present and the post-war future.

Mr. BANGHART. This is Kenneth Banghart in Washington, D. C. Today the American Federation of Labor presents as its guest United States Senator ALLEN J. ELLENDER, of Louisiana. He will speak on the need for a National Housing Program. After he outlines the subject, it will be discussed around the table by the America United panel, which today consists of Mr. Boris Shishkin, representing the American Federation of Labor; Mr. F. S. Fitzpatrick, representing the United States Chamber of Commerce, and Mr. Paul Sifton, representing the National Farmers Union. And now here is Senator ELLENDER.

Senator ELLENDER. The American economy after the war must do two things:

First, it must offer the opportunity of employment to everyone who is willing and able to work;

And, second, it must give every American family a chance to enjoy the high living standards that full employment can produce.

A vast post-war housing program will help to achieve employment. Decent housing, for the millions who do not now have it, will help to raise standards of living. By both of these tests, housing is near the top of things we must do when victory comes. Now is the time to get ready.

We have fought a bigger war than ever before. We have accomplished marvels of production. We have the highest national income on record. The problems of transition from war to peace will be tremendous. After the war one of two things will happen: Either we will have more prosperity and more business activity than ever before or we will have a worse depression than ever before.

We must think bold thoughts. We must make broad plans. We must do big things.

What does this mean in housing?

During the 10 years before the war we built an average of less than 275,000 nonfarm houses each year. In the first 10 years after the war we must raise this figure to almost 1,500,000 houses a year.

Instead of investing only about $1,000,000,000 a year in the building of housing, we must invest seven or eight billion dollars a year.

Every little mind that says, "This cannot be done," is an obstacle to our economic progress. Every selfish interest that says, "We will not allow this to be done," is an enemy to our economic security—an enemy to the fighting men who want jobs after the war—an enemy to the families of these men, who want decent homes after the war.

This post-war housing program is consistent with the American system of private enterprise and individual initiative. It will help to preserve that system. But a large housing program depends upon new and bold measures—for we must grow if we are to live.

We need public funds to expand the slum clearance and low-rent housing program. We also need public funds to raise housing standards on the farm.

We need long-term loans at very low interest rates to stimulate housing for middle-income groups, who do not need subsidy, but who cannot afford to borrow from private lenders.

We need, through better methods, to improve the production of housing for those whom private enterprise and private lenders can effectively serve.

In short, we need a well-rounded housing program serving every need, and serving every need in full.

A forward-looking Congress must take the leadership toward enacting such a program. I expect to introduce legislation toward that end.

But Congress represents the whole people. It depends upon the organized efforts of industry, agriculture, and labor—upon their ability to get together, to work together, and to help develop a united economic program.

That is the reason for this discussion today. I hope that other discussions will follow—expressing the irresistible determination of the American people that we must win the peace at home after winning the war abroad.

Mr. SHISHKIN. Senator ELLENDER, I believe you have pointed the way, and the way that you have pointed is not a winding, narrow path for one separate group to follow. It is broad, like a six-lane highway, that offers room for everyone to march ahead together. The American Federation of Labor has formulated and will support a Nation-wide program for housing big enough to employ millions of men and to provide decent housing for all over a reasonable period of time.

What do you think of the chances of getting what is so important—a Nation-wide agreement among all interested groups so that such a program may get started, and started soon?

Senator ELLENDER. I think the chances are very good. I believe that close cooperation among industry, agriculture, and labor is vital and necessary to our post-war progress. Disunity in dealing with domestic problems would be as harmful as disunity in dealing with foreign affairs.

Housing is such a fundamental necessity to the whole country that unity on housing should be reached quickly among all of our people. At the same time Congress must be bold enough to move ahead on post-war matters, even if there is some opposition. As all of us are aware, it will be impossible to please everybody

Some of the forward-looking legislation enacted by the Congress in the last 12 years—

for instance, the social security, various labor laws, the Securities and Exchange Act passed to help small investors—all of these were passed after hard fights in Congress. They were bitterly opposed. But today everybody is in agreement that much of this legislation was necessary.

Mr. FITZPATRICK. Senator ELLENDER, you have placed a good deal of emphasis upon the necessity of getting organized efforts of industry, agriculture, and labor to achieve the goal you have so ably outlined. I would like to add to those three interests a fourth one, namely, the organized efforts of our communities.

Now, you know that highway and transit and city planning engineers have found ways in recent years not only to design but to locate entirely new kinds of major thoroughfares throughout a whole city and its suburbs.

The purpose, of course, is to make traffic congestion and excessive noise a thing of the past, but there is another purpose and this is of great importance. This new kind of main thoroughfare can be used to mark off and to protect new neighborhoods, not only throughout the city but throughout its suburbs.

Now, it seems to me that when we get this dynamic kind of city planning into action we will then be in a position to replace our present run-down and slum and blighted areas in the cities with modern housing and good neighborhoods for both grown-ups and children. It seems to me that is largely a community responsibility and I also think that the State and Federal Governments can be of assistance to it in large measures through the State highway departments which can help these communities to get these new thoroughfares not only planned but financed and constructed, and it is action that we want.

Now, my question: Don't you think it would be unwise for us to concentrate entirely upon housing and overlook these other community and city planning factors that I have outlined?

Senator ELLENDER. Of course. It strikes me that in order to get full employment, we must utilize all of our resources. We must produce all those things which make for better communities and better living. Housing is merely a part of the picture, but I do think that housing is the biggest single item for post-war expansion.

That forms a nucleus from which our post-war economy can make a good start.

Mr. SIFTON. Senator, in this country, we need about four million new farm homes. Five years ago the 1940 census found that 8 out of 10 farm homes had no running water within the dwelling. About 9 out of 10 had no bathroom. About 7 out of 10, no electricity. That was 5 years ago. During the war, the situation has not improved in any degree. It is probably somewhat worse due to lack of building materials.

This problem of farm housing has been largely neglected in connection with the housing activities of the Government in the past. What kind of program would you suggest for helping the average farmer to obtain decent housing after the war?

Senator ELLENDER. Well, we have certainly sadly neglected our farm problems, that is the housing end. Decent modern housing on the farm is just as important as in the city.

Mr. SIFTON. But how do we get it?

Senator ELLENDER. I am glad you asked the question. I believe we should provide for loans at low-interest rates, and such help as may be required to enable our farmers to have just as good houses as we want the masses of people in our cities to have. With some modifications, the housing legislation that has helped low-income families in the cities can help low income families on the farms. That will happen just as soon as those living on the farm make their needs sufficiently well known to the Representatives of Congress.

In other words, just as soon as the farmers let their desires be known to Congress, I have no doubt that Congress will respond.

Mr. FITZPATRICK. Senator ELLENDER, you place a good deal of emphasis upon the use of public funds for housing. I think that public housing is primarily a welfare activity which ought to be administered and financed by the States and the localities. I have some reservations about such large use of public funds because I am fearful that they will tend to discourage the private home builder and the family that is going to invest its money in housing from going ahead. Will not the large use of public funds for housing projects discourage private investment in housing? I know you don't want to do that and thus be self-defeating.

Senator ELLENDER. I have no fear of that, Mr. Fitzpatrick. It strikes me that private housing should be stimulated and encouraged to do as much of the whole housing job as it possibly can. Additional legislation for that purpose should be enacted. I am somewhat of a realist, when I say that I believe that public assistance is necessary in slum clearance and to rehouse families of low income in the city and on the farms.

This kind of public housing program creates a market for the products of private enterprise. I also believe that a comprehensive program, including both private and public housing, will lift all of our standards of housing demands. These higher standards will provide a bigger and more stable opportunity for private home building. Both kinds of housing are necessary and desirable, and Congress should make sure that there is no competition between the two. My hope is that the private enterprise will undertake to do the whole job, but if it does not and cannot, then I believe that it is incumbent on our Government to take on where private enterprise leaves off.

Mr. SHISHKIN. We agree with you very strongly on that, Senator. We believe in a universal housing market and a necessity of providing the foundation for it by eliminating the worst slum housing and replacing it with decent low-rent homes. Then private enterprise will be strongly stimulated into providing better housing and for the higher-income groups. But we have got to tackle our main problem in the major area of need and that is eliminate with public assistance and through community participation the slums that are now blighting the entire housing market.

Mr. SIFTON. I understand that 41 percent of selectees from farm areas have been rejected because of physical disability. This is an alarmingly high rate, much higher than for the country as a whole. Do you think there is much connection between this health condition and the tremendous amount of bad housing in farm areas?

Senator ELLENDER. To improve the health of the Nation, we must remove deficiencies in medical care, in diet, and in education, as well as in housing. We must move on all fronts at once. If we devote as much effort to the good things of peace as we have devoted to the war, there are almost no limits to what we can accomplish. Undoubtedly, better housing on the farm would make for better health on the farm. That has been proved by the results wherever better housing has been tried.

Mr. SHISHKIN. It's all very well to talk about a big post-war program. But this program will not develop automatically. It will not develop by wishful thinking that all will be well if we do nothing. What can we do, specifically, to get started?

Senator ELLENDER. I do not think we need much more research or study of the subject. That has been going on for years. The broad outlines of what we need to do are fairly well known. Congress should declare a national housing policy, to replace all of our substandard housing over a period of 10 to 15 years. It should improve the legislation designed to give private enterprise the first chance to do as much as it can. Congress should set a goal of about a million or more housing units a year to be produced by private enterprise. It should help enterprise, insofar as necessary to reach that goal. In addition, the Federal Government and the localities should both help local housing authorities to provide public housing for the balance of the need, coming to several hundred thousand units a year. If the Government commits itself to spend one-third of a cent each year for housing, for every dollar it is now spending each year for fighting the war, we can clear up all of our urban and rural slums in about 15 years. I think the American people will want to do that. I think that where there is a will there is a way.

Mr. SHISHKIN. Senator ELLENDER, I believe that our general agreement right at this table is evidence that the American people have the will to give their full support and cooperation to the kind of post-war housing program you have outlined as the most important step toward full employment and prosperity after the war.

Mr. BANGHART. Our time is up, and thank you very much, gentlemen. I am sure that your discussion here today on the need for a national housing program will stimulate public interest in this problem. Our guest today was United States Senator ALLEN J. ELLENDER, of Louisiana, and the members of the America United Panel included Mr. Boris Shishkin of the American Federation of Labor; Mr. F. S. Fitzpatrick of the United States Chamber of Commerce, and Mr. Paul Sifton of the National Farmers Union.

This is Kenneth Banghart inviting you to join us again next week at this same time when our guest will be Mr. George Meany, secretary-treasurer of the American Federation of Labor, and the topic, America's Wage Policy.

ANNOUNCER. Printed copies of today's forum may be obtained by writing to Ransdell Inc., printers, Washington 18, D. C., or to the station to which you are listening.

America United was presented by the American Federation of Labor as a public service feature through the National Broadcasting Co. and its affiliated independent stations. This program originated in Washington.

Must 10,000,000 Americans Stay Poor?

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 10 (legislative day of Friday, March 16), 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Must 10,000,000 Americans Stay Poor?" written by me and published in the magazine Digest for May 1945. It deals with compensation of 65 cents an hour, the point being made that anything below 65 cents an hour is a substandard wage.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MUST 10,000,000 AMERICANS STAY POOR?

(By CLAUDE PEPPER)

I think you'll be interested in a letter I've received. It is from the vice president of a large lumber company in Louisiana, and this is what he says:

"Labor in the South cannot possibly do as much work in a day as can be done in the North. This is because of the heavy climatic conditions—so much rain and a long period of hot months each year. Naturally, this lowers the vitality of the men. Therefore, we cannot possibly get the same production per man-hour from the people in this section as can be had in the Northern States." Therefore, he claimed, he could not be expected to pay the same wages as his competitors in the Northern States and still remain in business.

The lumber official wrote that letter in protest against a wage proposal I had made, that 65 cents an hour be set as the minimum wage for the United States. And at that time a Senate subcommittee was conducting hearings on my proposal.

The lumberman's letter is typical of the economic fatalist. He blames God and his competitors for the low wages which he claims he has to pay. Salving his conscience, he justifies himself by saying that poverty is inevitable.

But we in America no longer believe that poverty is unavoidable. We do not believe that malnutrition and sickness are the necessary rights of any part of our population. The majority of our people are convinced that poverty and substandards of living must go.

But here's the danger. Although we believe that America must banish poverty, we've temporarily been letting the matter slide. Our whole effort has been directed toward winning the war. Many social and economic reforms—even those proposed by the administration and enthusiastically passed by Congress—have been put aside for the duration. When such sacrifices are necessary, no one will object. For all-out production means all-out work; it means long hours. In many sections of the country it means bad living conditions. But in one respect this wartime policy defeats its own purpose—the slow-down of social reform has meant a slow-down of production.

That is a vicious circle. There was no intention that the belt-tightening needed to win the war should be so tight as to delay victory. Yet in a way, it has made victory that much slower in coming.

The fact is that the industries which have paid substandard wages are the very ones which have failed to meet their production quotas. This is a matter which should be remedied now—in order to attain that final spurt necessary to beat Japan, and also to achieve the necessary full production to give us a flying start on our Nation-wide post-war reconstruction program.

Several years ago Congress made a start by passing a wage-hour law which would have raised wages step by step over a period of year. Ultimately this law would have brought wages up to a point where families in industry could enjoy a reasonable standard of health and security. But the war intervened.

It is true that, meanwhile, the natural wartime competition for workers has brought wages in many areas above the minimum standard. Still, some industries have not raised their workers' wages even to the point orginally authorized in the wage-and-hour law. Furthermore, because workers today are faced with higher living costs, the minimum called for in the old law is out of date.

During the past year, at least 10,000,000 workers in this country received an average of less than $1,300 a year. That is considerably less than 65 cents an hour straight time on a 40-hour week, 50 weeks a year basis. And that figure—10,000,000 workers—doesn't include those in agriculture, the professions, or Government or domestic service.

Even with an income of $1,300 a year—and many receive less than that—these families are unable to maintain life on a fair standard, in terms of today's prices. War Labor Board investigators find that an average family of four people should have a minimum income of $1,454.72 a year. That works out to 73 cents an hour. This is the standard, set for relief workers by W. P. A. in 1935, given in terms of today's costs. To indicate how "emergency" the standard is, consider that it allows no newspapers for the family, and less than 25 cents a week for cigarettes and tobacco. This standard sets aside "savings" of $20.80 a year—in the form of insurance premiums—and nothing for War bonds. It provides only one-third the amount needed for adequate medical and dental care.

A family of four would get more than this 73 cents an hour, in terms of dependency allowances alone from the Government, were the father in the armed forces. In addition, of course, the father would be completely supported by the Army or Navy.

Yet more than 10,000,000 workers in industry and trade alone are taking home less than $1,300 a year; less than 65 cents an hour. Unquestionably the wage-stabilization program has been partly responsible for keeping the income of these people down to the starvation level.

Which industries pay wages under 65 cents an hour to most of their workers? They are essential industries—lumber, furniture, tobacco, textiles, and apparel. Even the furniture industry has been largely converted to war production. About 60 percent of all tobacco workers earn less than 65 cents an hour; 58 percent of those in lumber and in textiles; 57 percent in apparel; and 50 percent in furniture. The much-talked-of worker's prosperity obviously has not been felt by these 10,000,000 workers and their families.

We had several witnesses at the hearings who told us just what these low wages mean. One woman—she had four children under working age—said she had to borrow a decent dress before she could come to the hearing. Her coworkers had taken up a collection of pennies and nickels to buy her a hat to wear. As a result of sickness the family was still $80 in debt to the doctor.

A woman tobacco worker with three children told us that her fourth child had died some time before, because she could not afford proper medical care. She said her husband's greatest ambition was to buy her a decent Christmas present and buy himself a suit of clothes.

What effect have these low wages had on our war production? The results have been serious in the production of essential commodities. Workers in the lower brackets very naturally have moved over to higher-paid jobs. That has left the low-wage industries shorthanded. The tobacco worker told us that this fact was responsible for the cigarette shortage. The industry could not retain its workers in the face of much higher wage offers from other plants.

Similarly, production of cotton goods essential to the Army and Navy fell off 2,000,000,000 yards in the past 2 years—a decline of nearly 17 percent. This decline occurred during the period when war production quotas actually called for an increase. The War Labor Board said: "The decline in production has been due very largely to labor shortages. This labor shortage was the result of substandard wages."

Moreover, the annual production of lumber fell nearly 3,000,000,000 board feet in the past 3 years. That was a drop of over 8 percent. Lumber stocks were cut from 17,000,000,000 to 6,000,000,000 board feet, for we had to eat into our surplus to supply war needs. The reason: lumber workers looking for a living wage have left in droves to work in shipyards, where they sometimes receive double the amount they were making originally.

Obviously, substandard wages are not only a crime against our democracy; they have consistently been a very definite hindrance to the war effort. A 65-cent floor to wages is an essential war production measure.

Many employers claim that this is an attempt on our part to slip over some social reforms during the war emergency. Nothing could be further from the truth. The proposal would unquestionably improve production in the low-wage industry.

Moreover, the 65-cent floor to wages would help maintain a minimum standard of living for all American workers today and during the post-war years. It would eliminate much costly labor turnover. I believe that any law which will cut down labor turnover and thereby improve production is a "must" law. It is important to point out, however, that my proposed 65-cent-an-hour level would be in no way a direct order to the War Labor Board.

What would happen if we tried to establish, without any flexibility, a 65-cent minimum wage throughout the Nation? Well, we would probably find ourselves faced with a sit-down strike by management in the low-wage industries. They would continue to close down their plants until we let them raise the selling price of their goods. If we did that, it would endanger the price-ceiling program. Consequently, we would open the doors to inflation. This we must avoid. The laboring man can never keep up with the soaring prices that would result from relaxation of price control; he would be worse off than before.

Consequently, the minimum wage resolution was phrased as a recommendation rather than an order to the W. L. B. The Board Chairman, William H. Davis, made it clear that his organization would use the power granted it with great care.

If both labor and management should agree to raise wages to the minimum level, the Board would immediately approve this action. But should labor request the increase and management refuse to agree to it, the Board would offer a compromise by authorizing an increase that would not jeopardize the price ceiling.

As author of the resolution, I am prepared to accept Chairman Davis' interpretation of it. In order to achieve fullest possible war production we must, of course, give management a chance to make good profits. That is just as fair as it is to provide decent standards of living for labor. At the same time it is absolutely necessary to keep living costs down for the Nation as a whole and so avoid inflation.

But as a human being, I deeply regret having to take this stand. It seems incredible to me that even in the midst of a war we should acquiesce to such a policy. For it means assured malnutrition, guaranteed ill health, and permanent insecurity for a large part of our population. There is a point below which wage increases are not merely an issue in collective bargaining. That is the point where they are an outright demand on our collective caution.

During the hearing before the subcommittee, I said, "As far as I am concerned, I would be willing to authorize a flat increase to 65 cents an hour for anybody who is fully employed. I would like to say to employers, If you work them at all, you must pay these people 65 cents an hour straight time. Then let the remaining part of the economy struggle with the problem. Put the shoe on the other foot for a while."

I take back not one word of that statement. I still believe that it would be best for all of our people to bring the lowest-paid group up to at least a decent standard of living. But if other judgment prevails, then

our first post-war task must be to make an all-out assault upon substandard wages.

After Japan is defeated, I believe we shall have to go beyond the 65-cent minimum. Surely no one can believe that even 65 cents an hour would give our people the kind of life they ought to have. It's all right for us to talk about post-war reconstruction for the rest of the world, but we ought to do some of it ourselves. You cannot build a strong democratic economy upon substandard labor.

And it's not enough to talk about full employment, about the need for finding a ready market for the products of our industry and agriculture. Our people also need proper wages to go with their jobs. They need adequate housing and health and a minimum standard of education.

I think you'll agree with me, therefore, that the 65-cent-an-hour minimum is more than an essential war measure to get that extra effort that will shorten up the war against Japan. For it will also lay the foundation for the security and well-being of our people in peace.

Police Car Conservation and Safety Program

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 10 (legislative day of Friday, March 16), 1945

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very illuminating statement on the subject Police Car Conservation and Safety Program, issued by the Automotive Safety Foundation of Washington, D. C.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

POLICE CAR CONSERVATION AND SAFETY PROGRAM

On next Sunday, April 15, State, city, and local police and sheriffs of the United States, and the law enforcement agencies of Canada, are joining in a vast undertaking which will have an extremely beneficial effect in preserving adequate transportation and in maintaining our war effort.

The law enforcement officials are going to conduct a passenger car conservation and safety program, centering around a brake-check, with the immediate aim of screening out the cars with the most dangerous brakes. That program will aid in conserving our dwindling supply of passenger cars, and will save innumerable lives and limbs.

Extending through June 1, the program also will place emphasis on better car care in general. It is a program that should and must have the support of the entire public.

In a communication addressed to the International Association of Chiefs of Police, sponsors of the program, President Roosevelt has urged mobilization of the law enforcement agencies to make "a concerted attack on this fearful threat (traffic accidents) to our people and to our war effort."

Gen. Brehon B. Somervell, Chief of the Army Service Forces, declared in pledging his support, "every automobile in America must be regarded as a weapon in our all out war effort." The Office of Defense Transportation, other Government agencies, many groups of State and local officials, and more than 100 private organizations and agencies interested in safety are actively supporting this timely program.

I am calling this program to the attention of the Congress because of its transcendent importance to our national welfare. We have been warned repeatedly by the Office of Defense Transportation that every possible effort must be made to make our passenger cars last, not only until the conclusion of hostilities, but through the immediate post-war years.

Our economy today—indeed, every phase of daily life on the farm and in the city—is built around the motor vehicle. But we are coming dangerously close to that point where our highway transportation will not be adequate to meet essential civilian and war demands.

The police program is focused on one of the major causes of passenger-car destruction and of traffic accidents. Best estimates are that as many as 10 percent of the passenger cars now on the roads and streets have unsafe brakes.

The brake-check will be given only to passenger cars involved in traffic violations and accidents, and to other cars operated in a manner indicating unsafe brakes. Because of manpower shortages, it will be impossible for the police to check the brakes of all passenger cars. But everyone can cooperate. All motorists can have their brakes inspected and repaired if necessary, and keep their cars in safe operating condition.

The American people have many wartime responsibilities. A splendid job is being done on all fronts. While this problem of conserving our cars and reducing traffic accidents is not a new one, it is getting more serious every day. We must give it the utmost attention. The home front must not be weakened.

Expedition of Capt. John C. Fremont

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 11 (legislative day of Friday, March 16), 1945

Mr. CAPPER. Mr. President, I send to the desk an article from the Kansas City (Mo.) Times of Saturday, May 29, 1943, entitled "John C. Fremont Left This Settlement To Open the West 100 Years Ago Today." In 1845 Captain Fremont filed with the Government his official report on this expedition. It was, therefore, 100 years ago last month when the Congress ordered 10,000 reprints of that report. Consequently it seems to me quite timely, Mr. President, to ask unanimous consent to have printed in the Appendix of the RECORD this article by Paul I. Wellman.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOHN C. FREMONT LEFT THIS SETTLEMENT TO OPEN THE WEST 100 YEARS AGO TODAY—IN ST. LOUIS, THE EXPLORER'S WIFE, DAUGHTER OF SENATOR THOMAS HART BENTON, ASSURED THE START OF THE FAMOUS EXPEDITION BY WITHHOLDING FROM HER HUSBAND A RESTRAINING ORDER FROM WASHINGTON—THE CENTENARY WILL BE OBSERVED

One hundred years ago today began from Kansas City one of the most important exploratory expeditions in the history of the United States—the second expedition of Capt. John C. Fremont. It was this expedition, with the consequent publicity attending it, which, more than any other single factor, led to the great rush of immigration to the West.

The centennial of the great journey will be celebrated throughout the coming year, and in spite of the war, memorials of somewhat elaborate form are being planned for it.

Senator Thomas Hart Benton, the great Missouri solon who has been called the father of the West, was chiefly responsible for Fremont's explorations, which achieved exactly what he desired from them—dramatization of the boundless resources of the wilderness for American settlers. Fremont was Benton's son-in-law, having married the gay and charming Jessie Benton, in a runaway marriage which the Senator later forgave, only 2 years before.

Already the young officer, a captain of engineers, had made one trip to the West, having crossed the plains in 1842, to Wyoming, and returned. But that was only a practice march, so to speak. The real expedition was scheduled for 1843, and it was to be the most important single act of Fremont's life.

Leaving Jessie at her father's home in St. Louis, Fremont came to the infant town of Kansas, where he organized his expedition. According to the reports of the times, there never had been an expedition, Government or private, fitted out better than this. Fremont had 39 men, all fitted with the latest and best carbines and pistols. At the head of his guides was the famous Broken Hand Fitzpatrick, one of the starkest of the mountain men, and two Delaware Indians, among the greatest hunters of the West.

POTENT 12-POUND HOWITZER

The equipment included a fine refracting telescope, two pocket chronometers, two sextants, a reflecting circle, a syphon barometer, half a dozen thermometers, an assortment of compasses, a large supply of gifts for the Indians, provisions for the party, a rubber boat, and, most important of all, a 12-pound howitzer on wheels. The latter was to "overawe" Indians in case of trouble—or perhaps to do the same to hostile Mexican or British parties met on the Pacific. It came near to stopping the whole expedition, and was the reason why this day—May 29, 1843—was the starting date of the expedition.

Fremont was not nearly ready. The West Bottoms were crowded with wagons, livestock, and campers. More than 1,200 emigrants were there, waiting to begin the journey to California or Oregon, in addition to many parties of fur traders and trappers, freighters, hunters, and other persons out for adventure or profit in the West. The facilities of the little settlement then existing as the ancestor of Kansas City were taxed to the utmost. Every bed and room in the town was occupied, some bunks doing 24-hour duty on a 3-shift basis.

Long lines of horses and mules fought flies along the banks of the Missouri, and the bellowing of oxen, the swearing of the bullwhackers, the shouts of the roustabouts at the steamboat landing where rows of steamboats stood unloading kept a tumult going nearly all the way around the clock.

In the midst of this Fremont received a letter from his young wife in St. Louis. It urged him to set out for the West immediately. No reason was given, but it was imperative that he depart without hesitation for Bent's Fort.

Fremont knew the judgment and decision of Jessie, and he obeyed her without question. Although he had expected to spend days more in preparation, he ordered his carts and wagons hitched up, and the motley array, with the cannon bouncing along at the rear, moved out of the valley in a rain. The first

day's journey was only 4 miles, but they camped safely out of sight of the village.

AN ORDER WITHHELD

Not until he returned more than a year later did Fremont learn what occasioned this precipitancy. Among the mail addressed to him, which had come from Washington to his wife's address at St. Louis, was a military envelope. Jessie, with feminine intuition, knew she should open it. She did. The letter contained an order for Fremont to return to Washington at once, placing his expedition under command of another officer, and explain why he had taken a cannon along on a peaceful topographical exploration.

Jessie sent her imperative plea for Fremont to move at once. She did not immediately send the order, and of course she could not tell her husband why she urged him to move, for if he knew of the order he would be violating it by failure to comply. So Fremont, with good judgment, moved on faith in his wife's intelligence and address. Later, when the delayed mail arrived at the frontier settlement, Fremont was gone, and he could never be accused of insubordination.

Out across the plains trundled the well-found and well-disciplined little column. For a part of the time, at least, the famous missionary and martyr, Dr. Marcus Whitman, rode with them. They reached the Rockies and glimpsed the great peaks. And there, in the foothills, Fremont's old friend, Kit Carson, encountered the expedition and was engaged on the spot to accompany it.

Later Alexander Godey, another famous scout and trapper, joined the party, and now Fremont had the finest group of guides it could be possible to imagine. Carson, Fitzpatrick, and Godey were among the few pre-eminent adventurers and warriors of the West. They knew the West like the palms of their own rugged hands. What Fremont was going to explore they already were familiar with, but his important objective was the acquaintance of the public with those trails, mountain ranges, rivers, lakes, and natural resources which the inarticulate trappers never could have accomplished.

Over the rugged Oregon trail, Fremont's party pushed its way. As a result of Fremont's description of the Great Salt Lake and its valley, Brigham Young, 4 years later, was to determine to lead the Mormons there and establish his new Israel. Fremont reached the Columbia River in November, and with the cannon still trundling along behind, reached the foot of the Sierras. The country here was barren, rocky, and difficult, but the guides with Fremont told him that beyond the Sierras was plenty. So he determined to cross those forbidding mountains, although it was winter.

GOT RID OF HOWITZER

In early February the ascent was begun over the range which contains many 14,000-foot peaks, and through the passes which were then almost unknown. An Indian served as guide. And here Fremont was forced to abandon the howitzer which he had brought thus far through all difficulties. The gun had not been fired, and was a useless encumbrance anyway. Fremont left it in a rocky canyon in the mountains and went on.

The expedition was fortunate. No sudden blizzard such as those which snowed in the Donner party later, and led to the revolting siege of cannibalism, occurred. They scooped snow, hacked out roads, took turns at the exhausting work, and ate their mules and even their pet dog mascot, Klamath. But by February 20, they had surmounted the range and started down into California.

Sutter's Fort, the site of the later great California gold rush, was visited, and after a rest Fremont began the return to the landing on the Missouri from which he had departed, by way of the desert Old Spanish Trail. At last, on the last day of July 1844, the party, tanned, ragged, and worn, once more reached the town of Kansas, on the banks of the Missouri, exulting, after 14 months of absence, at the familiar scene they viewed.

No time was taken by Fremont for rest. The very next day he took a steamboat for St. Louis, where he was reunited with his wife and the small child he had not seen for more than a year. Then the little family went to Washington, where Fremont prepared his memorable report, second expedition. Congress ordered 10,000 copies of it to be printed, but the printings far outran that. Newspapers reprinted large sections. Fremont found himself the hero of the day and the West became a popular subject of interest.

Recently a bill has been suggested providing an appropriation for the construction of a heroic statue commemorating the Fremont expedition. The site has not yet been selected, nor has the artist, although T. A. Rovelstad, a sculptor of Elgin, Ill., and Washington, has already presented what is pronounced by many to be an excellent design, showing Fremont, surrounded by his scouts, Carson, Godey, and Owen (who took part in a later expedition) with Jessie Benton, on the obverse side, affixing a new star to the flag, in commemoration of the acquirement of California by the Union.

PAUL I. WELLMAN.

Farley Speaks of Future

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, April 11 (legislative day of Friday, March 16), 1945

Mr. McMAHON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Farley Speaks of Future," from the Bridgeport Post of March 31, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARLEY SPEAKS OF FUTURE

The former Postmaster General, now a big-business executive, took time out recently to talk to the Rotarians in Northampton, Mass., giving them his views on what has made America great and what will continue to keep it great in the future.

No man in public life is better qualified after his many years in close touch with the "common man" to express his views about the "average" American than he. He has talked for years with men in every walk in life in every State in the Union. It was his job as the man most responsible for the first election of Franklin D. Roosevelt to know average Americans everywhere.

It took a great many things to create this average American, who built a great nation and is now impressing that sterling American character "upon a wide and distracted world." The man whom Mr. Farley calls average was the product of a problem that may be with us as long as men live on this earth, the product of a Europe which has suffered for centuries from the fact that it could produce more people than it could feed.

Men came to America for a variety of reasons, at various times, but they came to escape from the man-made hardships of Europe to conquer the barriers nature had set up here, to create a free land, and "when men invested their labor and their courage, nature paid them a fair and ample wage."

Mr. Farley showed that out of great experience great men are born and it is out of great enterprise that a great people is born, America was built upon individual men and women, and if the American Nation has, in its resources, in its political institutions, and in its culture, preeminence in the world today, it is because of our great area and richness of resources; the wise policy of the pioneers and founders of our Constitution of individual freedom; the assimilation of all the people who came here through American genius, to create a better life.

In future, beyond this war, our task will be in spite of the suggestions of those who have formulas for security and happiness, to bear in mind that the United States was not built upon formulas. It was built upon the individual. We shall retain the power that is essential to the maintenance of America's responsibilities in the world only so far as we retain the spirit of the pioneer in each individual American.

Whatever the average Americans of the future have, they will have only if these truly American principles can be retained. The future of American political, social, and economic life should continue to have as a basis true principles of individual liberty. Free enterprise must be reestablished. Government encroachments upon the life and work of Americans must be curbed. The day war ends will be the day when all Americans in and out of the Government's official life must buckle down to the task of restoring that which for 169 years we have considered the American way of life.

As Mr. Farley concluded, the greatness of the past, in its achievements, lights the way for progress that is assured, if no man-made shadows blur the road.

The Meat Shortage

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 11 (legislative day of Friday, March 16), 1945

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Put Your Cows Together, Boys," published in a recent issue of the Indianapolis News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PUT YOUR COWS TOGETHER, BOYS

Not even the seven sages could penetrate the discordancies of Washington when the master planners get to explaining. It becomes a case where rationalizing has the people so irrational that it is little wonder that so many Americans have become afflicted with jitter complexes.

The meat shortage explanations are a case in point. No less an authority than President Roosevelt took up the issue 2 weeks ago. He said that it was a matter of justice, or rather of decency, that the American people should tighten their belts to keep others from starving.

No sooner had this comment been circulated about the country than in stepped Leo T. Crowley, Foreign Economic Administrator, to demolish all the argument that domestic shortage of beef and veal are attributable to foreign shipments. Lend-lease shipments of

these items took less than 1 percent of our domestic products, he said, and, further, we received from our allies under reverse lend-lease about three-fourths as much beef and veal as we sent abroad. The balance, he said, deprived each of us in America in 1944 of only about two and a quarter ounces of beef and veal—for the whole year.

Mr. Roosevelt says we have to keep others from starving. Mr. Crowley says we are not depriving ourselves of anything by foreign shipments. Chester Bowles of O. P. A. says we are eating more meat. Congressmen prove Mr. Bowles' figures are all off for 1945—jabber, chatter, cackle—and still no meat. As Shakespeare had King John saying, "I was never so bethump'd with words."

Government in the Life of the People

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 11 (legislative day of Friday, March 16), 1945

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the RECORD a timely editorial entitled "When Do We Get Enough 'Government'?" The editorial calls attention to a trend in government of which the people are becoming more acutely aware all the time.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHEN DO WE GET ENOUGH "GOVERNMENT"?

The folks who want the "Government" to run things certainly ought to have some very repentant thoughts these days. Now that the "Government" has succeeded in getting the meat situation in a state of almost utter chaos, Solid Fuels Administrator Harold Ickes has seen fit to assert himself as part of the "Government."

Two very significant sentences were found on the market pages of metropolitan papers last week. The first, "Hog receipts were the lowest in 69 years"; the following day, "Hog receipts were 73 percent below the same day last year." It isn't lend-lease; it isn't the need of providing food for liberated countries which is causing the meat shortage. It's the "Government."

Looking over last April's Times-Mail, we find bacon and roast pork advertised, 1 point a pound. We also read that men over 26 will not be drafted; that the stockyards are simply glutted with pork. Today pork has almost disappeared. This should be no surprise. Last summer farmers who had been urged to raise pork took their hogs to market. Instead of getting the ceiling price, they did not receive the floor price. There were plenty of disgruntled hog producers right here in Lawrence County. The present pork shortage was foreseen last August. It is going to be some time before bacon comes back on breakfast tables. It isn't going to come back until the "Government" quits trying to run the food markets of the Nation.

Harold Ickes has been quiet for a long time. He couldn't resist issuing a directive. Coal consumption will be cut to 80 percent next year, he says, and only 50 percent of the year's supply can be delivered this summer. Local coal dealers have not received official word yet, but Ickes has talked for publication. All coal received after April 1 counts on next winter's allotment.

This is the height of the whole asinine performance. No family is going to burn more coal than is necessary. If next winter is mild, less coal will be burned. If it is cold, more coal will be burned. It's that simple. Why would any family burn more coal than necessary? It's just burning up money. But Ickes felt the need of expressing himself Byrnes had clamped on a curfew, cut out horse racing; Marvin Jones arranged to have food shortages. Ickes wanted some publicity. One reason for the coal-use reduction is that freight cars are scarce, yet we read that Mexican railroads have purchased 1,500 freight cars for delivery this year. Why not use the cars here?

Just what is this "Government" that regulates the most minute detail of our lives. In theory the Government is a sincere, impartial, capable something which is superior to any individual. In fact, it is anything but that. The Government is a member of the political party in power—a fallible man who has rarely distinguished himself in any way other than getting votes.

The Government is the O. P. A. prowler who finds a grocer selling 3 or 4 cents over or under the ceiling. The Government is the wage-hour snoop, who tries to ingratiate himself by downright misrepresentation. The Government is the man on the War Labor Board who says you can, or cannot, get a raise in pay. The Government is anyone of the hundreds of people on the Department of Agriculture pay roll, who tells the farmer what he can raise, and how much he can get paid for it. The Government is the policeman on a motorcycle who dashes through the city streets with a siren at full blast, so some second-rate official can have an escort. The Government is the city official who marks off sections of the curbing, so that official cars, bought and paid for by the taxpayer, can have a privileged place to park, close by the public offices. Actually, the Government is just a lot of ordinary people of the party in power, who are responsible to a department head, who is resonsible to the mayor, governor, or President, who is, in theory, responsible to the public; but actually is responsible only for a month before election.

We once asked a Government official how much the travel in his particular department could be cut down without materially affecting the work of the bureau. He answered, "About 80 percent." That's what the lack of responsibility in government creates.

Neither of the major parties can point a clean finger of scorn at the other, although no political group has ever had the audacity to ignore the public as has the group under the New Deal.

This is a very appropriate time to recall the words of Thomas Jefferson, the founder of the Democratic Party, "The best government is the least government." We have certainly strayed a long way from that sage advice.

Individualism in America

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, April 11 (legislative day of Friday, March 16), 1945

Mr. McMAHON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a brief comment under the heading "Wise words," published in the Boston Post of March 31, 1945.

There being no objection, the comment was ordered to be printed in the RECORD, as follows:

WISE WORDS

In these days when economic and social planning are so popular the sage advice of former Postmaster General James A. Farley should not be overlooked. He reminded a Bay State audience the other day that the "United States was not built upon formulas but upon individuals." And our best guaranty for a successful future, he wisely observes, is retaining "the pioneer spirit in each American."

Blessed Are the Peacemakers

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a sermon delivered by Dr. A. J. McCartney, pastor, the Covenant First Presbyterian Church, Washington, D. C., on April 1, 1945, Easter Sunday, on the subject Blessed Are the Peacemakers. This sermon was delivered in prospect of the United Nations Conference to be held in San Francisco. Dr. McCartney is the father of First Lt. Benjamin C. McCartney, who died of wounds received in Italy. To those of us who are privileged to hear Dr. McCartney from time to time, his sermons are inspiring, and this sermon deserves our prayerful study. May we all join with Dr. McCartney in a firm determination that, standing by the graves of 200,000 Americans, we shall dedicate ourselves anew to the cause for which they died. May we devote all our energies and our efforts to the cause of permanent peace in this war-weary world.

The sermon follows:

We come up to this Easter service with the overwhelming fact staring us in the face that more than 100,000 of our young men who have been nurtured in the belief of a life beyond have passed from earth since we met here a year ago. Our concern as to how it fares with them on the other side is no different in quality and character from what it was a year ago, but for hundreds of thousands it is certainly more intense and personal. The other day there came to my study one who was a stranger to me, a young mother of 22, who had sought me out in the hope that I might have some solace for her, who had just received the fatal telegram from the Government that her husband had been killed in action on the western front. "Do you think," she asked, with that wistful pathos which breaks one's heart—"do you think I shall ever see him again?" That I can only answer in terms of the Christian hope that is so dramatized in the New Testament account of the resurrection of our Lord, and the amazing persistence in a belief in life beyond the grave in all quarters of the world, century after century, in spite of all the discouraging evidences with which we are confronted.

In a beautiful editorial in the Washington Evening Star entitled "Good Friday," there is expressed the thought that all the sufferings and anguish of this world's Good Fridays, are followed by Easter:

"In 1945 there are millions of men and women who appreciate as people never did before in 19 centuries the essential covenant between humanity and the Power which rules the universe. They realize that righteousness and justice, fellowship and peace are not to be had for the mere asking. Such blessings must be earned. * * * The young lives that have been expended since 1939 for the salvation—yes, and the expansion—of civilization are not lost. Good Friday will be followed by Easter."

For my own part, it is practically impossible for me, nurtured in the Christian faith as I have been, to dismiss the belief that these alert and blazing personalities we have known are now nonexistent, and betimes there comes sweeping over me the feeling that will not down that their disembodied spirits are finding employment and eager delight in realms yet unrevealed, and perhaps not so distant from us. And that in whatsoever world or condition they be, their lives are unfolding in the presence of God, and their talents and gifts so manifest in this life, must surely find sweet employment in the spacious fields of eternity.

But be that as it may, I feel that we owe a debt that can only be liquidated by an unswerving loyalty and sacrificial dedication to the original purpose of a free world for which we exposed them to danger and to death. So, as a tribute to them, I want to take the occasion of speaking to so large an audience a few things regarding the contribution that we who are Christians should try to make toward the molding of a new world order, which we trust may be effective in adjourning for many generations to come World War No. 3, about which we hear all too much loose and irresponsible talk. I feel that I have a stake in the making of the peace; and if any word that I should speak might be instrumental under God in establishing more firmly the pillars of a just and lasting peace, I shall not have chosen my subject in vain. Not that I would bypass the Easter theme, but standing by the graves of 200,000 American youth, I would like to dedicate ourselves anew to the cause for which they died.

As the war draws to its inevitable climax, and military victory seems assured, the very staggering immensity of the tasks of the post-war period comes into frightening focus. Presently we shall be coming to grips with the appalling moral, social, and material aftermath of Axis rule, problems that will tax the wisdom of a Solomon and the patience of a Job. The real victory in this war will depend upon the clarity of our aims beyond the military defeat of the enemy and the sincerity and completeness of our dedication to these aims.

I wonder sometimes if we here in America, as yet untouched and unscorched by the flames of war, realize that we are living through and the makers of the most changing events in the long history of the race. Do you, young men and women, realize that you are at once the actors and the audience in the greatest drama of all time; a drama that will affect the fortunes and happiness of mankind for good or ill, for centuries to come.

GENERAL ASSUMPTIONS

To this end there are certain assumptions of a general and popular character which we should recognize. To begin with, everyone hopes that the outcome of the war may result in some kind of world organization that will help to prevent a future war of such destructive proportions. Our major concern is to so organize human affairs that no Hitler, or power-greedy nation, shall ever again plunge this whole world into such a hell. To bring such a hope into fulfillment some sort of organized supreme government, vested with sovereign authority, must be agreed upon. There is no other conclusion, in the face of the insane, idiotic, overwhelming disaster in which our stupidity has involved us.

Another assumption that we all recognize is this: That now is the time for us to do something about it. We must act while the molten lava is in flux. Nor need we wait upon the counsels of perfection. Any leadership that assumes this responsibility must share it in a subsidiary measure with regional groups of smaller nations in terms of the special needs and rightful aspirations of the minority groups concerned, in order to release the restraining economic and social tension, which inevitably issue in revolutions and war.

One further assumption of a general and popular nature would require that any peace that is made should provide the political framework for continuing expanding and growing cooperation among the nations now united, and to make such provision for automatic changes as unforeseen events and conditions demand, and possible doorways for eventual cooperation with neutral and enemy nations.

We believe that this goal, desired by so many peoples of the earth, can be obtained in the measure in which the makers of the peace will be animated by the spirit and principles of Christianity at its best. So, ancillary to these popular and general and world-wide assumptions, there are certain assumptions of specific concern to Christians:

CHRISTIAN ASSUMPTIONS

Assumption 1. God is the Creator and Father of all men, and He purposes that all men and all nations and all races should constitute a family fellowship. God has made all kingdoms and tongues and peoples for to dwell together upon the face of the earth. No casuistry of human argument can get around that central fact of Christianity. The very last thing our Lord said to His disciples was this: Go ye into all the world and preach the gospel to every creature. Any policies which depart from this assumption must eventually lead to failure and disaster, and the makers of the peace will have to be on their constant guard against unsanctified human nature which so insists upon placing their individual, racial and national interests first. The golden rule is going to be a difficult yardstick with which to measure these conflicting interests; but it should certainly be a motto for the peace table, pointing always to an ideal.

Assumption 2. Our chief concern as Christians is the salvation of the soul of the common man, his immortal welfare; and after that, his social welfare. Redemption is an individual affair. So our business is first of all to seek to bring more persons, who constitute these conflicting groups, into submission to, and the subjection of their lives to, the will of God as we see it revealed in Jesus Christ. It is not the business of the church to furnish blueprints for the detail and technique of this vast problem, but it is our task to insist that any supreme counsel that assumes leadership and responsibility should recognize certain things—the freedom and dignity of the individual man; his right to exist and express himself; religion unhampered by the state; justice and punishment swift and adequate without vengeance; and the spirit of the good Samaritan, who made personal sacrifices and cut across social and racial barriers to bring help to a suffering fellow-being.

Assumption 3. All this brings us to the problem of the Christian treatment of the vanquished. Here our Christianity is going to be tested. The end of hostilities and war weariness will make many of us soft and forgetful in the general stampede to get back to normalcy. But God forbid that, altogether apart from the millions of her dead soldiers, we should ever forget that the Axis gamble for power, in its cruel and ruthless prosecution, has cost 20,000,000 innocent lives, in a period of 5 years. Our first duty to the fallen foe will be to provide food and physical relief, and then to set up some supreme authority to establish courts of justice with punishment for the guilty, swift and final, and mercy for the innocent. The screening of the guilty from the innocent is going to be a difficult task. But that is no reason why we should not attempt it. It will not be a choice between rough justice and perfect justice, but it will be a choice between rough justice and none. We must labor, however, toward such just punishments as Christian people both in the country of the victors and in the lands of the vanquished, will be able to see as meet and necessary, and where human instrumentality errs and fails we shall remember that God is not mocked, for whatsoever a man soweth that shall he also reap. Over against this insistence upon just punishment for the guilty wherever they can be identified, the church lifts up its voice to warn against a vengeful spirit. There must be no place for the ambassadors of vengeance at the coming peace table. To kill every Japanese soldier, every German soldier, will not bring to life a single one of our bonny lads, but prompt, severe, and adequate punishment of war criminals will surely have a wholesome effect in the future. Evil men must be brought to book for all the misery they have brought to this world, but we shall not forget that vengeance belongeth unto God, and He will certainly repay in His own inscrutable and inescapable way; for the Judge of all the earth shall do right. Even from our human viewpoint, God seems to be trampling out the vintage where the grapes of wrath have been stored, in the lands of the enemy where they are experiencing swift and dreadful judgment in the rubble of their cities and the millions of their graves.

Assumption 4. Mercy and judgment, however, must walk hand in hand, and we shall have a wonderful opportunity to manifest the spirit of our Lord Jesus Christ, who, while He suffered on the Cross, said, "Father, forgive them, for they know not what they do." Ours will be a rare opportunity to reach out a helping hand to the fallen foe, bind up his wounds, and nurse him back to sanity and the hope that some day, some time, his people, purged of their insane thirst to lord it over other peoples, will merit a place in the well-ordered family of nations.

Assumption 5. Last of all, we must refuse to accept the counsels of despair. Cynical voices are already being lifted up, telling us that world order is a hopeless undertaking. The discouragements that in the past we have encountered must not dissuade us from making a new and more determined effort for a just and durable peace. When the American Constitution was being born George Washington said: "It is too probable that no plan that would be proposed will be adopted. Perhaps another dreadful conflict is to be sustained. If, to please the people, we offer what we ourselves disapprove, how can we afterward defend our work? Let us raise a standard to which the wise and the honest can repair. The event is in the hand of God." Whatever happens, we must not forsake our faith, or compromise the faith of those young men who have already laid down their lives for this great hope. The prophet Isaiah in a closing chapter recites with terrific indictment the disheartening conditions of his time, which are so amazingly and accurately reflected in our own world. Tidal waves of evil and of savagery were surging over the face of his world

then, as our world now. To quote him—"We look for justice, but there is none, for salvation, but it is far from us. Our sins testify against us. Judgment is turned away backward, and righteousness standeth afar off. For truth is fallen in the street, and uprightness cannot enter." Then, the prophet having called the people to righteousness and to a return to God, makes this declaration: "When the enemy shall come in like a flood the Spirit of the Lord God will lift up a standard against him." Let this statement be a tonic to our souls today, and let it lift a curtain of hope upon the stage and theater of this history-making hour. When I read this verse in Isaiah's majestic language I see the Spirit of God upon the march. I see the emissaries of peace coming together, and the invisible forces of good will brooding over their assembly, and lifting the white standard of hope before the bleeding and wounded nations of the earth. For when the enemy shall come in like a flood the Spirit of the Lord shall lift up a standard against him. And around that standard let all the free men of the earth now gather. And blessed be the peacemakers, for they shall be called the children of God.

A Fair Price Means a Full Cupboard

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. MUNDT. Mr. Speaker, in the report on the food outlook for 1943, before the Senate Committee on Agriculture and Forestry, Lieutenant Colonel Olmstead, Director of Office of Supply, in the Commodity Credit Corporation, stated that pork production would be 18 percent lower than in 1944. I view this as an alarming situation and one which should concern us all. This serious shortage of pork has its roots in the fact that too many broken promises by Government planners have left the American farmer with the feeling he has been definitely short-changed. The farm-labor shortage, the changing of the floor price on hogs last year and the penalty that was placed on farmers whose hogs became overweight have combined to discourage hog production on many farms.

Mr. Speaker, I have received an illuminating letter from Mr. D. H. Cunningham, secretary of the Sioux City Livestock Exchange, Sioux City, Iowa. Sioux City is the sixth in size of all packing centers in this country and last year slaughtered 2,190,000 pigs. The analysis which Mr. Cunningham compiled was written after a poll had been taken in the Sioux City marketing area of over 2,000 farmers, and it merits careful study.

I think that it is important to understand what has happened and to work out a program to insure adequate food supplies for the coming year. It is important that those in charge of the war-food program seek the advice and counsel of packers and marketers such as Mr. Cunningham in outlining future production plans. We must assure farmers that they will not lose money by raising hogs. We can do this if a floor price of $13.75 per hundredweight is guaranteed at Chicago. We must convince farmers that the food program will be adhered to so they will not be caught short again this year or in 1946. Unless a sound policy is adopted in regard to the production of pork, I fear that shortages will become more acute in 1946. We can only carry out plans to feed our Nation and our allies with a food program based on an adequate price and free from uncertainty and distrust.

Mr. Speaker, give the American farmer a fair price for a full crop, sufficient farm machinery, and the bare minimum of help essential to his operations and this country will have a full cupboard while at the same time being able to contribute mightily to the bread baskets of the world.

The letter from Mr. Cunningham follows; it deserves your thoughtful reading:

SIOUX CITY LIVE STOCK EXCHANGE,
Sioux City, Iowa, April 3, 1945.

Hon. KARL MUNDT,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: The market interests at the Sioux City stockyards, Sioux City, Iowa, have a radio program of 20 minutes during the noon hour, Monday through Friday of each week. This radio program is not confined strictly to a broadcast of market news alone, but any topic or any move that is pertinent to the welfare of the producers of livestock is given full recognition and accorded the utmost publicity through this radio medium. Our program goes out over radio stations WNAX, Yankton, S. D., and KTRI, Sioux City, Iowa. You are of course fully aware of the fact that WNAX has one of the largest rural listening audiences of any radio station in the United States. Our broadcast over this station has been in full swing for a period of 5 years and we feel sure that upon investigation you will find that we probably have as large a concentrated rural listening audience as does any farm program in the country. As a confirmation of this statement, we need only to direct your attention to how successfully the Sioux City market handled the large hog marketings of 1943 and 1944. We point with pride to this achievement as well as to the fact that at that time the Sioux City market over this broadcast devoted a good deal of time to the question of weights in hogs with the result that farmers of this area were able to save millions of dollars that might have been lost to them.

For some time past we have been fully cognizant of the fact that hog production and hog marketings during this present year have been far below the requirements necessary for a successful war-food production program and a careful analysis of this situation by us here at Sioux City led us to believe that we knew the reasons for this, but we wanted further confirmation from the country and our farmer listeners. We were firmly of the conviction that there were primary reasons for the reduction of hog numbers, and still are firmly of the conviction that if this course is adhered to that we will find ourselves faced with still further reductions this fall of 1945 and spring of 1946.

Our contention is that the farmer and producer of hogs did not forget that he was severely penalized in selling his hogs last year when the hogs became overweight and the way he was treated in this matter left a very bad taste in his mouth and that's putting it frankly. Consequently, he decided not to be caught in the same predicament again and turned away from hog production to other farm activities that he felt gave him more assurance for the future. The second reason was that while he was still in the throes of this marketing problem last year, the floor was reduced on these hogs to $12.50 per hundredweight—Chicago basis—and limited to good to choice 200 to 240 pound barrows and gilts. This really was about the last straw. A dollar and a quarter was taken off the floor and there was further danger of being penalized on weights. He just couldn't bring himself to believe anything else than that he should and would curtail hog production.

As we have said before, we decided to take the case to the Country to confirm our belief in what had really happened and accordingly we talked to our immense rural listening audience, stated our views, reviewed what had happened, and asked them for their reaction to the present ceiling price, what they thought about the present floor price and their effect upon hog production for both this year and next. We also injected into our broadcast the subject of a subsidy to be paid to the producer provided that his hogs would be marketed through federally inspected slaughtering points so that the pork so slaughtered would be available for Government use. We did not advocate a subsidy, we simply asked them what they thought of it.

Now here are the results of our survey. We have had 2,000 letters in answer to our radio broadcast. We feel sure that is a very fine response when one takes into consideration the fact that spring work is in full swing and farmers are extremely busy. Not only have we had 2,000 letters but we've been besieged by telephone and personal calls that bore out exactly the opinions stressed in letters we received and these facts we have found to be the opinion of farmers and producers of hogs.

First, we have noticed with a good deal of satisfaction that the American farmers who have written to us are not asking for an unrestricted chance to get rich during the war emergency. By that we mean that only an infinitesimal portion of these responses ask for any higher ceilings on these hogs and we think that that is a very admirable fact. We have also received comparatively few responses in which the producer has indicated that he is expecting or asking for a subsidy and when such if any is to be paid it should be paid to the farmer or producer and not to the processor if production is to be encouraged. They take the viewpoint that the past record of subsidy payments to processors has not worked out in the way it was intended and has not and is not being passed along to the producer as a further incentive for him to produce or feed either hogs or more cattle. We know full well that this was the real interest of the subsidy program but farmers do not feel that it has fulfilled the expectations of the program to further larger production.

The third thing we have found out is again reassuring in respect to the producers' attitude. As we said before he does not ask for higher ceiling but every letter, every telephone call, and every personal contact brings out the fact that if we are to have a large production of meat in the form of pork that the only thing that will get him to produce the pork in the volume necessary is a raise in the floor price back to the old floor of $13.75 per hundredweight (Chicago basis) and a removal of weight limits. His recent experience makes him shy away from any other program. He would be satisfied with a floor price of $13.75 per hundredweight (Chicago basis) on the average drove cost of the buyer but with nothing short of this.

To sum up this portion of his viewpoint is simply to say that in view of labor costs, higher feed costs, shortage of manpower and

all of the things which now enter into his production picture, the farmer can see no way out for himself except that he be granted an assurance of a $13.75-per-hundredweight floor (Chicago basis) so that he will know exactly what to look forward to in the months that lie ahead. Of course we know full well that this floor if so advanced would do very little to stimulate any larger pig production this spring, but if the hog production for the entire year has to be one of greater numbers then this assurance would go far toward producing a larger fall crop but time is the essential element right now as far as a fall pig crop is concerned, for the producer must of necessity begin to lay his plans for breeding of sows for fall farrowing. A decision one way or another will greatly affect the picture. We're confident that a maintenance of the present floor price of $12.50 per hundredweight (Chicago basis) on good to choice 200- to 275-pound butchers will result in a smaller fall pig crop but we're equally positive that a raise in the floor price to $13.75 without weight limit will brighten the picture no end. The thought is uppermost in the minds of a great many that our hog crop for this year will be considerably larger but all the information we have been able to receive points to the fact that this is not the case and that a further continuance of uncertain floor prices will lessen the chances for hog production in 1946.

One other thing seems also to be paramount and that is if future food production as far as pork is concerned is to be made to reach the necessary requirements that an extension of time on this floor price is absolutely necessary. We believe and our survey shows that the farmer would like to have 2 years of protection after the war is over but if this would be impossible the time limit set on this floor should be at least until December of 1946.

We think, Congressman, that this gives you a clear picture and we're asking you to go to bat for your farmer constituents because we have had hundreds of letters from all over your State and if this program could be carried through it would work out for the mutual benefit, first, for the war effort in which we are all interested, and second, for the benefit of your consituents.

We trust that you will give this matter your early and earnest consideration and that this one thing be a "must" on your agenda.

Yours very truly,

D. H. CUNNINGHAM,
Secretary.

The Egg Situation

EXTENSION OF REMARKS
OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the production of eggs has shown a very marked increase. This increase was first the result of the patriotic desire to produce on the part of both farmers and the people of the villages; second, the result of a favorable feed situation when the large increase in production was attained; third, the fact that manpower shortage did not affect this industry quite as severely as where heavier manual labor is required; and fourth, the fact that a production program was set in motion by the United States Department of Agriculture to obtain eggs and powdered eggs for the war and lease-lend.

Here is a food product that has been produced in abundance. This is the best food insurance for all the people. Eggs have not even been rationed. The production has fulfilled every demand. This production has in fact been embarrassing at certain periods. With foresight other food products could have been produced in abundance the same as eggs have been produced. I have often wondered why not? Is control to outweigh production?

The production by States is shown in the following official table:

Total eggs produced—aggregate

[In millions]

	1939	1940	1941	1942	1943	1944

United States	38,843	39,585	41,765	48,331	54,165	57,481

Source: U. S. Department of Agriculture, Crop Reporting Board.

Information from the United States Department of Agriculture shows that about 8,000,000,000 eggs were diverted to lease-lend in 1943 and also in 1944.

The shipments of eggs to United Nations Relief and Rehabilitation, the armed forces, and exports to other countries also must be taken into consideration.

From the total production it would appear that ample eggs for all purposes are and could be available. They no doubt will be available unless the War Food Administration disturbs the program of egg production. We can at least hope that they do **not** disrupt it.

Commendation of Fred E. Gross by the War Department

EXTENSION OF REMARKS
OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. NORRELL. Mr. Speaker, during the course of the present world conflict, we have been aware in some measure of the scientific and mechanical developments that have been achieved through the ingenuity, skill, and patriotic endeavor of many civilians, who share the common desire to contribute their utmost in the prosecution of the war. We are indebted to them for the preservation of lives that are dear to us, for the necessary means of warfare, and for the savings that have been effected to protect our economy.

It seems appropriate to identify one of those who has so contributed, and who is a resident of the district I have the honor to represent. In recognition of his exceptional civilian service, Mr. Fred E. Gross, a civil and electrical engineer of Lonoke, Ark., has received official commendation by the War Department for designing an ammunition box for fuzes, which has become standard for use.

The value of the design, through conservation of critical materials and shipping space, increased production, and in tremendous savings of money and manpower, is evidenced by the detailed statement submitted by Col. W. L. Bell, Jr., in recommending to the Ordnance Office Board on Civilian Awards that the exceptional award be granted Mr. Gross. Colonel Bell's statement follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ORDNANCE,
Washington, D. C., November 8, 1944.

Memorandum for: Ordnance Orice Board on Civilian Awards.

Subject: Exceptional award for Mr. Fred E. Gross.

1. In accordance with paragraph 3b (2) of A. S. F. Civilian Personnel Memorandum No. 91, it is recommended the following person receive the exceptional award:

(a) Name of employee: Mr. Fred E. Gross.

(b) Organization: Inspection Branch, Ammunition Division, Industrial Service, Ordnance Department, A. S. F.

(c) Period of service: Employed at Arkansas Ordnance Plant, Little Rock, Ark., from April 20, 1942, to July 31, 1944, when transferred to office, Chief of Ordnance.

(d) Statement of outstanding service which merits the award: Soon after taking charge of the bomb component line at Arkansas Ordnance Plant, the line was faced with a bottleneck for the want of certain bolts, wing nuts, and washers used in securing the vane assemblies in the packing boxes for the 100 series of tail bomb fuzes. Being cadmium or zinc plated, as called for by the specifications, they were rather critical to obtain, and the line would be forced by the lack of them to close down. In view of this fact, Mr. Gross went to work, on his own time, and designed an ammunition box which securely and adequately held the vane assemblies in place, within the box, without the use of any critical materials, having substituted wood therefor.

(1) The design was presented to technical department of the Arkansas Ordnance Plant through channels to office, Chief of Ordnance.

(2) On February 15, 1943, this design came out on the official ordnance drawing No. 76-16-166, being mandatory on all future contracts, and current contracts as soon as the change-over could be made without interfering with production.

(3) This box design was originally used for the AN-M100A1, AN-M101A1 and the AN-M102A1 fuzes. Since then it has become standard for use in the following packing of not only the above fuzes, but the following fuzes as well: AN-M112A1, AN-M113A1, AN-M114A1, M115, M116, M117, M120, M121, M123, M124, and M125.

(4) Unit savings per box were as follows: Displacement, 0.64 cubic feet. Lumber, 1.35 square feet. Zinc or cadmium plated nuts, bolts and washers, 1.50 pounds. Lumber by weight, 2.50 pounds. No. 10 1½" wood screws, 0.25 pound. Less weight per box when completely packed over old style, 3.50 pounds.

Saves 640,000 cubic feet displacement equal to 380 railroad boxcar loads in 1,520 shipped, or 10 merchant transport shiploads in 40 loads, or 250 cargo plane loads per 1,000 loads, $2,500,000 estimated savings; 1,350,000 board feet building lumber equal to 135 seven-room homes, or 96,444 additional packing boxes, $195,781 estimated savings; 1,500,000 pounds steel equal to 750 tons of critical war material, $600,000 estimated savings; 6,000,000 pounds shipping equal to 3,000 tons, or 60 shiploads, $3,000,000 estimated savings.

Furthermore, it saves manpower on the production and assembly lines, eliminates unnecessary processes, and improves existing methods. Improves conditions affecting health and safety of operators. It eliminates excesses, increases production, improves methods of unpacking in the field of operations when assembling onto the bombs.

As the lines of supply lengthen, the importance of these savings is increased proportionally.

W. L. BELL, Jr.,
Colonel, Ordnance Department.

The citation accompanying the award to Mr. Gross reads as follows:

In recognition of his outstanding contribution to the Ordnance Department and the Nation's war effort by the design of an ammunition box which has conserved critical materials and shipping space and has also resulted in tremendous savings of money, time, and labor for the Government.

One Hundred and Twenty-fourth Anniversary of Greek Independence

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Thursday, April 12 (legislative day of Friday, March 16), 1945

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting and inspiring address delivered by His Excellency, the Ambassador of Greece, at Worcester, Mass., on last March 25, in commemoration of the one hundred and twenty-fourth anniversary of Greek independence.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am most happy to have the opportunity of visiting the city of Worcester, and deem it a fortunate event that I appear at this gathering at the same time with my honorable colleague, the Minister of our good ally, New Zealand. Moreover, I desire to extend my thanks to the United Nations Information Office for their kind invitation to deliver an address on the occasion of the anniversary of Greek independence, which falls on this day.

Having for more than 5 years the honor to represent my country in the United States, I can say from experience that, outside of Greece, in no other country is this anniversary celebrated with more warmth and enthusiasm than in the United States. This is due to the existence here of a large number of Americans of Greek descent, who know how to unite in their devotion and loyalty the two countries—America and Greece—and to the fact that this land by its love of freedom, and its free institutions, and its numerous and recurrent manifestations of a living democracy, appears as the direct inheritor of the spirit of ancient Greece. Today, you may be sure, ladies and gentlemen, that there is no city in the United States, including large or small Greek communities, which does not celebrate in all earnestness this anniversary of the rebirth of the Greeks as a free nation. Our minds turn reverently to the unforgettable great men of the Greek Revolution and the Philhellenes who shed their blood or otherwise contributed to make Greece free.

Everybody knows of the struggle of Greece during the present war and the tremendous sacrifices she has made in order to defend her honor by the side of the freedom-loving people. Today, thanks to the victories of its great allies, Greece again breathes the air of freedom, but the loss of life and the damage wrought by the enemy is appalling. Health conditions are beyond description. Mr. Van Vlach, an American doctor on the staff of the U. N. R. R. A. in Greece, reported lately that 60 percent of the inhabitants in certain regions who survived the war, are tubercular and that malaria has become a real scourge. Other official information shows that for at least the next 2 years Greece, generally speaking, will not be able to use its railroads—so great and so thorough has been the destruction wrought by the enemy to the vital factor of transportation and communication.

Nevertheless, I wish to emphasize in mentioning the frightful figures, that I do not wish to leave an impression of pessimism for the future of my country, but, rather, to place on record how costly freedom has been to Greece. The Greek Nation must be imbued with the consciousness that it should look forward with the determination to rebuild the country and to resume its course in order to fulfill its mission in that part of Europe. No other consideration is more important. The task is formidable and it requires all the patriotism, the spirit of union, and the vitality of the Greek people; the union with the mother country of those well-known territories which rightfully belong to the Greek inheritance in order that Greece might feel secure and fully reestablished in her new frontiers; and above all, the help of the great allies for the reconstruction and rehabilitation for the completely disrupted land. What the Greek people ask for today is that their powerful friends give them the means of work and production. They know how to do the rest. They know that only thus will they find the possibility of restoring their normal life, which, under the most optimistic calculations, will take more than one decade if the country is to be brought back to the conditions it enjoyed in 1939.

Of course, Greece will have to face many problems arising out of the war; problems for the solution of which, as we have mentioned above, Greece will need the help of the great allies. It is a good omen, nevertheless, to be able to give assurance that there are certain conditions in Greece which will facilitate the solution of these problems. Firstly, the social struture of the population. This population in 1939 amounted to 7,600,000. We reckon that we have lost in the struggle 500,000 from causes directly or indirectly connected with the war. So the remainder of the population does not exceed 7,100,000. The rural population represents 60 percent and the urban about 40 percent. Agriculture is still the principle occupation, employing over a million ablebodied peasants with their families. We have no landed aristocracy or privileged class. We have a small capitalistic class of bankers, industrialists, and shipowners. The average Greek is either a peasant or a small bourgeois.

This is the best proof that the recent uprising had no justifiable social causes. I will add that on this point a large segment of American public opinion has been largely misled. Moreover, we do not have to face in Greece the problem of nationalizing existing wealth monopolized by private interests, because this wealth is very limited. We have no landowners, as I said, we have no large mines, and no big banking institutions, and the management of public utilities does not lead to undue exploitation as it happens in larger and highly industrialized countries.

These are the causes for which, in spite of the very critical conditions now prevailing in Greece, we are confident that we will be able to restore the country. Let me say that we expect a great deal from the peace organization which will result from the San Francisco Conference. Greece has always been a peace-loving country and one of the most faithful adherents of the League of Nations. She has always believed in human progress by peaceful means as distinguished from the concept of the predatory powers against whom she resisted so valiantly. But at the same time, the Greek people feel the need of safe frontiers—for such need has been indelibly impressed upon her mind by three invasions during the last 30 years.

In order to clarify this statement, I would point out that in this regard the geographic position of Greece and her security in relation to Bulgaria is in all respects comparable to the position of those neighbors of Germany who have always lived in constant fear of Germany and have more than once in the last three generations been victims of aggression.

It is our hope that in the post-war world we will enjoy freedom from want and freedom from fear in a world rid of the menace of war and so be permitted to follow unmolested the natural inclinations of the Greek people to devote themselves to their obligations arising out of our long history and to the moral uplifting and material improvement of that land which has been our home for thousands of years.

Authorization for Use of Lumber

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, April 12 (legislative day of Friday, March 16), 1945

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in

the RECORD an advance release of the War Production Board stating, among other things, that the Board has authorized the supply of approximately 280,000,000 board feet for use in England and other countries.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

Lumber authorized for rehabilitation use overseas and for construction in this country of prefabricated housing for export amounts to less than 1 percent of anticipated 1945 domestic lumber production, the War Production Board said today. Amounts authorized total about 280,000,000 board feet, and species and grades being supplied are those that will conflict as little as possible with military and essential domestic civilian requirements.

Quantities of lumber authorized for rehabilitation use to date, including direct shipment and that for prefabricated housing are: 5,600,000 board-feet for repair of dikes in Holland; 23,400,000 board-feet for barracks to house workers repairing French ports, prefabricated in the United States; 4,750,000 board-feet for repairing war damage in formerly occupied countries; 164,000,000 board-feet for 30,000 temporary housing units for England, prefabricated in the United States; and about 80,000,000 board-feet for repair of bomb-damaged structures and other essential uses in England.

Though this lumber is not for direct military use, it will fill needs that have a direct bearing on military operations, particularly in the case of dike repair and barracks for workers at French ports, W. P. B. officials pointed out.

The 30,000 housing units for England will to a small extent alleviate serious housing shortages, W. P. B. said. One-third of all dwellings in England have been destroyed or damaged by bombing, and minimum requirements for temporary dwellings are estimated to be 500,000 units. Specifications for the 30,000 prefabricated units have been drawn up so as to use a minimum of lumber; other materials are being used for sheathing, siding, and roofing. Lumber for hardwood flooring, millwork, and crating is included in the 164,000,000 board-feet authorized for this program.

J. Philip Boyd, Director of the Lumber and Lumber Products Division, in a letter to the lumber industry said: "In view of the desperate needs which the rehabilitation lumber partly serves, I do not believe the amount constitutes an unfair or unreasonable demand on our lumber resources." "The extent of our aid to foreign countries in supplying lumber for urgent needs has been greatly exaggerated through unfounded rumors and misunderstanding," he said.

St. Lawrence Seaway and Power Project in Relation to the Shipshaw Project

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. PITTENGER. Mr. Speaker, I am prompted to call to the attention of the Members of the House of Representatives the St. Lawrence seaway and power project at this time because of testimony just now developing before the Senate Committee on Small Business. Evidence presented before this committee the last few days gives striking proof of the immediate need for completion of the St. Lawrence seaway and power project. The evidence further demonstrates the false economy which prominent Government officials have followed in pouring hundreds of millions of dollars into the development of the natural resources of other countries, while at the same time development of our own natural resources has been sidetracked and delayed. In brief the facts about the Shipshaw project are these:

In 1941 a few weeks after the United States-Canadian agreement to complete the St. Lawrence seaway and power project was signed on March 19, 1941, the Metals Reserve Company, an R. F. C. subsidiary, entered into a series of contracts to make advance payments for aluminum and loans to the Aluminum Company of Canada, Ltd. Under these contracts the United States engaged to purchase over 1,300,000,000 pounds of aluminum at prices running, in some instances, to as high as 22 cents a pound. At the same time, aluminum was being produced in this country at a price as low as 12 cents a pound. These contracts with the Canadian Aluminum Monopoly, owned by the same majority stockholders as the Aluminum Company of America, derived sufficient advance payments, loans, and profits from the United States Treasury to enable that company to build the enormous Shipshaw power project on the Saguenay River in the wilds of the Province of Quebec.

The testimony shows that the Shipshaw project was given precedence over the St. Lawrence development and was rushed to completion in 1941, 1942, and 1943 while the St. Lawrence agreement of 1941 was sidetracked by United States Government officials. What a paradox and what a tragedy.

If such a policy is carried over into the reconversion and post-war period it will result in a ruinous condition. Not only does such a policy check the development of our natural resources but in the post-war period when unemployment may become serious, it fosters the closing of our own factories and will result in unemployment of our own people. How can this Government defend such a ridiculous program? The answer is that it cannot be defended. There is no valid excuse for the delay in passing necessary legislation to authorize and complete the St. Lawrence seaway and power project together with other worthy projects through the Nation.

In contrast with the speed with which the Shipshaw deal was rushed through I wish to present to the House at this time a factual record showing how the St. Lawrence seaway and power project was surveyed, studied, and approved after public hearings by committees of both branches of Congress long before the present World War.

BOUNDARY WATERS TREATY RATIFIED BY THE SENATE IN 1910

In 1909 the United States and Great Britain, on behalf of Canada, signed the Boundary Waters Treaty, which was ratified by the United States in 1910. This was a general treaty for the regulation of the Great Lakes-St. Lawrence boundary waters between the United States and Canada.

It extended equal navigation rights to both countries in these boundary waters, provided for diversion of waters at Niagara Falls for the benefit of both countries, and contemplated that future improvements, relating both to navigation and power, might be dealt with by special agreements between the two countries subject to approval by the reciprocal legislation to be enacted by Congress and the Canadian Parliament. In other words, the 1909 boundary treaty, as ratified by the United States Senate in 1910, was broad enough in its terms to provide for future developments and to obviate the necessity of authorizing each of these developments by means of a special treaty.

ST. LAWRENCE TREATY SIGNED IN 1932

On July 18, 1932, the United States and Great Britain, on behalf of Canada, signed the Great Lakes-St. Lawrence Deep Waterway Treaty. In the negotiation of this treaty under the Hoover administration, the State Department chose for reasons which it considered proper, to disregard the agreement method and to follow the treaty method of ratifying this agreement of July 18, 1932. It was recognized at that time that either procedure was proper, as the Assistant Secretary, Adolph Berle, of the State Department, testified at hearings before the House Committee on Rivers and Harbors in 1941.

The 1932 treaty was submitted to the United States Senate by President Hoover in January 1933 but was not acted upon until after the close of the Hoover administration. President Roosevelt resubmitted the treaty to the Senate with a recommendation that it be ratified in a special message on January 10, 1934.

The Committee on Foreign Relations of the Senate meanwhile had completed exhaustive public hearings on the merits of the project beginning in November 1932 and continuing through February 1933. By a vote of 15 to 5 the committee approved the project and recommended that the treaty be ratified.

DOMINION-PROVINCIAL AND FEDERAL-STATE ACCORDS ON THE ST. LAWRENCE POWER PROJECT REACHED IN 1932–33

In the course of the hearings before the Senate Committee on Foreign Relations the committee took definite action to allocate the share of the construction cost to be assumed by the State of New York and the Province of Ontario in connection with the construction of the dam near Massena, N. Y., in the International Rapids section of the St. Lawrence River. It is in this section of the river that all the power is to be developed in connection with the St. Lawrence seaway and power project, and it is the unharnessed rapids of this section of the river also which at present stand as the chief bottleneck against deep-water navigation from Duluth to the open waters of the Atlantic. In this section of the river 2,200,000 horsepower of hydroelectricity is to be developed and at the same time the obsolete 14-foot canals now used are to be replaced by modern 27-foot side

canals with locks of a depth of 30 feet around the dam structures.

It developed during the Senate hearings in 1932–33 that the Province of Ontario had already signed an agreement with the Dominion of Canada under which Ontario was to take over the ownership and operation of the Canadian half of the power project in the International Rapids section and was to assume the cost of construction of the Canadian half of the power project. Senator Thomas J. Walsh, of Montana, a member of the Senate Committee on Foreign Relations, took the lead in bringing about a similar arrangement on the United States side between the State of New York and the Federal Government. Senator Walsh and the committee initiated conferences between the Corps of Engineers of the United States Army and the power authority of the State of New York which resulted in a Federal-State accord dated February 7, 1933. Under this accord, the power authority undertook to assume $90,000,000 of the costs of construction of the power project on the United States side and to conduct and maintain the power development to be built in the State of New York. This accord was first presented at public hearings of the Senate Committee on Foreign Relations and was approved by that committee in its report to the Senate.

In April 1933, a joint resolution, House Joint Resolution 157, was introduced in the House by Chairman McReynolds, of the Committee on Foreign Affairs, and was introduced in the Senate by Chairman Pittman, of the Senate Committee on Foreign Relations, to approve and implement the Federal-State accord. The resolution was referred in the House to the Committee on Interstate and Foreign Commerce and was favorably reported to the House by Chairman RAYBURN. The resolution was adopted by the House on April 26, 1933, after Chairman RAYBURN and Representative Snell, of New York, then the minority leader, had urged favorable consideration.

In the Senate, opponents of the St. Lawrence seaway and power project, led by Senator Huey Long, of Louisiana, and Senator Copeland, of New York, staged a filibuster to prevent prompt Senate consideration of the resolution passed by the House. Meanwhile, the St. Lawrence treaty of 1932 reached a vote in the Senate March 14, 1934. A clear majority of the Senate, sufficient to authorize any ordinary construction project, voted to approve the 1932 treaty, but, lacking a two-thirds majority, the treaty failed at that time of ratification.

ST. LAWRENCE AGREEMENT NEGOTIATED BY SECRETARY OF STATE HULL

From 1934 until 1941 Secretary of State Cordell Hull conducted negotiations with Canada intermittently to reach a new agreement on the St. Lawrence seaway and power project. The old treaty, for all practical purposes, was dead and the project had to be revived by new negotiations.

In the fall of 1940 the Power Authority of the State of New York and Governor Lehman joined in a recommendation that engineering surveys and plans be initiated to speed the St. Lawrence development as a part of the national defense program. The Corps of Engineers of the United States Army was directed by the President in October 1940 to conduct such surveys and prepare such plans. On the basis of these fresh surveys and plans the United States and Canada on March 19, 1941, signed the pending amendment on the St. Lawrence seaway and power project. On the same day the Province of Ontario and the Dominion of Canada signed a collateral agreement allocating costs of $90,000,000 to the province and renewing the Dominion-Provincial accord of 1932.

ST. LAWRENCE PROJECT AND BILL APPROVED BY HOUSE COMMITTEE AFTER PUBLIC HEARINGS

A bill to approve the March 19, 1941, agreement between the United States and Canada was introduced in the House in June 1941 by Chairman MANSFIELD of the Committee on Rivers and Harbors. This bill was reported by the House committee by a 2 to 1 vote on November 21, 1941, after prolonged public hearings. The opponents of the seaway and power project exhausted every device to prolong the hearings and to prevent the bill from coming to a vote on its merits in the Seventy-seventh Congress. They were successful. In its report on this bill the committee cited the fact that War Department, Navy Department, the United States Maritime Commission and all other Federal agencies having to do with the improvement had strongly recommended passage of the bill as a measure that would be of immense value to the whole Nation both in time of war and in time of peace. The committee also reported to the House that both Federal and State agencies had agreed upon the Federal-State accord provisions of the bill, which provisions the committee found were in the public interest.

CONGRESS MUST ACT TO DEVELOP OUR OWN RESOURCES AND TO PROTECT OUR OWN PEOPLE AS THE WAR IN EUROPE ENDS

In the Seventy-eighth Congress, companion bills, identical with the former Mansfield bill, were introduced in the House by the late Representative Culkin of New York, Representative WASIELEWSKI, of Wisconsin, and myself. In the Senate an identical bill was introduced by Senator AIKEN, of Vermont. Although Senator AIKEN repeatedly pointed out in debate that the Shipshaw project was being rushed ahead of the St. Lawrence seaway and power project, it proved impossible to get public hearings on the merits of the St. Lawrence project bill during the life of the Seventy-eighth Congress. Lacking such hearings and without a committee report on the bill, under legislative procedure it was not possible to have legislation enacted.

We now face the need for immediate action on this project in the Seventy-ninth Congress. There is no use to dodge, or alibi, or make excuses for refusal to act on this matter at this time, and in this year.

On January 4, 1945, I reintroduced the St. Lawrence project bill, H. R. 671, in the same form in which it was approved by the Rivers and Harbors Committee of this House in 1941. We will fail in doing our full duty to the American people if favorable action on this project is further delayed.

Letter From the President of the University of Oklahoma

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. WICKERSHAM. Mr. Speaker, I desire to present a letter from the president of the University of Oklahoma, which I deem worthy of consideration:

THE UNIVERSITY OF OKLAHOMA,
Norman, Okla., April 7, 1945.

Hon. VICTOR WICKERSHAM,
House of Representatives,
Washington, D. C.

DEAR SIR: I am writing to call your attention to Senate bill 637 which was introduced in the Senate of the United States by Senator ALLEN J. ELLENDER of Louisiana on February 26 of this year. We ask that you give this bill, or at least the purposes it was intended to serve, your full support.

The situation intended to be remedied by this bill is that confronting our people because of the woeful lack of trained medical personnel that will be available to serve the health of the Nation after the war. The situation is critical. Since 1941 a very large proportion of our able-bodied physicians has been called into military service. Of this proportion, probably one-fifth will not return to practice in any capacity after the war. During the war period civilian training for physicians has practically stopped. Civilian premedical students have been drafted into the service without regard to the future of the profession. Our best premedical students volunteered before they were called. That means that our best materials for training for the profession were lost, many temporarily, and too many permanently. Their places in the schools have been taken by military trainees who were assigned to study medicine and with too little regard for their fitness for that work. Our best premedical students are not given an opportunity to go on with their studies as military trainees.

As to the situation after the war: In the 3½ years since Pearl Harbor a substantial proportion of our former civilian physicians have been disabled or killed or their health impaired so that they will not be available in their profession. There will be a greatly increased need for medical men for the enlarged Military and Naval Establishment that will be maintained in the future. The military and naval trainees who were prepared during the war will not come near meeting this enlarged demand. If we have a system of universal military training for 18-year-olds, an additional large number of physicians will be assigned to the care of their health, a number out of proportion to the needs of those men while they were a part of our civilian population. Greater demands will be made on military hospitals for the care of soldiers wounded or nervously incapacitated because of their war experience. The net result will be that not more than three-fourths and probably fewer of our former civilian physicians will ever serve the civilian public again.

This brings up the question of the adequacy of the relief that will be afforded by the Ellender bill.

It provides that the President may call out from the armed forces not more than 10,000 men ready for the first year of preprofessional medical work and may place them in colleges for training. That not to exceed 4,500 shall be allowed to remain in such preparation beyond the third month of the second year of their preprofessional training. Our

observation, based on experience, is that 10,000 men sent into the colleges for their first year of premedical training will not screen out 4,500 at the end of the second year of preprofessional work, of the quality and capabilities required. Our experience is that not 40 percent of the young hopefuls, as contemplated by the bill, but nearer 25 percent, will ever reach an approved medical school. That would mean that the first-year quota must be nearer 18,000 to furnish even that quota of 4,500 entering the medical schools.

And the number of 4,500 accepted medical students each year will not be adequate. Even if all could graduate and serve the public, it would mean only one new doctor added for about 27,000 people each year beginning about 7 years from now. By that time only a negligible proportion of the doctors who served when the war began will remain. With 4,500 new men entering the medical schools each year, and counting the attrition that will result from all causes, only 40,000 doctors, approximately, will be prepared in the 10 years following 1952. That will give one new doctor for each 3,000 persons in that entire period.

There should be a more urgent campaign to greatly increase this number. Public health is public safety; it is assurance that we will, say in 1960, be able to defend ourselves against an enemy. This is a problem for the Government of the United States, as well as the States. The apparent tendency has been to limit the numbers in the profession and preparing for the profession each year. No limitation should be applicable in the present critical situation as to the supply of competent doctors for the public.

The bill should go further in directing the President to consult the schools as to the best available material now in the armed forces. Since many will have been out of school 2 to 4 years, opportunity for refresher courses should be offered. The number should be increased and, if necessary, the Government should provide subsidies to permit the medical schools to increase their capacity.

I have dealt with the subject at this length because it is a vital one and one too little understood. We ask that our Representatives and Senators be alert to the needs set out above, and that they lend support to every movement to improve the medical situation and the public health.

Cordially yours,

G. L. CROSS, *President.*

Centennial Year of Iowa

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the General Assembly of the State of Iowa:

House Concurrent Resolution 22

Whereas on December 28, 1946, the State of Iowa will have completed its first century of statehood, and the year will be celebrated in Iowa as the State's centennial year; and

Whereas there is general desire on the part of the people of the State that the centennial year of Iowa shall be made the occasion for renewed interest in and acceleration of the study of the entire history of Iowa, by appropriate ceremonies in the schools, the churches, and all civic societies, in every city and town of the State, to the end that Iowa people shall have finer appreciation of their own State and the achievements of her people: Now, therefore, be it

Resolved by the house (the senate concurring), That the fifty-first general assembly hereby endorses and approves the movement made by Hon. KARL LECOMPTE, and other members of the Iowa delegation in Congress, to secure the publication by the Postal Department of a special stamp commemorative of the event, serving to remind all the people of the fact that Iowa was the first free State of the Louisiana Purchase, and of its growth and greatness; and the similar effort to secure the coinage of a special commemorative coin of special Iowa significance, and we hereby add our indorsement to the effort to make not only Iowa but all the world more history-conscious as a background for the higher patriotism affecting all things American.

HAROLD FELTON,
Speaker of the House.
KENNETH A. EVANS,
President of the Senate.

Resolution of the Polish-American Congress

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include resolutions of the Polish-American Congress adopted on March 9, 1945, at meeting of the executive board held at Polish Women's Alliance Building, Chicago, Ill., relative to the decisions reached at the Yalta Conference with regard to Poland. These resolutions are very informative and I am of the opinion they will be of great interest to Members of Congress:

Whereas President Roosevelt named the decisions made at the Yalta Conference "a compromise," an admission in itself that they were unsatisfactory to him—

Whereas they are contrary to the aims of the Atlantic Charter, since they accede to might and not law and justice, giving away half of Poland to Russia without agreement or consultation, without knowledge and without consent of the legal Polish Government, and also without hearing the will of those most concerned, the people themselves—

Whereas the decisions made at the Yalta Conference are contrary to international law, especially in the case of United States adhesion by virtue of signature to declarations of the Hague Convention, which do not foresee the affront to moral righteousness in permitting one ally to dispose of the lands of another ally—

Whereas the decisions made at the Yalta Conference violate the fundamental principle of democracy in international relations, namely, the principle of equality among nations in regard to rights, as recognized by Secretary Hull on March 21, 1944, in the name of the United States Government as an indispensable stipulation for a better organized world in the following declarations:

"Each sovereign nation, large or small is in law and under law the equal of every nation; the principle of sovereign equality of all peace loving states, irrespective of size and strength * * * will be the foundation stone upon which the future international organization will be constructed; * * * all nations, large and small, which respect the rights of others are entitled to freedom from outside interference in their internal affairs."

Whereas the Yalta Conference decisions deprived Poland of equal rights by deciding her boundaries without her knowledge and agreement, at the same time accepting the principle of "interference in the internal affairs" of Poland as a privilege of the Big Three, a privilege which in actuality serves the Soviet Russian Government—

Whereas thus it was resolved, with the absence of legal or moral basis, to submit sovereign rights of the Polish Nation and people to establish its own government into the hands of the Soviet Commissar of Foreign Affairs, Molotov, who is to be aided in this usurpation and misuse of the sovereign rights of the Polish Nation by the English and American Ambassadors to Russia, through this act Poland's independence, expressed time and again by our Government as the necessary fundamental of justice, actually was destroyed—

Whereas through signing such resolutions the United States Government burdened itself and the American people with joint responsibility for the legalization at the Yalta Conference of Russian aggressive acts in regard to the Baltic States and especially in regard to our heroic ally, Poland—

Whereas by the legislation of the Yalta Conference resolves and Russian acts of force and aggression, the United States would take joint responsibility with the American people for all the violent acts, murders, and brutality the Soviet officials perpetrated, are perpetrating, and will continue perpetrating in regard to our comrades-in-arms, the soldiers of the Polish underground army, who through their superhuman sacrifices rendered Soviet Russia and us priceless military aid and who were solemnly acknowledged to possess the right of a combatant ally by the Governments of the United States and Great Britain—

Whereas all decisions of this type strike at the good name and honor of the United States, depriving it of the friendship of the free nations of Europe, depriving it of influence and respect, and lead to an isolation that is a menace to our future—

Whereas as a result of the decisions made at the Yalta Conference Soviet hegemony in the greater part of Europe and Asia shall be solidified, a fact which will threaten our security—the Executive Board of the Polish American Congress hereby resolves to ask that the United States Senate refuse to confirm the decisions made at the Yalta Conference, since they represent the acceptance of might over right, the legalization of aggression, a denial of democratic principles and equality in international relations, and, generally speaking, the recognition of Soviet Russia's hegemony in the whole world—simultaneously the Polish American Congress confirms that:

1. Only the constitutional Polish Government in London today represents the Polish Nation and people, and only the constitutional Government of Poland can and should take part in the Conference at San Francisco.

2. Any "government" brought into being by a foreign power will not be representative of the will and rights of the Polish Nation, and as such cannot be recognized by the United States without violation of the elementary principles of law and justice.

3. Any elections held on Polish soil under Soviet occupation are in the nature of things a distortion and falsification of the will of the Polish Nation, a violation of free conscience and as such are lawless and illegal.

4. Any governing bodies created by a marionette "government" imposed on the Polish Nation through a foreign power cannot be

recognized as Polish governing bodies but should be recognized as Soviet agents.

5. Any disposal of the estates and properties of the State, its citizens and Polish institutions, without agreement and more, contrary to the will of the legal Polish Government and Polish Parliament—will be constituted illegal acts of plunder.

The Executive Board of the Polish American Congress resolves that the above resolution be sent to the President and members of the United States Government, to all Senators and Congressmen, and to all Governors and State Legislators.

POLISH AMERICAN CONGRESS, INC.,
CHARLES ROZMAREK, *President*

Inflation Control

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the National Grange Monthly for April, 1945:

INFLATION CONTROL

In assuming the office of Director of Economic Stabilization, William H. Davis has said wisely that the closer we come to the end of the war, the more imperative it is that we hold to our controls against inflation.

The National Grange has deplored the short-sighted control policy we have followed, but having set upon such a course, agrees that it cannot be relaxed or abandoned now without a complete breakdown, and a degree of inflation greater than if no attempt to control inflation had been made. Somehow we must manage to hold the line until production of the things people need catches up with the demand. In the meantime we will have increasing trouble with shortages, more and more regimentation, and we hope we will have learned a lesson in simple economics.

When war came, with its increased demands and increased personal incomes, it was evident that inflation was inevitable unless steps were taken to hold it in check. Either one of two courses could have been pursued:

One way would have been to make use of economic forces by providing conditions which would be an incentive to increase the supply of consumers' goods, while at the same time reducing the demand through taxes and savings. In the case of those items which could not be produced in sufficient supply to meet the demand, the demand could have been adjusted to fit the supply through rationing.

The second way would have been to try to override economic forces by laws, edicts, and regulations, and, by decree, to establish ceilings on the prices of consumer goods.

We adopted the latter course in spite of the fact that it had never succeeded over an extended period. We ignored the fact that costs always go up in wartime, and that if we held ceilings below cost, production would fall off and add to the difficulty. What we actually did was to engage in a desperate gamble, betting that the war would end before we had reduced production by the price-ceiling method so much that we would create want and suffering, with the inevitable growth of black markets and final collapse.

We set out on a program of regulating everything, not stopping to think that when we attempted to save the workingman money by placing a ceiling on the price of his work shirts, we did him an injury when that ceiling drove the work shirts off the market and forced him to buy a shirt costing three times the money.

The statistical indices show we have maintained the price level fairly well. The actual figures show that it is costing consumers much more to live, because they are forced to buy flimsy material or goods they don't want, while many are patronizing black markets at enormously higher costs.

It does little good to point out that we might easily have avoided many of the shortages we now face. The simple fact is that we followed the expedient course, and have created a lot of unnecessary shortages, and we now have to decide which way to go from where we are.

Four years ago, in warning against this danger, the National Grange said that if we embarked on the expedient course of price fixing, it would be almost impossible to back up. That is where we are now, and we agree with Director Davis, that it is very necessary to hold the line now, until we can begin to increase the supplies to meet the demands. Our policies involving ceilings and subsidies will have to be modified gradually if we are to avoid a bad economic upset.

Consumers may be pinched harder before they find relief. Real and lasting relief can come only through increasing production, gradually bringing supply and demand into balance. If, for example, this means an increase of $2 a hundred in the price of hogs, the consumers may have to pay a little more money for their bacon, but eventually they will find relief in a more plentiful supply of meat, and will not have to take so many of the cuts which actually produce less nourishment per dollar of investment. They may have to pay 75 cents for a shirt they could formerly buy for 60 cents, but they will then be able to buy all the shirts they want and will not have to substitute with a $2 shirt, because none of the cheaper shirts are to be had.

We should not expect to live as well in wartime as in peacetime. War causes waste, and waste costs money. If we demand that all our incomes keep abreast of these rising costs we are demanding inflation. We are approaching the most critical days in the big gamble we have undertaken. Now is not the time to turn loose of all controls. Rather it is the time to tighten our belts and take the necessary steps to begin to strengthen our production capacity. Let us not add to the fuel of inflation by increasing costs and maintaining selling prices at figures which curtail production. Let us strike at the cause of inflation and begin to build a program which will work us out instead of deeper and deeper into trouble.

Milk Used in Cheese Production

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the extension of the reciprocal trade treaties and the request of Congress to delegate to one man the power to have absolute control of the Nation's foreign agricultural policy is to be considered by the Congress by July 1, 1945.

Before the discussions on this issue become too heated and before the pressure is applied that might result in an unfair approach to the problem, I wish to submit the official price figures for each month from January 1, 1920, to January 1, 1945:

Prices received by Wisconsin farmers for milk used by cheese factories, 1920–35

Year	January	February	March	April	May	June	July	August	September	October	November	December	Annual weighted average [1]
1920	2.92	2.63	2.54	2.46	2.25	2.02	2.00	2.13	2.30	2.33	2.36	2.01	2.30
1921	2.17	2.10	1.90	1.30	.98	1.00	1.43	1.53	1.58	1.82	1.70	1.71	1.56
1922	1.68	1.65	1.49	1.24	1.31	1.39	1.50	1.56	1.85	2.25	2.32	2.39	1.67
1923	2.30	2.14	1.90	1.85	1.87	1.87	1.82	2.01	2.23	2.24	2.20	2.00	2.01
1924	1.96	1.80	1.65	1.33	1.40	1.42	1.40	1.53	1.60	1.60	1.70	1.87	1.58
1925	1.96	1.87	1.84	1.80	1.78	1.78	1.76	1.88	1.96	2.17	2.12	2.13	1.90
1926	2.08	1.95	1.72	1.51	1.53	1.58	1.58	1.71	1.93	2.13	2.17	2.21	1.80
1927	2.16	2.00	1.89	1.86	1.90	1.87	1.87	2.05	2.23	2.42	2.34	2.36	2.05
1928	2.30	2.00	1.84	1.82	1.86	1.97	1.99	2.05	2.10	2.09	2.04	2.07	2.00
1929	1.96	1.93	1.89	1.80	1.76	1.71	1.68	1.75	1.94	2.02	1.97	1.90	1.84
1930	1.73	1.64	1.59	1.52	1.45	1.37	1.32	1.43	1.56	1.53	1.50	1.40	1.49
1931	1.29	1.17	1.15	1.00	.90	.90	.95	1.06	1.20	1.23	1.14	1.06	1.07
1932	.98	.86	.81	.76	.72	.69	.71	.78	.90	.93	.90	.92	.81
1933	.83	.74	.72	.82	.95	1.01	1.02	.97	.96	.98	.97	.84	.91
1934	.89	1.06	1.08	.95	.92	.96	.91	.97	.98	1.03	1.13	1.17	1.00
1935	1.31	1.37	1.30	1.27	1.19	1.10	1.11	1.17	1.25	1.34	1.48	1.61	1.27
1936	1.51	1.38	1.20	1.19	1.19	1.27	1.43	1.56	1.60	1.57	1.58	1.58	1.42
1937	1.56	1.54	1.50	1.40	1.34	1.33	1.36	1.42	1.55	1.66	1.71	1.67	1.48
1938	1.50	1.37	1.28	1.16	1.11	1.08	1.08	1.02	1.04	1.10	1.15	1.18	1.16
1939	1.11	1.08	1.01	.96	1.00	1.05	1.05	1.09	1.24	1.38	1.46	1.45	1.14
1940	1.44	1.38	1.26	1.18	1.17	1.19	1.21	1.24	1.28	1.38	1.50	1.55	1.30
1941	1.48	1.38	1.41	1.49	1.60	1.73	1.85	1.98	2.15	2.25	2.30	2.30	1.82
1942	2.27	2.14	1.97	1.89	1.85	1.82	1.87	1.93	2.08	2.26	2.32	2.40	2.04
1943	2.45	2.45	2.44	2.44	2.42	2.43	2.45	2.48	2.54	2.57	2.58	2.59	2.48
1944	2.58	2.53	2.53	2.50	2.49	2.49	2.50	2.50	2.52	2.54	2.58	2.58	2.55

[1] Computed by weighting monthly average prices by average milk production per cow on 1st of each month.

Source: Bureau of Agricultural Economics.

What do these prices show? First of all they prove that plenty of New Dealers have been making some reckless statements as to farm prices that prevailed during the last Republican administration. You will note that milk for cheese averaged $1.68 per hundredweight from 1920 to 1933 and that this was higher than it averaged any year of the New Deal from 1933 up to 1941, when the cheese price was supported for lease-lend shipments. The 1942, 1943, and 1944 prices of from $2.04 to $2.55 include a subsidy that was provided in December 1941.

Surely, milk averaged only 81 cents per hundredweight in 1932, but you will note that it averaged $1.30 per hundredweight for 1929, 1930, 1931, and 1932, and that in 1939, after 7 years of the more abundant life and before the war influenced prices, the milk for cheese averaged only $1.14 per hundredweight. You will also note that milk for cheese sold as low as 96 cents per hundredweight in 1939, after billions had been spent in the name of agriculture.

This table shows that many statements made by the New Dealers about milk prices are not accurate when the facts are presented.

Is it surprising that the hourly return for farm labor on the typical Wisconsin family-sized dairy farm was 14 cents per hour in 1939?

This delegation of power, as now proposed by the administration in extending the reciprocal trade treaties, places in one man the opportunity of determining the hourly wage of every person in our land. This problem should be approached from a public welfare standpoint and should not be a political football for any one group or for any one individual. As long as the Congress appropriates $1,000,000,000 a year and employs 200,000 or more part-time and full-time employees on a domestic agricultural program we can well stop, look, and listen before we turn the foreign agricultural program, which program can nullify all the benefits of the domestic agricultural program, over to any individual or any group in America.

When 50 percent of a State's farm income is from milk, and when one-third of the milk production of a State is diverted to cheese production, and when the prices of milk prevail that did prevail from 1930 to 1940, it is apparent what influence these low prices year after year really had on the economy of the State. Is it surprising that more farm mortgages were foreclosed by the Federal land bank than ever before by this institution in Wisconsin? The 100 legislative bills to support cotton, the billions of dollars of borrowed money to support soil-depleting crops, the expenditures of billions in the name of agriculture did not trickle down to the milk producer, whose product did not have the legislative advantages accorded other groups.

An Open Letter From Generoso Pope Urging Invitation of Italy to the San Francisco Conference

---

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, April 12 (legislative day of Friday, March 16), 1945

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of an open letter by Generoso Pope, publisher of Il Progresso Italo-Americano, the leading Italian daily newspaper of this country, to the members of the United States Security Delegation respecting Italy's right to be present at the conference soon to be held in San Francisco. I believe it clearly states the case.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER

To the Members of the United States Security Delegation:

You, as members of the United States Security Delegation, realize the great responsibility which rests upon our country for the success of the United Nations Conference on International Organization at San Francisco. It can be truly said that all America is deeply stirred by this momentous opportunity to lay the foundation for what our esteemed Secretary of State, Cordell Hull, once called "a world organization for peace and advancing civilization, rather than for war and degrading savagery."

The questions and tasks that will face our delegates are the vital concern of the entire Nation. It is, therefore, the right and duty of every citizen to help make this historic gathering fully fruitful. In this spirit Il Progresso urges the United States delegates to give earnest consideration to its ideas and proposals for assuring success at San Francisco.

BUILDING EFFECTIVE PEACE MACHINERY

We believe that the chief responsibility for establishing the new world order rests on those who have participated actively in defeating and destroying the Axis. Devotion to democratic ideals and loyalty to democratic institutions must be the animating spirit of the forces guiding the international security order. Finally, due consideration must be given to the size and importance of every nation, to the strategic location of every country, and to its potential role in the creation of a peaceful community of peoples. As we see it, these are the decisive prerequisites for constructing an effective machinery to preserve world peace. It is our firm conviction that in this approach we are at one with the mood and mind of the American people.

That is why Il Progresso appeals to every member of the American security delegation to have our country move for inviting democratic Italy to the San Francisco Conference. Let no one confound the Italy of today, our fighting partner, with the Italy of yesterday. The new Italy is vigorously anti-Fascist and is opposed to all deals and plans for aggrandizement. Present-day Italy is a valuable and vital source of potential strength for the peace and welfare of all nations. Its heart and soul are in the camp of world democracy; its people are an organic part of the forces of freedom marshalled for the annihilation of Axis tyranny and aggression.

Timely and telling recognition of Italy's role was made by President Roosevelt when he declared, in welcoming Italian Ambassador Alberto Tarchiani: "The American people admire the courage of patriotic Italians in the struggle against the enemy, and they watch sympathetically every sign that the Italians * * * are resolved to build a genuine democracy which will be proof against oppression from within and guarantee Italy's value to the world." Here is a warm-hearted and realistic attitude free from the bitter passions and old hates rooted in long-outlived conditions.

On the same occasion, the President paid tribute to "the hard-working, intelligent mass of Italian people" and expressed confidence "that Italy will build at home, and help to build for Europe, a political and social organization worthy of the heart and mind of her people." He went on to express his gratification that the Italian people are now represented by men "whose faith in human dignity and love of freedom clearly withstood the threats and blandishments of fascism." What a clear and refreshing realization that the Mussolini regime was much more the misfortune than the mistake of the Italian people. What an eloquent appeal that no further indignities and punishment should be inflicted on the resurgent liberty-loving Italian nation.

A WELL-EARNED RIGHT

No more powerful case could be made for the admittance of Italy to San Francisco. Democratic Italy has not been one of those neutral nations that hangs its flag with the prevailing winds. Its declaration of war against Germany has turned Italy into a fierce and bloody battleground. To deny the embattled freedom-loving Italian people representation at San Francisco is to treat them as a conquered foe and not as a liberated friend. No one with a sense of justice would propose such unwarranted distrust and mistreatment for this talented and vigorous Mediterranean nation which is so vital to world peace and prosperity.

Comradeship in arms certainly entitles a nation to the right of representation and cooperation in international conferences. If our soldiers can fight together with Italian troops and patriots for victory on the battlefield, why can't our diplomats and statesmen work together with the representatives of democratic Italy for the triumphs of peace in the sessions of San Francisco? The peoples who have suffered together for a common goal in war should strive together for common aims in peace. The Italian people have received the most glowing praise from our highest commanders for their service under fire. How, then, can our political leaders deny them a voice and hand in the halls of international peace deliberations?

The courage and capacities, the energy and idealistic patriotism of the aroused 47,000,000 people of fully liberated Italy are indispensable to the security and progress of all mankind. Humanity now has its last opportunity to avoid another mad orgy of suicidal world war. The hopes and prospects for an enduring peace rest above all on the ability of the leading nations—Italy included—to concentrate on the task of rebuilding civilization. For the sake of this noble objective we appeal to you members of the American world-security delegation to take the initiative in securing democratic Italy's representation at San Francisco and her recognition as a full-fledged ally.

GENEROSO POPE,
Publisher, Il Progresso Italo-Americano.

Resolution of the Legislature of the State of Texas

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. BECKWORTH. Mr. Speaker, I desire to extend my remarks and include in the CONGRESSIONAL RECORD a resolution by Representative Carlton Moore which was recently passed by the Texas House of Representatives. I feel the Social Security Board should give immediate attention to this matter.

House Concurrent Resolution 25

Whereas the benefits of the Social Security Act and particularly of the Unemployment Compensation Act have been extended by the Congress to cover a major portion of the people of the country who are employed in industry, business, and other private pursuits, but not to that large body of our people who are employed by the several States and their counties, municipalities, and other political subdivisions; and

Whereas such State employees are performing work and labor equally essential and deserving of consideration and recognition to that of all others now protected by law; and

Whereas the adherence to such a policy by the Congress is an unfair discrimination against those in essential public service and ultimately will so detract State, county, and municipal employment that worthy and efficient people will seek other employment, all to the great impairment of the civil services and the welfare of the people: Therefore, be it

Resolved by the House of Representatives (the Senate concurring), That the Congress of the United States be memorialized to amend the Social Security Act so as to extend its benefits to State, county, and city employees; and, be it further

Resolved, That the chief clerk forward a copy hereof to the Vice President of the United States as President of the Senate, to the Speaker of the House of Representatives, and to each of the Texas Representatives in the Senate and House of the Congress with the request that it shall be presented to each body for consideration and appropriate action.

C. H. GILMER,
Speaker of the House.
JOHN LEE SMITH,
President of the Senate.

Address of Fleet Admiral Ernest J. King

EXTENSION OF REMARKS

OF

HON. EVAN HOWELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. HOWELL. Mr. Speaker, on April 4, 1945, Fleet Admiral Ernest J. King, United States Navy, Commander in Chief of the United States Fleet and Chief of Naval Operations, addressed the Academy of Political Science at the Hotel Astor, New York City, N. Y. In this speech Admiral King made strong recommendations as to the control of certain bases that our armed forces have won in the Pacific. I am sure everyone recognizes the importance of the control of these bases to the people of the United States of America, as they can in all probability become the cornerstones for our future peace and security in the Pacific area. I want to join with the other Members of the House of Representatives who have commended the position taken by Admiral King, and share with them the hope that our representatives at the San Francisco Conference will recognize the importance of the views expressed by him. Because of the importance and timeliness of the material contained in this speech, I deem it quite appropriate to make it a part of the CONGRESSIONAL RECORD and include it in full at this point:

I wish to thank the Academy of Political Science for affording me this opportunity to speak. I propose to discuss the influence of certain phases of sea power as it has shaped some of the events of the war up to this time. I shall also touch upon the role sea power may play in our future national security.

For almost 3½ years we have been fighting an intense global war. During these months of combat, American seamen have proved themselves the rightful inheritors of naval traditions almost forgotten. During this same period our fleet has been multiplied in spite of war's bitter attrition. By now, however, sufficient evidence has been accumulated to warrant our drawing a few observations and conclusions. They are more than this—they are lessons.

Although sea power contributed much in the founding of our Republic, although it fought to preserve the nation after its birth, the passage of time records that we neglected our birthright. Somewhere along the line we lost the pioneer's vision. Particularly during the latter decades of the nineteenth century and until recent years the American public thought of this nation primarily as a land power. Several factors influenced that thought. Millions of our people lived inland—our territory was contiguous and it was located in a peaceful hemisphere.

But today, the United States is the leading maritime power in the world. And events of this war have proved—if proof were needed—that where international affairs are concerned, sea power is of maximum significance.

Sea power means precisely what it implies: the power to gain and hold control of the seas. It does not mean ships—and ships alone; neither does it mean planes—and planes alone. The term is collective, denoting the sum total of all those instruments by which control of the seas is gained and exercised.

Composed of seven essential elements, we may express sea power as an equation: Sea power equals surface ships plus submarines plus aircraft plus merchant ships plus naval bases plus trained personnel plus the productive capacity to build, equip, operate and fight them.

To be fully effective, sea power must have all of these seven vital elements. The omission of any one tends to upset the equation and renders sea power that much less efficient.

In the present war there have been several instances in which one or another of the belligerents failed to pay sufficient attention to all of the elements of sea power. By neglecting surface ships, submarines, aircraft, merchant ships, bases, trained personnel, or productive capacity, serious consequences were suffered.

Foremost in making such a costly blunder is Germany. The Germans, who have never been effectively sea-minded, launched their program of world conquest in 1939 without providing adequate means for projecting their massive land forces across intervening stretches of water. They placed their reliance upon the plane and the submarine. The submarine is intended, not so much as a means to gain control of the sea, but to deny its use to the enemy. German U-boats attacked the Allied life line to Britain, and the Battle of the Atlantic ensued. The result is well known to all.

Again, by placing their major confidence upon the airplane, the Nazis failed to thrust across the English Channel. Their planes wreaked havoc on British cities, but they could not occupy that defended land. The Germans massed tanks and infantry at the water's edge—and there they stopped. Their provisions for amphibious warfare, which we have since so highly developed, were inadequate. Our mastery of this kind of warfare and our control of the waters adjacent to Europe enabled Allied armies to do in 1944 what the Nazis were incapable of doing in 1940—cross the English Channel.

Japan, too, blundered. Perhaps the weakest link in her naval armor was the inability to protect her merchant marine. In their lightning offense of 1941–42 the Japanese sprawled their forces over an expanse greater than their merchant marine could effectively serve. Means were not available to them to prevent our submarines, and, later our planes, from whittling down Japanese shipping. This deficiency was further accentuated by the inadequacy of trained personnel and shipbuilding facilities to replace these losses. Thus the Japanese found themselves incapable of exploiting their conquered empire; they had no way of linking it with their industrial centers on Honshu and the Asiatic mainland.

In pointing to the mistakes of our enemies, we must also examine our own shortcomings. An inadequate merchant marine was one of our pre-war weaknesses. After the last war we dissipated our store of merchant shipping. We compounded the error by not maintaining our shipbuilding capacity. Consequently, at the outbreak of this war we found it necessary to construct swiftly what has come to be a stupendous tonnage of cargo ships. But so great was the demand and so heavy our shipping losses in the early days of the conflict that new construction could not keep pace with our needs.

For many anxious months it was a nip-and-tuck affair trying to fulfill the shipping needs and at the same time attempting to meet the requirements for offensive and protective operations both in the Atlantic and Pacific.

As you know, the appetite of war is said to be all but insatiable. The demands of this war have almost continuously exceeded the supply. Always, from the first day of hostilities, there seemed to be highly desirable operations that might have been conducted had we but possessed a sufficient pool of supporting cargo vessels. Even with the unparalleled accomplishments of our cargo shipbuilding efforts, severe shortages have made it necessary from time to time to delay operations. We have paid the price in retarded progress.

Recalling the shipping difficulties encountered in this war, and contemplating the armada of bottoms and the expanse of shipyards we have built, we now face a vital question. How much shipping should be retained in fairness to ourselves? Shall we again risk the impact of total war without adequate shipping to deliver the tremendous quantity of materials needed by our forces and those of our allies? Shall we again permit our goods to be carried in foreign bottoms to the detriment of our own shipping needs in time of emergency? In the light of our foreign trade and our naval needs what should we do? This will be one of the

knottiest post-war problems—a problem in which the Navy is vitally interested.

But more than an adequate merchant marine, we must have bases. Of all the elements of sea power, the United States Navy suffered most at the war's outbreak from the lack of overseas bases. We lacked operating bases in the Alaskan area; had none in the Far East, except for isolated and inadequate Cavite; none in the Central Pacific, except Pearl Harbor, and only those recently acquired in the North and Central Atlantic outside of Cuba and continental United States. The bases we did possess were not equipped with the requisite guns and planes and men to stem the enemy's initial onslaughts.

I make this point because it is well to remember that the mere ownership of outlying bases means little, if these bases are not maintained and implemented by an appropriate fleet ready for action.

Up to the present, the Pacific war has been largely a battle for bases. Our primary efforts so far have been directed toward wresting from the enemy advance territory from which our naval and military forces can rain body blows upon the inner Japanese empire. At the war's termination we shall have bases serving our task forces in most areas of operations.

These atolls, these island harbors, will have been paid for by the sacrifice of American blood. They will have been scooped out of sand and rock, coral and volcanic ash, by a generation of Americans giving their service, their ingenuity, and their money.

Failure to maintain these bases essential for our defense raises the fundamental questions: How long can the United States afford to continue a cycle of fighting and building and winning and giving away—only to fight and build and win and give again? Rich as we are, we do not have the human or physical resources to dissipate our patrimony, generation after generation, in this manner.

The United States Navy now possesses a balanced fleet containing all the essential elements by which the control of the seas can be attained and retained. How this concentration of power has been applied against the enemy—the actions of our fleets speak for themselves. But as forceful as they have been, there are several basic achievements worthy of mention, accomplishments that may not have received sufficient emphasis.

In all wars, the Navy's strategy and tactics have revolved around those weapon-bearers that hit hardest and farthest. Our fleet's adaptation of the airplane to sea warfare may be rated as one of the major military achievements of our age. The air arm of the United States Navy is the envy of other navies throughout the world. By utilizing air, our fleet has been able to make long advances, instead of having to doggedly batter the enemy mile by mile. Without our highly developed and closely integrated air arm, we would, in all probability, still be operating in Allied territory today. Particularly is this true in the Pacific where distances count for so much.

The significant aspects of naval aviation are not only the technological advances that have been made in airplane and carrier but also the manner in which the plane has been integrated with the fleet. It is this high degree of integration that explains much of our sea-air success in the present war. The process of integration began in 1913, when the plane was coming to be recognized as a potent military weapon. In assimilating the plane the Navy treated it as any other new weapon or new weapon bearer—just as it had previously treated the submarine.

When the effective submarine first came into being shortly after the turn of the century, the Navy did not create a separate submarine or underwater corps, commanded by officers who knew submarines and little else. Instead those naval officers of the line who volunteered for submarine duty were considered to have additional qualification above and beyond the normal line requirements.

So it was with the airplane a decade or so later. In accepting the plane the Navy did not junk its other weapons, nor did it give the plane an independent or semi-independent status. Instead the plane was added to the arsenal of the many weapons that are necessary to gain and exercise control over the seas. Naval aviators are naval officers who are additionally qualified for the management and operation of aircraft. That has been the practice down to this day. The Japanese, uniquely among other powers, have copied our methods in the matter of naval aviation development. Had the Japanese carried out such a development independently of our example and had we failed to develop an efficient integrated naval aviation arm, I can assure you that our country would have been confronted with disastrous probabilities.

Wartime developments in the employment of various other instruments of sea warfare are significant. The battleship and cruiser are types in point. The advent of the plane materially altered the technique of their employment, but far from destroying their usefulness made them more than ever essential elements of sea power.

Weapons, however, are not enough to win a war. They must be used with skill and employed in new ways. Although amphibious warfare is as old as history, we have through hard work and battle experience developed and perfected the technique of amphibious operations, in which the Japanese were apparently so proficient in the early days of the war. Such operations have, however, achieved a new importance because of certain geographic factors of this war; and also because modern weapons have made the defense so strong that amphibious attack has become one of the most difficult forms of the offensive. In former times, landing on an enemy shore was a fairly simple matter. Those afloat had more mobility than those ashore. The classic technique was to fool the enemy by a surprise landing where his defenses were weak or nonexistent.

However, in recent years it has become more difficult to outguess the defenders. This is due to the development of mechanized land forces which permits the defenders to move with great speed, and the reconnaissance of aviation which precludes surprise attacks. In the special case of the war in the Pacific, we frequently have had to make frontal attacks against small islands where no soft spots could be found and there was no possibility of surprise. Consequently, new types of vessels and new types of weapons and equipment have been devised. We are still improving, with some of the ablest officers in the armed forces working continuously in applying the dearly-bought lessons of the war. In all such operations the cornerstone of our success has been the proven ability of the Army and Navy to fight as one team. It is significant that amphibious operations have initiated practically all of the Allied successes during the past 3 years.

I do not have the time to mention all the other uses to which instruments of sea power have been put in this war. But one of great importance is our development of the task force or task fleet. The idea was conceived by the United States Navy years before the outbreak of war. It was tested and found to be sound in the various hit-run raids on the Marshalls and Gilberts, Marcus and Wake in early 1942.

Another significant naval development has been in the field of supply. By speeding up the flow of men and materials to the fighting fronts, our fleets have been able to operate against the enemy over protracted and unprecedented periods of time. Never in the history of naval warfare have fleets remained away from their bases so long. Without such logistical support, the Pacific war could not have progressed so far or so fast.

Improvement in naval gunnery has been another outstanding achievement of the war. Prior to the war, the world's prevailing naval thought was that surface craft could not successfully challenge shore batteries. Our fleet has proved that view wrong. The big guns of our battleships and cruisers have successfully slugged it out with coastal guns on several beachheads in both the European-African and Pacific areas. In effect, the guns of the fleet have extended the area of sea control inland from the sea.

As spectacular as have been the achievements of the United States Navy during this war, I wish to add this sobering thought: we cannot patent or copyright them for our exclusive future use. Our successes and our mistakes, our tactics and strategy will be studied and copied or avoided by other navies for years to come. Today we are truly writing the naval textbooks of tomorrow.

It therefore behooves this Nation to keep abreast—no, ahead of the times—in war and peace alike. We must, therefore, continue scientific research in the military field on a sustained basis even after the final victory. We must go still further. If we are to maintain our naval position in future years, we must augment the study of the science of war that has guided us in the past during peace. This has special application, of course, to the officers of our military and naval establishments. It seems unnecessary to expand on this point.

We are today confronted with two powerful warrior nations that have made the scientific conduct of war a continuing study, one of them for more than 75 years. When they struck, they struck swiftly and effectively, while their selected opponents, were mentally and materially unprepared. Only because of our favorable geographic position and the brave delaying actions fought by our allies were we spared even greater reverses than we might have sustained. Never again can we afford to let future aggressors versed in the art of war take advantage of us.

Today there are people who gaze into the future and confidently predict that sea power—control of the seas—will not be a significant factor in determining the outcome of another war. Some of these prognosticators are the same as those who, earlier in this war, sang the swan song of the battleship and consigned the foot soldier to oblivion.

Throughout the ages centers of civilization and power have gravitated toward the water. Access to the seas has made nations prosperous in times of peace. Control of the seas has made them powerful in times of war. There are no developments in this war that controvert the fundamental importance of the sea. Neither is there anything that depreciates the value of sea power—at least, nothing that need concern us of this generation or in the forseeable future.

Because of the exercise of our sea power in this war, a significant twofold result has been accomplished. First, even at the lowest ebb of our naval strength, we were able to keep the conflict 2,000 miles from our shores. The battles to protect the United States from invasion were fought in the Solomons, the Coral Sea, at Midway, and in the Aleutians—not off San Francisco, or Seattle, or San Diego. Second, our sea power has enabled us to maintain at all times the vital sea communications without which we could not support our allies. This gave us an advantage that is not sufficiently understood or appreciated. This is an advantage we must never relinquish.

I wish to point out particularly that the success of international agreements in the settlement of international dispute, especially in the early phases, will rest on world appreciation and recognition that these de-

cisions can be—probably will be—enforced. Sea power will be an essential means to this end.

Moreover, it is well to take thought of the human factor. Just as in this day of mechanized warfare, the machines, ships, planes, tanks, guns, which make war so deadly are as nothing without the men who man them and give them life. So it is with agreements and treaties. Without human will to make them work, or without the physical means to make them effective, they become and are in fact "mere scraps of paper." Theodore Roosevelt was, I think, quite right when he said: "Speak softly, but carry a big stick."

Possessed as we are for the moment, with naval greatness, it is difficult to believe that we will permit this power to be squandered or bartered away thoughtlessly. We will never do this, I am sure, if we understand what it might mean in terms of America's future in the world of tomorrow.

Hence our sea power should be maintained. Furthermore, it should be dedicated, in war and peace alike, to promoting the security and well-being of our people and to the peaceful stabilization of an improving world orderliness. We who have gone through this war have paid the penalty of forgetting the lessons of the years between wars. This time we shall win the victory despite our past mistakes. But next time, the penalty of forgetting may be the loss of America, and of liberty as we have known it.

Against an M. V. A.

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the Sioux City (Iowa) Journal of Tuesday, April 10, 1945:

AGAINST AN M. V. A.

Representatives of three organizations interested in river development went on record last Friday at a joint meeting in Omaha against the Murray bill, which would create a Missouri Valley Authority. A resolution to this effect was adopted, the full text of which was published in the Journal Monday. The arguments raised against the project are those which commonly are heard from the people who live in the Missouri Valley and do not want an authority to take over the potentialities of the great stream and force upon the area involved a form of state socialism such as a Murray act would succeed in doing.

There were three organizations represented at the Omaha meeting. Delegates from the Mississippi Valley Association, the Missouri Valley Development Association, and the National Reclamation Association plainly said the organizations' membership did not want Congress to create such an authority. Instead, they wished the present law, enacted by Congress and in operation, to continue since it provided the means to employ the river to advantage so all interests—reclamation, power, and navigation—could be served. This, of course, is the set-up under which the Bureau of Reclamation looks after the irrigation interests in the upper reaches of the river and the Army engineers work out plans for both power and navigation.

To throw the entire Missouri Valley into the hands of three, or four, or five men, given absolute power over the economic interests of an area such as would come under their authority would be to hinder development for years. It also would shut off any and all representations from various existing groups that have studied the possibilities for years, that are more familiar with the conditions than the officials of an authority could be, and that also have the interests of the valley at heart because they live along the stream and want the best use of it which common-sense treatment would give.

It would be impossible for a Missouri Valley Authority to be created without there being—and it would not matter who composed it—despotic rule for the region as far as irrigation, navigation, and power were concerned. The whole country has witnessed the operation of the Tennessee Valley Authority, which is comparable to the proposal for the Missouri only in the projected administration. The T. V. A. is almost a separate entity, with the men in charge doing just about as they please with everything that comes under their direction and control. A Missouri Valley authority would have far more power for the reason that a greater, richer area would be affected. The Missouri Valley is one of the largest and most important not only in the Nation but in the world. Senator MURRAY may have overlooked an opportunity in drafting his bill by not providing that the chairman of the authority ought to have some kind of crown to wear since he would be monarch of all he surveyed in the Missouri Valley and his right there would be none to dispute.

Finally, it all comes down to this—that the Missouri Valley Authority legislation definitely is a thing which an overwhelming majority of the people affected do not want. The people living in the Missouri Valley from the source of the river to its mouth are against an authority. They fear such a set-up, and if it were left to them they would thrust it aside. So the question, Have Congress and the administration in Washington a moral right to force upon the millions of people living in the Missouri Valley something in which they have no confidence and which they do not want? If in this democracy we have representative Government, the people's wishes on this piece of legislation ought to be respected. If so, there will be no Missouri Valley Authority.

No Hearing Aids Have Been Supplied for Prisoners in the United States

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. PLUMLEY. Mr. Speaker, I do not wonder that the people were disturbed to learn from a radio commentator that our Government is buying hearing aids for German prisoners. I am inserting extracts from a letter I received with respect to the matter, viz:

DEAR MR. PLUMLEY: I am writing you in regard to a report I heard Sunday night given by Walter Winchell, to the effect that our Government is buying hearing aids for German prisoners, at a cost of $60 or $65 each, because they lost their hearing from the noise of our big guns. Isn't that most ridiculous? Is it possible they didn't hear the boom of their own guns when they were shooting our boys? If this is true, and it must be, or he would not have reported it, isn't it time that an investigation was started? Shall we pay taxes and buy War bonds and have the money spent in this manner? And our boys who are prisoners over there going without enough to eat.

I hope, Mr. PLUMLEY, there will be an investigation started, and I shall hope to hear from you in regard to this matter.

Complying with the request indicated I have the following information from the Provost Marshal General:

The Army has never provided hearing devices of any sort for any prisoners of war, German or otherwise, interned in this country and has never contemplated doing so. The International Red Cross Committee has notified belligerent nations that it will make hearing aids available to deaf indigent prisoners of war of any nationality in the custody of any nation, including Americans interned in Germany. The hearing aids which the Red Cross is prepared to supply prisoners upon request would be purchased from the funds of the International Committee of the Red Cross and if furnished to prisoners in our custody would not constitute an expenditure by this Government. The International Committee of the Red Cross, as distinguished from the American Red Cross, serves all persons impartially, and German prisoners of war have contributed to its support. However, the War Department has been informed by the International Red Cross Committee that to date no requests for hearing aids have been received from prisoners of war interned in this country and that none have been supplied for prisoners in the United States.

Reduction in Output of Farm Machinery

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 12 (legislative day of Friday, March 16), 1945

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Farm Machinery Cut 23 Percent in Output" published in the New York Times of April 11, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARM MACHINERY CUT 23 PERCENT IN OUTPUT

WASHINGTON, April 10.—Production of farm machinery, one of the most critical of the civilian programs, will be cut 23.8 percent in the second quarter of this year and will remain at the reduced level until Germany falls, the War Production Board announced today.

It informed the Farm Machinery and Equipment Industry Advisory Committee that allocations of controlled materials, steel, copper, and aluminum, for the manufacture of farm equipment will be reduced to 195,000 tons in April, May, and June, compared with 256,000 tons in January, February, and March.

The reduction will be made only in the output of new machinery, since the volume of materials granted for repairs will remain at first quarter levels, officials said.

The committee also was advised that the allotment of the materials for the second half of the year would remain at the lower

level unless the present accelerated demands of the military for steel, due to the pace of the war in Europe, are reduced.

An increase in allotments will certainly follow VE-day, W. P. B. said, because an increase in farm machinery is a must on its list of essential civilian and war-supporting programs.

The W. P. B. also reported that production up to March 1 was an average of 12.2 percent behind scheduled levels, compared with a lag of 13.6 percent January 1. Wheeled tractors were said to be 3 percent behind schedule; repair parts, 9 percent; attachments, 4.4 percent, and all other equipment, 20.4 percent.

Manufacturers predicted, however, that they would nearly complete their approved schedules by July 31, adding that lack of manpower was their greatest problem.

At the same time, they said that they expected to lay off workers in the third quarter because of the sharp cut in material allotments.

Food Waste at San Francisco

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. HAVENNER. Mr. Speaker, my attention has repeatedly been called to charges of food wastage on San Francisco's water front. Complaints have been made by the longshoremen employed in my district that tons of food from ships' stores are being dumped overboard regularly as garbage. In a recent issue of a San Francisco News, Eugene F. Burke, executive secretary of the Marine Cooks and Stewards Association, was quoted as follows:

The food loss described by the longshoremen is a drop in the bucket compared with the large quantities of food that goes over the side every day because of the practice of port feeding.

Both the War Shipping Administration and the maritime unions have urged shipping companies to eliminate in-port feeding and give seamen subsistence allowances during the time a ship is docked, Mr. Burke stated:

When a company refuses subsistence, it is required that three meals a day be prepared for all crew members—

Said Burke—

Since only a fraction of the men turn up for meals in port, huge quantities of food go to waste in San Francisco every day while civilian supplies tighten. Here is the No. 1 source of water-front waste.

Further discussion of waste of food in San Francisco is contained in the following editorial recently published by the San Francisco News:

DUMPING GOOD FOOD

Even granting the food is not fit for human consumption, which is denied, the manner of disposing of old ships' stores on the water front is in complete disregard of public feeling on the whole question of food shortages.

Water-front workers called attention of The News to the practice of dumping large quantities of foods at the docks to be picked up by scavengers, in order to make room for fresh stores in cargo ships' galleys. Much of this food, according to these informants, was still fit for human consumption, in fact entirely unspoiled. Yet it was disposed of as garbage.

Such wanton waste when civilians generally are being denied normal rations of many foods is not calculated to create good feeling. It is recognized these supplies could not be put back into ordinary channels of trade, but they surely could be given to institutions or disposed of otherwise usefully, thereby lessening demands upon supplies already in trade channels.

For the sake of public relations, if not for other reasons, the Maritime Commission, or whatever agency has the authority, should see to it that this wholly unnecessary practice should stop.

Bureaucratic Control and Regimentation

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. JOHNSON of Indiana. Mr. Speaker, the following letter received from a very reliable business firm seems to express the general opinion of bureaucratic control and regimentation. As stated in the letter, "it is high time that Congress took cognizance of this very serious situation."

Congress should take steps immediately to stop such unwarranted actions by these agencies, and to preserve our form of government under the Constitution.

MARCH 26, 1945.

The Honorable NOBLE J. JOHNSON,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN JOHNSON: Never in our 103 years as retail merchants have we been confronted with such mounting maze of dictatorial and regimenting directives as are being issued almost daily by the War Production Board and the Office of Price Administration.

The latest of each being the strangling W. P. B.'s M-388 and the coercive O. P. A. measure presently labeled MPR-578.

A sane, thinking person is forced to the conclusion that both of these agencies have gone hog wild in their efforts to complicate, confuse, and finally condemn the American system of free enterprise.

It would appear that the directives in question were concocted by persons incapable of comprehending the ramifications of their far-fetched and ill-advised brainstorms, nor can they foresee the disastrous results which would follow the enactment of these orders.

The latest newspaper headlines and radio reports all indicate our heroic boys are winning the war on every far-flung battlefront of the world.

Are we in reality winning the war on foreign shores, only to be losing the American way of life here at home? When one glances through MPR-578 and M-388 the answer is self-evident.

For over a hundred years, the manufacturers, wholesalers, and retailers of this country have gone all out to cooperate with every branch of the Federal Government in every instance where their aid was solicited, and even when it was not. Every sensible law enacted during that time has had their whole-hearted endorsement and support.

They have paid hundreds of millions of dollars in taxes and have given employment to millions of men and women.

Now, due to the insidious policies being pursued by certain individuals in both the W. P. B. and the O. P. A., the manufacturers, wholesalers, and retailers of this country are being bombed with a weight of discriminating and obnoxious orders and directives which will prove to be just as deadly and as devastating as any bombs that could be dropped by the enemy.

Were we a totalitarian nation, these dictatorial demands and threats of fines and the suspension of our business, among other penalties, would be taken for granted.

However, as American citizens and businessmen we cannot continue to take the orders being handed out, without making a ringing protest—one that will be heard by our duly elected Senators and Congressmen—and we hope promptly acted upon by them.

These two controversial and communistically inspired measured W. P. B.'s M-388 and O. P. A.'s MPR-578 demand a show-down on the floors of Congress.

These orders and others of their ilk are a serious menace to the future security and prosperity of all business, and of our country.

Additional pages could be filled with glaring injustices which M-388 sponsors, but we believe those mentioned above will be more than ample evidence on which to condemn this measure before its effective date now set for May 1.

We challenge those responsible for M-388 and MPR-578 to justify the necessity for these edicts in the first place, and secondly to defend them as they are written, as being in the best interests of American business and the American consumer.

M-388 and MPR-578 are but two more links in a chain of directives and official orders issued by O. P. A. and W. P. B. which chain is being slowly, but nonetheless surely drawn tighter and tighter around every business in this country to control it, and limit it, and regiment it, and eventually to strangle it. This increasingly dangerous trend is a direct threat to the future of our country and its liberal institutions.

The power and influence now being wielded by the O. P. A. and W. P. B. far exceeds that which was intended by Congress when these two agencies were created. It is high time that Congress took cognizance of this very serious situation, by demanding that all directives from both agencies be submitted for congressional approval before being foisted upon American business.

We are fully aware of the unforgettable fact that America is in the midst of the greatest war in its history. We know that each and every one of us must do all in his power to aid in bringing victory to our arms, and the return of our boys to their loved ones, at the earliest possible moment.

This century-old institution of ours has been in the forefront of every civic and Federal drive since long before Pearl Harbor. We have gladly spent thousands of dollars in newspaper and radio advertising to help in our small way in putting the various War bond drives over the top in this area.

The many Government citations awarded us bear testimony to the helpful results achieved.

To cut down absenteeism, our store is open an extra evening each week to serve the war workers who are serving the Nation.

Everything that can be done to help win the war is being done by us, and by thousands of other patriotic American merchants.

That is why we are so truly alarmed by the restructive, provocative, and un-American course which the W. P. B. and O. P. A. have charted for themselves.

The splendid legislative record you have compiled in fighting to retain the principles

of a free and unshackled democracy is so well known that we are soliciting your cooperation and support for such immediate congressional action as will end, once and for all, the menace of such orders as M-388 and MPR 578.

All we ask is the right to live and to do business as free men under constructive laws and regulations and we have every confidence that you and your able colleagues in Congress will guarantee us this privilege.

The Meat Crisis

EXTENSION OF REMARKS
OF
HON. ANTON J. JOHNSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. JOHNSON of Illinois. Mr. Speaker, the Nation is greatly disturbed over not only the shortage of meat, but also the extreme poor quality of beef.

The consuming public is not generally informed of the causes of both shortage and poor quality. I insert, under leave to include, a statement from a Corn Belt cattle feeder which very clearly states the reason for, not only the shortage, but also the very poor quality, dark black-red color, yellow fat, instead of white fat, tough meat, all because of the lack of corn feeding while our elevators are full of corn and almost no boxcars available. The farmer still has his corn and much of it piled upon open ground.

The following is a statement I have from a practical cattle feeder in my district. He makes a statement of fact.

The boys in Washington are having quite an argument about the meat situation, but, it don't look like they are getting anywhere, and I thought I would just as soon have my suggestions in now as think about them later on.

I feed from 800 to 1,200 head of cattle each year, and about the same number of hogs, in fact, I market about a million and a half pounds of live meat each year. I know this is not a great amount of meat, but, a person can lose a lot of money in such an operation if things turn sour and on the other hand, I can truthfully say, that I have not made very much money for my investment, due to the various rollbacks, ceiling-price controls, etc., which have been imposed on the trade in the last 3 or 4 years.

As I see the situation, they have the hog situation in pretty good shape. We can raise hogs, fatten them out and put them on the market for $14.75 and make a little money, with corn at $1.10 per bushel. However, the cattle situation is altogether a different proposition and my thought is that there could be a lot of changes made which would help the trade and at the same time, produce more beef.

In the first place, we have been butchering too many pre-mature animals, that is, animals that have not reached the butchering age. There has been a lot of calves slaughtered, also there has been a lot of yearlings killed that should have been grown and put on the market weighing 1,100 to 1,200 pounds but they only weighed 600 to 700 pounds, and this has caused a big decrease in dressed beef; all this is due to the fact that our planners have overlooked the cattle feeder and they have not made any provision for the job he plans in the meat-production program, and during all this discussion, I have failed to read where he has received very much consideration as yet.

The whole situation hinges on one thing, that is, we are taking care of the western cattle grower and taking his grass-fat cattle for slaughter, when such cattle should have a turn in the feed lot and made better meat and more meat. They have been preaching in Washington for a long time that they don't want to put corn into cattle, and they naturally have succeeded in getting what they want, as there is very little corn going into cattle, consequently, we have an oversupply of corn, and it will be a drug on the market before fall and nothing to feed it to.

Now, suppose, we give the boys who just graze their cattle a good price for them, say 11 cents at the ranch, that would make them a barrel of money, would cost a dollar to get them to the feed lot, give the feeder a 3.50 spread, and you would have a 15.50 fat steer in Chicago. What are they doing now? Paying 14.50 to 15.50 for grass fat steers and they will dress out about 55 to 56 percent. All this is caused by the packers going into the market and outbidding the feeder for such cattle. Well, you ask why they outbid the feeder—because they are in a position to upgrade this grass fat beef and in addition get a subsidy on it, all of this is working out alright now, but it sure is not helping the future beef situation. When the packer pays 16.75 to 17 cents for cattle, there is not much chance for him to upgrade such beef. Consequently, he don't care to buy it except for his trade that demands such beef and won't take the tough grass beef.

I was in Kansas City Monday trying to buy some feeder cattle. I ran across a string of 109 head of cattle that has been on wheat pasture in Kansas; they would weigh about 950 pounds and were carrying just a grass fat kill. He was trying to get 15.15, and finally they sold them to a packer buyer at 15.10. He will kill them and upgrade the beef and get a subsidy on the meat. If I had gotten them, I would have put them on full feed for at least 90 days and added 180 pounds to them and put them on the market and they would have produced approximately 20,000 pounds more beef than they are going to do. However, I figured that if I got the extreme top of the market after July 1 of 17.50 they would have lost me money, so there was no use trying to buy them.

Farmers Who Win Prizes

EXTENSION OF REMARKS
OF
HON. WALTER K. GRANGER
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial from the Standard-Examiner, of Ogden, Utah, which tells of the accomplishment of two farmers from my district who have been awarded national honors in the Philip W. Pillsbury wheat award contest. This is a worthy achievement at this time when food is the question uppermost in the minds of the people of the world.

While Utah is not considered a wheat State, these men, Mr. Murphy and Mr. Rasmussen, can take justifiable pride in the fact that they have set a record for quality in wheat. I join with the editor of the Examiner in expressing my hearty congratulations to these men.

FARMERS WHO WIN PRIZES

Certainly a farmer who wins national honors in a contest to determine skill in the production of food deserves the recognition and publicity that would be accorded to a person who makes an unusually long run in a football contest, who kills a bear or makes a hole in one luckily while playing a game of golf.

Therefore, this comment is made about two Utah men, Eldred Murphy, of Salina, in Sevier County and P. H. Rasmussen, of Clarkston, Cache County.

They were awarded national honors in the Philip W. Pillsbury wheat award contest.

Mr. Rasmussen won the national reserve championship for hard red winter wheat grown on his 2,000-acre dry farm, and Mr. Murphy was named grower of the Nation's best soft white wheat. This white wheat came from the same 50 acres he has been tilling for the last 25 years.

To be designated as champion farmers is to receive recognition that must make men proud and happy, indeed. The honor bespeaks agricultural skill of rare quality. It also tells of love of the soil which stimulates care of the soil. Note that Farmer Murphy's prize wheat came from the 50 acres he has been tilling for 25 years.

Good farmers are good citizens. They improve and do not damage their environment. They give more to their communities than they take.

The Curfew Order

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. ROONEY. Mr. Speaker, since the advent of the Byrnes curfew edict and while fully complying with the provisions thereof in the interest of the success of our war effort, a great many of the constituents of my congressional district have written me expressing their apprehension and fear that this edict is a step toward national prohibition. Only a few days ago I received a resolution passed by the Brooklyn Council-Kings County Veterans of Foreign Wars of the United States, which expresses very succinctly the feelings of all the people of Brooklyn on this subject. This resolution follows:

BROOKLYN COUNCIL-KINGS COUNTY,
DEPARTMENT OF NEW YORK, VETERANS OF FOREIGN WARS OF THE UNITED STATES.

Hon. JOHN J. ROONEY,
Member of Congress,
House Office Building,
Washington, D. C.

HONORABLE SIR: In conformity with the mandates of Brooklyn Council-Kings County Veterans of Foreign Wars of the United States, I present the following resolution passed in regular session by that body on March 12, 1945:

"Whereas over 300,000 men and women from the Borough of Brooklyn are now serving in the armed forces of our country; and

"Whereas Brooklyn Council-Kings County Veterans of Foreign Wars consider themselves the guardians of the rights and privileges of these men and women from the Borough

of Brooklyn, county of Kings, city and State of New York; and

"Whereas Brooklyn Council has gracefully accepted all edicts and directives coming from the various war agencies, the last one the so-called curfew law; and

"Whereas while accepting these edicts and directives they have been apprehensive lest these men's and women's rights and privileges be usurped while serving in the armed forces; and

"Whereas the members of Brooklyn Council, Veterans of Foreign Wars, composed of men who served in World War No. 1 and World War No. 2 on foreign shores and hostile waters remember that prohibition was thrust on us while the manhood of the country was away and unable to voice their disapproval: Be it

"*Resolved*, That Brooklyn Council, Veterans of Foreign Wars, inform the rest of the country that they will fight any attempt by any person or group of persons to foist on us any form of prohibition, wartime or otherwise, and will use its full resources to protect the men and women now in the armed forces from any return of prohibition."

Respectfully submitted.

JOHN GARDELLA, *Commander.*
BARCLAY FARENGA, *Adjutant.*

Expenditure Controls in the United States Government

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. LUDLOW. Mr. Speaker, writing under the title "Expenditure Controls in the United States Government" in the Accounting Review, Mr. E. L. Kohler has contributed an interesting and illuminating article on appropriating procedure. Salient points of Mr. Kohler's article are as follows:

PREPARATION OF ESTIMATES

Estimates of future expenditures originate annually within each spending agency. The Budget and Accounting Act of 1921 provides for the appointment by the head of each agency of a Budget officer who prepares such estimates, and the Bureau of the Budget each year issues regulations governing their form and content. For the old-line establishments, the estimates for the fiscal year 1946 must be in the hands of the Bureau of the Budget by September 15, 1944; the war agencies, including the War and Navy Departments, will submit summary estimates on December 15, 1944, and detailed estimates, which will naturally differ in total from the preliminary figures, on March 15, 1945.

No uniformity exists among Government agencies as to the method followed by Budget officers in obtaining future estimates. Only the general content of the estimates presented to the Bureau of the Budget is prescribed. This consists of four items; a brief one- or two-page letter of transmittal which summarizes the agency's estimates; a proposed appropriation bill covering the estimates; a detailed list of jobs the total of which agrees with the labor cost appearing in the summary, a total of each of the other objects of expenditure such as travel and office supplies, and a functional recapitulation, if obtainable; and finally, a narrative describing the proposed expenditures, with particular emphasis upon changes in expenditure rates.

REVIEW BY THE BUREAU OF THE BUDGET

Since 1939 the Bureau of the Budget has been an independent agency which has acted as a direct aid to the President in the preparation of the annual Budget called for by the Budget and Accounting Act of 1921; it also aids him in other ways. To obtain the annual Budget it combines to estimates of the various agencies after their approval by the Estimates Division and the Bureau's top staff.

The Estimates Division consists of groups of specialists who follow the work programs of the agencies assigned to them, aid the agencies in the preparation of their annual estimates, and advise with them during the year on any major problem that may affect the original work plan or the amount or nature of the expenditures authorized in appropriation acts. These specialists, after their review of formally prepared agency estimates, conduct hearings attended by agency heads and their assistants, thus obtaining a more accurate picture of prospective activities. presentation of the agency's case follows whatever pattern the agency head may determine, and the hearings, which for the larger agencies may require several weeks, are informal. Additional information is frequently asked for, and a number of proposed activities may be eliminated. At the same time the opportunity is offered for policy discussions and clearance at a time and under conditions that cause the least embarrassment to the agency and its staff.

ACTION BY CONGRESS

Relations between the Congress and the spending agencies are maintained through standing committees and appropriations committees. The former exist only for the old-line establishments; war agencies have derived their authority largely from delegations of wartime powers conferred on the President by congressional acts. In general the separation of authorization from appropriation has become a well-established working plan within the Congress. Appropriation bills of the old-line agencies are filled with parenthetical references to enabling statutes, and members of both Houses are insistent on the omission from appropriation acts of legislation creating new powers or jurisdictions.

There is but one appropriation committee in each House, with, however, numerous subcommittees to which specific agencies are assigned and a deficiency subcommittee made up of other subcommittee chairmen. Assisting the committee are a clerk and a number of assistant clerks. By custom, appropriation bills are first considered by the House of Representatives and it is there that they receive their principal review. Hearings are held by the Appropriations Committee of each House, but before the Senate committee they are usually limited to situations in which an agency is dissatisfied with the cuts which the House committee has made in the agency's proposals. The Senate as a rule acts on the basis of its consideration of the House bill, the agency justification, the transcript of the House hearings, and the House report.

The spending power of the agencies has been curtailed by the adoption of numerous controls, the principal ones being:

(1) Most appropriations extend over a single fiscal year. Obligations authorized must therefore be made within a relatively short period; to continue operations thereafter, the agency and its program must be again reviewed by the Appropriations Committee before the end of the period. Occasionally appropriations unspent at the end of a fiscal year do not lapse but, as in the case of current War and Navy appropriations, they may continue over a period not exceeding 2 years. A variant of this last procedure is found in "contract authorizations," whereby a specific sum is named in an appropriation measure permitting the initiation of commitments in the current year and their payment in a subsequent year.

(2) The House Appropriations Committee will consider no request for an appropriation that has not first cleared the Bureau of the Budget. This conforms to the indirect requirement of the Budget and Accounting Act of 1921 that "no request for an appropriation * * * shall be submitted to Congress or any committee thereof by any officer or employee * * * except on the request of either House of Congress."

(3) Independent investigations of spending agencies are made by the House Appropriations Committee whenever a subcommittee wishes further information. For this purpose experts from other agencies, employed under ingenious conditions which have been established by the committee to keep them away from politically minded Members, study the problems assigned to them, interview agency representatives, review procedures, and make independent reports to the committee, thereafter returning to the agency from which they were borrowed.

CANNON ABLE AND FORTHRIGHT

(NOTE.—Chairman CLARENCE CANNON, of the House Appropriations Committee, author of this investigatory procedure has described it at length in the CONGRESSIONAL RECORD, Vol. 89, p. 11104. His exposition of the safeguards that should accompany legislative investigations of executive agencies is both able and forthright, his insistence on arm's-length relationships qualifies him as a first-rate auditor.)

(4) Limitations of various kinds may appear in appropriation legislation; some of them are inserted by the Bureau of the Budget, but the bulk of them have originated at one time or another in the House Appropriations Committee. Although the Federal system of appropriations is commonly referred to as a lump-sum-appropriation system, the effect of the various forms of limitations, particularly in recent years, has been to create a hybrid which approaches the detailed-appropriation plan of some States and many municipal bodies. A common limitation is the top figure set for certain types of expenditures within an appropriation. For example, the Securities and Exchange Commission is allowed to spend $4,651,704 during the current fiscal year, of which an allotment is made "not to exceed $1,000 for the purchase of newspapers"; in addition to the total sum indicated it is permitted to spend $45,000 "for all printing and binding"; no other monetary amount appear in the S. E. C.'s appropriation act.

Many of these monetary limitations are lost in history. Others, of comparatively recent origin, have been occasioned by agency abuses—at least the Congress has so regarded them—of unqualified spending privileges. Other monetary limitations which creep into the appropriations of various agencies relate to such items as travel, attendance at conventions, the purchase of automobiles, and the employment of consultants: particularly in instances in which the agency itself has, in the eyes of Congress, been at fault.

Limitations of a qualitative character appear everywhere in appropriation acts. The appropriation act covering the Department of Agriculture is a document of 45 pages, lump-sum amounts appear for more than 40 heterogeneous suborganizations, and there are more than 200 express limitations on various objects of expenditure. Most of the act is, however, a definition of the particular scope of activity which may be followed during the current year by the various suborganizations.

(5) During hearings before the House Appropriations Subcommittees, administrators have frequently been warned by committee members regarding the modification of practices followed by the agency. The impression may have been gained that certain activities or expenditures were contrary to con-

gressional intent. The warnings may be no more than adjurations, but they are often regarded by the agency head as restricting his actions. The same may be said of formal committee statements which accompany the appropriation measures when they are reported back to the House or Senate. A committee cut in an appropriation request may be ascribed in a report to a particular item, but if the language of the act does not expressly prohibit, the agency is free to apply the cut to some other item; although if it does, it may face a hostile subcommittee in the year following.

(6) Interim contacts are a further source of congressional control over individual agencies. These contacts are of two types: Voluntary from the point of view of the agency or involuntary. The voluntary contact arises if a change in an agency's program is brought about by circumstances that could not be foreseen at the time when its future budget was under consideration, or if it finds it has underestimated its future financial requirements and now seeks what is known as a deficiency appropriation in order to carry through the year. At deficiency hearings, the progress to date of the agency's program or a section of it is commonly reviewed. The involuntary review may be made by one of the standing committees or by the Appropriations Committee and is usually occasioned by criticisms of the agency's program.

When a large degree of policy making must be delegated to an agency or when a none-too-certain policy has just been created by the Congress, there has not infrequently been an agitation for congressional representation in the controlling group. Most Congressmen, however, appear to doubt the constitutionality of such a procedure, and are afraid of the consequences that would arise from saddling administrative responsibilities on already overworked Senators and Representatives.

On the whole the work by congressional committee on the affairs of agencies seems to outsiders to be as intelligent and well done as time permits, even though clouded on occasion by the public comments of individual Congressmen whose attempts at intervention in agency administration have been unsuccessful. Party differences have little effect on agency operations—a fact probably insufficiently appreciated outside of Washington. The lay criticism of agency activities, which has so often resulted in better administration of the Government's work program, has been one of the chief contributions by the Congress in the way of controls over administrative practices.

Rejoice America!

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. BRYSON. Mr. Speaker, as an extension of my remarks in the RECORD, I include herein a very appropriate poem written by Benjamin F. Martin, Esq., a distinguished member of our bar, as it appeared in the Greenville (S. C.) News, January 28, 1945.

REJOICE AMERICA

"Our cause is the cause of all mankind, and * * * we are fighting for their liberty in defending our own. 'Tis a glorious task assign'd us by Providence; which has I trust, given us spirit and virtue equal to it, and will at last crown it with success." (Benj. Franklin, 1777.)

"I trust, pray, and hope that America will not fail the world." (Speaker SAM RAYBURN at the opening of the 79th Cong. January 1945.)

O God of Wrath! Thy face is turned
In majesty and might on man!
The seeds of hate and death are sown,
The harvest huge in every land!
No more the arts of peace enthrall,
We execute decrees divine!
Rejoice America! Rejoice!
Thy sons are in the battle line!

Hear now the cries of terror rise
From innocents who look to Thee,
From little ones that do no wrong,
Yet look through tears their fate to see!
We see Thy earth made desolate,
The hosts of hell at liberty!
O God of Justice! let us be
A worthy band to fight for Thee!

A million slaves from happy lands
Beneath the lash of foreign sky,
Uplift their eyes to Thee and pray
To calm the anguished hearts that cry,
The anguished hearts of those at home
Whose thoughts to them forever turn,
O God of Freedom! Grant we be
Thy faithful men to fight for Thee!

O God of Love renew our faith!
We hear Thy call! We come!
We know thy great decrees are right,
And pray Thy will be done.
Our all is least we now can give
To country, right and liberty.
O God of Mercy may we be
Thy worthy men to fight for Thee!

* * * * *

Yon flaming standard onward moves
To execute decrees divine,
Rejoice America! Rejoice!
Thy sons are in the battle line!

—*Benj. F. Martin.*

GREENVILLE, S. C., *January 28, 1945.*

Address of Dr. Ezequiel Padilla, Secretary of State of Mexico, at Inter-American Conference

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 9, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, at the recent Inter-American Conference held in the city of Mexico, which it was my privilege to attend as one of the delegation of our country, the president of the conference was Dr. Ezequiel Padilla, Secretary of State and Minister of Foreign Affairs of Mexico.

Dr. Padilla is one of the ablest men in public life in the Americas, and the brilliant address delivered by him at the opening session of the Inter-American Conference is worthy of reproduction, and under leave granted same is submitted herewith:

Honorable delegates, finally we are emerging from a long night of suffering and danger. In our innermost surely we shiver upon reflecting that, had we lost this war, something that could have happened, our sovereignty and our liberties would have been crushed. The militaristic castes of Germany and Japan would have kept for themselves our countries on the Atlantic and on the Pacific, respectively, to keep us subjugated for centuries to come. The decision, the valor, the heroism of countless multitudes of men and women, millions of whom have already given their lives to the cause they defended, have made our fate a different one. That is why it is possible that, once again, we the Ministers of Foreign Affairs of our sovereign American Republics should gather to deliberate on the destinies of America. It is imperative that in the course of our work we keep in mind that an invisible world of immolation and sacrifices is in flames over our heads.

We must be proud of having placed our destinies in their entirety on the scale of war, in defense of the democracies. We have contributed, in proportion to our strength, to the greatest cause ever faced by mankind. We must recognize with candor that in America the weight of the war fell mostly upon the great democracy of the United States. It is indeed just that we render to it the tribute of our admiration and gratitude. Bleeding itself on all fronts, exhausting immense wealth, leaving hundreds of thousands of homes in mourning, it has defended with imperishable epic greatness not only its seriously menaced destiny but continental integrity and world liberties as well.

What is it that America expects of this conference? The first thing it expects is practical resolutions; resolutions that alleviate the misery, abandonment and indifference in which, to a very great extent, our masses find themselves; resolutions that satisfy the longing of all our peoples for permanent security and a peace based upon justice. If we are to emerge from this assembly more united than ever, it will be because we have known how to ennoble solidarity in war, which has been consecrated by devotion to liberty and by the resoluteness of our peoples, and because we have made it transcend into solidarity in the coming peace. Such new solidarity must consider the poverty of the people, their social insecurity, their undernourishment and unemployment throughout the Americas, wherever it may be, deep in the Amazon or in the mines of Bolivia, on the plantations of Honduras, or on the plains of Venezuela. These iniquities not only are a stigma for the life of the countries suffering them, but also for the dignity of all the Americas.

This war is not all destruction, it is also hope, setting up principles for a just world: the "four freedoms," the Atlantic Charter, the Moscow, Cairo, Teheran, and Yalta agreements, the machinery of cooperation in wartime in anticipation of the machinery of cooperation in time of peace, the democratic feeling consecrated by victory, faith in the common destinies of the common man. That is why this war is, above all, a social revolution, the greatest in history. The Americas have the duty and the privilege of gathering the impetuous currents of a new life into the channels of law and justice, of liberty, of sympathy for humans uffering. The deepest and most impressive immediate clamor of this sacrificed generation is permanent world peace. The Dumbarton Oaks proposals, in their democratic process of consultation, constitute a scund and noble answer. The observations formulated by some of our nations, Mexico among them, aspire to the full realization of that aspiration. Peace is not everything. Without law it does not even deserve that name. Unless it rests upon justice, peace is merely a dark and gloomy armistice, and nothing else. If peace is not for the full enjoyment of human liberties, embracing the rights and the juridical equality of all nations it shall not have the sincere adherence of the peoples and of freemen. This is why, through its committees of experts, its thinkers, its statesmen, all mankind raises its fervent wishes that the permanent world peace organization be not established as an episode of might nor as a regression to the discredited system of alliances and balance of power,

the complete inefficacy of which, in the course of history, has so many times submerged international life in a deluge of blood; but as a true expression of human solidarity, of proportional responsibility, of the yearning for justice of all peoples, large and small.

In this assembly we must dedicate ourselves to the defense of the cause of human dignity, as the best tribute to those who have died, and will still die for it. We shall strive for the economic expansion of our nations. The Western Hemisphere comprises overy 30,000,000 square kilometers of frustrated lives. We must furnish working opportunities and defend, above all, a fair wage for man and woman, it being understood that a fair wage is not just enough for adequate nourishment and decent shelter for a man and his family, but also for necessary sanitation, pleasant leisure, efficient education for children and, first of all, proper protection against economic insecurity that fills with anguish and uncertainty the present daily life of the worker.

It is necessary that we fight against slave wages for the benefit of the Americas and the world. We are agreed, I am certain, upon the removal of all trade barriers leading first to economic warfare and in the last analysis to actual war; but not only that, we must harmonize this principle with the just expression of the International Labor Office, that the reluctance on the part of any nation to adopt human working conditions is an obstacle in the way of all the other nations wanting to fulfill this inescapable mandate. In the Americas we must put an end to the Danteseque spectacle of man without hope, eaten away by tuberculosis, malaria, malnutrition, silicosis. An end must come in America to the somber picture, that cannot be described in words, of the jobless man who, in the midst of his country's indifference, gets home, night after night, clenching his hands, without bread for his children. We should not come out of this assembly with dignity were we to fail to give assurances to the masses of the determination of our Governments and our States to formulate and comply with all decisions necessary to ensure that in America, for its own sake and as an example to the world, we put an end, for all time, to those curses, just as we put an end to slavery and to the inquisition!

But how can we achieve the expensive organization of social security and economic expansion, surrounded as we are by so much misery of the people of our Latin America? These objectives we could not reach by the mere impulse of private initiative in our countries, nor could we accomplish them with the means available to our respective Governments, not even with a union of our Latin American peoples alone. And this must be said for the benefit of those who think about these problems in terms of Phalangist Hispanicism; these objectives will only be attained by pooling the energies, the resources and the confidence of all the Americas. What does bestow substantial unity on the American nations is the reciprocal support of their energies and the community of their destinies, that coordination of forces that supplement each other and do not fuse into what would be a regrettable and disgraceful standardization of all that is genuine in each one of our peoples. It would be absurd indeed if the sap, the culture and vitality of each one of our peoples were levelled down to a dull and gray unity. Everyone of us would lose by this. The wealth and beauty of the Americas spring from the variety, in the material and in the spiritual, of their sparkling mosaic. The United States and Latin America make up the creative equation of the grandeur of America, each one of these sectors having its own contribution to give.

Technology, the pride of human intelligence, has achieved stupendous power in the United States, as shown by war production. But such power cannot come to standstill upon the advent of peace. Sixty million men and women will claim the permanent continuance of their high wages and high standard of living. Their statesmen are not going to have the people collapse into the hell of unemployment. This means the rapid reconversion of war industries to postwar industrial production. Sixty million men and women with extraordinary qualifications to do their job, an army of first-class administrators and a fantastic modern technology, combined will produce one of the bases that will determine the redemption of mankind: abundance. Thus attained, abundance will find the most outstanding means of distribution in endless fleets of sea and air ships. For the first time in history abundance and means of distribution are limitless. But that production must go somewhere; a coordinating intelligence must organize the buying power of nations. Lest a catastrophe of tremendous implications is invited, there is only one answer to the enormous power of abundance and distribution: the very great consuming power of the masses. Let us organize it in America. Latin America, in turn, awaits the opportunity of developing its resources. There are unsuspected possibilities in our wealth and in our men. There is no cause for pessimism. We should interpret statistics on human terms. Production of Latin American labor often is unfavorably compared with that of Anglo-Saxon labor. But is it possible to make a just comparison between an undernourished worker, undermined by disease, discouraged by infamously low wages, and a worker full of life and the joy of living, strong and highly paid? Let us rehabilitate the man of our America. Let us review the resources of the Hemisphere, to conclude that there is no excuse for the poverty of America. Let us build gigantic works of irrigation, public utilities, rural electrification, land, sea and air transportation, and they will be sufficient to ensure jobs to a whole generation and will create fabulous trade in equipment, machinery and other products manufactured in the United States. Let us organize long-term credits which will mostly pay for themselves, credits as large as are the resources of a whole Continent. Let us become industrialized by building an American world of consumers and high standards of living, by breaking the shackles of our agricultural communities which, incapable of creating large capital for industrialization, have continued producing only raw materials in the old colonial pattern, exploited by the highly industrialized countries.

The coexistence of free, prosperous peoples with slave and poor peoples must be canceled definitely. Only poverty is to be feared. In the same measure the buying power of a people increases, the economy of all grows richer and the security of all becomes solid. Will fabulous sums be needed to carry out this program? Most certainly. But surely what has been done to win the war, can and must be done to win the peace. From this combination of resources, as gigantic as the events we must face, shall emerge a continent in feverish activity. Thus the youth of the Americas will have a constructive program to which they may devote themseles and in which they may nourish their hopes, their well-being, and their pride. The continental idea will cease to be the abstraction that has not as yet entered the humble homes of the American masses. When they derive from it the great benefits of their liberation, then they will learn to love it and to defend it. In a world still crowded with uncertainty, they will know how to live and to die for it. We must realize that we are not facing just an economic problem; it is a moral problem for the Americas, that of preserving our free institutions. The American world must face once more and with greater danger a renewal of the radical struggle between ideologies, a struggle which will have for its stage in the immediate future not actual warfare, but the unhappy lacerated soul of man. One of these ideologies rests upon faith in the constructive power of democracies; the other in the convulsive power of violence. Violent and extremist ideologies—Nazi fascism itself which, even though defeated in war, live as an opportunism until justice and not only might, wins the peace, appeal to the most inflammable sentiments of the human heart and offer some hope; their propaganda only requires the virulence of booklets, the incendiary torch in the hands of fanaticism; they do not need order nor great economic resources; chaos is their element and the poverty of the people their fuel. Peoples in desperation go to the extreme left, governments to the extreme right, under any of the hateful types of Nazi fascism. In the end these movements result always in dictatorship and in the loss of human dignity. But this the people learn too late. On the other hand, democratic ideologies are all persuasive affirmation. Here we find the unevenness of the struggle and at the same time the noble opportunity of doing good, of doing justice, of serving the highest destinies of humankind.

If democracy is not an imposture, it must offer safe, steady work, fair wages, decent homes for the people, it must build schools, hospitals, libraries, parks, but, above all—and this is characteristic of democracy—it must guarantee economic security, not based on dictatorship and slavery, but upon the foundations of true liberty, abundance, fair distribution, social justice, and all freedoms, the authentic freedoms. This is the battle we must fight in America, because liberty is for this continent the pattern and the very essence of its life. We are ascending toward free institutions, and any regression threatens the future of all America. This terrible war, out of which we are emerging together, was caused by the attempt on the part of dictatorships to conquer the world. It has been a struggle against militaristic castes, against governments that were the enemies of liberty; it has been called fighting for democracy. Its postulates have called whole nations to sacrifice themselves in the most devastating war of mankind. And now we must ask ourselves, if millions of men have known how to die for liberty, shall we not know how to live to defend it? It is a sacred duty, an inescapable commitment of the highest moral nature to offer at the pyre, which burns even now, of the suffering and sacrifices we are experiencing, the determination to make of human liberties and democratic principles a collective responsibility of all the American peoples.

Honorable delegates, the hopes of America and of the world envelop us. At this, one of the crucial moments of history, when bleeding, disconsolate humanity, tired of a merciless war, could weaken its faith in the triumph of principles and noble promises, let us demonstrate with fervent action of reciprocal confidence and high intrepid decisions, that America carries within it, as a torch, the unfailing fire of its example and of its faith in the free destinies of man.

The Shortage of Overalls

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. HOEVEN. Mr. Speaker, a shortage of overalls exists throughout the

Farm Belt. A pair of overalls to the average farmer is about as essential as the tools with which he tills the soil.

Suspecting that shipments of overalls were being made to foreign countries under lend-lease and otherwise, I recently directed a written inquiry to the War Production Board with reference to the matter.

The War Production Board advised me that during the fourth quarter last year, 344,724 pairs of overalls left the country for all destinations. With the exception of one lend-lease requisition for 96,000 pairs, all of this trade was on a commercial or cash reimbursable basis. The total export figures for the first quarter of 1945 are not yet available but it is known that one requisition calling for 70,896 pairs of overalls was approved for shipment on lend-lease during that first quarter.

The above figures indicate that at least 415,620 pairs of overalls have left the country during the past 6 months.

Address of D. D. Monroe, Grand Sire, Independent Order of Odd Fellows

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. PITTENGER. Mr. Speaker, under leave to extend my remarks, I include herein the radio address recently made by D. D. Monroe, of Clayton, N. Mex. Mr. Monroe is the grand sire of the Independent Order of Odd Fellows and his radio broadcast was made over Station KOB, Albuquerque, N. Mex.

His address is as follows:

Friends, it is my happy privilege to extend to all my listeners, and particularly to all members of our fraternity wherever dispersed, the greetings and best wishes of the sovereign grand lodge of the Independent Order of Odd Fellows.

AN OUTSTANDING FRATERNITY

There exists in every city and town, and in almost every hamlet on the North American Continent, subordinate, encampment, canton, and Rebekah lodges, which are, respectively, bodies of the men's and women's branches of this order. For youth, we have Young Odd Fellow Clubs, Theta Rho Girls' Clubs, and Alpha Rho Coed Clubs. Each represents a valuable unit of world-wide fraternal organization composed of some one and one-half million members belonging to over 22,000 lodges located in 70 States, Provinces, or defined geographical areas in 17 different nations.

Spreading from the mother country, England, where the order had existed for many years, Odd Fellowship had its natal day in America, in Baltimore, Md., on April 26, 1819. It was introduced into Canada August 10, 1843, and subsequently extended from country to country until today it veritably encircles the globe.

LEADS IN RELIEF WORK

The motto of Odd Fellowship is friendship, love, and truth. Its tenets are faith, hope, and charity. Its symbol is the three links. It has been said in truth that the sun never fails to set agleam these golden links, the symbol of this great world-wide fraternity, which has lined the pages of history with more than 125 years of valiant striving for the uplifting of mankind. Uplifting because it constantly admonishes its members of these sacred missions: "To relieve the distressed, bury the dead, comfort the widow, and educate the orphan." The order spends approximately $4,000,000 annually in the relief of distress and suffering; the order maintains 64 homes valued in excess of fourteen and a half million dollars. It has educated and raised more orphan children than all State and Federal institutions combined. There are at present approximately 4,500 residents of these homes. No Odd Fellow or Odd Fellow's dependent ever becomes a public charge.

RELIGION IS ITS CORNERSTONE

But Odd Fellowship is not a mere beneficial society having for its object the relief of its members or the ministering to the necessities of their families. The Order of Odd Fellows was the first to establish mutual aid and benefit associations; its educational foundation and student-loan fund was among the first established; it was the first organization to introduce community singing into its meetings; it does not pretend to supplant the church, but it inculcates a veneration for religion. According to the Gospel of St. James, i: 27, "Pure religion and undefiled before God and the Father is this, to visit the fatherless and widows in their affliction, and to keep himself unspotted from the world." This is the basis of Odd Fellowship.

Then, Odd Fellowship, recognizing the fatherhood of God and the brotherhood of man, is democratic in that it is a true democracy, a democracy that teaches, as is so clearly stated by John James Ingalls, "In the democracy of the dead, all men are equal. There is neither rank nor station nor prerogative in the great republic of the grave." This is the philosophy of Odd Fellowship, a philosophy which directs us to teach men to view and to contemplate "What they are sure to be and what they may soon become." A philosophy which further teaches us that "Perfection comes not in doing extraordinary things, but in doing ordinary things extraordinarily well.

CIVIC AND SPIRITUAL PRINCIPLES

In America, Odd Fellowship is composed of the great middle, industrial classes almost exclusively. Mechanics and workingmen organized this modern institution which has grown steadfastly in numbers and importance, as an organization laboring faithfully for the amelioration of the human race, the field of labor which is coextensive with the globe, representing to the world a unique spectacle that commands and deserves the earnest and most critical examination and consideration of all those who have at heart the welfare of their fellowman. It constantly fights against immorality, vice, and the innumerable woes incident to life. It does not seek a veiled origin in the misty shades of the past to justify its existence in the present.

And, finally, Odd Fellowship is a patriotic organization, teaching its members that in order to be true they must be faithful to their Creator, obedient and patriotic toward their Government and fraternal to their fellowmen. Every Odd Fellow (and by the term Odd Fellow I include not only the adult male members of the organization, but the Rebekahs, the Young Odd Fellows, the Theta Rho girls, the Patriarchs and Ladies Militant, the all other affiliates) is pledged to lend every effort, not only by the giving of money, but by giving of personal services and personal sacrifices to the allied effort until victory has been achieved in the present emergency and thereafter to strive valiantly for the winning and the perpetuation of an everlasting peace. The dream Fruit Tree of Odd Fellowship and the goal toward which we strive is the day when one law shall bind all nations, tongues, and kindred of the earth—and that law shall be the law of universal brotherhood.

In a society which has become largely commercially minded this statement may seem commonplace and trite, because of its idealism and altruism. We, of this age, seem to have drifted away from the spiritual values, and away from humanities, and tend to stress price rather than value. Yet today the boy over there, the kid at war, dreams not of prestige, and power, and wealth, but of days back home, the neighborhood gang, the old jalopy, a warm bath, comfortable relaxation. It's funny, how all these little things add up to make the biggest, most important thing of all to the kid. Because of these little things, because of the hope of keeping these little things in his way of living, the kid is willing to give his everything, his life.

There is hope of a better world of tomorrow for everyone. Yet a better world will come only if a better race of people survive the terrible conflict which is now raging.

Here in America too many of us are still more interested in racing for our trains than we are in training for our race. We are changing the face of the world. How about its heart? The day may never come when all men will think alike, but we believe that the day can be made to come when all men will feel alike, and it is in men's hearts and not in their heads, that a possible, feasible basis for the solutions of the problems of the world may be found.

INTERESTED IN FUTURE WELFARE

It is my honest conviction, and I firmly maintain, that the constructive forces of the world are far superior to and will eventually conquer, the destructive forces. The ancient world had its Alexander the Great. The medieval world had its Ceaser. The modern world had its Napoleon. But where are they? Their memory lives only to be despised and shunned. Today we have Hitler, but he will soon, very soon, go the way of his predecessors. The pathways of peace are more pregnant with power, more vital with strength, more imbued with permanency than all the waging of war.

You are all familiar with the story of the contest between the wild wind and smiling sun in an attempt to compel the traveler to shed his cloak. The more furiously the wind lashed at him the closer the traveler wrapped his cloak about him, while the warm smile of the sun soon made the traveler take off his cloak and carry it on his arm. The wrath and fury of the storm brings only wreckage and destruction. So with war. Not until the hatred and fury and carnage of the battlefields are forever a thing of the past can we start our march of progress toward a better and a fairer world in which to live. But we can look ahead now and visualize that world. The end of this war is going to be followed by the greatest social revolution in all history. There will be no precedent to follow. There will be no administrative rule to guide us, because the world will be in ruins, some countries physically, some geographically, some financially—and most nations' morale will be reduced to the lowest ebb ever known in human history. A new world, entirely revolutionized (so say most of our social scientists) will have to be built and it will have to be reconstructed day by day.

BELIEVES IN LEADERSHIP OF YOUTH

I am not afraid of that world placed in the hands of the millions of our youth who have borne the brunt of this conflict. I am afraid of it if it is left in the hands of those who plan only diplomatically and commercially, striving for power and position without thought of moral and spiritual values. I feel sometimes that I would like to apologize for the leadership of our "older" generation to our young folks. I agree with Richard N. M. Snyder: "After 2,000 years of Christianity, my generation has dragged the flower of our youth through the worst depression this world has ever seen, and now

we are immersing them in the most horrible blood bath civilization has ever known. The mess we are in today is a flagrant case of adult delinquency. And I frankly believe that the teen-age youth of today, with their jitterbugging, boogie-woogy, and bobby socks, represent a more mature mentality than our slot machines, crooked politics, and selfish, materially minded power and pressure ideology. We haven't yet learned to live among ourselves. The war must be won at the battle fronts, but the peace must be won in every city, town, hamlet, and in every community and cross roads in the world, and in every organization, society, church, and school, and in every single home in America. If we don't have peace at the mess table, we're sure to have a mess at the peace table."

Only day before yesterday I received a copy of a letter written by an overseas veteran home on furlough. He had become too fed up on the smug complacency of our people, the "what's in it for me" and "I don't care what happens just so it don't happen to me" temperament so prevalent throughout our civilian population. The feeling upon the part of his own parents that the war would soon be over and that everything would be O. K. again. So fed up that he slipped out of the house early one morning to return and rejoin his buddies at the front, and he left a letter, addressed to his mother, pinned on his pillow, telling her that he was going back into the battle. I want to quote just a few paragraphs of this letter: "We'll be looking very brave and confident. And that's just the point. I may as well jump in with both feet right now. We won't be confident. At least, I won't. The old man fought in the Argonne to make the world safe for democracy, and here we go again. It was tough in his generation, but it's tougher in ours, because we aren't going to be filled with the faith his crowd felt. We've seen how you older people can lose the peace after we've won the war. We're going with our fingers crossed, and it's hard to fire a gun with your fingers crossed.

"We don't doubt democracy is worth fighting for, and we're not afraid to go. I don't think I'm a coward—I'm not afraid to die, but I'm afraid of dying for nothing. You see, we're afraid of the old shell game.

"I see the truth now, but it was hard to come by. 'I am my brother's keeper.' It's brotherhood this time or else.

"Sorry, I had to scold, but it's time you older people grew up. You've been the loveliest of mothers. But the point is, the world is not made only of lovely people like you. I wonder if just being a lovely person is enough any more."

"This time it's brotherhood or else." That is the thinking of the kid in uniform and under fire today. Listen to this poem by my good friend, Maj. Victor Grant:

" 'Twas in the war when first we met
'Mid the carnage round Marquette,
He loomed up through the night with grim intent;
There was blood lust in his eye
And my own, I can't deny,
Revealed that I was there on murder bent.

"His aim was not so good
So I shot him where he stood,
He quaked, then swayed a while and fell;
All the hate within me died
As I knelt there by his side,
He tried to smile, then sort of waved —'farewell.'

"Could I have known him better
I might have called him 'brother'
And greeted him with cheer and hearty laughter;
May we meet with kindly glances
Under higher circumstances
And share a soldier's faith in this hereafter."

IN CONCLUSION

Through brotherhood and fraternity we hope to fulfill our obligations to these men, and to do our part in the building of that better world of tomorrow.

It has been aptly said that "A man who is too busy to serve God and his fellow man is just too busy." Years ago Elbert Hubbard said "One great, strong, unselfish soul in every community could actually redeem the world." It is our hope that through the practice of the principles of friendship, love, and of truth, of faith and hope and of charity, we may so direct public thinking as to create in our communities strong, unselfish kindred feelings—foundations upon which we may build toward the better world of tomorrow. Believing in the Fatherhood of God, struggling to expand the brotherhood of man, we here and now rededicate ourselves to the great task that lies before us, pledging ourselves and our order to extending the ideals of this great fraternity in the hope that we may contribute toward the day when, after the passage of the decades of time, we have taken our place only in history, it may be that the sentry of those passing days, pacing his rounds on the watchtowers of civilization and hearing rung out the challenge "Watchman, what of the night," shall answer in vibrant tones, "Man, redeemed and disenthralled from the slavish life of his passions, has now asserted his high birthright and owns the tie that binds him in universal consanguinity with his fellow man, God is in Heaven, all is well with the world."

Compulsory Military Training in Peacetime?

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by Dr. Joseph S. Davies, director, food research institute, Stanford University, on the question of compulsory military training in peacetime.

This statement was prepared at the request of the editor of the Commercial and Financial Chronicle, of New York, and published in that paper on February 1, 1945. It follows:

COMPULSORY MILITARY TRAINING IN PEACETIME?

(By Joseph S. Davis, director, food research institute, Stanford University)

This question is not yet ripe for effective public discussion or decision.

Thoroughgoing preparation for defense of the United States is certainly one of the essentials for the peace period ahead. As our delayed participation in two world wars has shown, adequate defense requires readiness to fight overseas, if need be, early rather than late. We have never had a good defense program. It is urgent that one be carefully drafted and adopted, after discussion in the Congress and by the public at large, without protracted delay. But what such a program should contain is quite beyond the power of the general public at present to judge.

The drafting of a well-rounded defense program is a proper job for a commission made up of our ablest citizens with the aid of experts in several fields. In a very different field, the Baruch committee on rubber showed what can be done. Compulsory universal military training, if included in the defense program, could at most be only a part of it. Another highly important part consists in our vigorous participation in the maintenance of world peace, to which both political parties and most of our people are committed even before details are worked out.

Such a commission might well have been appointed several months ago. Pending its investigation and report, the recommendations of President Roosevelt, if not those of General Marshall, were premature. So also are the Gurney-Wadsworth and May bills now before Congress. The best that can be hoped from them, and from such symposia as the Chronicle is conducting, is that they will lead to the early set-up of a suitable investigating body.

Meanwhile, I am not ready to go on record for or against compulsory universal military training or national service, of 1 year more or less, for young men alone or for young women as well. If something of this sort is essential to adequate defense, I shall be for it. At present I very much doubt that it is. Decades of compulsory military service did not save Czarist Russia from defeat in 1917 or the nations of western Europe from conquest in 1940, Switzerland alone, excepted. Lack of it did not prevent Nazi Germany from vanquishing these nations, or bring the British Empire down to defeat in either World War. After fighting this war in unorthodox fashion, Americans can be pardoned for doubting whether our future preparations for defense must involve copying continental Europe's old system in this particular.

In any event, I feel sure that a really competent investigation would reveal the great importance of other elements in a desirable defense program, some of them entailing much more brains but much less cost in human terms if not in financial burdens. The general public, even the more thoughtful portion of it, is in no way ready to pass upon the apparently simple but very complex question now being raised, out of any relation to other issues that are even less understood.

Great Britain Seen in Strong Post-War Shipping Position

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following article which appeared in the New York Journal of Commerce, dated April 11, 1945, entitled "Great Britain Seen in Strong Post-War Shipping Position."

GREAT BRITAIN SEEN IN STRONG POST-WAR SHIPPING POSITION—CARGO FLEET OF 19,000,000 TONS DUE THIS YEAR—MORE BUILDING PLANNED

(By Stanley Ferguson)

Great Britain, although it has lost about 40 percent of its pre-war tonnage in ocean liners, appears destined to emerge from the war with a far larger fleet of the cargo ships which are actually essential to its economy than either the British or American public has generally been led to expect, a survey of such official British figures as have thus far been made available indicates.

In cargo ships of 10,000 tons or less, a classification which includes tankers and small coasters and which makes up the core of almost any merchant fleet, Great Britain is expected to have at least 19,000,000 and possibly 20,000,000 deadweight tons at the end of this year, indicating that her net losses in this class since 1939 have not exceeded 16 or 17 percent.

LINES NOT REPLACED

Britain's current relatively strong position in cargo ships, as compared with every other country except the United States, is due in part to the fact that the heaviest losses have been incurred among the larger passenger and passenger-cargo liners, and in part to a well-executed if little-publicized merchant shipbuilding program which has been concentrated entirely on cargo ships of the 10,000-ton class and upon smaller types.

Thus the 16 to 17 percent drop in freighter tonnage compares quite favorably with a net less of 40 percent in liners and with an over-all net loss of 23 percent in vessels of all categories in excess of 1,600 gross tons to the end of 1943.

However, when it comes to surveying the actual types and speeds of the new cargo vessels being built for the British merchant marine, students of the problem both here and abroad, run up against a wall of secrecy that is unprecedented in almost any other major field of British wartime endeavor. The United States has announced monthly the number and type of virtually every merchant ship built in American yards since the beginning of the emergency building program, but the British Government has disclosed less about its merchant shipbuilding program than about its naval building, its production of aircraft, and so on.

From the middle of 1941 until last November, reports of losses at sea were suspended. In November the British Government published a White Paper giving the number and tonnage of British vessels lost up to the close of 1943 on a year-to-year basis. The white paper also disclosed the tonnage, but not the number, of merchant vessels built—the aggregate amounting to approximately 4,500,000 gross tons from September 1939 to December 31, 1943.

BRITISH RESUME SILENCE

The most careful study of the White Paper figures revealed only that the British merchant fleet, aggregating 17,500,000 gross tons of ships in excess of 1,600 tons in 1938, stood at 15,500,000 at the end of 1943; and when allowances were made for vessels that would have to be returned to other countries, the total was 13,500,000 tons. Since then the British Government has resumed its long silence on all details of its merchant shipbuilding.

Even well-informed Britishers outside Government circles appear to have been kept in the dark as to the current status of the British cargo fleet and as to plans for its replacement. The influential London Economist, for example, estimated the size of the fleet at 10,000,000 gross tons, just before the White Paper put it as 13,500,000 (a figure which did not include small coasters and vessels returnable to other countries after the war). Lord Winster, taking a particularly gloomy view, predicted last year that Britain would come out of the war with needs for 30,000,000 dead-weight tons but with only 15,000,000 dead-weight tons on hand.

Recent piecemeal disclosure as to the losses of the major British liner companies have provided the key to the puzzle of Britain's position with respect to freighters. Since there have been no replacements in vessels of the liner class, save through launching of a few large units such as the *Andes* and the *Dominion Monarch*, which were planned before the war, it is clear that the British merchant marine is stronger today on a tonnage basis than many American shipping circles would have believed possible a year ago.

NEW BUILDING PLANNED

Liner losses of 40 percent, although serious are not as crippling as comparable losses among freighters for two reasons. First, Italy, Germany and France, Britain's chief competitors in the liner trades, have lost more heavily still and two of them may probably be counted out of the running for some time to come. Second, the airplane is expected to cut into the liner passenger and mail business anyway, with the result that the post-war need for large fast vessels of this type will probably fall below that of the period before the war.

Lord Leathers, British Minister of War Transport, disclosed last month that British shipyards are now turning from the standard 10,000-tonner to more varied types of ships. In addition to the 10,000 to 11,000 deadweight ton Empire class vessels, Britain has been building fast cargo liners running up to 12,000 dead-weight tons and 18 knots maximum, tankers, refrigerator ships, colliers, ventilated fruiters, heavy-lift derrick ships, and other odd types—but how many in each class is a well-guarded secret.

British Motorship, an excellent technical monthly published in London, has been carrying some details of these various types, month by month, but American readers have been interested to note that some of the most important data that would furnish a clue to the actual competitive value of the ship such as dimension of the engines and shaft horsepower, is invariably missing, whether by design or inadvertence.

BASIS OF COMPUTATION

When Britain's current position as to freighters is computed on the basis of (1) white-paper figures, (2) liner losses, (3) probable losses of old and new ships based on prevailing war-risk rates and on reported losses by other allies, and (4) the proven capacity of British shipyards, a very conservative estimate would put Britain's strength in freighters, tankers, and coasters of all types of 10,000 gross tons and under at 13,000,000 gross or 19,000,000 dead-weight tons at the end of 1945. This would compare with a fleet of 15,500,000 gross tons, or 25,500,000 dead-weight tons before the war.

In computing these figures, the output of British merchant shipyards, which produced 1,158,000 gross tons in 1941, 1,302,000 in 1942, and 1,204,000 for 1943, has been calculated at 1,000,000 tons for 1944 and 1,000,000 for 1945. Actually, it is expected output may be higher because repair yards, which absorbed one-half the manpower available for merchant ship work through 1943, is expected to fall off sharply with the collapse of Germany.

Must Keep America Off the Road to Socialism

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. HARE. Mr. Speaker, with the permission of the House, I desire to include in the extension of my remarks in the RECORD an editorial appearing in the Greenville News, Greenville, S. C., April 8, 1945, as follows:

MUST KEEP AMERICA OFF THE ROAD TO SOCIALISM

It is a wholesome sign for this country's future, we think, that Congress has recently been showing evidences of apprehension that efforts may be made to maintain many of our wartime controls and restrictions after war needs have passed, with a view to keeping the Nation's economy under the constant and expanding control and direction of the Government in the postwar period.

It is being more and more widely realized both in Congress and among the general citizenship that one of the first jobs this Nation will face when the war recedes will be that of freeing it from all measures of governmental control and regimentation whose only justification is the existence of conditions of war.

But there are those of socialistic tendencies who see in the present war-emergency policies of complete Government domination of the Nation's economic life a most favorable setting for carrying on and expanding further a program of complete Government direction, planning, and management of the Nation's economic activities. Getting rid of these controls which only war justifies may, therefore, not be the easy task that it might seem, for we are doubtless going to hear many arguments, and seemingly plausible ones, too, of the necessity for maintaining various controls to meet other emergencies.

One of the greatest dangers that will face this country in the fairly near future, as many thoughtful citizens see it, is that we shall be carried into actual socialism through this process of steadily expanding the directive and managerial powers of Government over business enterprise generally, leading to a replacement of private initiative and business management by what will in effect amount to actual Government operation, which is essentially socialism.

It can be conclusively shown, we think, that socialism is incompatible with real individual freedom, and that in a socialist state the citizen is virtually a political slave, since his very means of existence are constantly under the direct and complete control of a governmental authority. Socialism, in short, brings a completely dictatorial government through its virtually absolute powers over the economic resources and activities of the citizens.

Socialism and communism are alike in their basic political philosophy and effects. The difference lies chiefly in the means of gaining their political objectives. While communism believes in gaining control by any means necessary, including force and revolution, Socialists profess to seek these changes through democratic processes, and many Socialists, we dare say, are sincere in their belief—mistaken as we are convinced it is—that a socialist state can continue to be a democratic state. But socialism is the doctrine of Karl Marx, and would have the state own and operate the Nation's economic activities, and that is exactly communism's program.

And because of this difference in political methods, socialism is a greater danger to America than communism. For we may be persuaded, if we are not constantly alert, to approve step by step, on the plea of meeting some special conditions, measures of steadily broadening governmental control which in the aggregate will eventually transfer to governmental bureaucracy the actual responsibility and management in the conduct of business and industry generally.

As we approach the end of the war emergency, we shall need increasing vigilance to prevent the carrying over into the peace period of extraordinary measures of governmental control which would be injurious to private enterprise in a free economy and which would serve to advance the ultimate aims and objectives of socialists. This may prove to be our most crucial attle in postwar America—to curb the designs of those who believe that utopia can be established by placing the managerial powers over all economic activity in the hands of the Government.

Our Responsibility for Veterans

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. LEFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Tribune:

OUR RESPONSIBILITY FOR VETERANS

No more important postwar task confronts the Nation than that of restoring the men discharged from the armed forces to civilian life speedily, satisfactorily, and with a minimum of fuss. Our responsibility is to see that the veteran gets a fair deal, that the sacrifice he has been required to make be compensated, insofar as possible, by opportunity to finish his schooling or get on with his business or work. It is the intention of every decent American, of his representatives in Congress and in legislatures, of elected officials and civil servants, that this responsibility be acquitted well. Yet there is evidence in the experience of the first men discharged that we have, in spite of the multiplicity of good intentions, got off to a poor start.

In a current series of articles in this newspaper on veterans' problems, Peter Kihss says that disillusionment has come to many of the 1,500,000 already discharged. It has come because what is virtually a competition among Federal, State, and local government agencies and private organizations has resulted in confusion. It has come because the widely advertised G. I. bill of rights seemed to promise so much. It has come because the slow-functioning and hyper-cautious Veterans' Administration is swamped by a 300-percent rise in work load accompanied by only a 14-percent rise in personnel. Red tape in Washington occasions endless frustration; veterans wait weeks for answers to applications; the loan program hits snags in the law's wording, runs afoul of priorities and regulations of war agencies.

So many Federal agencies are involved that the usual Washington remedy has been applied—a super-coordinating board. It is called the Retraining and Reemployment Administration, is charged with general supervision of the activities of all agencies except the Veterans' Administration engaged in retraining, vocational education, and rehabilitation, etc. It is also "to confer with existing State and local agencies" for purposes of coordination. The head of this coordinating superstructure is Brig. Gen. Frank T. Hines, Veterans' Administration Chief.

The Veterans' Administration, superimposing new tasks on old looms, as Charles G. Bolte, chairman of the American Veterans' Committee, has said, "as the post-war colossus of Government agencies." Yet this very Bureau is the target of complaints indicating that especially in the field of hospital and medical care it was not as competent as it should have been before all these new and expanded functions devolved upon it. (Mr. Kihss will have more to say, as shall we, on veterans' hospitals and medical care.) The complaints have been aired in Congress by Representative PHILIP J. PHILBIN and others. Mr. PHILBIN urges "a thorough investigation of the entire rehabilitation program from top to bottom." That may be, alas, what is required if intelligent reorganization of veterans' facilities is to precede the advent of 12,000,000 more veterans to a society which is not doing well by 1,500,000.

The United Nations' Conference on International Organization

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. SPRINGER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include therein a very carefully prepared article by Soterios Nicholson, an attorney of Washington, D. C., author of War or a United World, on the subject of the United Nations' Conference on International Organization, which article follows:

The avowed purpose of the impending conference of the United Nations in San Francisco is to organize themselves in such a manner and cooperate in such a spirit as to prevent the recurrence of war once peace is secured.

Anthony Eden, the Minister for Foreign Affairs of England and head of the British delegation, who has intimate knowledge of the serious problems which will arise in the conference, thought it expedient to make two pertinent remarks:

First, that this may be "the world's last chance to create an effective peace organization combining responsibility with force."

And second, that "there should be no bullying of the small nations by the big powers."

These fundamental observations were prompted by the fear of failure and the duty of warning. The ominous phrase "the world's last chance" is logically untenable, yet its very irrationality makes it dramatic. Any intelligent person understands why the San Francisco Conference cannot be the last chance of the world to create peace. Since there is hope as long as there is life, the human race will have many opportunities to realize its dream of peace. There is more than one chance for anything in eternity.

As to the bullying of the small nations by the big, the secret Crimean agreement in regard to multiple votes for Russia and the United States was an ugly gesture, a faux pas which may wreck the conference before it convenes, no matter how cleverly this political crow will be dressed and served to the public by the cooks of international triplomacy.

The coming conference, being the second great attempt in our times by the civilized nations to attain peace, offers a brighter hope to humanity. Those responsible for its success will be able to avoid the mistakes of their predecessors, if they be willing to profit from experience.

In our opinion, the most pernicious pitfall in the path of the present pioneers is the faith of many internationalists that Europe should be organized on the pattern of the United States of America. In fact, there are some even more sanguine idealists who think the time ripe for a United States of the world under a central government on Jeffersonian lines of democracy. We trust that such utopian notions will not be coddled too much by the balmy breezes of the bay region and the rosy dawns on the Pacific shores. They are the mellifluous songs of the sirens leading to the oblivion of reality and to destruction.

We hold this to be an obvious truth: Today every nation of the world in general and of Europe in particular is more than ever before intent on keeping and perpetuating its separateness and distinctness from every other nation, irrespective of racial relationship or geographic contiguity.

Nationality is a persistent force which it is practically impossible to suppress. Externally, nationality is founded upon geographic conditions. Peoples are divided into national groups, owing to the difference in the configuration of the earth and in the climate of the various localities in which they live, these differences breeding concomitant divergence in the features, temperaments, customs, and languages of these communities. Now, these characteristics of the physical-geographic situation cannot be appreciably modified, and consequently, inas much as the surface of the earth will continue to present different physical features in different localities, the differences of nationality are bound to persevere.

Internally, nationality persists because it is sustained by a powerful instinct—the sentiment of nationality. The force of this instinct is so great that it induces man to suffer sacrifice, even that of life itself, which almost no other situation can persuade him to undergo.

Thus, nationality appears to be a fairly permanent possession of the human race, a factor to be taken into account and used to advantage, and not to be looked down upon as evil or dispensable. It is an aspect of the basic law of self-preservation, and the problem is what use we shall make of it to serve the highest interests of humanity. The proposed scheme of international organization supplies the answer. Organize the states in which the souls of the nations incarnate themselves into a coherent system, and you will integrate humanity into a cooperative society working efficiently for peace. Wars arise mostly from a conflict of interests, but in the establishment of our scheme the interests of the various nationalities will be mutually adjusted, and this cause of war will cease to exist.

The universal confederationists may object that the sentiment of nationality substitutes smaller loyalties for the spirit of loyalty to humanity and patriotism to one country for patriotism to the whole world. But it must be remembered that feeling, if expended on too broad and heterogeneous a surface, thins out and loses its power. The average man can feel strongly for humanity as such, only if he concentrates his interest upon a particular and limited section of it, namely the one closest to himself. Otherwise, if he is required to feel in equal intensity for all humanity, he will fail to keep his object definitely in view and his loyalty will degenerate into a sickly sentimentality with no outcome of active service. We insist that loyalty to one's own country, instead of serving as a substitute for love of humanity, is really its concrete and particularized embodiment—charity begins at home.

Finally, to those who call for a general deletion of all lines of national cleavage, because they think that nationality erects walls of separation among the members of our race, and they desire humanity to be one, we reply that distinction according to nationality supplies precisely that element of diversity of equipment which economists find to lie at the root of the mechanism of the division of labor, so indispensable to the successful prosecution of the business of life itself. Each nation possesses something unique, which being contributed by it to the common stock, supplies a virtue enriching humanity, and which, being adjusted into the fabric of the contributions of the other nations, makes humanity a single complex organism—single, because characterized by identity of ends; complex because diversified by the varied nature of its functioning parts. In the sacred mosaic picture of humanity, each nation represents an individual precious stone of different size and color. Nationality is a permanent and useful factor

of life and progress. Its justification carries with it the justification of the institution of the state, and consequently, the scheme of international organization of states as such is left intact and unshaken by any assaults from unfriendly quarters. The state unit must be conserved and the new league should be built on the basis of nationality.

We shall now proceed to consider how the proposed international organization will serve to prevent the occurrence of wars, and how, if wars arise, it will deal with them. The international organization will embody the ideal of cooperation as against the rule of mutual conflict, but an ideal is not identical with an attainment. There will always be a falling short of the ideal, to a varying extent. Organization will be the purpose, and recognition of the rights of other states will be the normal attitude, but the condition of war will not be excluded as a possibility or as a fact. Nevertheless, the occurrence of war will be within the bounds of expectation only as an exception, a violation of the accepted custom and the prescribed law. Hence, the establishment of international organization, although not implying the absolute cessation of war, will mean making of it an abnormal condition, from the legal as well as from the purely natural point of view, to be dealt with as it arises. What, then, will be the attitude of the international organization toward the problem of war? How will it aim to prevent its occurrence?

(a) According to the plan tentatively agreed upon at the Dumbarton Oaks Conference, the machinery of the international organization will be objectified through its General Assembly, its World Court, and its Security Council, corresponding respectively to the legislative, judicial, and executive branches of our Federal Government, the members of the organization corresponding to the individual States of the United States of America.

War, to a large extent, arises as a protest against injustice, but the organization, because of its transcendence of strictly national bonds, will be enabled to treat all states impartially and fairly.

If the salutary suggestions of Senator VANDENBERG be accepted at the San Francisco Conference, the General Assembly will be enabled to discuss all matters submitted to it by any of its members, and as far as possible it will endeavor to satisfy the legitimate demands of each state, preventing exploitation of one state by another.

(b) The General Assembly should be entitled to create, in the spirit of justice, a comprehensive system of law, relating to the mutual adjustment of the rights of all states and bearing in general on all international affairs, so as actually to meet any difficulty between states, or even to anticipate any dangerous situation which might arise, indicating methods for their solution. We consider this function of the General Assembly as fundamental and of the utmost importance.

(c) A fruitful cause of wars and desire for wars at the present is admittedly the fact that each state is armed to its very teeth with appropriate tools of defense and offense, so that, the instrument being ready and fit, the disposition to put it to use is fanned and intensified. The tool runs away, so to speak, with the hand that holds it, and the state becomes hypnotized by the magnitude and splendor of its armaments to provoke war. Moreover, given that one state is more strongly armed than another, the former will always be tempted to attack the latter. In the international organization no individual state should be allowed to equip itself with an army, a navy, or military aircraft. Of course, each state will possess its own police force to maintain peace and order within its jurisdiction, but no armed force whose field of operation must necessarily lie within the borders of another state. Obviously, such an operation is an interstate affair—a matter to be controlled and regulated by the organization.

In acknowledgment of the same principle, under the present system of government in any civilized nation, individuals within a state are forbidden to carry arms on their persons, as instruments of offense or defense, and it is expected from the state to deal with the situation in the adjustment of their mutual obligations and prerogatives. Similarly, when the parties concerned are states, offense and defense are affairs exceeding their authority. The right and the means to deal with the situation must be taken out of the hands of the latter and be vested into those of the organization.

(d) The creation of law does not, as such, insure its own enforcement. No matter how many possible pretexts for engaging in warfare are eliminated, the states will in all probability be apt, sometimes, to trample on each other's rights and create situations where rigorous action by the organization will be necessary. We must, therefore, consider punitive measures for the prevention of war, which will aim specifically both to prevent the occurrence of war at all and to bring war to a stop when it has started. To this purpose the court of the organization will judge between all states in litigation. When an actual offense has been committed against the international law, the court will cause punishment to be administered to the offender through the security council.

The instruments of punishment will be twofold—economic pressure and the use of military power. The former will consist in the maintenance of a commercial boycott against the offending state, enforced, if necessary, by the establishment of a blockade by land, sea, and air, by the prohibition of any credit to that state, and generally by severance of all business ties and transactions with it.

The use of military power will be effected, whenever occasion arises, by the sending of a sufficient portion of the organization's army, navy, air armadas, or any combination of them, to the precincts of the offending state, threatening to compel it by force to comply with law. If the state refuses to yield, its territory will be invaded and all necessary measures taken to effect the cessation of hostilities, until the state agrees to subject itself to the decisions of the court.

In the San Francisco Conference, if the United States, England, France, Russia, and China will be concerned more with their selfish interests than with justice for all the United Nations, they will expose themselves before the world as politically deaf and morally blind. The United Nations are clamoring for liberty, equality, fraternity; they are crying for justice in the name of humanity and God. The success of the conference depends entirely on the great powers, on their faith in democracy and their vision. As history will credit them with its success, so she will hold them responsible for its failure.

But we must not despair if they fail again, if they insult again the aspirations of the ages, if they mock again the passions of crucified humanity, the death and misery of millions of forgotten men and women. We must remember that since the days of the amphictyonic councils in ancient Greece and the league of the Iroquois Indians in the New World, the steadfast resolve of man is to attain peace. He will do it, be it sooner, or be it later, but "if eventually, why not now?"

The two great dangers ahead of the conference, like Scylla and Charybdis, are the fears of the extreme rightists and the desires of the extreme leftists. The modern Ulysseses of the United Nations, traveling to the blessed home of peace "over shadowy mountains and deep-sounding seas," should be careful to steer the good ship to safety by keeping as close as possible in the middle of the swirling waters.

To those who, seized by hysterical confusion, blunder as to the issues; and to those who, anxious to get rid of war in a mad hurry, act as if it were a bubble to be blown out with a mere whiff, we address the warning of the ancients, "Make haste slowly." We remind them that quick remedies are usually quack remedies.

If we are patient, we shall see happier days. He who expects at once to achieve the maximum, the ideally good, will be disappointed. As Senator VANDENBERG puts it, "We must avoid attempted miracles." But he who, shutting his eyes to schemes of Utopian perfection, aims only at the better and from that moves on to the still better; who is not discouraged by failure but makes of obstacles stepping stones for further progress in a path of which he does not see the end, a practical idealist, one who believes in evolution, will surely get his due reward.

Purchase of Army Surplus Material by Farmers

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WONEWOC, WIS., *March 26, 1945.*

Hon. WILLIAM H. STEVENSON,
Third Congressional District,
Washington, D. C.

DEAR CONGRESSMAN: I wish to call your attention to some of the things going on right here near your home in our great State of Wisconsin. There is any amount of material up at McCoy on the camp grounds that farmers can put to good use in getting in their crops. We are very short of help with all our boys overseas and many of them coming home all broken up. We need materials of all kind to run those farms so we can get the things the boys need and everybody else needs. There is an abundance of this material in question at McCoy. It is for sale, but the personnel at this point won't let us buy what we need for the farm. It must be obtained under sealed bids, etc. We need this material now—we want it now if it is going to do us any good in getting in the crops and working the crops. If you put in a bid for anything you have to bid in the whole of any item. For instance, if you want a jeep you must bid on all the jeeps. No one individual can do that. Only big corporations can do that.

As my Congressman and as all my sons are overseas, I ask you to send me a permit so that I can go in to McCoy and get the necessary material I need that is listed for sale on the list. There is plenty of it there. I know you can do this, and do it by return mail. I am an American; I want to be treated as an American. Big shots, if you don't act, will grab onto everything. Act now and don't leave us holding the empty sack. That will save me the time writing my sons overseas on the matter where I am sure of action. Excuses are not going to work this time. We want this material which is no good for anyone only farmers who are producing and feeding the world. I was going to take this up with our farm organization, but I know you can do this with the scratch of your pen.

Kindest and warmest greetings and sincerely yours for cooperation,

ROBERT M. RING, Sr.

Post-war American Merchant Marine

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. WELCH. Mr. Speaker, Fleet Admiral Ernest J. King, commander in chief of the United States Fleet, speaking before the Carnegie Peace Foundation conference on post-war problems, said:

This time we shall win the victory, despite our past mistakes. But the next time the penalty of forgetting may be the loss of America and of liberty.

In his address before the Academy of Political Science on April 4, 1945, Admiral King also said:

Recalling the shipping difficulties encountered in this war, and contemplating the armada of bottoms and the expense of shipyards we have built, we now face a vital question. How much shipping should be retained in fairness to ourselves? Shall we again risk the impact of total war without adequate shipping to deliver the tremendous quantity of materials needed by our forces and those of our allies? Shall we again permit our goods to be carried in foreign bottoms to the detriment of our own shipping needs in time of emergency? In the light of our foreign trade and our naval needs what should we do? This will be one of the knottiest post-war problems—a problem in which the Navy is vitally interested.

Certainly the answers to Admiral King's questions are not to be found in H. R. 1425, now pending before the Committee on Merchant Marine and Fisheries. This bill provides for the disposition of 57,000,000 tons of ships constructed with some seventeen billion dollars of American taxpayers' money. Under the terms of the bill as introduced, rather than encouraging American shipping companies to operate an adequate merchant marine, it discourages them. As written it provides for the sale of these ships to foreign ship operators at lower prices or under more favorable terms than to American ship operators. In this respect it abrogates the permanent policy established under the Merchant Marine Act of 1936 providing for an adequate merchant marine as an arm of our national defense.

Admiral King apparently recognized this when he further said in his address before the Academy of Political Science:

In pointing to the mistakes of our enemies, we must also examine our own shortcomings. An inadequate merchant marine was one of our pre-war weaknesses. After the last war we dissipated our store of merchant shipping. We compounded the error by not maintaining our shipbuilding capacity. Consequently, at the outbreak of this war, we found it necessary to construct swiftly what has come to be a stupendous tonnage of cargo ships. But so great was the demand and so heavy our shipping losses in the early days of the conflict that new construction could not keep pace with our needs.

For many anxious months, it was a nip-and-tuck affair trying to fulfill the shipping needs and at the same time attempting to meet the requirements for offensive and protective operations both in the Atlantic and Pacific.

If another war comes upon us it will come as a bolt out of the heavens. Technological advances in weapons of modern warfare have been such that there will be no time to again build a merchant marine to meet the needs of national defense.

We have that merchant marine now. We must maintain it. We must encourage its private operation in post-war commerce. We must increase the proportion of American-made goods shipped abroad in American bottoms. We must increase the flow of our international commerce. We must overthrow the policy of the Civil Aeronautics Board in preventing American shipping lines from operating overseas air lines, a policy which is in direct contravention to the policy expressed by Congress in the Merchant Marine Act of 1936 to encourage the development of an adequate merchant marine. We must take whatever legislative steps are necessary to insure the equality of competition of American shipping companies with foreign shipping companies. Other maritime nations are following the realistic policies necessary to develop their merchant marines. We must do likewise.

United States Gold Pile Is Dwindling While Our Allies Fatten Theirs

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. REED of New York. Mr. Speaker, in view of the large gold reserves of the leading countries of the world, why should this Nation now deplete its own gold reserve at a time when our national debt is rapidly approaching $300,000,000,000? Those who have purchased Government bonds have felt that our gold reserve would maintain the par value of Government securities, even if other resources should fail to sustain them.

Under leave to extend, I shall include as part of my remarks an article by Walter Trohan which appears in the Washington Times-Herald, April 12, 1945:

UNITED STATES GOLD PILE IS DWINDLING WHILE OUR ALLIES FATTEN THEIRS—RESERVES FALL TWO AND ONE-HALF BILLION IN 3 YEARS; FRANCE AND ENGLAND ARE DOING WELL

(By Walter Trohan)

Gold stocks of the United States are dwindling while reserves of the monetary metal of Allied Nations are mounting as the United States is dealing out billions in lend-lease aid, and is being asked for further billions to underwrite the industrial and economic rehabilitation of the world.

In 1 year the gold stocks of the United States, largely in the repository at Fort Knox, Ky., have dropped $1,122,185,262.

WE DECLINE—OTHERS GAIN

In the last 3 years the gold reserves of the United States have dropped by almost two and one-half billion dollars while those for the rest of the world have increased by roughly $3,000,000,000.

As of April 5, 1945, American gold reserves were $20,417,497,099. A year ago the same date they stood at $21,539,682,361.

Over one billion of the $3,000,000,000 of increased gold reserves in the rest of the world went to South American nations. Neutrals, namely, Switzerland, Sweden, Spain, and until recently Turkey, showed heavy increases in gold reserves. However, Allied Nations generally have shown increases while the reserves of the United States dropped.

The increase in outside gold cannot be laid to gold production, according to experts, because most of the gold produced during the last 3 years has accrued to unrecorded reserves, particularly in Russia, and there has been a general decline of gold production as nations concentrated on the production of war goods.

AFRICAN PRODUCTION OFF

Production in South Africa, which accounted before the war for one-third of the world output, including Russian production, dropped from $504,000,000 in 1941 to $448,000,000 in 1943. Canadian production dropped from one hundred and eighty-seven to one hundred and twenty-eight millions, and that of the United States from one hundred and sixty-six to forty-eight millions. Output in Austria was cut in half from fifty-two to twenty-six millions and in the Gold Coast from thirty-one to twenty millions. Nothing is known about Russian production.

Under lend-lease the United States has given $45,000,000,000 worth of assistance to Allies and has approximately $25,000,000,000 worth of additional allotments under way. It has been conservatively estimated that Allied Nations are seeking $40,000,000,000 in gifts or easy loans for post-war rehabilitation.

The nations seeking to share in American spending are getting mounting gold reserves out of United States outlays. Britain and France are replenishing gold stocks under New Deal financing, which pays American soldiers serving abroad in the currency of the country in which they are stationed.

BRITAIN IS DOING WELL

The United States has been a heavy buyer of British currency for several years. The dollar balance obtained under this purchasing has been used by Britain to buy gold from the United States Treasury and not to make any repayments on lend-lease.

This financial program has placed the United States in the peculiar position of paying gold to Britain at a time when the American Treasury has a large credit balance with the British. In normal procedure, British gold should be flowing to the United States.

Various units of the British Empire are benefiting under this program. Troops stationed in India get their pay in rupees, those in Australia in Australian pounds, those in Canada in Canadian dollars, and the like.

FRANCE IN A GOOD SPOT

France is benefiting even more heavily than Britain. American soldiers in France are paid at the rate of 50 francs to a dollar at a time when the American dollars on the unofficial market will buy 200 francs. This means the United States is making the French Government a gift of 150 francs every time it pays 50 francs to the millions of American soldiers stationed in that country.

The Netherlands has the major portion of its half-billion-dollar gold reserve frozen in this country. France has a gold reserve of $2,000,000,000. Some $285,000,000 of French gold has been stored in gold coin in Fort Desaix's casements at Martinique, French island in the Caribbean Sea.

Latin-American countries and neutrals have made substantial purchases of gold, along with Allied nations. Little of this gold has actually left this country, but is

earmarked for the account of new owners. Some gold was taken to China, but this was withdrawn from Chinese gold reserves in this country. Most belligerents have such reserves here.

Gold itself has not been lend-leased. Profits of lend-lease have been used to purchase gold in the United States. More than $100,000,000 in silver has been lend-leased to several countries for the making of silver coins.

Weekly Report to the People of My District

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WNBF on April 7, 1945:

Dear friends of the Triple Cities and my congressional district, tonight marks my return to WNBF after several months' absence. It is therefore most gratifying to enjoy the privilege once more of talking to you in my home section.

These broadcasts, sponsored by the patriotic women of the Hall Furlough Clubs will come to you each Saturday at this same time.

As your Congressman, I am well into my fourth term and busier than ever before. I receive 50 letters from home each day. They contain all sorts of requests. Most frequent, however, and most welcome are the messages from you wives, mothers, sisters and relatives of our heroic men in service.

To my audience this evening, I would like to say, if you have any problem that I can help you with in Washington or back home, please don't fail to write me. Remember, I have the very best contacts in our Nation's Capital, especially with the War and Navy Departments. Remember, the heads of those departments and every other division of our Government are told to give first attention to calls on them which come from your Congressman in the interest of his home folks.

In spite of the extension of Veterans' Administration Offices into my district, I find many people are turning to me for help and information about veterans' affairs. To those veterans or veterans' relatives who write me about any problems which they are facing, I will say, write me, your letters are welcome and I am equipped not only to handle the veteran's request but also in many instances, to grant that request.

The same goes for the service man or woman. To them and their families, I say, write me because I know what you're up against and I am in a position to help you.

Under our system of government, those in Washington and in other places who have Government jobs are expected to put the people's desires above everything else. That is constitutional government in which the will of the people is supreme.

Unfortunately, today, there is the belief among a few individuals in United States bureaus and agencies that the people's will can and should be superseded by the personal whims of the men in power.

As the Congressman from the Thirty-seventh New York District, it has been my steadfast determination since I have been in Washington to challenge that theory of government. We Americans have enjoyed the blessings of a century and a half of freedom. We are fighting and winning the greatest war for freedom ever waged.

While our mighty armies are struggling on fronts as far apart as the poles themselves, we in Congress and you folks at home owe a serious responsibility to the heroes of those armies and Navy. We must keep the faith here in America. We must preserve the freedom they are dying for.

From now on, whenever you hear me on this weekly program, you will know that my voice is raised in defense of our fundamental American rights and our constitutional privileges. I urge you to meet with me regularly each Saturday evening at this hour and we will explore together the ways of keeping the United States free to men and women of every race, creed, and color.

During the past 6 years while I have had the great honor of representing you folks in the Congress of the United States, I have visited the Supreme Court Building many times. On the front of this magnificent structure of priceless alabaster, there are chiseled four words destined to live through the ages. They read, "Equal Justice Under Law." You and I must never allow any other condition to exist in America. To all our people, our beloved flag, our Constitution, our country must continue to mean perfect equality and justice and the symbol of liberty and hope so long as life on earth shall endure.

Calvary

EXTENSION OF REMARKS
OF
HON. FRANK L. SUNDSTROM
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. SUNDSTROM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a poem written by Lt. Mitchell T. Ancker, Chaplain Corps, United States Naval Reserve, for years pastor of Central Brick Presbyterian Church, East Orange, N. J., who has been in the Pacific for about a year rendering a splendid service as a chaplain. The poem, Calvary, is dedicated to Chaplain John W. Moore, who is on the staff of the commander in chief, Pacific and Pacific Ocean areas.

CALVARY

Three crosses stood on Calvary,
Dark Calvary, where Jesus died
Upon the tall, hard, central one,
Nailed, bruised, and crucified.
I came upon the awful scene
And stopped inquiring to assay—
When held by some mysterious hand
I listened helpless to one say,
"Choose you the cross that will be yours
At either side of His that stands
Between thy Paradise and Hell."
I stood as held by iron bands,
Froze by fright at the single thought
That I must choose my destiny;
How was it then that I had learned?
"Salvation is of God alone";
Sweet freedom that such mastery
Of holy thought and tenet bring!
In marked disdain I could not help,
I turned to leave the frightening scene,
When once again the voice I heard,
Awful, deep, and rapier keen,
"Choose you the cross that will be yours
At either side of His that stands
Between thy Paradise and Hell."
I stood as held by iron bands,
Froze by fright at the single thought,
How I must choose my destiny.
For now my mind became convinced
That I must choose one cross to bear;
It was not at the pain I winced,
For now upon my mind it dawned
That freedom lay within the choice,
Now I could drink at freedom's spring,
Quaff the fresh waters and rejoice;
What mattered pain of cord and cross
With freedom mine to bless me twice,
When once again that freighted voice
Spoke in authoritative tone,
"Freedom's to Hell as well as Paradise!"
I stood fast-rooted to the ground,
And once again all pleasure left,
Cringed at the thought that I must choose
Between the crosses no men knew;
I felt of wisdom all bereft,
But moved in some bewildered faith
To cry for mercy at the feet
Of Him who hung upon the tree;
I only heard the voice repeat,
"Choose you the cross that must be yours
At either side of His that stands
Between thy Paradise and Hell."
"Then choose I will to break the bands!"
I spoke impassioned from my soul,
"I'll chance another hell than this
I know in bondage of my will,"
That to the right of Him who hung
There in the center limp and still,
I took without a doubting thought
That cross, and felt the tight'ning thongs
Impress me to the rough hewn wood.
At once I knew an ecstasy
That painful to the free belongs;
But wanted something more than this,
That martyrs feel in any cause,
Good and bad, or true or false;
I longed for Paradise and Heaven;
The sense that by God's righteous laws
I'd chosen right not merely brave
The cross I bore because I must.
In longing now I turned my eyes
To Him who said, "He came to save
And not condemn the world of men."
And as I gazed he looked at me
With countenance of mingled mein,
A look of hurt and pain and love
Came from his eyes that seemed to see
My very soul—and all the sin
That lurked in darkness in my breast;
It hurt and burned, like heated darts
Stabbed into pained wounded flesh;
There rose to height as to a crest
A flame of searing, hot remorse
That forced a cry of anguish, loud,
"Forgive me God, that I have brought
This shame and suffering to my Lord."
I looked, but not in manner proud
Or 'quisitive as once I did—
With eyes of shame, and furtively,
I now glanced at my dying Lord,
And lo, the heavens opened wide,
No pain, no cross, no thongs I felt,
As on His face, through bitter tears,
I saw a smile, and kindly look
In which there was no hurt or pain,
And ere he spoke the blessed words
That for all sinful men suffice,
I felt I was in Paradise.

Lieutenant, Chaplain Corps, U. S. N. R.
Dedicated to Chaplain John W. Moore.

Servicemen's Prayer

EXTENSION OF REMARKS
OF
HON. SAMUEL DICKSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

SERVICEMEN'S PRAYER FOR THOSE IN THE UNITED STATES ARMED FORCES

(By L. Monfried)

O gracious God, Lord of the universe, Father of all mankind! To Thee I open my heart in this solitary moment, when my mind is isolated from earthly thoughts and is devoted only to Thee, my Heavenly Father. Before I pray to Thee, I plead for Thy merciful goodness to forgive any sins I may have committed against my God and fellow men, so that I may come before Thee without shame and remorse.

And now, Almighty God, I beseech Thy blessing of strength and well-being for our Commander in Chief, our noble President, and all those in the service of our Government. Grant, O Lord, boundless might and courage to all those bravely engaged in protecting our country and defending our flag at all times. May we succeed in defeating our enemies whenever they threaten the sanctity of our democracy, so that the sacred blessings of justice, equality, and freedom may continue to prevail.

As for Thy humble servant, I beg of Thee, O gracious God, to bestow upon me the courageous strength and wisdom to serve my country with heart and soul, ready to sacrifice my life for the high ideals symbolized by our glorious flag. May Thy great Spirit guard my tongue and lips against uttering, and my hand against writing, anything that may give information to our foes. May the sacred spirit of our heroes, who gave their lives for our country, guide me along with my comrades of the forces of land, sea, and air toward total victory and triumph over all aggressors and enemies of democracy, and may peace, security, and happiness be with us and with all mankind forevermore. Amen.

Seventh War Bond Loan Drive—Letter From Joe McGuire, Somewhere in the Pacific

EXTENSION OF REMARKS

OF

HON. JOHN H. TOLAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. TOLAN. Mr. Speaker, as part of my remarks, I wish to include an appealing and powerful letter from Joe McGuire, whose family I have known for many years in Oakland, Calif. On the eve of the Seventh War Bond Loan drive Joe's letter is timely, beautifully written, and so true. It should appeal to all of us, safe at home, coming from a 23-year-old boy, who has seen years of active service fighting for his country.

I am proud to have the honor of inserting this wonderful and patriotic letter in the CONGRESSIONAL RECORD and we should take his soul-stirring words to heart. We should show Joe and his fighting buddies that we believe every word he writes by making the seventh War bond drive a thrilling success. This will be, and must be, our answer to Joe and our brave boys who are giving their all on the fighting fronts.

Joe's letter follows:

SOMEWHERE IN THE PACIFIC,
Thursday, March 15, 1945.

DEAR DAD: We have just heard of the coming War bond drive sometime during the month of April. I believe that it will be the last one for all time but only if you and every loyal American citizen does his utmost to try and buy a $100 bond. By doing this you will furnish us with food, clothing, fighting equipment, and ammunition, and that is all that we ask of you back home.

I am sure that if the folks at home could look into a hospital out here and see the fellows who have returned from what they call their job and duty in such a condition that they will never again be able to see or walk and of the thousands of others that gave up their lives so that you at home would never have to see these things happening in our beloved America.

If they could see their boys attacking a hill knowing that death was waiting for them somewhere along the way, but never once with the idea of stopping or turning back because they believe that what they are fighting and dying for is right and that it is the only way to keep American what it is and always will be—the home of the free.

I wonder if the folks at home realize what losing this war really means. It does not mean that the war is over and we have lost. It means that from now until the end of time ourselves and our sons and daughters will be under the rule of such things as Hitler and Tojo.

When you back home buy a bond you are investing and saving, saving not money alone but the lives of thousands of men which God forbid may include your son. A lot of us have spent 3 or more years overseas and we want to return home and be once more a free American, living in a free America. The only way that this is possible is for you back home to invest everything you have in War bonds.

We do not have an 8-hour day or any overtime and we are not asking for any. All we ask is for your help. There are millions of men overseas that are here not because they were made to come out but because they believed that there was a job to be done. You can thank Almighty God for men like these because without them there would be death and blood in the streets of America.

The news at home sounds very good and there are no doubt many of you that feel that the war is as good as over. If, however, you saw your buddy shot dead at your side you would realize that it is not over and will not be over until the enemy has been defeated everywhere. The quickest and surest way to bring this about is for you at home to buy all the bonds that it is humanly possible for you to.

Don't buy a bond for us alone but buy one for your own protection and to insure a safe and free home for your children.

Your loving son,

JOE.

P. S.—Please buy more bonds.

Address at Testimonial Meeting to Hon. Sol Bloom

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include herein a speech delivered by me at the testimonial meeting to Hon. SOL BLOOM, chairman, Committee on Foreign Affairs, House of Representatives, delegate to San Francisco Conference, on Friday, April 6, 1945, at Riverside Plaza, New York City:

Mr. Chairman, members and friends of the American Labor Party, New York is proud to have one of its distinguished citizens representing the United States of America as a delegate to the San Francisco Conference. Hon. SOL BLOOM, a Member of the House of Representatives, from New York, has served his district with honor and distinction for the past 24 years. As chairman of the Committee on Foreign Affairs in the House of Representatives he has been a leader in carrying out the legislative program of President Roosevelt's foreign policy. His devotion to this task will be long remembered in the legislative halls of the Nation and throughout the country. As chairman of the New York County American Labor Party I am happy that we have the distinction to accord this testimonial meeting to Congressman BLOOM. We know that at the San Francisco Conference his experience, his ability, and his generalship will contribute greatly toward the establishment of an organization to secure democratic and permanent peace for the people of the world.

I particularly want to extend to him my personal thanks for having accorded a hearing on my House Joint Resolution 99 which calles for the recognition of Italy as an ally. This hearing will take place on next Wednesday before the committee of which he is chairman. I now avail myself of this opportunity to present Italy's cause to the members of my party and their friends. I plead Italy's cause as her cause is inexorably part of the program for speedy victory, for a democratic and lasting peace, and for post-war domestic and international stability.

Nineteen hundred and forty-five is the year of decision, undoubtedly the most tremendous military decision in the world will be made in Europe soon. That military decision will signalize the extirpation of fascism not only in Europe but everywhere in the world and will strengthen the fight in these United States to destroy the forces of domestic fascism. February 1945 marked the announcement of the most far-reaching political decision in the history of mankind. The decisions at the Crimea Conference constitute implementation on a world-wide basis of the Declaration of Independence, the Bill of Rights, and the Atlantic Charter. Lasting and democratic peace are dependent entirely upon the grand coalition cemented at Crimea and to be further reinforced at San Francisco.

The immediate success of this war is dependent upon the success of this grand coalition composed of Great Britain, the Soviet Union, and the United States. Only the other day we saw living proof of this when the Soviet Union delivered a hammer blow against Japan in announcing the abrogation of the neutrality pact. I do not want to see that coalition impaired under any circumstances. It is in the interest of the world of today and tomorrow that all questions be subordinated to the problem of the preservation and strengthening of this coalition. In making my plea for Italy I do so in the hope that her problem will be solved within the structure of the coalition. In making my pleas for Italy I do so with the full realization that Italy's cause, the cause of all nations, can be saved only as a result of the success of the coalition, as a result of the success of its decisions, and as a result of the further strengthening of the coalition. The chances for a democratic Italy, a democratic Greece, a democratic world are dependent entirely on the success of the coalition of these three great nations and the fruition of the decisions made at Yalta by the leaders of these great nations. If San Francisco fails, if the coalition is disrupted, Italy's cause, the cause of all other nations, the cause of the world will fail. Therefore, I again say that in-

pleading Italy's cause I do so not in contradiction of the great decision at Yalta but with the full understanding that the cause of a democratic Italy is an integral part of the living flesh and blood of the Teheran agreements, of the agreements of Yalta, of Dumbarton Oaks, and of the great meeting which will take place at San Francisco. For this reason alone Italy cannot be left out of the meeting at San Francisco.

Fascism was imposed on the Italian people from the outside, with foreign guns and foreign funds. For 21 years the Italian people had to live with a bayonet at their throats. The traitor Mussolini supplemented the tyranny of Italian fascism with that of the might of the Nazi wehrmacht. By 1939 the Fascist peninsula had become a Nazi concentration camp. Italy no longer had sovereignty, no longer freedom of action. Its traitor, Il Duce, had surrendered the people of Italy to Adolf Hitler. Thus in 1940 when the Italian Fascists entered this war it was not any choice on the part of the people; it was a mere declaration on the part of the Nazi warden, Benito Mussolini. An imprisoned nation could have no choice. Time and events have demonstrated that it had none, except to revolt. The Italian people did revolt. They used the only method that was possible for them, and that was voluntary surrender of hundreds of thousands of its soldiers. The Italian people are not cowards.

The history of Garibaldi and his legions will always remain glorious pages in the history of world heroism. Men and women of Italian origin of these United States, over one million of them in the armed forces, their exploits and their achievements in this war will always give the lie to anyone who snidely charges cowardice to be an Italian characteristic. The 300,000 Italian partisans now engaged against the common enemy have been described by General Alexander: "The resistance movement in Italy has been more effective in fighting the Germans than any other resistance movement in Europe." Up to date more than 250,000 Italians have lost their lives in that resistance movement. No, the surrender of hundreds of thousands of Italian soldiers was not an act of cowardice, it was an act of revolt, revolt against Fascist, Nazi tyranny. It was the only form of revolt that a people with a bayonet at its throat could undertake. Italian soldiers can fight for liberty and freedom. History has demonstrated it. Italian soldiers refused to fight for tyranny and slavery. Events of only yesterday have demonstrated it. All that Italy seeks now is that she be permitted to fight against the common enemy as an ally. I can say with full confidence that Italy is ready to declare war against Japan just as she has declared war against Germany. All she asks is that the fetters of the armistice which deprive her of the right to declare and make war be removed. That the dignity of her people be restored by recognizing as allies these people who are now actually fighting on our side, whose patriots are actually fighting and dying on our side, whose navy is actually engaged in warfare on our side. All she asks is to be permitted to mobilize her forces, to be assisted in doing so, by removing the shackles of the armistice and granting to her the status of what she actually is and what her people have always been, allies, and to grant her the right to participate in the building of a world security organization for democratic and lasting peace at the San Francisco Conference.

Italy has earned this right with the blood of her men, the famine of her children, and the suffering of her women. To continue Italy to be humiliated by refusing her the recognition of an ally, by barring the doors of San Francisco to her, while at the same time her people are fighting against fascism at home and abroad, restricted by the impossible terms of an unrealistic armistice is not in keeping with the spirit of the agreements at Teheran and Yalta.

Italy's contribution to Allied victory began long before the armistice. It was not only the blows of our military might that brought about the overthrow of Mussolini, but it was also the act of revolt, the surrender of Italian soldiers at the front, the sabotage of fascistic military efforts by the Italian people at home.

In a report to Congress on the subject of the progress of the war made on September 17, 1943, the President stated, "Italian soldiers, though disorganized and ill-supplied, have been fighting the Germans in many regions. In conformity with the terms of unconditional surrender, the Italian Fleet has come over to our side and it can be a powerful weapon in striking at the Nazi enemies of the Italian people." It must be remembered that when we invaded Italy we at all times stated to the Italian people that we were entering Italy as liberators and not as conquerors. This was said truthfully as we recognized that the people of Italy would have no truck with a Fascist-Nazi war. In a radio address to the Nation on July 29, 1943, following Mussolini's overthrow the President promised: "Eventually Italy will reconstitute herself. It will be the people of Italy who will do that, choosing their own government in accordance with the basic democratic principles of liberty and equality. In the meantime, the United Nations will not follow the pattern set by Mussolini and Hitler and the Japanese for the treatment of occupied countries—the pattern of pillage and starvation." And again on September 11, 1943, immediately following the armistice in a joint statement, both President Roosevelt and Prime Minister Churchill said to the people of Italy: "Take every chance you can, strike hard and strike home. Have faith in your future. All will come well. March forward with your American and British friends in the great world movement towards freedom, justice, and peace."

I sincerely believe that all of these messages and promises were made in good faith and it is my firm belief that the President will do his utmost to see to it that these promises made to the Italian people are kept. It is my firm belief that an overwhelming majority of people in America, Great Britain, and the Soviet Union do not desire a status of conqueror and conquered between them and the Italian people, but of liberator and liberated.

It is with regret that I must state that the events subsequent to the armistice in Italy have not conformed to the spirit, honor, and letter of the pledges made. The armistice itself restricted Italy's army to 11,000 and now that the restriction has been slightly lifted to allow Italy an army of a little better than 50,000, Italy's 300,000 partisans are fighting the enemy behind the lines. Her soldiers are at the front and her navy is doing a good job. Although it is extremely doubtful whether under the terms of the armistice Italy will be permitted to declare war against Japan and pool what she has into the war in the Pacific, for Italy cannot under the armistice declare war without permission of the Allied Commission, I am confident that Italy will make war against Japan, if permitted, and will do an effective job if material assistance is given to her.

I am not going to discuss the economic terms of the armistice except that they place on a country impoverished by the rapacious forces of the Nazis a burden that no nation can ever carry. I do not care to give a recital of the indignities imposed on the Italian people by the Allied Commission as it would serve no purpose at this time. I will simply give you those instances which will apprise you of the nature of the conqueror role that the Allied Commission has played in Italy: One. With the exception of the slight increase from 11,000 to some fifty-odd thousand in the armed forces, the Allied Commission has consistently denied the appeal of the Italian Government to permit her to raise an effective fighting army. Two. Even on the matter of relief the Allied Commission for months refused to carry out the President's order to increase the daily bread ration from 200 grams to 300 grams. The President issued this order sometime in October. It was finally put into effect on March 1, 1945. Three. When a national government composed of all anti-Fascist political parties was established in June of 1944, the Soviet Union sought to extend diplomatic recognition of that government, the Allied Commission in an arrogant letter to Prime Minister Bonomi informed the Italian Government that it could not enter into diplomatic relations with any government, including an ally.

It is not necessary for n e to recite the conditions of famine and disease now rampant in Italy. These are well known, and for those who do place the blame on the Italian people, may I remind them that the retreating Nazis took along with them all the cattle they could seize, all the grain, all the food, clothing, bedding, and other household furniture. What they could not take they destroyed. In many towns the Italian people were left without food and shelter, and yet these people still refused to have truck with the Nazi-Fascist war lords and welcomed those who came as liberators. Disillusionment followed soon, caused not by our soldiers, nor by the people of the three great nations, but caused by an Allied Commission which sought to play the role of Caesar rather than that of a Lincoln.

We all welcome the news of the easing of some of the restrictions. Italy now is permitted to govern most of the liberated territory, although its national liberation committee is still denied jurisdiction in areas that are now being liberated. The people are being allowed a greater degree of self-government and Italy today may enter into diplomatic relations with other nations. In fact, Italy today is in diplomatic relations de facto and de jure with Great Britain, the Soviet Union, and the United States. There is an Italian Ambassador in Washington and an American Ambassador in Rome; and yet we have the incongruous situation of having diplomatic relations with a nation, with that nation and its people suffering and at war with the common enemy, and still refused recognition as an ally and representation in the family of the United Nations at the San Francisco Conference.

How will this situation affect us here at home? Will it contribute to that post-war stability which is so necessary to carry out our program for 60,000,000 jobs and a healthy agriculture? Let us bear in mind that no nation can gain for itself prosperity over another nation, particularly one fighting on our side, which is prostrated and gradually forced to the brink of political chaos and complete economic disintegration. Unless we aid Italy the pressure on the present democratic government of Italy will be so great that it may bring about its overthrow, that it may be supplanted by a government of reaction composed of former fascist forces. Italy, so governed by these elements would be another hindrance toward that democratic world for which decisions were made at Teheran, Yalta, and Dumbarton Oaks, and for which nations are meeting at San Francisco. Shall we force upon Italy another fascist regime without black shirt, but nevertheless fascist in character? Shall the war criminals in Italy be permitted to become the masters once again of the Italian people? The answer to that question lies in the determination of the question whether or not we in America will lead the way toward recognition of Italy as an ally, toward having her represented at the San Francisco Conference.

Spring will soon come to the unliberated regions of Italy. The rivers will overflow. The floods will add to the untold hardship of the winter that has just passed. The destruction of those valleys will not make

for post-war economic stability. Unless we aid Italy now by extending lend-lease aid to her as an ally, to assist her in reconstruction, to help her to prevent further damage, to help her mobilize her forces fully so that they can join with us in defeating fascism, Italy will be a liability and a serious drag in the post-war world.

Is it not sound economics as well as justice that Italy be permitted and enabled to assist in the full dignity of a member in building the post-war democratic world? This question too lies in the determination of Italy's status—conquered country or liberted country, a cobelligerent or an ally, an outlaw nation or partner at the San Francisco Conference. It is my considered judgment, my earnest conviction that to recognize Italy now, to extend to her lend-lease aid now, and to invite her to participate at the San Francisco Conference will be in the interests of American agriculture, American labor, in the interests of 60,000,000 jobs, in the interest of a healthy, free Europe, in the interests of domestic and world stability and in the interests of a democratic world. These interests are our interests, the interests of the American people. They are in the interests of an America that is on the march of the far-flung battle fronts of the world, in the interests of a great America of today and of a greater America of tomorrow, in the interests of keeping alive, yes, everywhere in the world, the truths of our great Declaration of Independence and the Atlantic Charter, in the interests of establishing and perpetrating, yes, everywhere in the world, the cardinal motivating doctrine of mankind—all men are created equal.

Keep Political Hands Off the Army Engineers

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Antonio Express:

KEEP POLITICAL HANDS OFF THE ARMY ENGINEERS

United States Army engineers do not particularly care—and certainly they do not need the publicity, the way some other branch here and there evidently has felt it did, in times past—but the American people are long overdue on knowledge and appreciation of the quality of work done by Army engineers in both war and peace. Some other service branches have been storied in tale and film—some to satiety, and past. Even the indispensable, triple-tough Seabees have received a modicum of publicizing.

Now, under the lash of the engineers' achievements in Europe, recognition is forcing itself upon the public. Representative OVERTON BROOKS, of Louisiana, lately inserted a striking address on the subject into the CONGRESSIONAL RECORD. It was a pip. It told compactly and stirringly a few high points in the Army engineers' record from D-day to the Rhine crossings. Past that, the engineers even have been mentioned in a few press dispatches lately.

Not long ago an anonymous Army engineer in Germany gave a correspondent a summation of his corps:

"The engineers have the easiest job in the Army. All they have to do is throw bridges across rivers, build roads and railways, remove booby traps and mines—all under fire—and then take the Infantry by the hand and show them where to go."

That engineer could have enlarged on the list of "all they have to do" virtually without limit. For one example, they landed on the Normandy beaches 30 minutes before H-hour, where their job was to blow great holes in the antitank wall. They succeeded—under fire that subsequently almost swept following Infantry units from the beaches.

Of such men, the recent story about the pontoon bridge which was thrown across the Rhine in 9 hours, after the commanding general had estimated that it would require 48 hours, is but typical. That special quality which enables them both to fight and work effectively and at the same time, is one which only engineers and Seabees understand. It is a quality beyond words.

It is that quality—and the spirit of scornful, incorruptible integrity which it bases—that underlie the Army engineers' service in peace, when they determine the need for, and direct work on, flood control and river and harbor development. It is a quality and a spirit which have given the United States a long period of service by Army engineers without the slightest breath of scandal ever so much as touching their activities or decisions. It is a quality and a spirit which have maintained in those activities and decisions a level of technical excellence unsurpassed, if equaled, in any other land.

All that is the main reason why now—when some politicians would remove such work from the engineers' jurisdiction—the American people should know the breed of men who constitute the United States Army engineers. They are fighters; they are workers; they are men of superb technical attainment and absolute integrity.

The American people must let no meddling politicians touch their Army engineers.

Iowa Centennial

EXTENSION OF REMARKS

OF

HON. JAMES I. DOLLIVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the General Assembly of the State of Iowa:

House Concurrent Resolution 22

Whereas on December 28, 1946, the State of Iowa will have completed its first century of statehood, and the year will be celebrated in Iowa as the State's centennial year; and

Whereas there is general desire on the part of the people of the State that the centennial year of Iowa shall be made the occasion for renewed interest in and acceleration of the study of the entire history of Iowa, by appropriate ceremonies in the schools, the churches, and all civic societies, in every city and town of the State, to the end that Iowa people shall have finer appreciation of their own State and the achievements of her people: Now, therefore, be it

Resolved by the house (the senate concurring), That the fifty-first general assembly hereby endorses and approves the movement made by Hon. KARL LECOMPTE, and other Members of the Iowa delegation in Congress, to secure the publication by the postal department of a special stamp commemorative of the event, serving to remind all the people of the fact that Iowa was the first free State of the Louisiana Purchase, and of its growth and greatness; and the similar effort to secure the coinage of a special commemorative coin of special Iowa significance, and we hereby add our endorsement to the effort to make not only Iowa but all the world more history-conscious as a background for the higher patriotism affecting all things American.

HAROLD FELTON,
Speaker of the House.
KENNETH A. EVANS,
President of the Senate.

Flood Control

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the General Assembly of the State of Iowa:

Senate Concurrent Resolution 17

Be it resolved by the senate (the house concurring):

Whereas the Congress of the United States has enacted legislation providing for additional flood control and also for a further development of navigation on the Missouri River; and

Whereas plans are being made for an even greater development of the Missouri River including a great development of irrigation; and

Whereas said improvements should be made at the earliest possible time in view of the destruction of life and property and the loss to industry, agriculture, and commerce caused by recent floods and the continuous waste of valuable water resources within this basin; and

Whereas improvements of the type contemplated have been carried on in the past by the Corps of Engineers, United States Army, and the Bureau of Reclamation, Department of the Interior; and

Whereas the said Government agencies have had charge of such developments for many years and have planned and are prepared to execute the said works of improvement with no delay at the conclusion of the war; and

Whereas it has been suggested that in order to further the progress of this development, a Missouri Valley Authority should be formed with broad powers similar to the Tennessee Valley Authority: Now, therefore, be it

Resolved by the General Assembly of the State of Iowa:

1. That we endorse the aforementioned improvement program and recommend and urge upon the Congress of the United States of America that the coordinated plan for the control and use of the waters of the Missouri River Basin, as now authorized by law, be given immediate adequate appropriation so that the plan can be executed as expeditiously as is consistent with the public economy.

2. That we commend the corps of engineers and the Bureau of Reclamation for their action in effecting coordination of their activities within the Missouri River Basin.

3. That we oppose Senate bill 555, introduced on February 15, 1945, and is now in the Committee on Commerce, because such bill would—

(a) Create a Federal corporation clothed with the power of government, fortified by law with a functional flexibility of a private

corporation and freed of all the legal restraints which experience has demonstrated are necessary and desirable.

(b) Place the States within the Missouri Valley Basin, subservient to a superstate controlled by three men, so far as the control and development of the water resources of the Missouri Valley Basin are concerned.

(c) Stifle industrial growth, individual enterprise and agricultural development inasmuch as the proposed Federal corporation would be in control of a basic economic resource.

(d) Establish a precedent for the establishment of a similar authority in the Missouri Valley Basin, which would be detrimental to the best interests of the State of Iowa and the Nation at large.

4. That a copy of this resolution, suitably engrossed, be transmitted by the chief clerk of the house of representatives and the secretary of senate to the Vice President of the United States, to the Speaker of the House of Representatives of the United States, to each Member from Iowa in the Senate of the United States and in the House of Representatives of the United States, and to the legislature of each State bordering or through which the Missouri River flows.

G. R. HILL.
DE VERE WATSON.
A. D. CLEM.
E. K. BEKMAN.
RALPH E. BENSON.
J. A. NEWSOME.
ARTHUR JACOBSON.

We, Kenneth A. Evans, Lieutenant Governor of Iowa, and W. J. Scarborough, secretary of the senate, hereby certify that the above and foregoing resolution was adopted by the senate and house of the Fifty-first General Assembly of Iowa.

KENNETH A. EVANS,
Lieutenant Governor of Iowa.
W. J. SCARBOROUGH,
Secretary of Senate.

Deferment of Farm Workers

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. TRIMBLE. Mr. Speaker, under leave to extend my remarks, I include a letter from Mr. and Mrs. F. M. McFeeters, of Gravette, Ark., which speaks for itself, and is positive whether you agree with them or not in their conclusions:

GRAVETTE, ARK., *March 4, 1945.*
Hon. JIM TRIMBLE,
United States Congress,
Washington, D. C.

DEAR SIR: I am writing you on the day that my eldest son would have been 27 years of age. He gave his life for his country when the U. S. S. *Princeton* was lost. I am writing in his behalf and in behalf of another son who is fighting on the battle fields of France and because I feel a grave injustice has been done to all the boys who are fighting and dying on the battle fields of the world.

It was with a feeling of shock and of having been betrayed that I read of the Senate's recent action in regard to the deferment of farm boys.

Our boys were excellent farmers, as good as you could find anywhere. You of course are aware of the fact that a large percent of our armed forces are made up of farmers. These of course come from the family sized farm mostly. This is the group that is not represented by the powerful farm bloc.

Just why is the Senate bowing and scraping to this bloc that represents the big business men of farming? Could it be they prefer the vote of these to keeping faith with our fighting men—the heroes both dead and living?

We feel the Tydings amendment has been of great benefit and help to these and a temptation and encouragement to the draft boards to play politics.

We are farmers. We have a third son who will be 18 in July. We feel the Tydings amendment should be repealed. We want to see the Army have all the ammunition it needs and all the young men it needs so we can get the war over with and all our boys can come home. Then, too, this amendment judges a man by what he owns and not by his ability. This is another case of granting special favors to those who have.

* * * * *

Why not let some of our war-weary farmers who have been in battle come back to the farm and some of the deferred farmers take their place?

We feel Congress is meddling too much in the War Department's business. Surely our Army officers know better than Congress if they need men, food, or ammunition most. We have heard nothing of a food shortage. Surely all of us could do on less.

Sincerely yours,
Mr. and Mrs. F. M. MCFEETERS.

Federal Income Tax Rate

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

House Joint Resolution 7

Whereas the sixty-third general assembly adopted House Joint Resolution No. 32 thereby making application to the Congress of the United States to call a convention for the purpose of proposing a suggested amendment to the Federal Constitution, the effect of which would be to fix the maximum income-tax rate at 25 percent; and

Whereas the sixty-fourth general assembly considers the proposal made by such resolution inadvisable and is opposed thereto: Therefore, be it,

Resolved by the House of Representatives of the Sixty-fourth General Assembly of the State of Illinois (the senate concurring herein), That it express its opposition to the application and intent of the resolution set forth in the preamble hereof; and, be it further

Resolved, That the secretary of state be directed to forward a copy of this resolution to the Senate and House of Representatives of the Congress of the United States.

Adopted by the house, March 13, 1945.
HUGH GREEN,
Speaker of the House of Representatives.
FRED W. RUEGG,
Clerk of the House of Representatives.
Concurred in by the senate, March 28, 1945.
HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Special Committee To Investigate Food Shortages

REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. AUGUST H. ANDRESEN. Mr. Speaker, by direction of House Resolution 195 creating the Special House Committee to Investigate Food Shortages, the Speaker appointed the following Representatives to conduct the investigation: CLINTON P. ANDERSON, chairman; STEPHEN PACE, EARLE C. CLEMENTS, MARTIN GORSKI, AUGUST H. ANDRESEN, CHRISTIAN A. HERTER, and HAL HOLMES. During the past 10 days the committee has been in daily session and has held numerous conferences with Federal officials representing food-claiming and policy-making agencies. It was deemed advisable to secure all available data on supplies, requirements, and commitments of food before public hearings were held. The committee has also heard representatives of processors, producers, and distributors. With this background, the committee feels that it is now in a position to hold public hearings.

Hearings will be held in Chicago on April 16 and 17; in Cleveland, Ohio, on April 18; at Boston on April 23; Providence, April 24, and in New York City on April 25. It is anticipated that other hearings will take place in other parts of the country, and dates will be announced later as arrangements are made.

As a member of the committee, I am convinced that the break-down in our system of distribution of beef, pork, and poultry is largely due to a lack of coordination and proper understanding of the problem by Federal officials charged with the responsibility for securing an abundance of food and distributing it. Thus far, the Office of Price Administration, as I see it, is largely responsible for the break-down in the distribution system because of the many unsound policies initiated by the O. P. A. which have greatly discouraged production and seriously retarded the flow of processed and other foods into the channels of consumption.

The O. P. A. has utterly disregarded the intent of Congress when it initiated policies which were contrary to customary business practices. Many processing concerns have been put out of business because they were not permitted to receive a fair and equitable margin of profit over their cost of production. Unless the O. P. A. changes its present policy so as to permit processors to receive a fair and equitable margin, and to further follow the law, I am convinced that there is little hope to remedy existing shortages of meat and other vital products.

I will not attempt a discussion at this time of the detrimental policies now in operation which retard the production of vital foods. That will be done by members of the special committee when the

first report is made to the House by May 1. I do, however, want the record to show that your committee is constructively engaged in an effort to secure such changes in administration policies that will bring about an increase in the production of food, to help win the war and write the peace and to adequately take care of civilian requirements. To disclose, in part, what the committee has sought to accomplish with reference to securing an increase in hog or pork production for consumption in 1946, I am inserting herewith a letter written by me on March 31, 1945, to the Honorable Marvin Jones, War Food Administrator, and the statement of the War Food Administration dated April 11, 1945, which change in policy was announced after a conference by your committee with Mr. Jones, Mr. Bowles, Mr. Davis, and other administration leaders:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
March 31, 1945.

In re: Hog production for 1946.

Hon. MARVIN JONES,
War Food Administrator,
Department of Agriculture,
Washington, D. C.

MY DEAR JUDGE: As a member of the special committee to investigate the food shortage situation in this country I have a suggestion to make to you in regard to securing an increase in the production of pork for 1946. While our committee has not been provided with information as to commitments of beef and pork made by the various agencies for 1946, I desire to stress the need for additional hog production, in the event that commitments have been made which might exceed anticipated supplies. It will take at least 12 months to produce additional pork in this country.

The present shortage of pork in the United States is largely due to the lowering of the support price in the spring of 1944 from $13.75 a hundred to $12.50. If we are to have additional pork in 1946, farmers must make their plans within the next 30 days, and I therefore wish to suggest to you that if commitments have been made by the Government to supply foreign consumers with pork in 1946, beyond anticipated supplies, that the War Food Administration increase the support price at once to $13.75 for hogs weighing between 190 pounds and 300 pounds, and that such support price remain in effect until our commitments have been taken care of and civilian supplies restored. I wish to urge prompt action in this matter.

Hoping that my suggestion will be of value to you, and trusting that I may address you on various food subjects as our investigation progresses, I remain

Sincerely yours,
AUGUST H. ANDRESEN,
Member of Congress.

UNITED STATES DEPARTMENT OF AGRICULTURE, WAR FOOD ADMINISTRATION,
Washington, April 11, 1945.

HOG SUPPORT PRICE RAISED—LARGER FALL PIG GOAL ANNOUNCED

Increase in the hog support price and a larger 1945 fall pig production goal, planned to insure the largest practicable production and marketing of pork products, were announced today by War Food Administrator Marvin Jones.

The national fall pig goal has been set at 37,000,000 head, 18 percent more than the number raised last fall. The hog support price has been increased from the present $12.50 to $13.00 a hundredweight, Chicago basis, for good and choice butcher hogs, all weights up to 270 pounds. The new support price will become effective immediately and continue to September 1, 1946—through the period when 1945 fall pigs will be marketed.

At the same time, Price Administrator Chester Bowles announced that there would be no reduction before September 1, 1946, in the ceiling prices for live hogs from the present levels of $14.75 a hundredweight, Chicago basis, for butchers and $14 for sows.

"Expected continuance of heavy demands for pork makes it advisable to maintain hog production at the highest possible level," said Administrator Jones in discussing the price support and goal announcements. "As has been the case all through the war years, the 1945 fall pig production goal calls for the largest number for which it is safe to plan in view of prospective feed supplies. I am confident our farmers will set their sights to reach this new goal, continuing the record production which has meant so much to the war effort."

The record pig production of 1942 and 1943 was made possible by using the reserve stocks of grain which were on hand when the United States entered the war. Since these reserve stocks have been reduced as far as it is safe to go, hog production is dependent on the current level of feed production. Crop goals for 1945 nearly 5 percent larger than last year's actual acreage have been announced previously.

About 240,000,000 more bushels of corn are available for livestock feeding now than a year ago. If normal yields are obtained on the 96,000,000 acres of corn, which farmers indicated on March 1 they intended to plant this year, sufficient feed supplies should be available to fatten a 37,000,000 fall pig crop, as well as meet the other feed and industrial requirements for corn.

Montana County First in Seventh War Loan Drive

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, it is with real pleasure that I report to Congress the outstanding achievement of Daniels County, Mont.—and this is not the first time—in already surpassing its quota for the Seventh War Loan drive.

This outstanding Montana County thus becomes the first in the United States to meet and oversubscribe its quota. We of Montana are proud of this record and we know that all our other counties will follow the road Daniels has already trod.

Under unanimous consent I am inserting an article which appeared in the Helena Independent-Record of April 8, 1945:

ONE-DAY DRIVE PUTS DANIELS OVER WAR LOAN QUOTA

SCOBEY, MONT., April 7.—More than a month before the Seventh War Loan drive officially opens, Daniels County, in the northeast corner of Montana, reported late tonight that it had surpassed its quota by almost 20 percent.

The wheat farmers came to town today and laid down $250,000 cash for E bonds. Approximately $70,000 in F and G series bonds were also bought, Burley Bower, War loan committeeman, declared.

The small wheat-raising county, with one exception, met its quota long before the past six War loan drives started.

Said Bower:

"Looks like we're first in the Nation. * * * And remember, these sales are just for 1 day—just wait 'till we really get going."

The Cotton Belt's Interest in the Bretton Woods Proposals

EXTENSION OF REMARKS
OF
HON. ORVILLE ZIMMERMAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. ZIMMERMAN. Mr. Speaker, the Nation at large, and every segment of its population, is deeply interested in the outcome of the international conference which will be held at San Francisco in a few days.

Realizing the stake the cotton belt has in the outcome of this Conference and particularly the action that will be taken on the Bretton Woods Proposals, Hon. Oscar Johnston, president of the National Cotton Council of America, issued a very informative statement on the subject on April 6, 1945, which should be given careful study by all groups of our people dependent upon the cotton industry. No man in America has a better understanding of our cotton problems here and abroad than has Mr. Johnston. He has given great thought and study to the future of the cotton industry and I feel that his statement on this very timely subject should be given the widest possible circulation.

Mr. Speaker, under the leave granted, I am inserting the statement made by Mr. Johnston, which is as follows:

At the annual session of the National Cotton Council, which convened in Memphis, Tenn., January 24, 1945, the delegate members of the council unanimously approved the Bretton Woods program as that program had been announced. Because of this action on the part of its membership, I, as president of the council, am authorized to speak for the council in support of the Bretton Woods program.

The delegate membership of the council is composed of representatives from each of the six raw-cotton interests, namely: cotton producers, ginners, warehousemen, merchants, spinners, and cottonseed crushes, The delegates to represent each interest are selected by their respective interest organizations within each of the 18 States in which cotton is produced. I speak, therefore, with respect to this subject matter, as the accredited and authorized representative of the entire raw-cotton industry.

The South and the Cotton Belt should urge the Congress to approve the Bretton Woods monetary pact and the proposal for the international bank for reconstruction and development without substantial changes. In our opinion, both represent steps forward toward the restoration of a stable and expanded international trade after the war. The cotton industry has a greater stake in the restoration of trade than have most other industries. The alternative to a flourishing international trade after the war is a return to economic nationalism and more and more Government controls on

the cotton industry and every other industry. If we are uneasy over the spread of totalitarianism and the expansion of bureaucracy, we should work to combat the forces which cause them by doing all in our power by reviving world commerce.

There seems little controversy over the proposed bank and a good deal of controversy over the proposed monetary pact. The monetary proposal has been criticized by committees representing the American Bankers Association. I have examined these criticisms. They come from capable and experienced men and must be weighed carefully and yet I feel the reasons for approving the monetary pact outweigh the reasons for rejecting the pact or modifying it substantially.

One does not have to be a monetary expert to know that trade between nations had become increasingly difficult for several years prior to World War No. 2. A cotton exporter, for example, might sell several thousand bales abroad only to find that he could not convert the foreign currency he received as payment for his cotton into dollars. To get anything out of the sale, he would have to buy something in the country in which he had sold his cotton. If he did not want to purchase anything there he would find himself with a credit which he could not use. Numerous other examples can be given illustrating the anarchical situation which prevailed with regard to foreign exchange before the war. The Honorable William L. Clayton, Assistant Secretary of State described conditions extremely well in a recent radio address:

"Let us suppose for the moment that each State in this country had its own currency. The United States would then have 48 different currencies with fluctuating and uncertain relations between them. A person in Massachusetts selling goods in Ohio would receive Ohio money which could not be spent outside of Ohio. If a merchant in Philadelphia desired to purchase goods in New York, he would first need to acquire some New York money with which to pay for the goods. The rate for New York money would be frequently changing. Let us assume, furthermore, that in order to purchase or sell the currency of another State a license were required, and that applications for licenses were frequently denied. A person who had sold goods in another State would thus be unable to bring home the proceeds from his sale.

"It is clear that such conditions in the United States would be intolerable, and would reduce trade to a fraction of its present volume. Yet, these are the conditions which have existed for 10 or 12 years throughout much of the world. The purpose of the Bretton Woods proposals is to eliminate these conditions, and thereby to quicken and expand the exchange of goods and services between countries."

It was to avoid just the situation so accurately portrayed by Mr. Clayton that our Union of States was formed and our national monetary system adopted by our Congress, followed later by the adoption of a national banking system and still later by our Federal Reserve System.

The representatives of the Bankers Association propose that the bank plan be approved but that no action be taken on the monetary proposal at this time. Instead the bank would be given the responsibility for arranging and negotiating agreements between countries with respect to the stabilization of currencies, and the removal of exchange controls.

The Bankers Association takes the view that the International Bank can function sufficiently well without the fund until it can be definitely determined whether the fund is needed; that this country is not sufficiently protected under the monetary-fund proposal and that the fund is too loosely drawn and therefore subject to many risks and hazards.

Judged by ordinary banking rules, the criticism that the fund's operations are subject to certain risks and hazards undoubtedly would be justified. But the situation in which we find ourselves is by no means an ordinary situation. This country has invested billions upon billions of dollars, to say nothing of something infinitely more precious, the lives of thousands of its young men, in world peace and stability. We are in the position of a man who has put a lot of money and sacrifice into a costly project but who is likely to lose everything he has ventured if he does not press forward and invest more. We do not believe that it is a practical matter to put upon the bank the responsibility for negotiating currency-stabilization agreements between countries. We do not believe that an effort to negotiate agreements country by country would be practicable. The situation after the war will be confused and chaotic in many countries. It is in the interest of all concerned that exchange rates be stabilized and that restrictions on exchange transactions be eliminated as soon as possible.

Some critics of the fund make the point that exchange stability can be restored by restoring the gold standard. In view of our experience with the gold standard before the war, I feel that requiring countries to define their currencies in terms of gold is as far as we can go at this time. Nor do criticisms that too much leeway is given for the adjustment of a member's currency seem valid to me. A member country is permitted to decrease or increase the initial par value established for the currency by 10 percent. In view of the uncertain situation which will prevail after the war, this seems a wise precaution.

Since the criticisms of the fund seem debatable, I think the Cotton Belt should examine them in the light of its own interests. Obviously, we have a great stake in the restoration of a flourishing intercourse between nations. Obviously also, this is no time to be hesitant or timorous, or to be afraid to try something because it departs from familiar and often traveled paths. The entire world finds itself in a situation without parallel, and it is plain that a good many new things must be tried.

The Cotton Belt in the past has suffered perhaps more than any other section from restrictive trade policies. Because of tariffs and other handicaps to trade, we have sold low and bought high. All of us are aware of the effects of tariffs and quotas. It is not generally recognized that currency depreciation and manipulation operate as tariffs and quotas and are just as destructive to orderly and prosperous trade.

The countries of the world have embarked upon an effort to bring order out of the disorder which has prevailed in foreign exchange for years. The monetary fund proposal may not be perfect. Few proposals are, but, rightly operated, it can help establish the orderly and peaceful world which despairing mankind is seeking. Its rejection or emasculation would be a hard blow at this juncture. It would cast doubt on our willingness and ability to cooperate in a new world order. Therefore, the South and the Cotton Belt should see to it as quickly as possible that Congress hears its views on this subject.

Pay of Postal Employees

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

House Joint Resolution 28

Whereas the postal employees of the United States have not received an increase in base pay for over 20 years; and

Whereas during the present emergency they are receiving a $300 a year bonus (said bonus expires on June 30 of this year); and

Whereas these loyal employees of the Postal Service must have an increase in wages if they are to maintain a normal standard of living: Therefore be it

Resolved by the House of Representatives of the Sixty-fourth General Assembly of the State of Illinois (the Senate concurring herein), That we go on record in favor of H. R. 2071, now before the House Post Office and Post Roads Committee of the United States House of Representatives, which provides for a reclassification of salaries for postal employees; and be it further

Resolved, That a copy of this preamble and resolution be sent to the Honorable Senators LUCAS and BROOKS, to the Illinois Members of the United States House of Representatives and to the House Post Office and Post Roads Committee.

Adopted by the house March 28, 1945.

HUGH GREEN,
Speaker of the House of Representatives.

FRED W. RUEGG,
Clerk of the House of Representatives.

Concurred in by the senate April 5, 1945.

HUGH W. CROSS,
President of the Senate.

EDWARD H. ALEXANDER,
Secretary of the Senate.

Dismissal of Proceedings Against Harry Bridges

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. DE LACY. Mr. Speaker, I ask unanimous consent to have printed in the RECORD copies of three letters to the President of the United States, all of them urging the dismissal of deportation proceedings against Harry Bridges, west coast labor leader. One of the letters is from Harry C. Huse, Washington State chairman of the Democratic State Central Committee and a leading businessman. Another is from the Honorable Jerry O'Connell, former Member of Congress from Montana and executive secretary of the Washington State Democratic Central Committee. The third letter is signed by 73 members of the Washington State Legislature.

There being no objection, the letters were ordered printed, as follows:

DEMOCRATIC STATE CENTRAL COMMITTEE,
Seattle, Wash., April 2, 1945.

President FRANKLIN D. ROOSEVELT,
White House, Washington, D. C.

DEAR MR. PRESIDENT: As State chairman of the Democratic Party of Washington, I wish to express to you the sincere desire of our people out here that you dismiss the deportation proceedings now pending against Harry Bridges, the west coast's outstanding labor leader.

As the chairman of the party and as a businessman I feel that Mr. Bridges' contribution to the war production effort should

be rewarded by permitting him his American citizenship. I am sure that you'll see that this comes about.

With best personal regards, I am,

Respectfully yours,

HARRY C. HUSE,
State Chairman, Democratic State Central Committee.

Copy to Washington delegation.

DEMOCRATIC STATE CENTRAL COMMITTEE,
Seattle, Wash., April 2, 1945.

President FRANKLIN D. ROOSEVELT,
White House, Washington, D. C.

DEAR MR. PRESIDENT: This letter constitutes a sincere request that you use your high office to bring about the dismissal of the deportation proceedings now pending against Harry Bridges, president of the International Longshoremen's Union.

I am sure that you realize the tremendous contribution which Harry Bridges has made to the war effort by his outstanding leadership in the labor movement. He has been one of the Nation's outstanding production soldiers, and deserves the adulation of the Government instead of its persecution. I feel that both labor and management appreciate the stability which he has brought to industry on the Pacific coast.

As a leader of the Democratic Party in the State of Washington, I wish to express the sincerest gratitude of our people for his exceptional assistance, through his union, in the recent election campaign. Along with our new governor, Mon C. Wallgren, I feel that the people desire you to dismiss the proceedings against Mr. Bridges.

With kindest personal regards, I am,

Respectfully yours,

JERRY O'CONNELL,
Executive Secretary, State Democratic Central Committee.

Copy to Washington delegation.

MARCH 8, 1945.

President FRANKLIN D. ROOSEVELT,
White House, Washington, D. C.

DEAR MR. PRESIDENT: We, the following members of the Legislature of the State of Washington, have signed the following resolution asking that you dismiss the Bridges case in the interest of national unity and victory.

"The order to deport Harry Bridges is a blow at all the forces of unity." These are the words of C. I. O. President Philip Murray, who described the decision as a "burden on the conscience of the American people." American labor in the coming period must contribute even greater effort, service and sacrifice to the total war effort. The morale of American labor and the whole nation will be strengthened by immediate dismissal of the Bridges case.

The proceedings against Harry Bridges violate the basic principles of our Constitution, which protects citizen and noncitizen alike. Continuance of this case jeopardizes not alone the rights of one man, but the rights of millions of aliens who have made their homes in our country, traditional haven for the oppressed of all lands.

Power to dismiss the Bridges case rests with the Attorney General and the President of the United States, who can clear the way for Harry Bridges to become a citizen of the country he has served so loyally in peacetime and during the critical war years.

Therefore, we transmit to the Attorney General and to the President of the United States this urgent request that the Bridges case be dismissed without delay, as a major contribution toward national unity and victory.

Yours respectfully,

MEMBERS OF LEGISLATURE
OF THE STATE OF WASHINGTON.

Copies to Attorney General Biddle, Congressmen, and Senators.

MEMBERS OF WASHINGTON STATE LEGISLATURE

Senate: H. S. Bargreen, E. A. Beck, J. R. Binyon, D. Black, E. S. Coe, G. G. Dixon, A. E. Edwards, Lady Willie Forbus, M. J. Gallagher, A. J. Hanson, H. N. Jackson, E. H. Kohlhase, C. C. Mohler, M. T. Neal, E. T. Olson, T. C. Rabbitt, R. R. Ray, A. D. Rosellini, J. V. Sapp, P. G. Thomas, C. V. Tisdale, J. N. Todd, T. R. Waters.

Thomas Jefferson and Inter-American Unity

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, April 16, 1945

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on Thomas Jefferson and inter-American unity, before the meeting of Latin-American Judge Advocates, Monticello, Charlottesville, Va., April 11, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends and fellow citizens of America, the moment, the place, and the circumstances of our meeting today invite me to discourse, even though briefly, on a point of interest common to every American. The achievements of Spain in America were not, as some are still wont to think, the result of mere chance. In the sixteenth century Spain not only possessed the impulse but the capacity to discover, and these by reasons of her history and of her culture. As a result of the discovery, the conquest, and the colonization of the New World the geographic extension of the Spanish language and of Hispanic culture, together with the wealth of natural products which exist in the Spanish and Portuguese speaking nations of the New World, has made of these republics an essential factor in the economic and cultural life of the modern world, and there is no doubt but what these nations will acquire an even greater importance in the years to come.

We North Americans do not ignore the importance of Spain's contributions to the history, the tradition, and the culture of our country, considering that even a cursory reading of the chronicle of America reveals vividly the magnitude of this contribution. In 1512 Ponce de Leon baptized Florida; in 1519 Alvarez de Pineda discovered the mouths of the Mississippi; in 1528 Panfilo de Narvaez and his 600 companions crossed the forests and swamps of Florida, and in the years 1529 to 1536 Alvar Nunez Cabeza de Vaca and his 3 companions, Castillo, Dorantes, and the Negro Esteban, the only survivors of the Narvaez expedition, crossed on foot the vast territory from Texas to the Gulf of California. In 1540, after his return to Spain, Cabeza de Vaca was appointed adelantado of the Province of the River Plate. In 1541 Hernando de Soto discovered the great Mississippi, after having passed through the present States of Florida, Texas, Georgia, Alabama, the Carolinas, Mississippi, Arkansas, and Louisiana. In 1543 Juan Rodriguez Cabrillo, a famous Portuguese navigator in the service of the Spanish crown, explored the coast of the Pacific as far north as San Diego Bay, and with Rodriguez Cabrillo's death his companion, Bartolome Ferrelo, continued on as far as the coast of the present State of Oregon. In 1565 Menendez de Aviles founded St. Augustine, in the present State of Florida, the oldest city within the present continental limits of the United States.

In 1526, Lucas Vasquez de Ayllon founded San Miguel de Guadalupe somewhere in the present Carolinas, and in 1566 and 1570 Spanish explorers reached the Bay of Santa Maria, today Chesapeake Bay. These men, according to some historians, were the precursors of those who discovered the Potomac River which the Spanish called El Rio del Espiritu Santo, that majestic stream which rolls along to eventually irrigate the gardens of Mount Vernon. The words of Tovar and Cardenas were those that thundered in the depths of the Grand Canyon of the Colorado in 1541, these illustrious captains being members of the expedition of Francisco Vasquez de Coronado, the first explorer of the present and my beloved New Mexico.

Neither do we forget that the great Venezuelan, Francisco de Miranda, served with distinction in the North American wars of independence, coming to enjoy the intimate friendship of Alexander Hamilton; we also recognize that had it not been for Bernardo de Galvez, it is not pleasant to think how things might have gone with us against the English during the Revolution in the southeastern part of our country, particularly in the famous battles of Mobile and Pensacola. As a result of these conflicts the English were forever driven out of this part of the United States.

The temptation to extend this catalogue of Spanish achievement is great indeed, an achievement which in all reality forms those golden links which unite the republics of the Western Hemisphere. The first imprints of our European culture were Spanish, and various regions of the United States, of North America, such as Florida, Texas, New Mexico, Arizona, Colorado, and California, carry to this day the impressions of that culture. And, gentlemen, in my own New Mexico and up to the present day we still learn the language of Cervantes, of Santa Teresa, and of Fray Luis de Leon from the lips of our mothers, and we still extract our every day philosophy from those so gracious dialogues between Don Quixote and his lovable companion, Sancho, which for every Spanish-speaking person are nothing less than honey itself.

The descendants of these Spaniards are found today on every battlefront fighting for the maintenance of Democratic ideas, and the casualty lists published weekly by the War and Navy Departments of the United States regularly include the melodious names of Gonzalez, Garcia, Valdez, Sanchez, Gomez, Trujillo, Cordova, Gallegos, Romero, Lucero, and so forth.

It is not well known that the eminent Thomas Jefferson not only enjoyed a fine knowledge of the language of Castilla, but he also was a sincere friend of what later came to be known as the Bolivarian ideal.

The historian, Van Wyck Brooks, in his book, The World of Washington, has the following to say with relation to this matter:

"We know that Thomas Jefferson composed an epistolary essay on the pronunciation of the Greek language, writing part of this work in Spanish, in view of the fact that he was convinced of the importance of the Spanish language for every American. He anticipated future relations between his country and Spanish America, and upon more than one occasion expressed his ardent desires to some day witness the actuality of a pan-American hemisphere free of every foreign influence."

This illustrious American, the son of a rich Virginia planter, initiated his legal practice in 1767, and 2 years later was elected as a representative in the Colonial Legislature. He soon was recognized as one of the leaders of the opposition and became prominent for his anti-English ideas. After the dissolution of the Virginia Legislature he performed important tasks in the free convention and wrote a document, Summary Views of the Rights of British America, a succinct exposition of the rights of the English Americans. This document is a prelude to the Declaration of Independence. In 1775 he was elected to the Virginia Congress and composed the reply of the Virginians to Lord North, a document which was received with great enthusiasm, for it expressed more clearly than any previous composition, the will of the North American people to be independent. In 1776 Jefferson was given the task of proposing a declaration of independence and was named president of the commission charged with the responsibility of editing it. This precious American document, written entirely by Thomas Jefferson, was adopted with slight modifications on the Fourth of July of the same year. Possibly the most important contribution of Thomas Jefferson to the edifice of North American democracy was a formulation of the first 10 amendments to the Constitution, known as the Bill of Rights, and which embrace the fundamental laws with relation to the personal rights of the citizen.

Thomas Jefferson was named Governor of Virginia in 1779, and as soon as his term was over in 1781 he again occupied a seat in the National Congress where, among other things, he was responsible for the adoption of our present monetary system. In 1784 he was sent to Europe to assist Benjamin Franklin and John Adams in the negotiation of commercial treaties, and in the following year he replaced Franklin as American Minister in Paris where he remained until 1789, when he was named Secretary of State.

In 1801 Jefferson was elected President of the United States, and reelected in 1805. His two terms of office being most beneficial to the new Republic. In 1809 he refused a third term and retired to Monticello, the very house in which we are today gathered, where he occupied his time in myriad tasks, outstanding among them being the founding of the University of Virginia.

When Jefferson began his political career, he was the possessor of a considerable fortune, and after having spent 8 years as President of the United States he was in a state of near bankruptcy. So precarious was his material condition that he found himself obliged to sell to his Government, which he had served so long and so well, his magnificent library, in order to satisfy his debts and to be able to carry on. He died in these sacred halls on the 4th of July of 1826, the same day which witnessed the passing of John Adams and fulfilling exactly 50 years from that distant day when the Declaration of Independence was signed.

Jefferson is one of the founders of the United States of America and the most characteristic representative of democracy, dedicating his efforts to maintain the rights of his people. Of solid culture and deep-rooted convictions, it is interesting to observe that he never spoke in public, in spite of which he exercised a determining influence on the political and social life of this country.

I should not end this short discourse without expressing my most heartfelt thanks for the privilege of being with you. I do hope, in all frankness and good faith, that this gathering of such eminent Americans at one of the most sacred of North American shrines, will operate toward the establishment of that harmony and good will among our peoples which we so zealously desire.

Address by Hon. James A. Farley Before Maryland Bankers' Association

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, April 16, 1945

Mr. TYDINGS. Mr. President, on April 12, last Thursday evening, in the city of Baltimore, the Honorable James A. Farley, chairman of the board of the Coca-Cola Export Corporation, and a former member of the Cabinet, delivered a very interesting and thought-provoking address to the Maryland Bankers' Association. I think this address can be read by everyone with great profit, and I therefore ask that it be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy and honored to be your guest speaker this evening—happy to be among my good friends of Maryland—and honored that your association should invite me to address your annual dinner meeting. To be perfectly candid, until a friend of mine suggested a possible explanation, I was not clear about why I was invited to take part in your program. My friend reminded me that as Posmaster General I had supervision of the Postal Savings System, a banking set-up which at one time was thought to be unique because its investments were limited to United States Government bonds. "With that background of experience," my friend told me, "you are a natural to talk to bankers these days." "Bank statements", he pointed out, "are getting to look more and more like the statement of the Postal Savings System." "Your banker friends," he warned, "will want you to tell them where this trend in banking will eventually lead or, better still, how it can be reversed."

These are difficult questions and I know you don't expect me to supply all the answers this evening. You will recall, I am sure, that such reputation as I may have as a forecaster of future events was gained in a field having little in common with banking. Moreover, there is a good deal of the element of chance involved in any kind of prophecy.

Our primary task, that of winning the war, is one in which Maryland already has an outstanding record. Several billions of dollars of war contracts have been filled by the industries of Maryland on schedule and according to specification, notwithstanding the labor shortage in many areas which has seriously multiplied the problems of management. In ordnance and shipbuilding, in the production of steel, aircraft, chemicals, and many other vital products, your State has written a chapter in her glorious history never to be forgotten. In this great effort I know that you bankers have played an important part.

Directly, and through the Government, you have helped to supply the credit that was needed, and in other ways have facilitated the operation of the financial machinery essential to Maryland's great contribution to the war effort. It goes without saying that you will gladly continue to give your full energies to the winning of the war until the job is completely done. While still deeply engaged in war work you are and sh uld be concerned with the welfare of the human factors and the well-being of our national economy. The questions are: Will our Government, after the war, live within its income and foster business growth, or will it take the easy way of deficit financing leading to political regimentation of business and unavoidably to the destruction of the American system of free enterprise?

As I consider these questions my mind goes back to 1933, when I went to Washington as part of an administration committed to the principle of a balanced Budget, to the correction of certain practices in our security markets, to the strengthening of our banking system, to the extension of certain benefits to labor, to the establishment of a plan of social security, and to certain other reforms—all of which, as then contemplated—were thought to be consistent with the tenets of free enterprise. In the years that followed, this purpose was sometimes lost to sight in the scramble by opposing groups for power, for benefits, and for the advancement of pet theories of government. As Government yielded to the pressure of one group, others were encouraged to increase their demands and to exert greater pressure for the special advantages useful to them. Where, we are prompted to ask, is this trend leading us? The question, casually considered, may seem remote from everyday bankin , but I submit that the changes which have occurred in your balance sheets in recent years are, in a large measure, merely symptoms of this growing tendency to look to Government for subsidy, for credit, for insurance; in short, for security against risk of every kind. I am speaking now of a trend which was pronounced at the time of our entrance into the war, and not of activities assumed by the Government in the promotion of our war effort. The question now is, Whether at the end of the war this trend will be accelerated, or whether we may look forward to a period in which a serious effort will be made to balance the Budget, in which business can be reasonably free from the threat of more controls and more Government competition, a period in which we can test by experience the value of the many new laws which have been placed on the statute books during the past few years.

The prospect is not altogether encouraging. The appetites of many special groups have been whetted in past year by the tender morsels served them at the Washington table. They have succeeded in placing representatives in many important places in Government, and their spokesmen have become adept in special pleading. Let us consider the problem of attaining a balanced Budget. It is estimated that the annual cost of servicing the debt after the war may equal or exceed the total National Budget for any peacetime year prior to our intensive preparation for war. This fact alone should be sufficient to direct the thinking of all Americans along the lines of effecting, when the war is over, every possible economy in Government expenditures. Instead, we find that the groups which advocated liberal spending in the past have even more grandiose plans for the future. One such advocate had occasion not long ago to expound this philosophy of Government to a committee of the United States Senate. The statement was a sort of blue print for a fuller, richer life.

No man interested in the welfare and happiness of his fellow citizens could read it without hoping that the time may come when Americans may enjoy the great advantages there enumerated. The first point mentioned was the need, when the war is over, for full employment, with higher wages and shorter hours. This, it was argued, should be accomplished by having the Government stand by, ready at all times, to provide employment for those not absorbed by private business. Nor was the farmer forgotten. It was proposed that Government place a floor under farm prices and so insure the farmer against a fall in the market value of farm products. And that is not all. The farmer would be provided with better housing, and rural electrification would be expanded to the utmost to make rural life more comfortable. Turning to the problem of improving the health of the American people, this remarkable document would have the Government assume the responsibility of building hospitals in all communities not now having such facilities, and of providing adequate medical care for all citizens. Likewise, under this philosophy, better education would be made available to everyone. The statement was made that technical and higher education must, in the future, be made just as universal as secondary education has been in the past. There were other recommendations for Government guaranty of a better life and greater individual security. Many were laudable objectives, but there was one point, to some of us a very important one, which received only casual reference. I refer to the simple question of "Where is the money coming from?"

The school of thought which has been prominent in recent years in advocating public spending would answer simply by saying that if Government sees to it that we have a high national income, the Budget will take care of itself. One group of self-appointed experts on budgetary matters would go even further and assure us that a balance between income and expense is not necessary, and that there is no reason why the Government of the United States should not go on indefinitely spending more than it collects. We can be thankful that this brand of "progressive" thinking is not accepted by the great majority of our Representatives who make the laws and administer the various departments of Government. The fact remains, however, that the advocates of liberal spending are still retained in important official positions. Periodically they are allowed to expound their views on financial questions under circumstances seeming to indicate that they have substantial official backing. This sort of thing has been a constant deterrent to the development of confidence in the financial policies of the Government on the part of people in every walk of life. It is my considered opinion that nothing could contribute more to the building of confidence in the future of this country, here and abroad, than unequivocal assurances, backed by action, that we will strive to attain a balanced National Budget at the earliest possible time. In this respect perhaps we could learn a lesson from Prime Minister Churchill, who recently had occasion to define the position which he believes the British Conservative Party should take in the next general election. He said: "There is one thing we shall certainly not do. We shall not bid for votes or popularity by promising what we cannot perform, nor shall we compete with others in electioneering baits and lures. It would be very easy for us all to promise, or even to give each other, presents, bonuses and gratuities in a most enthusiastic manner; but if we woke up in the morning and found that the pound sterling only bought 5 shillings' worth of goods or services, we should have committed a great crime."

We must, of course, achieve and maintain a high national income after the war, and we must reconcile ourselves to carrying a heavy tax burden for many years. At the same time we have to recognize that the levying of taxes is not the sole means of bringing the Budget into balance. Control of expenses is also important, and we must give due regard to both factors if we are to solve the enormous financial problem which will confront this country at the conclusion of the war. This is no time to lay plans for things which are not essential and which we cannot afford, no time to encourage pressure groups, no time to lead people to think that all self-denial and sacrifice will end with the armistice.

I want this gathering to understand distinctly, that in what I have to say about the need for economy in government I have made no reference to post-war expenditures for the maintenance of our armed forces. I would here give great weight to the advice of Secretary of War Henry L. Stimson and Gen. George C. Marshall, Chief of Staff of the United States Army, and Secretary of Navy James V. Forrestal and Admiral Ernest J. King, Chief of Naval Operations, as to the extent of our military and naval needs in time of peace. They are entitled to our respect and confidence on questions concerning appropriations for the Army and Navy in the years ahead.

Just as there has been no absence of convincing assurance that all possible effort will be made to balance the Budget after the war, so we are left to speculate on the question of the post-war attitude of Government towards private business. Businessmen are aware of the challenge confronting them. Their appreciation of the importance of maintaining high employment is evidenced by the fact that they speak of the number of post-war jobs which they hope to offer as an objective of at least equal importance with the volume of goods which they plan to produce. It can be said with certainty that business leaders are in a frame of mind to make free enterprise work more effectively than ever before. But what will be the attitude of Government? Will business be encouraged to go forward, to expand and improve plants and to make commitments with labor, with producers of raw materials and the distributors of finished products? This question is uppermost in the minds of bankers and businessmen throughout the Nation. Not that we are fearful of the avowed enemies of the free-enterprise system. They are few in number and they seldom attain positions of power. The men who will bear watching are those who profess to believe in free enterprise, but with certain conditions always attached, such as: provided it is helped by government, supplemented by government, regulated by government, protected by government against its own weaknesses, etc., etc. These are the same self-styled friends who say: "If industry doesn't provide full employment, government must step in and take over," having all the time a plan for that purpose in their inside pockets, ready to be flashed on the public the minute industry fails to perform to their liking.

This constant goading of business, of threatening more regulation and more Government competition has prevented us from realizing the full benefits of a free economy. You bankers have had first-hand experience with Government competition. I understand that in the lending field you are required to compete with 46 different public agencies, and that you are now being threatened with more. You have indeed had a full experience with that technique by which officials soberly proclaim that credit for this or that is needed, and that unless the bankers meet the situation Government will do the job. This kind of announcement, as we have seen many times, is an invitation to all groups to come in and ask for help. Soon a new pressure group is organized, and free enterprise is threatened with the loss of another foot of precious ground.

In the early years of the depression it was necessary for government to supply credit for certain purposes which could not for good reasons be satisfied by private lenders. The need then was obvious to everyone. Today the situation is entirely changed. Our capital markets are functioning vigorously and effectively, both as regards equity and long-term debt. The banks are on the job looking for chances to lend money. I know that you are pounding the pavements and pushing into the byways looking for businesses requiring bank credit. I have been particularly interested in reading of the formation by banks in various parts of the country of your so-called "bank credit pools." The wisdom of adopting these measures is clearly apparent. By these means you have made certain that no credit application need be denied before it has been carefully scrutinized by a group specially set up to find ways of satisfying credit requirements which, for one reason or another, fail to meet the tests of a particular lending institution. To me, and I am sure to many people, these credit pools are symbolic of the desire and determination of bankers to make sure that no legitimate business will be hampered by lack of bank financing in the great program of production and employment to which we look forward after the war.

What more can bankers do to insure a healthy economy after the war? What more can they do to help arrest this invasion of Government into the sphere of business? The methods of influencing Government which have been most popular in recent years are not available to you. You cannot go to Washington and, by the sheer weight of your numbers, computed in terms of ballots, have your views accepted, no matter how sound they may be. You have to rely instead upon your ability to search out the truth and lay it clearly before your fellow citizens. Your motives will often be questioned by people who claim to know better, and your recommendations will be trampled upon by groups bent upon immediate gains without regard to final consequences. In time, however, your opinions will be heeded, and it will be found that you have contributed greatly to intelligent public thinking. It is vital that you continue to study and express your thoughts on the great issues confronting us. All have financial implications, all have a bearing on the momentous question of whether we shall restore order to our domestic financial affairs, and so maintain the strength to exert wise and constructive influence in the solution of international problems.

The banks have made a real contribution in keeping inflationary tendencies under control. From the beginning of our war effort your leaders have been outspoken in recommending measures to prevent prices from getting out of hand due to the high national income and a limited supply of goods. Bankers have welcomed the opportunity to play an important role in the plan to divert income into Government bonds. They have gladly carried a heavy burden, both in spreading the Treasury message to save, and in processing the sale of bonds. Thus far we have been remarkably successful in keeping prices under control, but the threat is by no means ended. As purchasing power piles up the task is likely to become more difficult. We must remember, too, that a return to the manufacture of civilian goods will not, in itself, end the threat of high prices. The process of making such goods also generates purchasing power, which in turn adds to the pressure on prices. The fight against inflation will therefore go on even after the struggle on the battlefield is won. To you who appreciate the importance of the effort, to you who are capable of devising means of combating this threat to the integrity of our economy, falls the duty of continuing leadership.

Another problem, in the solution of which the Nation will look to you for guidance as the war draws to a conclusion, is that of reconverting our industrial machinery from war production to its normal peacetime

functions. Bankers are specialists in credit operations essential to the full production of war goods. From now on you will be called upon increasingly for expert assistance by industries which are planning for peace. The prospect of Government contract cancelation is grim, indeed, for industries whose working capital is largely tied up in receivables, inventory, and partially completed goods. They must find ways of converting these assets into cash if they are to contribute to the production of goods and the employment of returning veterans. You can't solve all such problems, but you can advise customers and exert wise influence in dealing with such cases.

In recent months it has become important to consider some revision in the law to enable companies to have the benefit of their post-war refund during the period of reconversion, when some of them may face a serious struggle for survival. Likewise, it is important to remove from the tax laws impediments to post-war business activity. I am not suggesting that the Government can do with less income. Everyone recognizes that tax receipts in the future must exceed by a wide margin our pre-war revenues. But we should use the taxing power in ways that will encourage and sustain the spirit of enterprise. Whether we call it incentive taxation or something else, the fact remains that moderate taxation on a large volume of business is much to be desired over high taxes and only moderate business.

We must not permit the magnitude of the task ahead to dull our hopes or determination to build a better America and a better world. We can find encouragement in the emphasis which Government leaders now place on the need for post-war jobs. Perhaps this is a sign that Government in the future may give more consideration to the problems of the great body of American employers. Perhaps it foretells a renewal of faith in the dignity and strength and ingenuity of the individual, whether he be a worker on the line, a scientist, or just a plain business manager.

In mobilizing its great human and physical resources for war production American business sought no favors, only a fair chance to meet the greatest challenge in its history. It asks no favors now, only a fair chance, when peace arrives, to accomplish reconversion and set in motion our great industrial machinery in the interest of a better life for all.

World Peace

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, April 16, 1945

Mr. PEPPER. Mr. President, on the 31st of March, Hon. James M. Cox, of whom Florida is proud, and whom she shares jointly with the great State of Ohio, gave one of his rare interviews to the Associated Press on the occasion of his seventy-fifth birthday. The interview with Governor Cox was carried in the Miami Daily News of April 1st. Senators will remember Governor Cox as three times an eminent Governor of Ohio, and as the nominee for President of the Democratic Party when our great President, Franklin D. Roosevelt, who has just passed away, was the nominee for Vice President. There is much advice to the citizenry of the country and to the Congress in this outstanding interview with this distinguished American, and I ask unanimous consent that it be incorporated in the Appendix of the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

JAMES M. COX, AT 75, FORESEES "LONG CONTINUED WORLD PEACE"

(By The Associated Press)

James M. Cox, who carried the banner for the League of Nations in the Presidential campaign of 1920, saw Saturday a promise of "long continued and perhaps permanent international peace."

He sounded the cheerful note in one of his extremely rare interviews, granted to The Associated Press because Saturday was his seventy-fifth birthday.

The former Governor of Ohio observed the anniversary at a time when United States' participation in a post-war international organization is a live issue, just as it was in 1920 when he became the Democratic nominee for President and fought for the league envisioned by Woodrow Wilson.

"A new age opens before us," he declared. "That shouldn't be alarming. Every generation has a new world to face. We confront swifter change than in past times, but we have better means of adjusting ourselves. Man's life has been an age-long struggle to rise to larger stature. Some have succeeded in the adjustment and have gone forward progressively. Others have missed the mark and vanished from the race.

"A constant evolution has been going on. It has taken ages to develop our civilization and there are ages yet to go. All this tells us we must be patient, yet everlastingly at the present pressing task.

"We enter into the strange new day in the midst of widespread grief and desolation yet with every prospect of new and better things ahead. There is promise of long continued and perhaps permanent international peace. The world has been punished and in a chastened spirit has come to its senses at last.

"We shall have the benefits of scientific achievements. The mysteries of nature are one by one being solved and the material way of life, if we manage well, will be easier and happier. We have won many battles against disease and shall win many more. Because of this, we shall be a happier people, for health brings happiness. A healthy body, moreover, promotes that wholesome state of mind which begets understanding and harmony among men and nations."

Mr. Cox was asked whether the present war could have been avoided.

"This war did not need to be," he replied. "The conviction of that fact will grow as we demonstrate that an outlaw nation cannot run at large, and that disputes can be settled without resort to war. Time will reveal even more clearly than it has already done that the conspiracy which wrecked the project for peace after the First World War was the most tragic and sinful chapter in our history.

"I sometimes hear it said that in the coming cooperation of nations for peace, the errors of Woodrow Wilson will be avoided. The whole structure that is being built now is laid out from the blueprints embedded in the mind and soul of that martyred President. There will be changes in detail, but not in principle.

"Time brings its compensations. The wisest of men is the county coroner who gets the last look at things. Those who would cast discredit on Woodrow Wilson are only trying to cover up their own guilt in the conspiracy of 1919. If there still be active now some remains of the sinister movement of that time, it must be because an enduring peace will expose the wrong which they accomplished then. If a league of nations succeeds today, it would have succeeded had these political plotters given it the chance a quarter of a century ago.

"But enough of the past. The wisdom which the past has taught warns us that the path to peace is too sacred to be befouled by personal or partisan spite. The evils of today come from the neglects of yesterday. Our tomorrow will be what we make it today."

At 75, Mr. Cox directs the activities of his five newspapers and three radio stations. He has been particularly busy during the war while his son—"my mainstay"—Lt. Comdr. James M. Cox, Jr., is serving in naval aviation.

He looks 20 years younger than his calendar age and plays a game of golf which would be a credit to a man 40 years younger. He scores in the low 80's, and last Saturday carded a 38 for nine holes.

How does he do it?

"One cannot lay down a formula for health," he explained. "He only knows what he has found to be beneficial.

"He should not retire from business, and in addition to his own affairs he must have his mind tied to the current of world affairs.

"Physical exercise should be kept up, but temperately."

In connection with domestic affairs, Mr. Cox said "there is a disquieting situation."

"We Americans seem to run too much to extremes," he commented. "We have two forms of radicalism as we had in prohibition. Then we went from the open, uncontrolled, disgraceful saloon to the menacing gangsterism under prohibition. In time the pendulum struck center.

"Right now we have the radical reactionary on the one hand who can see little virtue in progressive economic and social policy. Anything which comes from the administration in Washington is condemned.

"On the other hand, there seems to be forming a sort of cult in this country which appears to believe that we are going backward if we don't have a new reform every day.

"These two radical movements fail to recognize an important fact, which is that extreme reactionaryism leads to the other radical extreme and if we do not maintain an orderly progress we can very easily—once the war is over—have a man on horseback giving us real fascism.

"If we can only develop a sense of balance in this country, our conditions will be very much more reassuring. A considerable part of the world is to be built, and with our material resources of raw products and skilled labor we can assume and maintain a leadership.

"If, however, we run into violent inflation out of which can easily come a pestilence of labor troubles, then we may lose our opportunity."

Of the living Presidential candidates, only Charles Evans Hughes antedates Mr. Cox. Mr. Hughes, who will become 83 years old April 11, was defeated in 1916.

The Vice Presidential candidate on the Democratic ticket headed by Mr. Cox was Franklin D. Roosevelt.

Post-War Employment for War Veterans

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, April 16, 1945

Mr. LUCAS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD a brief

statement made by John Thomas Taylor, national legislative chairman of the American Legion, together with an address delivered by Edward N. Scheiberling, national commander of the American Legion, at a dinner recently given by the Legion's national employment committee, at the Statler Hotel, Washington, D. C., April 6, 1945.

There being no objection, the statement and address were ordered to be printed in the RECORD, as follows:

STATEMENT OF JOHN THOMAS TAYLOR, NATIONAL LEGISLATIVE CHAIRMAN OF THE AMERICAN LEGION

The American Legion has just completed an historic conference here in Washington. Outstanding leaders in the field of industry, labor, agriculture, education, veterans' affairs, and government have met at the invitation of the Legion's national employment committee to chart a coordinated course toward the fullest possible post-war employment for our veterans—and for every American.

It was the Legion's purpose, in the words of Lawrence J. Fenlon, chairman of the Legion's employment committee, to draw from the combined experience of the participants new strength, new life in what is certain to be one of the most critical of all post-war problems. Mr. Fenlon said:

"If we do nothing more than to serve notice to veterans that their country is concerned with their future, this conference will not have been in vain."

The conference certainly did that. But out of the frank interchange of ideas and ideals there has sprung a new understanding of the nature of the task ahead; a new and firm basis for cooperative effort. The Legion recognized that no one organization, no one group, can assure maximum post-war employment, but that it can be done by the concerted effort of every group, every individual in America, working together as a single great team.

The focal point of the Legion's campaign will be the American Legion program for maximum employment, which is described as a program of action to stimulate the sales, the market from which production and jobs must spring. In that program the Legion warned:

"It will be only inviting disaster to try to create jobs without creating demand for the services the people in those jobs will perform."

Forty percent of post-war employment, the Legion found, must be created in the sales, service, and distribution fields. And selling is a grass-roots problem—one that must be done at the community level where the people live and work. The Legion believes it can be particularly effective there—for, more than any other organization, the Legion reaches into every city, every town, every village crossroads through its 20,000 Legion posts and auxiliary units.

The purpose of the Legion's campaign—and the inspiration which has been drawn from the important national employment conference held at the Statler Hotel, April 5 and 6, was forcefully stated by Edward N. Scheiberling, the Legion's national commander. I commend it to my fellow Senators for their closest attention:

ADDRESS BY EDWARD N. SCHEIBERLING, NATIONAL COMMANDER, AMERICAN LEGION

This date, April 6, is the twenty-eighth anniversary of the entrance of the United States in World War No. 1. The experiences of that war—the problems of demobilization and in the heartbreak of readjustment—are still fresh in the minds of all Legionnaires. They are behind the thinking of the Legion in its effort to ease the impacts of readjustment on veterans of World War No. 2.

As a result the Legion has lifted the horizons of its vision and adopted broad policies and programs designed to aid veterans of two wars. We realize fully the responsibilities we are assuming as a two-war organization. We cheerfully accept these responsibilities.

One of these responsibilities is to utilize our strength, our resources, and our facilities to help veterans of World War No. 2. The Legion is ready to do everything possible—to face any and all obstacles—in fitting back into our pattern of life the millions who are now on the fighting fronts.

Contrary to belief in some circles, these veterans are not coming back with the feeling that our country owes them a living. They are coming back with confidence that our country owes them the opportunity to earn a living. The Legion is dedicated to giving them that opportunity.

One of the definite ways in which we are undertaking to do this is through our national committee on employment.

There is being concluded in this room what I believe to be an unprecedented conference. Perhaps for the first time, representatives of every segment of our economic life have gathered in a single open assemblage, voluntarily partaking in a frank and open interchange of views.

The American Legion is grateful that it has had the opportunity to be host to this assemblage of outstanding leaders in the field of post-war employment planning. This has been a gathering, not of theorists, but of practical men of action—the men who will play an important role in providing jobs.

But this conference, noteworthy as it is, represents only the start of what must be a great, unified national cooperative campaign for maximum employment—one in which every organization, every individual in America must take part. The question of post-war employment must be taken off the drafting table and into the field. It must be done speedily. Time is of the essence.

We have been thinking of the post-war period as belonging to the future. Yet it is almost with us. Victory in Europe may be proclaimed in a matter of hours, days, or weeks. Developments of the last few days on the diplomatic front give hope that the Japanese war may come to a victorious end earlier than we had dared hope for.

And with the end of war, millions of our men will come home, calling upon us to redeem the pledges we have been solemnly making.

There is no time left for talk. There is no time left for slow or cumbersome planning. We have had years for talking and planning. Now we must be prepared to act.

Most of you are fully familiar with the American Legion's program for maximum employment. It is a program for action. And, as we leave here tonight, the Legion gives its pledge to the men and women now in service—its pledge, indeed to all America—that it is going out into the field with an active fight to create the markets, the sales, that produce jobs.

The Legion's national employment committee is taking its program to the country through a series of 12 regional meetings in every section of the United States. In the next 60 days, that program, the demand for urgent and immediate action, will be brought to every organization of the American Legion.

But we do not presume to undertake this job alone. We know that no single group, no single organization—not even Government—is strong enough, far reaching enough to achieve alone the maximum employment we must attain.

In the series of regional conferences to come, we shall make use of the combined experience, the combined judgment, planning and skill represented in this conference. In every section of the United States, as the regional meetings are held, we shall bespeak the cooperative ideas, planning and help of business, labor, education, church, agriculture, and government, both National, State, and local. These regional conferences will be, in the realest sense, conferences of the people, meeting together to consider what is, essentially, the people's problem.

We believe that, through the American Legion's program for maximum employment, we have made a real contribution toward the attainment of maximum employment for all. Yet we know that ours is not the only thinking, planning, and action. Here in this room, we have demonstrated that every segment of American opinion is united in the belief that we must have jobs for all. We have, we hope, laid the foundation for the type of cooperative effort America needs to accomplish the task ahead.

We welcome the statements made this morning by representatives of the American Federation of Labor and the Congress of Industrial Organizations that we must all undertake seriously to work out a program to achieve full employment for all, and their assurances that labor stands ready to cooperate in such a program.

It is toward that precise goal that the Legion has been thinking, planning, and acting not for days or months, but for years. From its inception, the American Legion has actively fought for the fullest opportunity for every American.

We are undertaking to carry through the Legion's program with full awareness of the problems involved. We recognize that war needs must come first. But these needs must not be made the "cover-all" for inadequate planning or hampering and confused restrictions. We recognize that the Federal Government owns and controls vast production facilities. The manner in which they are liquidated will have a telling effect on the ability of our private production system to provide employment.

War techniques have speeded the tempo of production facilities with the result that even those of pre-war days can now produce far beyond our normal peacetime requirements. Thus, the manpower needs for post-war production cannot be estimated until reconversion is under way and production levels anticipated.

Against this background is the fact that the great bulk of jobs must come in the sales, distribution, and service fields. These cannot be stimulated until the productive wheels are turning out peacetime supplies in the quantities needed. Even public works programs, the Government's direct aid to employment, cannot get under way until materials are available.

On several occasions I have cited two principles that will ease the impacts of demobilization. I repeat them again and will do so many times They are:

"First. That the rehabilitation of veterans and their readjustment to civilian life are as much a cost of war, as much a part of the over-all cost of defending our country and our way of life as any phase of actual warfare. We cannot afford to spend billions upon billions in wartime and then quibble over those few millions needed for the rehabilitation and readjustment of our fighting forces when peace comes.

"Second. That the men and women in our armed forces, by every rule of right and fairness, should be entitled upon their return to pick up a competitive position in civilian life. Obviously, they should not be expected to start all over again to win the place in life they held before war came. Any attempt on the part of any segment of our people to maintain wartime advantages gained solely because of the absence of millions of men and women in the service will create one of the most tremendous employment problems we have ever faced. I am confident that public opinion will be on the side of those who are now on the global fighting fronts."

It is true that the fullest possible employment must be—and is—our goal. But it is equally true that no plans, no goals, no single

thing must be permitted to overshadow the obligation we owe to fighting men.

We made them a promise when they were taken from their families, their communities, their jobs, and sent off to fight for our preservation In effect, they were told to go and fight with a mind free from worry about the future, we will take care of that when you come back.

The Congress of the United States said in no uncertain terms: Your job will be waiting for you when you come home.

That was the intent and purpose of the Congress. That was the avowed purpose of the American people. There was no uncertainty, no question, no compromise to it. And it was with this assurance that our men went to war. They left with confidence in the people of the United States. They must not come back in an attitude of suspicion or doubt.

To the millions of those who were not employed when they left for war, we gave another promise. It was that they should be granted, on their return, a full share in the prosperity, the economic security for which they have fought.

We must make good such promises as these.

There shall be no beribboned apple peddlers after this war.

No hero of Bataan, of Guadalcanal, Iwo Jima, or the Normandy beachheads shall be forced to pawn his medals to eat.

Bretton Woods Proposals

EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, April 16, 1945

Mr. RADCLIFFE. Mr. President, on the morning of April 12 an able and persuasively worded analysis of the Bretton Woods proposals appeared in the Sun of Baltimore. The article was written by Hamilton Owens, brilliant editor and historian. He is editor in chief of the Sun and Evening Sun. Both newspapers are published in Baltimore.

This article by Mr. Owens, reflecting the views not only of himself but also of the two Sun papers, is an illuminating and highly informative contribution to the study of the tremendously complex and important problems involved in the Bretton Woods proposals. I ask unanimous consent that this exceedingly valuable editorial be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE MUST SUPPORT BRETTON WOODS

Because the Congress is now considering the Bretton Woods agreements, it is important to understand the role these monetary proposals are designed to play in the postwar world.

There are two proposals. The first would set up an International Bank for Reconstruction and Development, its capital subscribed by all the member countries. The necessity for such a bank is universally admitted. There must be a vast store of capital to rebuild and restore the disrupted parts of the world. In the early stages, most of it probably will flow from the United States, to England, France, and Holland, and a few other countries whose normally high productive capacity can be quickly restored if their industries are given access to credit. Other countries, weaker in industrial potential but important, nevertheless, as suppliers of world commodities, must likewise have capital aid to bring them back into production.

The function of the bank will be to select the good risks among the would-be borrowers and lend to them directly or, in most cases, underwrite and guarantee their borrowings to private investors. This is equivalent to saying that it will act in most respects precisely like a traditional investment bank, with the management and directors obligated to consider the safety of principal first of all. The working capital will be subscribed by the participating governments, but if the plan is widely used, private investment capital will be the main reliance. The bank's guarantee of the bonds will be a mere insurance factor if the loans are judicious.

There is no effective opposition to the speedy adoption of the bank proposal, chiefly because full authority is given the management and directors to exercise normal banking prudence.

The International Monetary Fund, second of the Bretton Woods proposals—indeed, first, if we remember the original reasons for calling the Conference—is in much different case. The primary function of the fund is to recapture and restore some measure of that currency stability which the world enjoyed in the long period in which gold was the standard in international exchange.

The melancholy story of the abandonment of gold as a fixed standard is familiar to everyone. The governments of Europe and even, in 1933, the United States, were unable to withstand the political and social pressures created by the dislocations of the last war and devalued their currencies one by one. Having made this decision, most of them were unable to find a fixed resting place. Their weakness in this respect was made to appear like strength by the emergence of a group of economic thinkers who, in seductive language, argued that the gold standard was a wicked and destructive fallacy.

Unfortunately, they provided no effective substitute for the thing they were bent upon destroying, leaving the world with no ultimate recourse but bilateral bartering, which is the very antithesis of free-flowing trade. But trade must flow freely after the war or else the nations, or small groups of them, will become so many isolated camps, each seeking the impossible goal of self-sufficiency and each finding, instead, a declining standard of living.

It is easier to leave the path of righteousness than to return it. Even the well intentioned countries of the world have got themselves into such a tangle of tricky bilateral devices, often adopted with laudable motives, that they are hog-tied. It is only by common agreement that they can begin to rid themselves of the shackles which they have put on. The difficulty, of course, is to work out some basis of agreement.

This is what the fund seeks to find. In the nature of things, its proposals are highly technical (for money, since the undermining of the gold standard, has become the most complicated subject in all economics) and only a few specialists can hope to understand all that they imply. Many bankers, indeed, oppose the fund not because they disagree with its purpose but because they are lost in the mazes of its implications.

What the fund says, in effect, is that as of any given date, most of the important currencies of the world have a relation, expressed in the exchange rates, to the American dollar. The dollar has a definite tie with gold, so that there will be, as of the selected date, some general agreement as to the relative value of each nation's money. The objective, then, is to hold to that value as far as may be possible, so that international trade may be carried on without the harassment of monetary fluctuations.

The fund requires that the member nations set up a common pool, each contributing according to its abilities. The whole pool will amount to $8,800,000,000, of which the United States contribution will be $2,750,000,000. That is the extent of our primary risk. The sums put up by other nations will be in their own currencies, with a certain percentage of gold, the quota of each to be in gold or in terms of United States dollars.

A nation buying from Britain will need pounds; one buying from the United States will need dollars, and so on. If trade is balanced—which is to say if each nation's goods and services sold exactly equal the goods and services bought, the fund will have no function. But if, as usually happens, a nation's purchases temporarily exceed its sales and so put its accounts out of balance, it may exchange a portion of its currency in the fund for an equivalent amount of the currency it needs to make its payments to its creditor. When the balance is restored by further trading, it will buy back its own currency with dollars or pounds and so reestablish its normal relation to the fund.

Nations which allow their relations to the fund get too far out of balance by overbuying may, under certain conditions, be refused further access to its services. Those who continually sell more than they buy (or finance by long-term credits) will find their currencies in such demand the fund's supply of them approaches exhaustion. The fund will then have the right to report on this situation and make suggestions for correcting it. These corrective measures, if adopted, should restore the sought-for stability.

If a country is operating under trade practices which impair the free flow of goods, its credit with the fund will soon be exhausted and it will have to consult the fund as to its further course. If, on the other hand, that country struggles toward achieving a trade balance, it will tend to reduce its commitments to the fund and find less and less need to call upon the fund's resources.

But, as is all too evident, there will be many forces working to prevent such relative stability, many of them political in their nature and hence unpredictable. Take the case of Great Britain, for example. If she is to restore her economy, she must buy and sell in the world's markets upon a scale greater than ever before. "Export or die" has become the British slogan, and it precisely expresses her need. But Britain has other needs, of which housing is an example, which press upon her mightily. If too large a percentage of British labor and British material is diverted to housing, the remainder available for export goods will not be sufficient to pay for her import needs. This dilemma is fundamental in British politics today. At best, internal pressures will force her to use to the full every avenue of foreign credit open to her, with a consequent political strain upon her currency for a long time to come. Politicians, as we know from sad experience, tend to seek to relieve such strains by devices which often do more harm than good.

One good argument for the fund is that it aims to strengthen the arms of those governments which are conscientiously seeking to avoid currency manipulation despite internal political and economic pressures. To that extent it can justly be called political, which is one of the epithets which suspicious persons have applied to it. To that extent it departs from the purely banking function. But it is surely admirable to provide a mechanism and a pool of money to uphold those political forces in a nation which are seeking stability.

How, then, will the fund operate to achieve this goal? In the first place, it will put a limit on currency devaluations. It does not say flatly that no country can devalue its currency in terms of the American dollar. But it does say that a country which finds devaluation necessary must inform the fund of its intention and in no case can it devalue more than 10 percent. If a country insists upon its rights to go further than this, it cannot do so against the advice of the management of the fund and still remain a member in good standing.

What this adds up to, as we have said, is encouragement to governments to cease using money tricks either to get themselves out of political dilemmas at home or to advantage their exporters in international trade. The agreement to consult is the basic strength of the fund. The threat of loss of membership is the stick behind the door.

Now it is obvious that such an organization touches only a small part of the tangle of difficulties which will face the world after the war. It can affect only indirectly such matters as tariffs, quotas, bilateral agreements, cartels, and all the other devices to which a harassed world resorted when ruin threatened. It can exert only moderate force upon those nations which, in short-sighted desperation, resort to governmental spending and deficit financing.

Also, the fund would lose all its persuasive powers, insofar as we are concerned, were we to make the tragic error of failing to renew the Hull Trade Agreements Act, which provides for the gradual reduction of tariffs.

The fund, in brief, will achieve its full usefulness only if it is a part of the whole complex scheme of international collaboration which we are now attempting to work out. In such a scheme, its complexities would tend to disappear, for it would work almost automatically for the more stable and better-governed countries and would become a source of strength for those whose political bases are more uncertain. It would never, of course, be as exact and as demanding a standard as gold was in the old days. But it would be an anchor to windward during most of the storms which could affect a well-intentioned and reasonably well-ordered world.

The risks taken by the United States in the establishment of the fund, as in the establishment of any of the several international agencies now under discussion, will be great. They will, in fact, be exactly commensurate with our position as the most powerful nation in the world. But the authority conferred upon us will be in equal measure. The fund cannot exist without our collaboration. Likewise, it cannot function successfully unless we accept the responsibility entailed.

The alternative to assuming these risks and accepting this responsibility is a return to the tragic dislocations of the thirties, with bloody war as the inevitable outcome. The Congress of the United States should prove to the world our coming of age by voting for both the bank and the fund.

Casting Bread Upon the Waters!

EXTENSION OF REMARKS

OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, April 16, 1945

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Casting Bread Upon the Waters," by Maurice R. Franks, editor of the Railroad Workers' Journal, and published in the April 1945 issue of the journal. I believe a reading of the editorial by Senators and the American people will give them some food for thought not only in connection with labor but in connection with capital and management.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CASTING BREAD UPON THE WATERS!

The war, like everything else, must some day end. However, there are a lot of individuals connected with labor unions who seem not to realize this fact. Their actions lead one to believe that they don't want the war to end, and I can well understand their attitude, because most businesses with whom they deal, through the conditions of the war, are not able to operate in strict conformity with good business policies, and many labor leaders, through this condition, are getting by with murder.

Unions, generally speaking, have done very little in lines of casting their bread upon the waters of public opinion. The leaders—not all, but a good many of them—have been displaying the attitude of "will you, won't you, or else," with the inevitable reaction of distaste in the mouths of the citizenry as a whole.

Workers are being told that unless they join a union, and pay the toll demanded by the leaders, they will not be allowed to work. Employers are being told that unless they collect this toll from their workers through the check-off system, they will not be allowed to operate their business. The public is being told that if it does not like it, it can take a good jump into the lake, and all of this is practically telling the men in the armed services that if they don't like it they can jump right into a fox hole. In short, unions had better start casting their bread upon the waters if they don't want to be engulfed in the deluge of adverse public opinion which is bound to arise after the war is over.

This writer believes in collective bargaining; in legitimate strikes; in fact, in all prerogatives conducive to good Americanism. But I do not believe in unnecessary strikes over unreasonable demands; in jurisdictional-disputes strikes affecting innocent parties, who suffer for the inability of unions to set up specific organizations for specific occupations. I have no sympathy for the so-called sympathy strikes arising out of grievances in an industry having no actual bearing on the sympathizers.

Unions are selling themselves short on the market of public opinion in more ways than one. When this war is over, and business gets down to business, and if matters stand as of today, little will have been done to sell unionism to the worker, the employer, and the general public. The leadership of labor—and let the chips fall where they may—should hide its head in shame for its part in selling organized labor short during this war. Unions are missing their golden opportunity by not placing the welfare of this Nation beyond everything else at a time like this. In my mind, Americanism holds priority over unionism, now and at all times.

We, on this side of the two oceans, sit very complacently by while our armed forces are giving their all to further guarantee life, liberty, and the pursuit of happiness for all of us. Believe me, when this war is over and the boys return to find that unions have sold them short, I believe they are not going to like it, and it is not going to take them very long to do something about it. Yes, unionism is on trial and the jury is out—out fighting a bunch of Nazis and Japs, people who do not believe in the individual's rights to life, liberty, and the pursuit of happiness. But one of these days, this jury is going to file in to the court of public opinion with their findings, and I am afraid their recommendations and the sentence of the judge is not going to do organized labor much good. I pray that the innocent people of organized labor, who have done their all during this war, will not be made to suffer for the actions of the guilty.

It is recorded that employers, prior to the establishment of unionism, were damnably unjust to their workers, and in many instances lost sight of the fact that the Almighty God is greater than the almighty dollar. Everything was secondary to the earning of the dollar. The workers' welfare meant nothing to them. They operated their businesses as if workers were nothing more than slaves, people in bondage; as if God only endowed them with the right to be treated as humans.

The inhumane treatment of workers over a period of years built up resentment to a point of rebellion against man's inhumanity to man, and out of all of this came the workingman's right to protect himself against the industrial Simon Legree, the worker's right, by law, to collective bargaining. No fair-minded person will argue against this as being a forward step in human relationship. Therefore, it is apparent that unions came into being in order to keep "Legreeism" down to the minimum. But lo and behold, what do we have now? In place of abuse to the worker by the crooked employer, we are daily evidencing treatment equally dishonest, and meted out, if you please, by the very people trusted to guard against all abuse to the man who earns his living by toil.

Many unions (and the word many is not an exaggerative word in this instance) are putting the almighty dollar above everything else. Unless workers pay tribute in amounts not always conducive to the actual safe operation of a union, they are not allowed to work, which places them in a worse position than the slave of years ago, because from what I read about slaves, their masters provided food and shelter.

In examining the financial statements of our big unions of today, and coming across the item of surplus, one begins to wonder, "Are these big unions, or are they big business"? Their financial resources are staggering, which makes this writer wonder if unions are not also trying to get wealthy at the expense of the worker. Really I would like to see a healthy financial surplus in every union, but when I see their financial resources grow, and grow, and grow, and no actual evidence of betterment for the constituency, no assurance of longevity, then I can only conclude that unions are becoming vast financial institutions, with the almighty dollar as their main objective, and this, my friends, is a hell of a condition of unionism.

Unless the rank and file revolts against this treatment, it will become so repugnant to the general public that laws of restriction will be enacted. These laws may mean the end of unionism in this country, because their enactment will invariably be under pressure of mob hysteria. If this comes about, I feel sorry for the people who have to earn their livelihood through toil, because it will not be long after restrictive union legislation that the Simon Legrees of industry will start popping up again and lashing their workers as they did before the coming of unions. We need good unions, and we need good industrialists, but to have these we must, at all times, have enlightened, honest leaders "casting bread upon the waters."

Frankly yours,

MAURICE R. FRANKS, *Editor.*

The President

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1945

Mr. HOFFMAN. Mr. Speaker, the forceful, dynamic Franklin Delano Roosevelt has reached the end of the road we are all traveling, and only the coming years will disclose the effect which his policies, his life will have upon the lives of our people, the future of our Nation.

Some hailed him as the champion of the common man; others, equally sincere, considered his policies destructive of all they hold dear and sacred.

The book has been closed, and neither the most extravagant praise nor the bitterest condemnation can change the record which has been written. Only the future will disclose whether the ultimate result of those policies—those acts—will to our people—our Nation—be beneficial or otherwise.

In his place, a position from which, perhaps with one exception, can be exerted the most powerful influence upon world events for the next 100 years, we have Harry S. Truman.

President Truman, unlike former President Roosevelt, was not born of wealthy, socially prominent parents. Unlike former President Roosevelt, he was not born an aristocrat. He did not live among, and his early associates were not, those who, fairly or unfairly, considered themselves a little above the average American in worldly possessions and educational attainments. President Truman was born, lived with, grew up among, and associated with people who were just average Americans.

Born on the farm, a small-town, country lawyer, rising to political power and position, becoming a United States Senator, there has been nothing spectacular or out of the ordinary in his life and career. The only thing his political enemies have said against him is that his rise to power was aided by corrupt political machines. But who has not, at times, received the aid of those with whose policies and principles he had nothing in common?

President Truman belongs to that great class of people—the common people—of whom Lincoln is reported to have said, in substance, "The Lord must love them because he made so many of them."

President Truman is an average American possessing the good sense, the honesty, and, we believe, the faith and confidence in American institutions which is the heritage and security of the average American.

As a United States Senator, he was faithful to the trust reposed in him and, while he has been a loyal party man, there is no reason to believe that he ever has, or ever will, let party or political advantage work to the detriment of the welfare of our people as a whole, of our national stability and security.

President Truman has and, until there is some sound, overwhelming reason to do otherwise, will continue to have as President the confidence and the support of all political parties and of the people as a whole.

We ask for him divine guidance, the strength to perform the enormous tasks which confront him.

Address of Hon. Edward R. Stettinius, Jr., Secretary of State, at the Meeting in Honor of Hon. Sol Bloom, of New York

EXTENSION OF REMARKS
OF
HON. CHARLES A. EATON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. EATON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by the Honorable Edward R. Stettinius, Jr., Secretary of State, at the meeting in honor of Congressman SOL BLOOM at the Hotel Riverside-Plaza, New York City, April 6, 1945, under the auspices of the American Labor Party, New York County Committee, over Station WMCA:

As long ago as July 1943, an American statesman said: "Only a lasting peace as well as a just peace will now satisfy the United States and the world." And he added, prophetically. "If we are willing to shed our blood and pour out the Nation's wealth to achieve a just peace, we certainly are willing to cooperate with other free peoples to make it a lasting peace. We are not fighting for a 25-year peace, no matter how just it might be. We do not intend to have our boys killed in another war."

I quote these words to you as just one example of the clear thinking, the far-sighted thinking, of the man who is our guest of honor tonight—SOL BLOOM.

SOL BLOOM is a man of varied interests and strong enthusiasms. He has tasted the romance of America. He knows its history, and he knows its people. Human causes attract him irresistibly. He is, in fact, a great democrat—with a small as well as a capital D. The record of his public services is long and distinguished.

But I think that nowhere have his qualities of mind and heart been of greater service to his country than in the Congress itself. As a member of the Foreign Affairs Committee of the House of Representatives during the past 17 years, and as its chairman for the past 6 years—among the most critical years of our history—it has been his responsibility to lay before his committee, before the House, and eventually before the Nation itself great questions of foreign policy for debate and decision. On all these great controversial questions, the issues were always clear in SOL BLOOM's mind. The decisions for which he fought were right—as time has so abundantly demonstrated. Nevertheless, being the great democrat—small d—that he is, SOL BLOOM saw to it that all points of view were never denied a fair and a full hearing.

He has not overlooked the importance of an informed public opinion, and the deliberations in his committee room and on the floor of the House have helped millions of our citizens who were puzzled or in doubt to clarify their own thinking and better understand the great issues of these times in the field of our foreign relations. Let me give you just one classic example—the debates on the Lend-Lease Act in January and February of 1941.

We sometimes forget how deeply the Nation was divided on the issue of lend-lease, how many sincere and thoughtful people were still unconvinced that the Axis had aggressive designs on us. For weeks the eyes and ears of the Nation were riveted on the committee room where SOL BLOOM presided while scores of witnesses from every walk of life had their say. Patiently the committee listened and asked questions. All over the country people were listening and asking questions too. Americans stationed thousands of miles from home followed the hearings closely, knowing full well that our Nation stood at a crossroad in its history.

When H. R. 1776 finally reached the floor of the House on February 3, so clearly had the issues already been defined, that it was debated for only 5 days. It is not generally known, I think, that on each of these days SOL BLOOM and his colleagues of the committee met before the debate started to arm themselves with facts and figures, and to anticipate and discuss questions which might arise on the floor. As a result, the debate was a model of precision and clarity. Facts won the day—facts diligently amassed, accurately and convincingly presented by SOL BLOOM and his colleagues.

There you have an example of practical and responsible leadership. There you have one clue to his statesmanship, which has exerted such a profound effect on the course of legislation in the past 6 years. I think it may be said that at no period in our history has the House of Representatives played a more useful or influential role in the formation of our foreign policy.

It is, therefore, eminently fitting, from my point of view as Secretary of State, that you are doing honor to SOL BLOOM. It is also wise in my judgment that SOL BLOOM and his distinguished colleague from New Jersey, Representative CHARLES EATON, the ranking minority member of the Foreign Affairs Committee, have been selected to go to San Francisco as delegates to the United Nations Conference. We have good reason to rejoice that SOL BLOOM is to have a hand in writing the charter of a world organization to maintain the lasting peace for which he has fought and worked so well and so long.

It is also a source of great satisfaction to me that the Congress of the United States is to be so fully represented at San Francisco. Not only will SOL BLOOM and CHARLES EATON be there are Members of the House, but two distinguished Senators—TOM CONNALLY, of Texas, and ARTHUR H. VANDENBERG, of Michigan—will also be in the United States delegation. Half of the members of the delegation will be Members of Congress.

The executive and legislative branches of our Government are thus brought into close cooperation in the great task of laying the foundation so ardently desired by all our people.

The very active role to be taken by Senators and Representatives in the forthcoming conference is a good omen. As Administrator of the lend-lease program and in my present position, I have had many associations with Members of Congress during these last critical years. I have found them deeply conscious of the great responsibilities which the United States carriers in the shaping of an orderly and peaceful world. And I know, too, that from the Members of Congress, Americans in all sections of the country obtain much of their information on the issues of the day.

So I am glad when Members of the Senate and House are able to undertake additional responsibilities in the solution of these issues. During the Conference of American Republics at Mexico City, it was invaluable to have at our side as advisers, Senator TOM CONNALLY, of Texas, Senator WARREN R. AUSTIN, of Vermont, and Representatives EDITH NOURSE ROGERS, of Massachusetts, and LUTHER JOHNSON, of Texas. Recently the President sent on a special mission to China Congressman MIKE MANSFIELD, who once had served in the Orient in the United States marines. And I think it is a good thing that so many Members of Congress have visited the fighting fronts and seen for themselves what it has meant in effort and sacrifice and suffering to win one more chance to establish secure peace in the world.

Men like Congressman BLOOM, of New York; Senator CONNALLY, of Texas; and Congressman MANSFIELD, of Montana, bring to us in the State Department views and in the conduct of our foreign relations and opinions which are of invaluable assistance in gaging public opinion. And we, in turn, know that they also bring to their colleagues in Congress fuller understanding of the problems and efforts of the executive branch of the Government.

You of labor are honoring SOL BLOOM tonight. I can think of no economic group with a greater stake in the sort of world which SOL BLOOM and the rest of us hope to make possible by the deliberations at San Francisco. Millions of men from the ranks of labor are fighting on the battlefields. War exacts from the working people of the world a terrible price. War retards that social progress and that wider opportunity and security which labor seeks.

A major task of the world organization will be the establishment of those economic and social conditions which make for peace. Economic rivalries, poverty, and oppression breed wars. Economic security, rising standards of living, and freedom are the climate of peace. They represent the aspiration of working people all over the world.

Speaking to the first session of the Inter-American Conference at Mexico City in February, I said, "The United States intends to propose and support measures for closer cooperation among us in public health, nutrition and food supply, labor education, science, freedom of information, transportation, and in economic development, including industrialization and the modernization of agriculture." That represents our policy, not only in our relations with the other American republics but with the rest of the world.

These are objectives in which labor has a fundamental interest. They can be attained, both in this country and in other countries, only in a world secure from war and the constant and eroding fear of war.

The very fact that success of San Francisco is necessary to the future of all nations is itself the best insurance of success. It sometimes seems to me almost incredible that our civilization, which has produced the amazing technical developments of this century has not had the genius to establish a world order in which this inventive skill will be used to satisfy the highest aspirations of man, rather than to maim and kill him. Yet that is the point where we now stand in history.

President Roosevelt said nearly 10 years ago that this generation of Americans had a rendezvous with destiny. Such a rendezvous with destiny will begin on the other side of this continent 15 days from now. I rejoice that at our side, in this critical hour, will be a man with the steady wisdom, the lofty ideals and the long experience of your Representative in the Congress of the United States—the honorable SOL BLOOM.

House Joint Resolution 131

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. KOPPLEMANN. Mr. Speaker, I introduced on March 19, 1945, House Joint Resolution 131, to provide for authorizing the American representative on the International Security Council to pledge the use of American armed forces immediately upon need to prevent World War No. 3.

In support of this proposal, I would like to quote the Honorable TOM CONNALLY, chairman of the Foreign Relations Committee of the Senate, who is quoted as having said to the Rotary Club here in Washington, April 12, as follows:

"It must be borne in mind," the Senator said, "that the use of force under the conditions contemplated is not an act of war. It is an act to prevent war. It is essentially a peace measure. The history of international law is full of examples of the use of and display of force for the protection of the rights of nationals and the defense of property and to repel aggression on the high seas which did not actually result in war.

Upon the question of empowering the United States' representative upon the executive council to vote without reference to Congress, there cannot, in my opinion, be any alternative. It is absolutely essential that our representative have power to act in all cases of emergency.

We have learned that aggressor powers can and do act promptly, and unless the council is able to act promptly, there would be little use in acting at all.

The United States Congress will no doubt enact legislation providing for the selection of a United States representative on the council. In that act his authority can be defined and limited if necessary. No representative of the United States on the council would dare defy the opinion of the President of the United States or of the Congress.

Senator CONNALLY'S suggestion is provided for in House Joint Resolution 131. In it I provide first that the representative of the United States to the Security Council shall have authority after consultation with the President, the Secretary of State, and the chairman of the Committee on Foreign Relations of Senate and the chairman of the Committee on Foreign Affairs of the House of Representatives, if it can be done. My phraseology there is as may be practicable under the circumstances, to act immediately to pledge the use of the armed forces of the United States as may be required to enforce the decisions of the International Security Organization.

We all know how deeply our beloved President, whose death has laid on us all added responsibility to carry to completion his objectives for international order, desired adequate definition of this phase of our responsibility. In his speech before the Foreign Policy Association in New York City, October 21, 1944, he voiced his concept of the procedure by which the United States should share in the decisions of the International Security Council:

Peace, like war, can succeed only where there is a will to enforce it, and when there is available power to enforce it.

The Council of the United Nations must have the power to act quickly and decisively to keep the peace by force, if necessary. A policeman would not be a very effective policeman if, when he saw a felon break into a house, he had to go to the town hall and call a town meeting to issue a warrant before the felon could be arrested.

If we do not catch the international felon when we have our hands on him, if we let him get away with his loot because the town council has not passed an ordinance authorizing his arrest, then we are not doing our share to prevent another World War. The people of the Nation want their Government to act, and not merely to talk, whenever and wherever there is a threat to world peace.

General Hines Finally Persuaded To Revise Veterans' Hospital Application

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. SPRINGER. Mr. Speaker, we are witnessing with bowed heads as bureaucracy and obnoxious red tape gnaws its way into our homes and business institutions destroying the very principles upon which our country was founded. In this connection let us pause for a few minutes to pay tribute to an American Legion post that had the courage and resourcefulness to call upon Congress to fight a giant Government octopus and clip from it a few of its outstretched tentacles.

On September 7, 1944, I placed in the CONGRESSIONAL RECORD a resolution handed to me by Vice Commander Joe Leib, of the Costello Post, Washington, D. C., demanding the deletion of a number of objectionable questions that appeared on the application form for admission to veteran hospitalization.

In addition I introduced two bills calling for the revision of the form.

Five months later, on February 7, 1945, the Veterans' Administration released a new streamlined application form which took out 75 percent of the questions objected to. The fight to eliminate the other 25 percent of objectionable questions will be continued, and I hope that hearings will be held soon on my bill H. R. 599.

It is reassuring and heartening to make a comparison between the new form which is now only one and one-half pages long, while the former application was four pages in size. Here is the new streamlined form:

[New]

VETERANS' ADMINISTRATION
Form P-10 (Rev. December 1944)

APPLICATION FOR HOSPITAL TREATMENT OR DOMICILIARY CARE

The applicant should forward this form, when fully executed, with the original or a certified copy of his discharge or release from last period of service, to the Veterans Administration facility nearest his home, which is located at _____
(Location of facility)

1. I, _____ C-No. _____ Social Security No. _____ hereby apply for
(Print) (Last name) (First name) (Middle name)
admission to a Veterans Administration facility for *(hospital treatment) (domiciliary care) _____

_____
(Date of birth) (Color) (Sex) (Place of birth) (Present place of residence)

2. My entire service in the active military or naval service of the United States has been as follows:

Enlisted		Serial No.	Discharged		Rank and organization	Character of discharge
Date	Place		Date	Place		

NOTE.—If you served under a name other than the one used in this application, indicate the name under which you served and the period of service _____

3. Have you filed claim for pension, compensation, or retirement pay? _____
(Yes or no)
What office has your case file? _____
(Location)

4. Give the name and address of your wife, or nearest relative, or guardian, or other person to notify in event of emergency.
_____
(Name) (Relationship) (Address)

NOTE.—Where application is for condition for which applicant was discharged for disability in line of duty, or held service-connected by Veterans Administration, questions 5, 6, and 7 need not be answered.

5. Are you entitled to hospital care by membership in a lodge, society, community group treatment plan, etc., or as a beneficiary of an insurance company, workmen's compensation commission, industrial accident board. etc.? _____ If "Yes," give name of agency or organization _____
(Yes or no)

6. Are you financially able to pay the necessary expenses of hospital or domiciliary care? _____
(Yes or no)

7. Are you able to pay transportation to and from a Veterans Administration facility? _____
(Yes or no)

8. Have you received hospital or domiciliary care from the Veterans Administration? _____
(Yes or no)

If "Yes," state when _____ and where _____
(Give most recent dates) (Name of facility, home, or hospital)

8a. If discharged against medical advice, absence without official leave, for disciplinary reasons, or given an enforced furlough, underline applicable term.

I * {have read / have had read to me} and understand all questions and answers on this form, and the printed provisions on the reverse hereof.

The answers to all questions are true and complete to the best of my knowledge and belief. The foregoing questions and answers are made a part hereof with full knowledge of the penalty provided for making a false statement as to material fact in this application.

Witnesses to signature by mark (X)

1. _____ _____
(Signature) (Signature of applicant or representative)

_____ Post office address _____
(Address) (Number) (Street)

2. _____
(Signature)

_____ _____
(Address) (City) (State)

Subscribed and sworn to before me this _____ day of _____, 19____, by _____ claimant, to whom the statements herein were fully made known and explained. I certify that the questions and answers thereto have, in my presence, been *{read to / read by} the claimant.

[SEAL] _____
Notary Public.

PENAL PROVISIONS APPLICABLE TO TITLE I, PUBLIC NO. 2, 73D CONGRESS

SECTION 15. Any person who shall knowingly make or cause to be made, or conspire, combine, aid or assist in, agree to, arrange for, or in any wise procure the making or presentation of a false or fraudulent affidavit, declaration certificate, statement, voucher, or paper, or writing purporting to be such, concerning any claim for benefits under this title, shall forfeit all rights, claims, and benefits under this title, and, in addition to any and all other penalties imposed by law, shall be guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not more than $1,000 or imprisonment for not more than 1 year, or both.

REDUCTION OF PENSION, COMPENSATION, OR EMERGENCY OFFICERS' RETIREMENT PAY WHILE RECEIVING HOSPITAL OR DOMICILIARY CARE

Where any disabled veteran having neither wife, child, nor dependent parent is being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof, the pension, compensation, or emergency officers' retirement pay shall not exceed $20 per month, provided that the amount payable for such disabled veteran entitled to pension under Part III, Veterans Regulation No. 1 (a), as amended, for nonservice connected disability shall not exceed $8 per month, and provided further, that where any disabled veteran who is being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof has a wife, child, or dependent parent, the pension, compensation, or emergency officers' retirement pay may, in the discretion of the Administrator, be apportioned on behalf of such wife, child, or dependent parent, in accordance with instructions issued by the Administrator.

NOTE

This application is made with notice of Public Law No. 382 approved December 26, 1941 (38 U. S. Code 17-17j) which in effect provides that upon the death of any veteran receiving care or treatment by the Veterans' Administration in any institution leaving no widow (widower), next of kin, or heir entitled to inherit, all personal property, including money or balances in bank, and all claims and choses in action, owned by such veteran, and not disposed of by will or otherwise, will become the property of the United States as trustee for the Post Fund.

MEDICAL CERTIFICATE

A careful physical (including mental) examination of the applicant discloses these findings and diagnosis:

(1) Brief history:

(2) Symptoms:

(3) Physical findings:

(4) Diagnosis:

(5) Strike out the clauses not applicable: The applicant (is) (is not) ambulant. He (is) (is not) mentally competent. He (will) (will not) need an attendant during his travel. The proposed attendant's name is _____ address _____ The attendant (is) (is not) a relative of the patient. It is proposed that travel to the hospital will be made by (train), (bus), (automobile).

_____ _____ _____ _____ _____
(Date) (Signature of examining physician) (Street) (City) (State)

*Strike out inapplicable words or phrases.

OLD APPLICATION

Mr. Speaker, now compare the two forms. Note that the Veterans' Administration removed the penal provisions from the front of the old form and had it inserted at the rear of the new application. This was obviously done so that the threatening clause would not be so noticeable. The Veterans' Administration was not sure of the justification of this clause or it would not have taken this unusual step.

Worthy also of attention is the note under question No. 4 on the new form. This means that if a veteran makes application for hospitalization for a condition for which he is held service-connected he need not answer questions 5, 6, and 7 or otherwise known as a pauper oath.

But if a service-connected veteran desires medical attention for an ailment other than cause of discharge he is forced to sign the pauper's oath and certified by a notary public. Here is the old application:

[Old]

VETERANS' ADMINISTRATION
Form P-10—Rev. Aug. 1943

APPLICATION FOR HOSPITAL TREATMENT OR DOMICILIARY CARE

Penal Provisions Applicable to title I, Public, No. 2, 73d Congress

SECTION 15. Any person who shall knowingly make or cause to be made, or conspire, combine, aid or assist in, agree to, arrange for, or in anywise procure the making or presentation of a false or fraudulent affidavit, declaration certificate, statement, voucher, or paper, or writing purporting to be such, concerning any claim for benefits under this title, shall forfeit all rights, claims, and benefits under this title, and, in addition to any and all other penalties imposed by law, shall be guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not more than $1,000 or imprisonment for not more than one year, or both.

REDUCTION OF PENSION, COMPENSATION, OR EMERGENCY OFFICERS' RETIREMENT PAY WHILE RECEIVING HOSPITAL OR DOMICILIARY CARE

Where any disabled veteran having neither wife, child, nor dependent parent is being furnished hospital treatment, institutional or domiciliary care by the United States or any political subdivision thereof, the pension, compensation, or emergency officers' retirement pay shall not exceed $20 per month, provided that the amount payable for such disabled veteran entitled to pension for disability the result of injury or disease incurred after active military or naval service shall not exceed $8 per month, and provided further, that where any disabled veteran who is being furnished hospital treatment, institutional or domiciliary care by the United States or any policital subdivision thereof, has a wife, child, or dependent parent the pension, compensation, or emergency officers' retirement pay may, in the discretion of the Administrator, be apportioned on behalf of such wife, child, or dependent parent, in accordance with instructions issued by the Administrator.

The applicant should forward this form, when fully executed, with a certified copy of his discharge from last period of service, to the Veterans' Administration facility nearest his home, which is located at _____
(Location of facility)

1. I, _____ (Print) (Last name) (First name) (Middle name) C-No. _____
hereby apply for admission to a Veterans Administration facility for (hospital treatment) (domiciliary care)* _____

Regular Veterans' Survey To Aid Returning Veterans

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. HAGEN. Mr. Speaker and colleagues, many plans have been advanced to aid the service people returning from the wars. We are all concerned about getting these brave young people—our young men and women—back on good paying jobs as soon as they have rested and are able to again assume their place in civilian life.

To assist in this tremendous program, the Regular Veterans' Association has sent out a questionnaire through its official publication, The Regular, which will assist veterans in adjusting themselves to civilian life. The questionnaire provides the veteran with an opportunity to outline his qualifications and his reactions as to the type of work he wants to engage in when he returns home.

Because I feel that this survey is of great importance and significance, I am inserting herewith the article and questionnaires which appeared in The Regular of April 1945:

REGULAR VETERANS' ASSOCIATION FORMS JOB COUNCIL—PREDISCHARGE EMPLOYMENT GROUP HEADED BY ENGSTRUM

National Commander William M. Floyd has announced that the National Advisory Council of the Regular Veterans' Association has approved and established in the organization's national headquarters in Washington, a predischarge employment advisory council, and they appointed Regular Paul Engstrum, of Washington and Los Angeles as its national director.

Regular Engstrum is well known in business and professional circles as a consulting and industrial engineer and organizer, and enjoys an enviable reputation in his chosen field of endeavor throughout the Nation.

Regular Engstrum is a veteran of the last war, having served in our Navy in France as a special engineer, and was decorated by the Republic of France with the Croix de Guerre with Palm Leaf.

The National Predischarge Employment Council of the R. V. A. is national in scope and will operate through its posts and auxiliaries throughout the Nation. This predischarge employment advisory council has two main objectives: First, to get the members of our armed forces into private employment of their own choosing, for which they are qualified by education, training, and experience, as quickly as possible after their discharge, by arranging for their employment while they are still in the services. To accomplish this purpose the R. V. A. is sending to the members of the armed forces a simple questionnaire which came off the press today, and which when filled out should be returned as quickly as possible to our national headquarters here in the Nation's Capital. When the questionnaire is received in the national headquarters it will be given individual attention and each case will be handled according to the specific instructions outlined by the individual. Our second objective is to have the veteran assume his rightful place in his community as quickly as possible and to conserve his weekly unemployment allowances as provided for by the G. I. bill of rights—by that we mean we desire that the veteran be placed in a suitable position as previously outlined in our first objective. As you know, a discharged veteran is entitled to $20 per week unemployment compensation for a maximum period of 52 weeks. Nobody expects one to live on that, and it is for that reason that the Regular Veterans' Association has set up this council, by which it will put forth its best efforts to find suitable employment for members of the armed forces while they are still in the service. It was amazed to learn that for the week of March 17 alone, this year, the Government paid out $642,207 to unemployed veterans.

Now, no one begrudges these veterans a single bit of that money, but this is wartime, jobs are plentiful, and this unemployment compensation should not be used up at this time, but should be kept in reserve for an emergency, which at this time is not foreseeable.

Commander Floyd said the new council on employment will consist of Regular Engstrum as director, himself as the ex officio member, the administrative council of 21 members, 13 zone councilmen, and representatives from each of the various services.

In a joint statement following Engstrum's appointment, they described the plan in detail, as follows:

1. Employment applications are being sent to men and women in the services. These will seek the usual information about ability, vocation, past experience, and will also seek to determine peace-time location preference, family status, references, and other pertinent facts such as the whys and wherefores of any desired changes in employment status or location.

2. Upon receipt at R. V. A. headquarters the cards, 6 by 10 inches, will be made up in several copies and forwarded to regional and State R. V. A. employment officers who will immediately consult with prospective employers and help to arrange the job opening on an if-and-when basis.

3. Once the job has been obtained the R. V. A. will seek housing conditions, costs, and other facts, conveying them to the service person in detail.

4. There is no charge for this service to the service person or the employer.

5. The members of the armed forces to be eligible must have been honorably discharged.

Pointing to the growing cost of supporting discharged personnel on the $20 per week donation by the Government, Commander Floyd and Paul Engstrum said that for the week only of March 17, 1945, a total of $642,207 was paid out to 28,566 discharged persons who did not have private employment.

They said, and the War Department agreed, that a million and a half persons had been discharged up to the end of last year. Commander Floyd said that "unless something is done like our plan immediately, there is a good chance these weekly so-called Government unemployment checks may reach the staggering total of 30,000,000 annually."

And, added Regular Paul Engstrum, "Who wants our veterans who have given so much to try and get along on $20 a week. This permits of too much time to get into mischief; too much time to get into little side lines for added income, some of which could be illegal with bad results. The R. V. A. has taken upon itself the task of preventing as far as possible this very thing. Employers will be asked to hire these men on an if and when basis. We expect a great majority of these arrangements will hold until the discharged person reports for work, at a decent living wage which will make it unnecessary for the Government to hand out this dole, for that is what it is, a dole, a sort of discharged veterans' W. P. A. Our boys do not want that."

The weekly payment referred to by National Commander Floyd and Director Engstrum is paid to the discharged veteran after he has applied to the United States Employment Office and the U. S. E. S. has certified to the Veterans Administration that there is no job for the veteran. The Veterans Administration then pays out the money until the U. S. E. S. notifies them the veteran has been placed, or until the maximum payments have been made over the 52-week period.

The council, Paul Engstrum said, will cooperate with U. S. E. S. offices throughout the Nation. He will give all assistance to such offices. Engstrum, who coined the phrase, "When Termination Comes—Will You Be Prepared?" now is a consulting engineer in Washington on termination of Government contracts. He formerly was an engineer with the War Department. He is the son of the late founder and operator of the F. O. Engstrum Engineering Construction and Manufacturing Co., on the west coast and has spent much of his life engaged in aviation, transportation, shipbuilding and allied fields. He is a native Californian, attended Stanford University and others and holds membership in the Shrine, many patriotic and civic organizations, advertising, engineering clubs and others. He lives at the Hamilton Hotel in Washington and the Bryson Apartment Hotel in Los Angeles.

Ship Construction

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include therein a letter on the subject of ship construction from Admiral Vickery and a summary from the Maritime Commission showing tonnage deliveries under the Maritime Commission's program through the end of March 1945:

UNITED STATES MARITIME COMMISSION,
Washington, D. C., April 10, 1945.

The Honorable S. O. BLAND,
Chairman, Committee on Merchant Marine and Fisheries,
House of Representatives.

DEAR JUDGE BLAND: Believing it will be of interest to you, I am enclosing a tabulation showing the tonnage delivered each month under the Maritime Commission's program through the end of March 1945.

Last month American merchant shipyards completed 126 vessels with a total deadweight tonnage of 1,294,432. Between December 7, 1941, and April 1, 1945, deliveries totaled 4,699 ships of approximately 47,600,000 tons deadweight.

Last year, as you know, the Maritime Commission resumed the pre-war practice of contracting for ship construction on a fixed price basis (which includes both the lump-sum and selective price forms of contract). Moreover, during recent months numerous cost-plus-a-fee contracts have been converted to fixed price. During March, however, the Commission awarded the first shipbuilding contracts which it has let by competitive bidding since before the war. While certain wooden barges and tugs were the subject of competitive bidding in 1942 and early 1943, the vessels just awarded are 230-foot steel tankers of the T1-M-BK1 design for Lend-Lease account. Pursuant to invitations published on February 16, 1945, proposals were submitted by some 24 bidders and opened on March 16. Contracts for a total of 24 tankers were awarded to the three lowest bidders at prices well within the range of the Commission's estimates. Henceforth it is the Commission's intention to place any future ship construction contracts by competitive bidding.

With kind regards, I am,

Sincerely yours,

H. L. VICKERY,
Commissioner.

He Planted the Flag on Mount Suribachi

EXTENSION OF REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. SIKES. Mr. Speaker, seldom has America thrilled as it did to the picture of the raising of the American flag by the United States marines on Mount Suribachi. But there is a sad postscript to that picture. It is told in epic form by Technical Sgt. Keyes Beeck. I ask that it be reprinted in the CONGRESSIONAL RECORD:

SGT. ERNEST I. THOMAS, JR., WAS UP FRONT LEADING HIS MEN WHEN HE DIED

(By Technical Sgt. Keyes Beech)

IWO JIMA.—A Navy hospital corpsman tells of the death of Platoon Sgt. Ernest I. Thomas, Jr., of 112 East First Avenue, Tallahassee, Fla., the marine who raised the American flag on Mount Suribachi:

"We were up on a sort of ridge," said the corpsman, who was with Thomas, "and we had to cross an open area. Before we jumped off Tommy sized up the situation and said: 'It's going to be rough going over there.'

"But it wasn't so rough at first. I think we got across that open space without a casualty. Tommy was up front, where he always was, when we came to a rocky area.

"Then we began to get rifle fire from all directions. There were caves all around us and we couldn't tell where the fire was coming from.

"Tommy stopped beside a rock. He was holding his rifle straight up with the butt on the ground and was reaching for a phone when a bullet knocked the rifle out of his hand. You see, we had a wire-laying man with us to keep up communications.

"Tommy didn't do anything but glance at the rifle. He just went on talking over the phone to the first sergeant. He was telling him he didn't think we ought to advance any farther without some protection from the platoon on our right.

"Then he got hit and pitched over. The telephone fell out of his hand. He never knew what hit him."

"You can say this for the platoon," said the corpsman. "We'll never have another platoon leader like him."

Capt. Dave E. Severance, 26, of Seattle, Wash., his company commander, said of Thomas: "He was a damned good marine."

I knew Thomas, too, and this is not an easy story to write. But one thing helps. From where I sit, I can see the flag over Suribachi.

Sergeant Thomas was killed several days after planting the flag on Suribachi. His mother, an employee of the Florida State road department, was notified Wednesday by Lt. Gen. A. A. Vandegrift, Commandant of the Marine Corps, that her son died March 3, his twenty-first birthday.

War Veterans Should Keep Government Life Insurance

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. PATMAN. Mr. Speaker, the Institute of Life Insurance is doing a wonderful job informing veterans of this war that they should keep their Government life insurance. The institute is carrying a very valuable message to this effect to the servicemen, veterans, and their families through 300 daily newspapers with approximately 30,000,000 circulation.

Mr. Holgar J. Johnson, president of the institute, in a letter to me recently, stated:

INSTITUTE OF LIFE INSURANCE,
New York, N. Y., April 3, 1945.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN PATMAN: Approximately 16,600,000 National Service Life Insurance policies have been issued to members of our armed services, to the amount of more than $127,000,000,000.

This means that the average soldier, sailor, or marine has nearly $10,000 of service life insurance in addition to what he has in the regular life-insurance companies to sustain his family, or to serve as a foundation for building an estate when he returns to civilian life.

This insurance can give a measure of security to several million Americans and their families after the war, and the life insurance companies in America feel they can render a real public service by encouraging veterans to keep these policies in force.

Attached is proof of an advertising message which the life-insurance business is publishing in cooperation with the Veterans' Bureau. This message will appear in 300 daily newspapers with approximately 30,000,000 circulation throughout the United States, and in the leading military service publications.

This is but one feature of an organized program placing the facilities of the life-insurance business at the service of all veterans and their families in an advisory capacity in connection with National Service Life Insurance. Life-insurance agents in each community will cooperate with local veterans' organizations, and public officials or other groups interested in the welfare of those returning from service in our armed forces.

We will welcome the aid and endorsement of all leaders of public thought in this effort to have as many service men and women as possible take permanent advantage of this special life-insurance opportunity.

To assure widest possible circulation of this message to veterans, reprints similar to the enclosed will be furnished gladly upon request.

Very truly yours,

HOLGAR J. JOHNSON,
President.

The advertisement which appeared in the 300 daily newspapers is as follows:

A MESSAGE OF IMPORTANCE TO VETERANS[1] AND THEIR FAMILIES

VETERANS' ADMINISTRATION,
Washington, D. C.

To the Policyholders of Government Insurance:

Persons who actively served in the armed forces since October 6, 1940, have had the opportunity of applying for national service life insurance. Those who bought this insurance made a wise purchase. National service life insurance is low-cost insurance because the Government bears all losses due to the extra hazard of military and naval service and, in addition, pays all the expenses of administration.

When a person leaves this world he cannot take anything material with him but he can leave behind something of value to his loved ones. I know of no better way of protecting against their want than by means of adequate life insurance.

The insurance made available to you in the service was term insurance convertible without physical examination. It is a valuable asset which cannot be replaced. Continue to carry it. If you have let it lapse, reinstate it. When you are in a position to plan a long-range insurance program convert your insurance to a permanent form.

The American Life Convention, the Life Insurance Association of America, and the National Association of Life Underwriters, which represent the great majority of the life-insurance business, have all gone on record as indicating a desire to cooperate wholeheartedly with the Veterans' Administration in protecting the interests of service persons.

I welcome this cooperation and believe it will be a force for the accomplishment of great good. Accordingly I urge that you continue your Government insurance in force and I join with these life-insurance organizations in urging you not to exchange your Government insurance. Other insurance should supplement rather than replace Government insurance for veterans.

FRANK T. HINES,
Administrator of Veterans' Affairs.

FIRST STEPS TO TAKE WHEN DISCHARGED

Discharge from service in no way affects your Government insurance, except that premiums can no longer be deducted from your service pay, and you must now pay them direct.

Ordinarily, the premium for the month of discharge is deducted from your final pay settlement. Make a note of the date when the next premium is due (see your Form 53) and remember you must pay it within 31 days of that date.

Make your check or money order payable to the Treasurer of the United States and mail it to the Collections Subdivision, Veterans' Administration, Washington, D. C. Pay the premiums even though a premium notice does not reach you. It is most important to give your full name, birth date, present address, policy number, and your service serial number.

The financial health of America as a whole depends upon the financial health of every individual.

Recognizing this, America's life-insurance companies take this opportunity to cooperate with the Veterans' Administration in the conservation of life insurance issued to millions of individuals under the National Service Life Insurance Act.

As part of their educational program in the interests of all owners of life insurance, they wish to draw the attention of every man and woman in the armed forces, and their families, to the above letter of General Hines.

In cooperation with the Government, the life-insurance companies are advising their field forces and branch office personnel on the rights of veterans in regard to their national service life insurance.

Representatives of life insurance in the field will cooperate with various local veterans' organizations to provide a consultation service for veterans and veterans' organizations and to distribute the Veteran Bureau's official booklet, Continuance of National Service Life Insurance.

The life-insurance companies and their agents again welcome an opportunity to be of public service.

LIFE INSURANCE COMPANIES IN AMERICA,
New York, N. Y.

Mr. Speaker, this organization is to be commended for its generous contribution to the welfare of our veterans and their families, which is a contribution to the general welfare of our Nation.

[1] Even now, service men and women are being discharged at the rate of 70,000 a month.

President Truman at the Helm

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 17 (legislative day of Monday, April 16), 1945

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Barnet Nover entitled "President Truman at the Helm," published in the Washington Post of this morning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRESIDENT TRUMAN AT THE HELM

(By Barnet Nover)

The death of President Roosevelt has been followed, swiftly and spontaneously, by a closing of the ranks behind his successor.

This spirit of unity is a magnificent demonstration of the soundness of the political instincts of the American people.

Everyone is aware that President Truman has suddenly been called upon to bear greater burdens than were ever imposed on any American statesman of the past. And it is universally realized that he and the Nation over whose destinies he now presides will need the help of us all, Republicans and Democrats, New Dealers and Old Dealers, conservatives and liberals alike, to bring us safely through the difficult days that lie ahead.

No one is more aware of this need than President Truman himself. The plea for the cooperation of all Americans that he voiced in his address to the Congress on Monday was no rhetorical expression but the product of a clear-eyed awareness of the difficult and complex problems he has been called upon to deal.

But the President himself has greatly fostered the present mood of unity by his words and by his actions during his first days in office.

There was, for instance, his prompt decision, taken only an hour after he took the oath of office, that the San Francisco Conference should be held on schedule. There was his summoning from retirement of Justice James F. Byrnes to seek the latter's wise counsel. And he made a very favorable impression not only on his former colleagues in Congress but on the Nation as a whole by his informal visit to the Senate soon after his elevation to the Presidency.

The greatest problem that confronts the United States and the world today is the problem of organizing the peace that is to follow the war we are now certain to win.

In this field President Truman, as he himself would be the first to admit, lacks the special knowledge, the broad experience, that President Roosevelt possessed. But no one, like the writer, who has had the opportunity to discuss matters of international importance with the new Chief Executive, can have any doubt as to where he stands.

As Senator he supported every move looking in the direction of a realistic American policy of cooperation with the peace-loving nations of the world. He helped inspire and gave powerful support to the Burton-Ball-Hatch-Hill resolution. In his brief tenure as Vice President he was ceaselessly exerting himself behind the scenes to help make the San Francisco Conference a success.

His address to Congress is a clear indication that there will be no deviation in his administration from the broad lines of policy laid down by President Roosevelt. The goal is precisely the same.

The first great hurdle that President Truman has confronting him in this field is, of course, the San Francisco Conference.

It is enormously encouraging that at the very outset of his Presidency he has won a real triumph by persuading Marshal Stalin to reverse his earlier decision not to send Foreign Commissar Molotov to the United Nations Conference on International Organization.

President Truman's message to the Russian leader, sent by way of our Ambassador at Moscow, was polite but pointed.

Ambassador Harriman was instructed "to assure the Marshal that the coming of Foreign Secretary Molotov to the conference at San Francisco would be welcomed as an expression of earnest cooperation in carrying forward plans for formulating the new international organization as laid down by President Roosevelt and confirmed by the Yalta Conference."

Since Yalta many doubts have arisen regarding Russia's course.

The failure to designate Mr. Molotov as Russia's principal delegate was regarded by many as symptomatic of the Soviet Government's unwillingness, despite Yalta, to pursue a policy of wholehearted cooperation with the other members of the Big Three.

There was the complete lack of progress on the Polish issue, seemingly settled at Yalta. There were the irritations arising out of Russia's unilateral intervention in the Rumanian situation. There were the obstacles placed by Russia in the way of admitting American observers to the liberated regions adjacent to the Soviet Union.

We can only hope that Marshal Stalin's reversal regarding San Francisco reflects a

changing mood at Moscow; an awareness there that cooperation among the United Nations is essential to the well-being of all the nations making up the Grand Alliance. At any rate, the skies over San Francisco look a bit brighter today as a result of President Truman's wise démarche.

Open House at Ordnance Plant—Army Planning and War Situation by Major General Donovan

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. PATMAN. Mr. Speaker, the Red River Ordnance Depot, located near Texarkana, Tex., had open house recently. About 10,000 people passed through the gates and were permitted to observe the ammunition areas, tank and maintenance shops, and acres of concrete storage space for tanks, guns, tank destroyers, and various other types of weapons. This plant is operated by Col. Robert N. Bodine. Incidentally Colonel Bodine's father at one time served in Congress from Missouri. This was a fine gesture of good will on the part of Colonel Bodine. The people generally appreciated it very much.

At a luncheon held that day, Maj. Gen. Richard Donovan, commanding general of the Eighth Service Command, Dallas, Tex., delivered a very interesting and timely address. Permission having been granted, I am inserting it in the RECORD at this time. It is as follows:

Events in Europe, as all of us can clearly see, are bringing the war to one of its most important climaxes. You can easily imagine that the fall of Germany, when it comes, will mean a shift in Army planning. We shall have to undertake a very difficult switch of direction. From striking eastward—with backhand passes at the west—we shall have to turn full-front knockout blows on Japan. That will be a tremendous job. We are already carefully preparing for it.

You, as influential citizens of a war-industry area can understand that the Army's change of strategy is bound to require reorientation of civilian effort, too. Though I am not in a position to tell you exactly what that reorientation will be, I can indicate some of the things likely to be expected of you in the months to come.

At the beginning, I must warn you of one thing: It takes neither a gift of prophecy nor inside information to realize that the collapse of Germany will not mean relaxation of your effort—even in the slightest degree. On the contrary, we will then be tackling the worst problem of all—licking an enemy over a 5,000-mile ocean. If any of you are wishful thinkers who feel that, with Germany out of the way, we can make short shift of Japan, I would remaind you that the marines couldn't make short shift of Iwo Jima. The advantages of position on that island, as in Japan's home islands, obviously belong to the defenders.

The States of Texas and Arkansas are each one rich in natural resources and energy. Thus the meeting of the two States here in Texarkana has made your city and the surrounding communities a concentration point for those resources and energies. You have been of great importance to the war effort—particularly as a source of the materials of war. So, as we undertake the big supply job of overcoming Japan, it is hardly likely that you will be called upon to supply less than before.

As part of the Eighth Service Command, the Texarkana area is tightly linked with all the domestic operations of the Army Service Forces. Since your war effort is so closely allied to ours, what we plan to do will certainly affect you.

The most significant fact to be recognized is that the big job of organizing, training, and initially outfitting our Army has been completed. Our troops are no longer in camps. They are on the battlefields of the world. From the States of the Eighth Service Command we have sent 33 infantry and armored divisions to battle in Europe and the Pacific. The ordnance battalions, organized and trained here at your own Red River Ordnance Unit Training Center, have also gone—and are now applying at the battle front the specialized skills they learned here. I feel sure some of them are very busy these days, keeping General Patton's tanks in running order.

But the fact that the units which used to populate Red River have now left this continent does not mean that the facilities of the training center are no longer needed. Training an army is only the beginning. It must be maintained at the proper strength through constant replacement. It has to be continuously supplied and serviced, and, when the emergency passes, it will have to be disbanded in an orderly fashion.

The facilities here at Red River Ordnance Depot, like certain Eighth Service Command camps, are probably destined to play a significant part in what is likely to be the most difficult maneuver of the war. That will be the transfer of millions of men from Europe to the Pacific. Hundreds of units will have to be brought back to this country, reorganized, refitted, and perhaps retrained for combat in a vastly different theater. That is why we do not abandon certain of our camps, now that training is largely completed. We merely close them down—place them on a stand-by basis for the day when they will be essential to us again.

The continued success of our forces overseas is sharply reflected in two service-command activities which are of great consequence to the two States represented here today. Battles are usually won at the cost of many casualties. As our forces advance, it nearly always follows that the number of wounded sent home to our care increases. Similarly, victories result in the capture of enemy soldiers, which means more prisoners of war for us to guard.

The number of wounded being returned to this country has recently been averaging around 1,200 a day. Thousands of these men are each month assigned to beds in the six Eighth Service Command general hospitals located within Texas and Arkansas. Now we are in the midst of a broad expansion program to make it possible for most of these hospitals to take even more patients. Each one of the hospitals is adapted to specialized study of a particular type of wound or illness. With the three other general hospitals within the Eighth Service Command they make this region an important medical center in the Nation.

At the present we have within the Eighth Service Command almost a third of all the prisoners of war now held in this country. That means we have custody of around a hundred and ten thousand Germans and Italians in 40 base camps and more than 90 branch camps. A base camp is a permanent prison compound, set up like a Regular Army camp; a branch camp is a temporary location for housing prisoners near some work project during the time required to do a certain job.

You may not be aware of the importance of prisoners of war as a source of labor in your communities. We never put them to work on any civilian project until the War Manpower Commission certifies that no civilian labor is available in the area. When you realize that in 1944 prisoners of war harvested about one-half of the total rice acreage in Texas and picked over 33,000 bales of cotton in Arkansas, you can understand that they gathered for you crops which, if they had not been on hand, might not have been harvested at all. According to reports submitted by the respective extension services of Arkansas and Texas, prisoners of war also did essential crop-saving work in the corn and sorghum and small grain fields of both States. For the last week about 2,000 of them have been extremely busy in flood prevention control work on Arkansas and Mississippi River levees.

Our handling of these prisoners is exactly in accordance with what is known as the Geneva Convention—an international agreement titled "The Articles of the Prisoner-of-War Convention," signed at Geneva on July 27, 1929, by most nations of the world, including the United States, Germany, and Italy. In general, the provisions of this Convention establish rules for the care of prisoners of war and protect them against violence, insults, and public curiosity; further, it provides that prisoners of war shall receive the same food, the same housing, and the same medical care as soldiers of the army which holds them in custody. Collectively, as agents of an enemy government, these prisoners of war may be looked upon by some of our people as criminals; but, as individuals, they are soldiers who, no matter how deluded and wrong they may be in supporting criminal governments, nevertheless, believe they are doing their duty. That, according to the rules and standards of war as they have existed through the ages, gives them the status of honorable soldiers and the right to be treated as such. Not only does the Government of the United States comply with the letter as well as the spirit of the Geneva Convention but it also treats these prisoners of war in such a way as to offer enemy governments no excuse whatever for so-called retaliation against any of our boys who may be in their hands.

The Eighth Service Command is part of the Army Service Forces, the link between your production achievement here and the soldiers' fighting achievement at the front. For nearly 4 years we have been working together, you, the civilians of this area, and we, the soldiers of the Army Service Forces. Often our activities have been so closely coordinated it has been impossible to define the division between civilian and military effort. Thus, when our overseas forces are successful, you have a right to be proud—not only of your sons who compose those forces but of yourselves for your contribution of the materials of war.

We sometimes hear that the home front is complacent—doesn't know the war is going on. Without discussing the justice or injustice of such a charge, I should like to say that it should be carefully weighed before being leveled at such a community as this. Our forces stormed the Normandy beaches—and took them; they stormed the formidable Rhine—and crossed it; they have hit and conquered one Pacific island after another. And always, as men in the combat forces readily testify, the overwhelming force of the matériel of war which people like you have put in their hands is, in a large measure, responsible for their success.

Our armed forces have undertaken the most prodigious campaigns in military history, and practically every battle has been fought in lands completely stripped of natural resources. So what has been done was accomplished on food and arms shipped from

the United States—strength supplied by civilians in the greatest concerted production effort of all time.

It must be most gratifying to you people to know that your community has been the source of much of that strength. Your people have furnished the energy for two war plants which are models of wartime efficiency and which contribute each day directly to the downfall of our enemies. When you read about the Third Army, you must be very pleased to think that some of the tanks in it once rolled around Red River Ordnance and are now rolling through Germany, thanks to ordnance soldiers trained at Red River. Each morning when you read of our Air Forces' latest raid on Tokyo, you must be pleased to think that among the bombs were 500-pounders loaded at Lone Star Ordnance.

I have been told that if something "moves, explodes, shoots, or is shot, you'll find it at Red River Ordnance Depot." A look into any of the vast ordnance parts warehouses of Red River or a quick estimate in your mind of the terrific firepower stored in those ammunition igloos make that seem an understatement. It also makes you very proud of the sheer strength of our armament and of the people who have built it.

You may be sure that V-day in Europe will mean no let-up for the people of Texarkana and the communities around it. We will begin then our assault on the water-walled Japanese in earnest. You know from the demands of our primary blows that the conquest will require everything you can produce here.

When victory in Europe comes, all of us will naturally feel a sense of relief. The first objective of our war will have been achieved. It is imperative, however, that the relief never be allowed to become relaxation. We want to pause only long enough to get a compass bearing on our next objective—the islands of Japan. We want to stop work only long enough to evaluate the importance of our job in our westward drive. We will have a right to celebrate on that day, but we should remember that the most fitting celebration will be intensification of our war effort.

For we must not forget that the men who paid most to win the day will not be on hand to celebrate it. They, the dead who lie in north Africa, Italy, Belgium, and France, will expect much more of us than cheering in the streets because we fight, not that we may celebrate a day of victory over our enemies but to live henceforth a secure nation in a free world. Not even victory over Japan, which must be bought with labor and lives in the coming months, is our true objective. Whether they or we have ever consciously stated the fact to ourselves or not, our men have died, and we continue fighting over their bodies, to arrange a world in which our sons and grandsons will not have a wade from landing barges to foreign beaches 25 years from now.

So far as I can see, there is no relaxation in sight for this generation. When the last pillbox is burned out and the last Japanese sniper lies dead, we still will have work to do—the greatest undertaking mankind has ever faced—the building of an enduring peace.

No past generation has solved this problem. But this generation of Americans has done many impossible things—things beyond the conception of any man only a couple of years ago. When the time comes, let us undertake the problem of peace with the same vigor and skill we have used to conquer the Axis. Let us tackle it with the same spirit and courage with which our men in service have tackled and taken foreign beaches. Just as they won, we can win, too—through sheer American determination to win.

Address by Dr. Frederick Brown Harris at Roosevelt Memorial Service

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 17 (legislative day of Monday, April 16), 1945

Mr. HILL. Mr. President, on last Sunday afternoon an impressive memorial service was held in Constitutional Hall, in this city, in memory of our late President Franklin D. Roosevelt. On this occasion Dr. Frederick Brown Harris, Chaplain of the Senate, delivered a very beautiful, eloquent, and moving address in tribute to Franklin D. Roosevelt. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"The President looked very much worn and tired—the lines of vast responsibilities, intricate questions and demands of life and death cut deeper than ever upon his face—yet he had all the old goodness, sadness, and canny shrewdness underneath the furrows * * * a combination of purest, heartiest tenderness and native manliness."

That might have been written by one who sat near the President, watching every expression of his face, as but recently he came to the combined session of Congress to report on the Yalta Conference. But this description of a face worn and tired, into which the lines of vast responsibilities, intricate questions and demands of life and death had cut deeper, is Walt Whitman's depiction of Abraham Lincoln, as he observed him at close range during dark days that tried men's souls. But it is also a perfect etching of President Roosevelt as he appeared on that last great public occasion with proud triumph in his tired voice. And now as in all the world the mourners go about the streets we are uttering the still unbelievable words, "He is dead."

More millions today mourn the passing of Franklin Delano Roosevelt than have ever mourned the passing of any man in the history of the world. More eulogies will be uttered as haloes to his memory than have ever been woven before out of affection and appreciation for any leader of men who has ever walked this earth.

That can be said because now the whole world is a whispering gallery, where voices carry to earth's remotest bounds. Even when the President was at Yalta and at Teheran he was not away from Washington.

It can be said because in this one world, with all barriers down, the man in the White House carried the banner of human hope for all mankind. Men and women under all skies, exploited and enslaved, degraded, debased, deceive, kept from a more abundant life, found in him a white-plumed knight whose shining sword was dedicated to their cause. Born to special privilege and to move in circles of the elite, he became the sympathetic servant of all, the very symbol of the hopes and yearnings of little men and humble people. For he learned the supreme secret of how to walk with kings nor lose the common touch.

In this truly global war, waged for the paramount dignity of the individual and for the rights of the common man, Franklin D. Roosevelt has done more than any one individual to defy the pagan powers of darkness, to unite the world-wide forces of decency and democracy against the common enemy, to fuse into one invincible phalanx the scattered battalions of freedom against the diabolical designs of a foe without pity or conscience and to make our America the arsenal of democracy's weapons for imperiled freedom everywhere.

One of America's greatest newspapers, which by no means always agreed with the President's policies, speaks what we believe will be the verdict of history when, upon receiving news of his death, it declared editorially:

"Men will thank God on their knees a hundred years from now that Franklin D. Roosevelt was in the White House, in a position to give leadership to the thought of the American people and direction to the activities of their Government in that dark hour when a powerful and ruthless barbarism threatened to overrun the civilization of the western world and to destroy the work of centuries of progress. * * * His was a foreign policy designed at all cost to prevent the United States from being driven into isolation, robbed of its friends, ringed by its enemies, and cornered finally in a maelstrom of national destruction."

Now, just as the bugles are sounding for the victory which he did so much to achieve, suddenly the trumpets sounded for him on the other side. And today we are saying, "Now, too, he belongs to the ages" and to the tomorrows that sing. Every white cross on far-stretching God's acres on alien soil is a belfry from which already victory is ringing. Thank God he heard their triumphant peals before he went. But today our weeping hearts are crying:

"O Captain, my Captain,
Rise up and hear the bells.
Rise up! For you the flag is flung,
For you the bugle trills,
For you bouquets and ribboned wreaths,
For you the shores—acrowding,
For you the call—the swaying mass
Their eager faces turning.
Exalt, O shores! And ring, O bells!
But we with mournful tread
Walk the deck our Captain lies
Fallen, cold and dead."

But Franklin D. Roosevelt is not dead. He hears the bells. He sees the flags of victory. As the massed forces of freedom move with steady step toward the bright new world his soul goes marching on. He calls to us today in those words his pen wrote last Wednesday—words his lips were not to utter. It is his last message, his marching orders to all the armies of freedom and to his fellow citizens everywhere. Listen—he speaks:

"Let us move forward with a strong and active faith. The only limit to our realization of tomorrow is our doubts of today."

Yes; he being dead will forever speak. His heroic triumph over bodily afflictions and disability is a precious gift to all servicemen who return to face the same test. His belief and practice of a brotherhood which is based on deeper affinities than strutting uniformities of race or class is a warning and a rebuke to all who would drag Americanism to the level of differing backgrounds rather than to lift it to the dream of common goals.

His spiritual insights are indicated by the sentence he broadcast again and again to those who represent the different faiths of America. Said he: "I doubt if there is any problem, social, political, or economic that would not melt away before the fire of a spiritual awakening."

At a blessed Christmastide it was my high privilege to bring the message at a service where the President was a reverent and attentive worshipper. The subject was "The

Word Made Flesh." The personal response that the heart of Christmas made to him has warmed my heart ever since. Afterward, when that message was put in print, I dedicated it to him. It was to that dedication that I turned when first I entered my study after the startling news came from Warm Springs. I found myself reading on the fly-leaf of that little volume:

"To Franklin Delano Roosevelt who, in the most influential office in the world is, in his personal courage, his faith in democracy and his passion to help the underprivileged and exploited, a word of justice and of hope made flesh in this torn and troubled generation."

How truly he has fulfilled that estimate of him in the decisive decade that followed its writing! The peace that is to be, and a world united for peace and progress and to an ampler life for all mankind, must be the high and white monument which will leap to the skies in his memory.

Review by Marguerite Young of Louis Bromfield's Book "Pleasant Valley"

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 17 (legislative day of Monday, April 16), 1945

Mr. GUFFEY. Mr. President, recently the apostle of gloom, Squire Bromfield, from Ohio, wrote a book entitled "Pleasant Valley." Miss Marguerite Young reviewed the book in the book-review section of the New York Times of April 8, 1945. I ask unanimous consent to have the review printed in the Appendix of the RECORD.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

SQUIRE BROMFIELD

(By Marguerite Young)

Louis Bromfield tells here the story of Malabar, his cooperative farm in the Ohio hill country.

His story is spacious and leisurely, since he has wished to include many impressions and ideas which would not have been possible in a more technical study. He has canvas enough to give attention to his China pigs, his dogs, his opossums feigning death, his bumble-bees—to the beautiful barns which were built by farmers who believed in witches, to the beautiful old houses built before the age of streamline. His statistics are enlivened by blackberry bushes, May apples, the flight of the pheasant. He has read his Ohio landscape in several ways—considering in one paragraph a program of green manure or reforestation, in another the delicate footsteps of birds, of foxes. Beyond these items, there is a running commentary on this region's legendary human figures, past and present—both Mr. Bluebaugh, who is very much alive, and Johnny Appleseed, who died in a hedgerow on or near the Ohio-Indiana border line.

What Mr. Bromfield adores with religious fervor is eccentricity of person and place, and, more narrowly, eccentricity as a paying proposition. All in all, he recreates an area of Ohio and furnishes it richly—both with its ordinary life and that extfaordinary life which exists nowhere but under his own hat. Here are Mr. Bromfield's personal mysticism and its conflicting principles—his distrust of the machine, his employment of the machine.

Also, he airs his political and economic views. Perhaps, indeed, his mysticism cannot be divided from his politics. He wants to get back to the good old days when men were men and snow was deeper, to live as his grandfather did on a farm that was a fortress of security. His grandfather had to buy little more than salt, sugar, coffee, tea, and spices. All else he produced out of the earth he owned and cherished. So Mr. Bromfield (with this dream of the past in mind) has started a back-to-earth movement which he hopes will inspire its imitators in at least the remote future.

The impetus for improvement will not be effective, he believes, if it comes from Washington and hare-brained theorists. He has been, in his own project, eminently successful—and without so much as a tip of his hat to Mr. Wallace. With the old pioneer's suspicion of a highly centralized government and other artifices, he considers himself the new pioneer of a program to restore the top soil. He certainly does not believe that farmers, poor farmers, should be subsidized. Rather they should investigate both sides of nature, the spiritual, the material. Only the good man can make things grow. The farmer, however poor, must cooperate with God toward the ultimate end which is security.

The trouble is, Mr. Bromfield does not tell us precisely how he intends to make his individual experience the universal one. Are all farmers to write novels before they turn to plowing? There are many poor farmers who do not have, as Mr. Bromfield has, the benefit of an extra support lent by M. G. M., and so forth. Perhaps they can still lift themselves, in the traditional manner, by their own boot straps. Whatever happens they have at least the shining example of Malabar—a cooperative farm or aggregate of farms based upon the Russian principles, but with an important difference or two which cannot be ignored. The most important difference is that Mr. Bromfield, as capitalist, takes the place of the state in that harmonious economy. He financed his farm exactly as he would finance a factory, and he gets a return on his investment.

What weakens the book is not Mr. Bromfields' practical knowledge but the mysticism of his political philosophy. He makes many general statements which, under investigation, dissolve into nothingness. He talks too much of racial stocks, for example, too much of the blood in his veins and what that peculiar inheritance implies. His dream of returning to the soil is somehow bound up with various repugnances to various aspects of peoples.

His seems a mechanized romanticism, a little dangerously near Sir Walter Scott and company. He is living at Malabar, in a kind of feudal grandeur—surrounded by his loving sheep, who will be served up on a golden dish tomorrow. They sport, not knowing what he intends for them. Perhaps, after all, what he is presenting is merely a human picture and very local. In France he had thought of his distant Pleasant Valley as a haven from what he calls the European sickness—and a haven, more or less, it is. The book, however, far from being a public, is a private document, and expressive of a dream like the opossum's feigning death.

In short, the solution to the world's ills offered by Mr. Bromfield is no solution at all, in any large sense.

The book may be summarized (although it suggests so many interests) as an eloquent argument against the food that comes out of a tin can. Mr. Bromfield was perpetually haunted, he tells us, by the terrible economic insecurity which a mechanized and industrial civilization imposes upon the individual. He meant to have as nearly everything as possible. Not merely chickens, eggs, butter, milk, vegetables, fruit, and the things which many foolish farmers buy today, but also guinea fowl, ducks, geese, and turkey (which might be cultivated in a half-wild state), grapes in abundance, plums, peaches, currants, gooseberries, asparagus, fish. All these he has acquired. He has even put the bumblebees to work for him. But the vast majority of physically depreciated Americans may, like squatters, look over the gates, with their golden hieroglyphs of the beautiful past that never was and wonder—What next?

Absentee Senators

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 17 (legislative day of Monday, April 16), 1945

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Absentee Senators," published in this morning's Washington Post. The editorial presents a very excellent discussion of the problem which recently has received so much attention.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ABSENTEE SENATORS

Senator BARKLEY'S denunciation of chronic absenteeism on the floor of the Senate has afforded Senator LA FOLLETTE an opportunity to make two suggestions for improving attendance. First, he asked enforcement of the regularly ignored rule that no Senator shall absent himself from the service of the Senate without leave. That means that he should remain within calling distance. Otherwise permission should be asked to go downtown or leave the city. Senator LA FOLLETTE also called attention to a statute, honored in the breach rather than the observance, requiring deductions from salaries of Members of Congress for each day of absence for reasons other than sickness. His final suggestion, which was carried out on Wednesday, was to abandon the practice of recording Senators as present on a quorum call, unless they are actually present to answer to their names.

Enforcement of these rules would, no doubt, assure better attendance, especially at times when important issues were pending. But the problem of senatorial absenteeism is not going to be met satisfactorily by disciplinary measures of this type. For, despite Senator BARKLEY'S remarks about the irresponsibility of the absenteeism, we doubt that poor attendance is explained by lack of zeal or desire to evade the duties of senatorial office.

The principal cause of poor attendance is, on the contrary, attributable to a distracting variety of duties that keep Senators in their offices interviewing constituents, or sitting at conference tables in committee rooms, instead of being in their places on the floor of the Senate when debates are in progress. To most of them, it may seem to be time wasted to sit through long debates on issues on which they have already reached decisions or on matters that are of minor concern. Moreover, if they are within calling distance they can be summoned in case of need to cast their votes.

Nevertheless, chronic absenteeism, even for most plausible reasons, in the end injures the reputation and detracts from the solid achievements of a deliberative body such as

the Senate. Its Members may believe that the specialized work done as committee members and the contacts with their constituents are of more immediate importance than debating or merely listening to the arguments of others. But it is in the give and take of debate that legislators form opinions and give the country the sort of service the voters expect of them.

There is danger that legislators immersed in committee work will become specialists inclined to overemphasize certain issues and disposed to take their opinions second-hand on many matters of equal importance. We need legislators who are generally well informed on, as well as experts in, certain lines. And to have that combination of qualities, Senators must be afforded time both to serve on committees and to deliberate.

That appears to be increasingly difficult under present conditions. So Senator BARKLEY'S blast is another reminder that there is pressing need for a simplification of congressional procedure. Senator LA FOLLETTE, chairman of the Joint Committee to Modernize Congress, realizes that the primary cause of excessive absenteeism traces back to the inadequacies of internal organization. But correction, he thinks, is likely to take a long time. Meanwhile, he would apply a necessary bit of coercion to enable the Senate to make a better appearance before visitors.

Control of Mississippi River Floods

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 17 (legislative day of Monday, April 16), 1945

Mr. PEPPER. Mr. President, on behalf of the Senator from Montana [Mr. MURRAY] I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "T. V. A.—M. V. A.—O. V. A.," which appeared in the Washington Times-Herald and other newspapers served by the News Syndicate Co., Inc., on April 11, 1945.

The editorial brings to our attention the deplorable spring floods now ravaging the lower Mississippi, and the damage being done to life and property, and urges that speedy action be taken to enact the pending Missouri Valley Authority legislation and thereby help eliminate these recurrent disasters.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

T. V. A.—M. V. A.—O. V. A.

The regular spring news of floods on the lower Mississippi is now coming in. Various Louisiana parishes are largely under water; some 40,000 persons are estimated to have left their homes for higher ground; numerous civilians and soldiers; plus quite a few German war prisoners, are working to plug, heighten and strengthen numerous levees. The Red River of the South, big Mississippi feeder that cuts down slantwise across northern Louisiana, is being especially troublesome.

THE SAME OLD FLOOD STORIES

These things happen every spring, always to many people's surprise and disgust.

Hadn't we better, as soon as possible after the war, get going on some long-range projects to bring the Mississippi under better and more systematized control than can be done by means of levees?

Floods in the Tennessee River system have been brought under control by the Tennessee Valley Authority's series of dams for regulating water flow so successful is this project that the city of Paducah, Ky., where the Tennessee River empties into the Ohio, advertised the other day that it was unhurt by recent Ohio floods.

Already before Congress is a plan, backed by various western Senators, Representatives, civic groups, newspapers, etc., to set up a Missouri Valley Authority to bring the Missouri River system under control. An Ohio Valley Authority is talked about.

We believe both an M. V. A. and an O. V. A. should be established, to get busy as soon as possible. Problems of both would be different from those solved by the T. V. A., because of different terrains, but we understand the best engineering opinion is that all these problems could be licked. Should an M. V. A. and an O. V. A. succeed, the Mississippi's two biggest feeders would be regulated—which should mean fewer and less serious floods on the Mississippi itself.

Incidentally, but importantly in view of the expected post-war upsets, both projects would make a lot of jobs for a long time.

Poland

EXTENSION OF REMARKS

OF

HON. JOSEPH F. RYTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Polish Central Council of New Haven at its meeting held April 11, 1945:

Whereas President Franklin D. Roosevelt, Prime Minister Winston Churchill, and Marshal Joseph Stalin recently met at Yalta in the Crimea for the purpose of laying the foundation for the future peace with the avowed purpose of preventing thereby the causes of future wars; and

Whereas as a part of the agreement reached by these three leaders, it was proposed to partition Poland by ceding to Russia all territory east of the so-called Curzon Line; and

Whereas it was decided to recognize as the Government of Poland the so-called Lublin Government after reorganizing the latter by adding thereto various other Polish leaders: Now, therefore, be it

Resolved, That we hereby register our strongest protest against such a flagrant act of injustice entailed by the decision to partition Poland, which has been one of the staunchest members of the United Nations and has fought against the common enemy longer than any other nation, and has contributed to the common cause by sacrifices exceeding those of any other Allied nation. This decision, which punishes rather than rewards Poland for her steadfast and loyal devotion to the Allied cause, acutely offends our consciences and, we believe, the consciences of most of our fellow American citizens; be it further

Resolved, That the recognition of any government save that of the only legal and constitutional Polish Government-in-Exile in London, would be a political expedient which would in no way accord with the facts of duly constituted authority, and would make a mockery of our previous continued recognition of the Polish Government in London. To thus recognize in effect the Soviet-inspired puppet government of Lublin would be an act of submission hardly consonant with our rightful heredity of political independence; be it further

Resolved, That as American citizens we emphatically and bitterly condemn the abandonment of the noble principles of the Atlantic Charter in favor of political spheres of influence, which will surely sow the seeds for future discords and wars in Europe and in the world; be it further

Resolved, That copies of this resolution be forwarded to our Representatives and Senators from Connecticut in the United States Congress and to President Franklin D. Roosevelt, Secretary of State Edward R. Stettinius, Jr., Hon. Cordell Hull, Hon. Harold E. Stassen, Senator Arthur H. Vandenberg, Senator Tom Connally, Representative Charles A. Eaton, Representative Sol Bloom, and Dean Virginia Gildersleeve, with the earnest request that the aforementioned decisions reached at Yalta regarding Poland be revised at the forthcoming United Nations Conference at San Francisco so that justice may be accorded Poland as befits her sacrifices against the common enemy.

POLISH CENTRAL COUNCIL OF
NEW HAVEN,
By RICHARD T. MOKRZYNSKI, *President*.
By STANISLAW DLUZNIEWSKI, *Secretary*.

The Fair Employment Practice Bill

EXTENSION OF REMARKS

OF

HON. CARTER MANASCO

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. MANASCO. Mr. Speaker, today, as never before in the history of our country, nothing should be done to cause disunity. We have just lost a great President. The task of our new President will be most difficult with all of us working in harmony to aid him in carrying out his program. Strong pressure is being brought to bear for the early passage of H. R. 2232, a bill to prohibit discrimination in employment because of race, creed, color, national origin or ancestry. To my humble way of thinking, the passage of this bill will create so much disunity in this country that President Truman's administration will be wrecked and any hope for lasting peace will be dashed on the rocks.

Whenever the Congress by law delegates the authority to any man or bureau to force American employers to employ against their will any person, that day democracy dies. It is just as reasonable to attempt to legislate whom one's friends should be or whom one should marry as it is to attempt to legislate whom an employer should employ.

Under the terms of H. R. 2232 a publishing house owned and operated by a religious institution could be forced to employ believers in other faiths. A Protestant could force a publishing house owned and operated by the Catholic Church to give him employment as an editor of a religious paper, or vice versa; or a Mohammedan who is otherwise qualified could force a theological college owned and operated by Baptists to train Baptist preachers to employ him

as a professor. An atheist who is otherwise qualified could force a Jewish synagogue to employ him to sing in the choir if choir members are hired. The same thing would be true of employers of religious bookstores, who cater solely to members of certain faiths.

In many communities where people of the same national origin, culture, and religious belief live, it is good business to employ people in stores and other businesses who are members of this particular group. This is as it should be, for it is human nature and good business to have harmony among employees.

If this bill were in effect now, it would be a violation of the law for a manufacturer who is manufacturing highly secret war materials to refuse employment to a qualified Jap or German. A Jap or German, under the terms of this bill, could force his employment in our munitions factories, our aircraft factories, our radar factories, and our shipyards. Why should we jeopardize the security of our country in an effort to get votes?

Of course, there are those in our midst who ridicule the American system of free enterprise. They much prefer the Russian system, where fewer than 4,000,000 party members control the destinies of 170,000,000 Russians—where it is almost impossible to break into the selected inner circle.

Where would our production be today if our armament manufacturers were haled into court every time a person sought employment and was turned down because he happened to be a Jap or a German sympathizer?

A lot of people are laboring under the illusion that this bill is to force the upgrading in industry of the Negro. This bill is to force Americans, against their wills, to employ people of any race, color, or creed. It could force Negro undertaking establishments to hire white undertakers, and you and I know what a howl would be raised if that were to happen. Any American who is worthy of being called American desires to select his own employees without dictation from Congress, the President, or any Government bureau.

If we want to precipitate race riots, destruction of property, and the abandonment of the system of private ownership, there is no better way to accomplish this end than to pass this bill.

There is not a Member of Congress who would stand by for one moment and permit an executive agency to force him to employ secretarial and clerical help against his will. Why should not we give our manufacturers the same privilege? Why should not we give our educational institutions the same privilege? Why should not we give our eleemosynary institutions the same privilege? Why should not we give our labor unions the same privilege? We should have more interest in the well-being of our country than in holding political office.

Many Members who are supporting this bill today are sincere in their belief that it will accomplish the impossible; but I predict here and now that if this bill ever becomes law, an aroused American public opinion will drive from office every person who votes for its passage.

Goals for San Francisco

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, April 17 (legislative day of Monday, April 16), 1945

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a joint study of Catholic, Jewish, and Protestant pronouncements on world organization entitled "Goals for San Francisco."

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

GOALS FOR SAN FRANCISCO—A JOINT STUDY OF CATHOLIC, JEWISH, AND PROTESTANT PRONOUNCEMENTS ON WORLD ORGANIZATION

Catholic, Jewish, and Protestant pronouncements have made clear the moral principles of a just world order. Our joint study of these authoritative statements convinces us that the agencies which issued them are agreed on 10 constructive recommendations for the United Nations Charter to be drafted at the San Francisco Conference. These agreements offer practical guidance to all men of good will. The pronouncements upon which they are based include the "Pattern for Peace," issued by leaders of the three religious bodies in October 1943; the statement of the Catholic bishops in November 1944; the statement of the Federal Council of Churches in December 1944; the statement of the Synagogue Council in January 1945; and the statement of the Cleveland Church Conference in January 1945. Our formulation of these recommendations to support and improve the Dumbarton Oaks proposals for a world organization is as follows:

1. NEED FOR ORGANIZATION

The sacrifices and hardships of this war and the need of mankind for an organized peace make it imperative that the San Francisco Conference succeed and the general security organization be established.

2. PREAMBLE

The charter of the United Nations Organization should acknowledge in its preamble that the actions of States are subject to the same moral principles as govern the conduct of individuals.

3. MEMBERSHIP

The charter should specify that membership will be open to all States willing and able to fulfill the obligations of the charter, so that membership may become universal.

4. INTERNATIONAL LAW

The charter should provide for the codification and development of international law and for its impartial enforcement.

5. PEACEFUL CHANGE

The charter should provide more explicitly for the revision of treaties and other agreements when such action is required by justice and the good of the world community.

6. SMALL NATIONS

The charter should safeguard the economic and political rights of small nations and assure them an adequate share in shaping the policies of the organization.

7. DISARMAMENT

The charter should provide a clear purpose and procedure for the limitation and control of national armaments, as collective security is established.

8. VOTING POWER

The charter should provide that no one nation be allowed to veto judgment in any dispute covered by international law.

9. HUMAN RIGHTS

The charter should include an international bill of rights and provide for a commission or commissions to protect and further the rights and liberties of the individual and of racial, religious, and cultural groups, especially those uprooted by war or oppression.

10. DEPENDENT PEOPLES

The charter should provide for a commission to supervise the administration of mandated territories and to promote the advancement of non-self-governing peoples toward economic well-being, cultural development, and political responsibility.

Rev. EDWARD A. CONWAY, S. J.,
Social Action Department, National Catholic Welfare Conference.
Rabbi AHRON OPHER,
Secretary, Committee on Peace, Synagogue Council of America.
Rev. RICHARD M. FAGLEY,
Secretary, Commission on a Just and Durable Peace, Federal Council of the Churches of Christ in America.

APRIL 5, 1945.

Poland

EXTENSION OF REMARKS

OF

HON. JOSEPH F. RYTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted by the delegates representing organizations of Americans of Polish descent in Connecticut at a convention held at New Haven, Conn., on Sunday, February 25, 1945:

We, the delegates of organizations representing some 300,000 Americans of Polish descent who reside in Connecticut, in convention assembled at New Haven, Conn., feel conscience bound to express their most profound grief and bitter disappointment in the conclusions reached at the recent Yalta Conference participated in by the President of the United States, the Prime Minister of England, and the Marshal Premier of the U. S. S. R. These sentiments, we find, are not confined to the 300,000 Americans we represent but are shared by many thousands of other Americans of this State who are outspoken in their belief that the gravest injustice that yet has been recorded in history will take place if the proposed plans, as published, will be put into effect.

If all human emotions have been abandoned; if all the sacrifices, loyalty to a cause, the suffering and insults to a people are to be swept aside to satisfy the demand of one power; if the privation, starvation, deportations, and cruelties inflicted upon an ally are to be forgotten and if the punishment imposed by the deliberate refusal to admit relief unless selfish political demands of one of the powers are met are to be tolerated; if all the promises of the Atlantic Charter and the "four freedoms" are to be ignored, then let us at least apply the light of truth to the situation.

President Roosevelt in his report to Congress of the doings at Yalta stated that the decisions concerning Poland were not satisfactory. This in itself indicates compromise. A compromise reached at the expense of an Allied country whose record is one of untiring effort, sacrifice, and zeal in its strife for justice in a cause from which it has not wavered. This is a compromise at the expense of a nation which paid; and paid more than its share and now when very little is left is called upon to suffer further agony by being called upon to pay more.

Poland has made sacrifices, and any nation should be willing to make sacrifices, if such sacrifices insured future peace in the world. But is it not here that the seed is planted for World War No. 3? Is this not appeasement of a great power at the expense of a small country? We have seen what this kind of appeasement does to the peace of the world by events as rcent as 6 and 7 years ago. An agreement reached on the theory of appeasement is treacherous. The unilateral declarations of one power with respect to the small nations adopted by the three powers at Yalta establishes a precedent for similar future conduct by any power.

There is no escaping the fact that the conclusions reached lead into another scheme of balance of power, the underlying cause of World War No. 1 and a powerful factor in World War No. 2. The so-called sphere of influence, merely a convenient substitute in terminology for balance of power, violates all of the precepts of the Atlantic Charter.

No matter how solemn, no matter how strong, no matter how sound the peace agreements may be, what guaranty and what respect can there be for the terms of any peace arrangements when precedent shows that these have been ignored conveniently and all principles abandoned? Promises have been broken, pacts have been discarded, and smaller countries have been subjected to the whims of greater powers which not only are superior in arms but who stoop to the use of deceptive propaganda unjustly to accuse a smaller country and place the blame upon it to conceal their injustices.

Can lasting peace be obtained with this kind of an approach?

Can any peace be reached unless it be based on justice?

We surely would be remiss in our responsibility if we did not take this opportunity to demand from our leaders the taking of immediate steps to prevent future wars which will involve our country, the United States.

We ask that the problem be met now. This is the time to solve it courageously. As citizens of this State and Nation we disagree with our Government's participation in the partitioning of any country, large or small, with its enforced expulsion of millions from their native countries and homes.

We commend the honesty and courage of the Polish Government-in-Exile in London for confronting this issue directly in the face of threatened catastrophe. We hope that the pitfalls and dangers to be found at diplomatic tables will be avoided. We stand firm in insisting that the war which will be won on the battlefields by our courageous soldiers be not lost at the peace conferences.

We have further resolved to send these resolutions to Franklin Delano Roosevelt, President of the United States, Senators, and all Members of the House of Representatives in Congress from Connecticut, and to the Honorable Harold S. Stassen, Senators Arthur H. Vandenberg and Tom Connally, Representatives Sol Bloom and Charles A. Eaton, Virginia C. Gildersleeve, and Edward R. Stettinius, Secretary of State.

Dr. B. L. SMYKOWSKI,
President.

Rev. JOHN J. SOBOLEWSKI,
Secretary.

The Late President Roosevelt

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. BROWN of Georgia. Mr. Speaker, all civilization mourns the passing of our late beloved President, the Honorable Franklin D. Roosevelt, and his memory will be revered and honored for time immemorial.

An editorial entitled "President Roosevelt Answers Final Summons," which appeared in the Athens (Ga.) Banner-Herald, of April 13, 1945, is one of the finest tributes to this great humanitarian that I have read. Under unanimous consent, I insert it in the RECORD:

PRESIDENT ROOSEVELT ANSWERS FINAL SUMMONS

The announcement of the death of President Roosevelt yesterday afternoon has cast a pall over the entire universe. That the Commander in Chief of our armed forces, the great humanitarian who had assumed world leadership in the plan to establish an enduring peace for all peoples at the end of the present global war, should suddenly pass out of the picture at one of the most critical stages of the war with Germany was an eventuality that few were prepared for. The shock provoked by the announcement of his passing was universal, for wherever want, insecurity, suffering, and oppression were endured, the leadership of Franklin Delano Roosevelt constituted almost the single ray of hope that a better day would soon dawn.

And while countless millions are not only stunned but grieved that he should be struck down at the height of his usefulness, there is consolation in the thought that the foundation for world peace has been laid and the machinery installed and readied for operation as soon as the post-war era shall dawn. Only the finishing touches remain to be applied at San Francisco the latter part of this month. That the President could not live to participate in this all-important conference, indeed to witness his arduous efforts translated into action in the world of tomorrow, is tragic; however, it is believed that his spirit and the noble precepts he stood for will dominate the San Francisco Conference, as well as the actions of the subsequent peace negotiators, for his conception of a world organization to effectively guarantee peace and security for all peoples has so thoroughly permeated the thinking of every race and creed that they will not be denied.

In these days President Roosevelt is thought of mainly as our war President, the man whose planning and leadership are responsible for transforming the vast resources of this Nation from a peacetime to a war footing in a miraculous, brief period and for quickly moulding a war machine that has never been equaled since the beginning of recorded history; yet the early days of his administration were equally as outstanding. Accepting the reins of government at a time when the greatest nation on earth was in the depths of despair with unemployment and discontent so widespread that our cherished democratic principles were in jeopardy, he invoked first one bold stroke and then another, with the result that fear gave way to confidence, unemployment was diminished, and prosperity restored.

A man of quick decisions, one who did not regard precedents when they stood in the way of what he conceived to be progress and the welfare of the greatest number, Mr. Roosevelt naturally invited criticism, which is inescapable for one who occupies the highest post in the land for so long a time, yet his policies were always vindicated by the people who looked to him as the champion of their rights and prerogatives, and when his historians assess the net accomplishments of the 12 momentous years of his administration, the name of Franklin Delano Roosevelt will rank high, if not topmost, among the immortals of all time.

The Vice President, Harry S. Truman, acceded to the Presidency 2 hours after the death of Mr. Roosevelt. Accepting this responsibility at the most critical period in world history, President Truman realizes the colossal aspects of the burden that has descended upon him, and it is reassuring in this dark hour to know that his first official act was the decision to retain the entire Roosevelt Cabinet with a view to following the policies inaugurated by President Roosevelt, including the continued vigorous prosecution of the war to a speedy and victorious conclusion, and the establishment of the kind of peace in the post-war world that his distinguished predecessor envisioned.

President Truman

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. CARNAHAN. Mr. Speaker, my own native State, Missouri, bows with the Nation and the world in sorrow at the loss of the late President Franklin D. Roosevelt. Missouri voted for Roosevelt four times for President and in his passing Missourians feel and fully recognize an irreplaceable loss. However, Roosevelt in death will live vividly in ideals and in spirit. America and the world are now more determined to make realities the ideals for which he lived, toiled, and died.

As we bow in the presence of divine providence and have committed a national leader to the ages, we must carry on. New hands must take up the tasks of national leadership. Missouri is honored to present to the Nation and the world the new American leader, President Harry S. Truman.

Harry Truman, born and reared on a Missouri farm, elected county judge, sent to the United States Senate, selected by President Roosevelt as a running mate, elected Vice President, and now President of the United States, is typically Missourian and typically American. What could more truly represent the American tradition and spirit than "from farm boy to President."

President Truman has made the slow ascent from humble position to eminence by merit and no eminence of station will ever cause him to forget that all of us make up America.

Mrs. Truman, Margaret, and Harry will bring to the White House another truly American family. Let us rejoice that the first family will continue to carry on and truly represent our American way.

This is the first time my beloved State, Missouri, has furnished a President. We are happy that it is Harry Truman. In sharing Truman with the Nation and the world we Missourians offer no apologies since we are convinced that apologies would not be in harmony with facts as they exist. His honesty, ability, frankness, experience, and humility fit him for the very heavy tasks which lie ahead. He is equal to the occasion. America is united for action, world order is reshaping; then let us go forward under the guidance of divine providence into the dawn of a better day.

Surplus Property Disposal

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. REED of New York. Mr. Speaker, the surplus property disposal presents one of the most serious post-war problems on the horizon. Unless this is handled in a common-sense and orderly fashion it can do great harm to the economy of the country. On the other hand, however, if a sane and sensible program is followed, this vast surplus can undoubtedly be absorbed into the economy of the country without injury to private enterprise.

Under unanimous consent to extend my remarks, I wish to include an editorial from the New York Times of March 26, 1945, together with a letter written to the New York Times under date of April 2, 1945, by Ody H. Lamborn, president of Lamborn & Co., Inc., with offices at 99 Wall Street, New York City:

[From the New York Times of March 26, 1945]

SURPLUS DISPOSAL

Estimates of the volume of surplus supplies when the war ends have exceeded $100,000,000,000. The magnitude of these supplies is so enormous that there are bound to be serious repercussions upon our economy if we do not have a carefully formulated program of disposal. While greater progress has been made in this direction than during the First World War, we still seem to be only in the preliminary stages of policy formulation and organization. In this connection the findings and recommendations of the Mead committee concerning developments to date must be given careful consideration.

Among the findings were these: The Surplus Property Board has formulated no general policies. The "administrative organization for surplus disposal has been extremely confused." Sales of these supplies should be given more "immediate and wide publicity" than in the past. The operations of the Surplus Property Board have been handicapped because of inadequate funds. Surpluses have not been declared promptly, and where they have been declared have not always been promptly sold. For example, only about 15 percent of the goods declared to be surplus had been sold up to February. The armed forces have not laid out the procedures to be followed when the European War is ended, or determined which items shall be declared surplus and which they expect to use in the Pacific. Lack of coordination is indicated by the fact that some items have been declared to be surplus in some plants, while shortages of the same items prevail in other war plants. Finally, the committee reported that unless immediate action is taken to correct the present inadequacies, the result might be "as chaotic a situation as we had at the end of the last World War."

These findings indicate the need for a prompt overhauling of surplus disposal policy. It is now about 6 months since Congress enacted legislation creating the Surplus Property Board. While this legislation is inadequate in some respects, it does furnish the basis for prompter action than has thus far developed. The committee is justified in its criticism that the formulation of general policies is "long overdue." It will be highly unfortunate if we should find ourselves only partly prepared to handle the problem of surplus disposal despite all the attention that has been focused upon it. In this field, as in many other phases of our post-war policy, the sands of time are running out rapidly without sufficient progress being made.

WHY NOT A UNITED STATES SURPLUS COMMODITY EXCHANGE?—A SUGGESTION FOR A BUSINESS-LIKE APPROACH FOR THE DISPOSAL OF GOVERNMENT SURPLUSES

LAMBORN & CO., INC.,
New York, N. Y., April 2, 1945.

The EDITOR, NEW YORK TIMES,
New York, N. Y.

DEAR SIR: I have read with interest the excellent editorial contained in your issue of March 26, entitled "Surplus Disposal." It is timely. In it you say in part:

"Estimates of the volume of surplus supplies when the war ends have exceeded $100,000,000,000. * * * In this connection the findings and recommendations of the Mead committee concerning developments to date must be given careful consideration.

"Among the findings were these: The Surplus Property Board has formulated no general policies. The 'administrative organization for surplus disposal has been extremely confused.' Sales of these supplies should be given more 'immediate and wide publicity' than in the past. * * * Surpluses have not been declared promptly, and where they have been declared have not always been promptly sold. * * * Finally, the committee reported that unless immediate action is taken to correct the present inadequacies, the result might be 'as chaotic a situation as we had at the end of the last World War.'

"These findings indicate the need for a prompt overhauling of surplus disposal policy."

It is commonly known that the handling of Government surpluses growing out of the last World War was very inefficient. It resulted in many scandals which reflected on the Government as well as individuals. There are still repercussions from it, as recent press reports indicate.

Since the problem of the disposal of surplus materials is again before us, but on an infinitely greater scale than in World War No. 1, it is obviously vital that an intelligent procedure be followed so that the public interest will be served.

The average citizen usually hears about sales of Government property after the disposal has been made. He sometimes hears of huge profits being made by what he considers a favored group. All of this leads one to believe that proper publicity is not given to offerings on the part of the Government and the impression, however untrue, develops that the business is done on a confidential basis with privileges granted to those who are "in the know."

The problem is one of Gargantuan proportions. The present "machinery" for disposal is obviously inadequate. The entire program should be studied by Congress and provisions made for the streamlining of surplus disposal.

The Government could well afford, in the disposal of surplus property, to follow the tried and true system used for the marketing of commodities by private industry, as expressed by the commodity futures exchanges of the country. Under that system there are no confidential deals; the public knows where to go to buy and sell, and the seller can offer, and the buyer can buy, for "future delivery." I refer specifically to such instrumentalities as the Chicago Board of Trade, the New York Coffee and Sugar Exchange, and other exchanges of a similar nature. Those exchanges provide distinct advantages to the public, some of which are:

(a) A centralized market place where buyer and seller may meet to trade in a given commodity;

(b) An active market;

(c) A buyer or seller, if not situated in the city in which the exchange is located, has an agent representing him to keep him, wherever he is located—here or abroad—informed on trades taking place on those exchanges and on prospects of things to come—crop developments, demand potentialities, market price trends, etc.;

(d) There is nothing secret about exchange transactions. Trading is done in the open and any citizen is enabled to know just what is going on;

(e) The exchanges make it possible for the newspapers of the Nation to quote the market on any commodity accurately. Nothing is done behind closed doors.

From the above it will be seen that the exchanges of the country are representative of the "American Way" at its best and are typical of genuine democracy at work.

A basic reason for the existence of these exchanges is that a broad market is provided not only for products required for immediate use but for commodities which may temporarily be in excess supply and carried, pending ultimate absorption, by related industries. This is a function of exchanges and would certainly apply to an organization properly adapted for the sale of any surplus material.

Drawing from this in considering the matter of the Government surplus commodities, let us assume that there is established by our Government what would be known as, say, the United States Surplus Commodity Exchange. Let that exchange be established in any city that seems logical, whether it be Washington, Philadelphia, Boston, New York, Chicago, or San Francisco. It would then be the focal point for the sale of all Government surplus commodities. With the establishment of such an exchange any and all industries in the United States and in foreign nations could have agents representing them on such an exchange. Those agents would act as liaison officers between those they represent and the Government representatives. This system would simplify the problem of disposal and provide intelligent marketing of surplus commodities.

The Government, in addition to other means it might use, would make available from time to time schedules of merchandise to be sold by the Government and the dates on which such merchandise would be offered. Such schedules would be made up sufficiently in advance for the agents to communicate with their principals and for the principals to have time to consider their own positions and the amount that they might be able to bid on such commodities. The United States Surplus Commodity Exchange would be the centralized point to which all could go for

information and for trading. Thus, for example, our Government would say today that on June 15 it would dispose of X,000,000 pairs of shoes; on June 16 of Y,000,000 yards of cotton cloth, etc. Where quantities to be disposed of were exceptionally large, the length of the trading period would be extended.

Through the agents and through the press the public would be informed of such offers and of the date on which purchases might be made. When the date rolled around for the disposal of any particular commodity as previously advertised by the Government, the trading would begin, the agents having limits as set by their principals as to the price they would pay on any given commodity. Thus the Government would be assured, as a result of such bidding, that the highest possible price would have been received, the public would be satisfied that there had been no special favors shown to any particular group, and the materials purchased would move into normal channels. And, of course, offerings should be in small enough units to give an opportunity to the small businessman as well as the larger.

The press would naturally report the developments of each day to the public, and, in general, a clean-cut method would have been used to dispose of surplus property. Everything possible should be done to permit the light of day to shine upon all activities in connection with this great project.

It would, of course, be necessary for the Government to use market judgment so as not to dump on the market at one time too much of any one commodity. The Government would not attempt on one day to sell all of the surplus airplanes it owned. It would, by intelligent offerings, prevent sharp price dips. Naturally it would want to follow such a course not only in order that it might secure the highest possible price for its merchandise, but also in order that it might do as little damage as possible to the then current production schedules, thereby causing as little dislocation as possible in the established industries.

Obviously, immediately after the war, or before, with the United States public lacking everything, while reconversion is going on, the country can absorb a much greater percentage of surplus goods than will be possible after we have completely reconverted. Therefore, it would be logical for the Government to establish such an exchange as soon as possible and to let out known surpluses through such an exchange as rapidly, and in as great a volume, as possible.

This is the simple, businesslike way to handle the situation and is, of course, not new at all, for since time immemorial throughout the world we have had market days, when the seller and the buyer in the market places got together and exchanged merchandise for money or exchanged one product for another product. In following any other method the Government is merely attempting to create a complex system that does not do justice to itself or to the American people.

In suggesting the establishment of a United States Surplus Commodity Exchange, I consider it a necessary, but temporary, expedient for the unloading of huge stocks built up by the Government during the war. As is the case with many millions of Americans who do not believe in all-pervading State control, I deplore the tremendous inroads Government has already made in the sphere of commercial activity, tending, as they do, to nullify our free enterprise system. If Government efforts in this direction continue unchecked they will destroy free enterprise.

Basically to the degree that it is possible, the Government should confine itself to the art of governing. And it is an art which has long been neglected in this country. I mention this so that you will not misconstrue my suggestion or think that I am advocating the entry of Government even one step further into business. I would also like to point out that the above suggestion is submitted only in broad outline. No attempt has been made to cover the many details that would have to be worked out in establishing a United States Surplus Commodity Exchange.

Yours very truly,

ODY H. LAMBORN,
President.

Humphreys County, Tenn.

EXTENSION OF REMARKS
OF
HON. WIRT COURTNEY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I include the following article describing Humphreys County, Tenn., prepared by a civic club in Waverly, Tenn.:

HUMPHREYS COUNTY, TENN., THE LAND OF PROMISE

AGRICULTURE, LIVESTOCK, HUNTING, FISHING, BOATING

Humphreys County, with a population of 12,254, is located on the western edge of middle Tennessee, 60 miles southwest of Nashville, on the Broadway of America, Highway No. 70.

Tennessee River borders it on the west, and it is traversed by Duck and Buffalo Rivers, and White Oak, Richland, Trace, Blue, Hurricane, and Tumbling Creeks, and numerous smaller streams.

The pool formed by the Kentucky Dam at Gilbertsville covers the western portion of the county.

Waverly, with a population of 1,318, is the county seat, and is located in the center of the county. McEwen, slightly smaller, serves the eastern portion of the county.

Every type of soil may be found in this county from the richest Duck River bottom to the upland clay.

There are thousands of acres of wooded lands that can be cleared and converted into the finest of pastures for cattle and sheep.

There is an abundant growth of young timber—oak, poplar, ash, etc.—over the great acres of this county.

The county has a garment factory at Waverly that works about 600 people, and one is now being installed at McEwen that will work some 200 people—also a modern sand and gravel plant, rock and lime crusher, canning factory, and numerous sawmills. Labor in normal times is plentiful.

The people are native Anglo-Saxon, hardy, energetic, and life-loving.

The county is traversed from north to south by State Highway No. 13, and from east to west by Federal Highway No. 70; and has 700 miles of good graveled secondary roads well bridged. These roads reach all parts of the county.

The lands are comparatively cheap, and are traversed by living water from numerous springs and sparkling creeks.

The Tennessee Valley Authority furnishes the electric power, and rural electrification covers a great portion of the county, and post-war plans call for complete coverage.

There are some 50 miles of beautiful shore line along the edge of the Kentucky Dam Reservoir; and hundreds of acres for camp sites, summer and vacation homes, and permanent homes overlooking this pool of clear, blue water, teeming with fish—bass, crappie, catfish, buffalo, pike, etc.

Humphreys County is a thriving community with modern homes, good farms, good roads, good schools and churches, friendly folk, and genuine southern hospitality.

The Kentucky Dam is T. V. A.'s largest dam, creating the longest man-made lake in the world. It cost $110,000,000, and is 184 miles long and has a shore line of 1,580 miles. It is a veritable fisherman's and duck hunter's paradise.

Humphreys County is served by the N. C. & St. L. Railway in addition to busses traveling the above-mentioned highways. It is approximately 160 miles from Memphis, 60 miles from Nashville, and 75 miles from Jackson, and 50 miles from Clarksville.

There are no better opportunities for:

1. The purchase of productive lands at most reasonable prices.
2. The building of homes in the fairest of southern lands.
3. The living of life in leisure among beautiful hills and pleasant streams abounding in game and fish.
4. The promotion of industry that is fast bringing the South to the forefront.
5. The utilization of the vast resources of the Tennessee Valley Authority.

Why Should I Be Afraid?

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. SPRINGER. Mr. Speaker, throughout the length and breadth of our land the people are greatly disturbed and distressed. They are thinking and they are praying; they are getting closer to God, and it is well that the Christian spirit is now abiding closer than ever before. In these days of distress during the most frightful war of all times, it is well that the people resign themselves to the power of thought and prayer. The angel of death has come to the untold thousands of homes in our country, and the people are bowed down in grief; they are giving more thought to Christianity than ever before.

In my home community that is evidenced greater than ever before. Mr. Frank M. Crawford, of Connersville, Ind., the grandfather of a fine boy who gave his life in this war that the people might be free, has written many beautiful poems. He is one of the finest American citizens, and it is a distinct privilege to insert his recent poem in the CONGRESSIONAL RECORD, which touches the heartstrings of those who read and think of our future destiny.

Mr. Speaker, I ask unanimous consent to insert in the Appendix of the RECORD the beautiful poem, written by Mr. Frank M. Crawford, of Connersville, Ind., which is as follows:

WHY SHOULD I BE AFRAID?

Why should I fear to walk the way
Along the path which all before me trod?
Why should I fear when comes the day
To pass the gate and meet a just, forgiving God?

In my life's span I've played my part
No sacred trust have I betrayed,
But ever kept a kindly heart.
Why should I be afraid?

I have not always prayed aloud,
Nor bowed my head in public place,
Yet sinner I may be allowed
The benefit of saving grace.

If God be God, he knows it all;
He knows how much, how far I strayed—
And God doth note the sparrow's fall.
Why should I be afraid?

—*Frank Crawford.*

Forest Protection

EXTENSION OF REMARKS
OF

HON. WIRT COURTNEY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I include the following address by former Senator James P. Pope, now director of the Tennessee Valley Authority, before the Wayne County, Tenn., Forest Protective Association rally:

THE WAY OUT

(By James P. Pope, Director, Tennessee Valley Authority)

It has been said that there are three stages in the history of man and nature—wilderness, desolation, and renewal of nature's balance.

In the first, men adapt themselves to nature, not trying to exploit the earth but subordinating themselves to its processes. This is the primitive and pastoral stage, when men live on game and fish and wild fruits, or when they follow their herds and flocks wherever the best grass may be found. The early American Indians were examples of the primitive, and the early Persians and Babylonians were examples of the pastoral. Men then lived in harmony with nature. In every country this first long stage of man's relation to nature is evident.

PRIMITIVE MAN IN HARMONY WITH NATURE

In America the primitive stage lasted until the white man came. The balance of nature was in no wise disturbed for the long centuries before, and even for many decades after the settlers came. These were the days when fish and wildlife were found everywhere in profusion—the days of the beaver, of the roaring buffalo herds, and of the skies darkened with passenger pigeons. Never had there been seen such broad wildernesses of trees, such wide expanses of grazing land, such varieties and quantities of wildlife. These resources were so great and the number of people so small that men hardly made a dent in them for generations. This was then the land of individual effort and opportunity. There wasn't a single unemployed man in all America in 1700, unless he was in jail. Men's rewards in those days were just about in proportion to their energy and their initiative.

Then the second stage began—the period of expansion and development, and of exploitation and waste. Railroads came, but the beaver and the buffalo passed. The passenger pigeon disappeared and wildlife everywhere had to be protected. An empire of grazing lands became almost exhausted. Thousands of acres of buffalo grass were plowed up for wheat, and a few years afterwards the skies were darkened, not with passenger pigeons, but with millions of tons of the best soil of the West. Men were also digging and boring into the earth for metals, for coal, and for oil. The process of rapid exhaustion began in these resources and is still continuing.

SPOLIATION OF FORESTS

And about the timberlands? Nowhere did this stage of spoliation apply so relentlessly as to the Nation's forests. First, of course, came the assault upon the pines and hardwoods of the Atlantic coast region, then upon those in the Middle States, then upon the pines and hemlocks of the Lake States region, then upon the yellow pines and hardwoods of the South, and finally upon the firs and other evergreens of the Pacific coast. The more millionaries there were, the more vigorous the attack became.

The big sawmills ran day and night. Vertical blades, which cut 5,000 feet a day, gave way to the circular saw, which cut three or four times that much. Then the endless blade of the band saw revolutionized the whole process. In one mill on the Columbia River 1,000,000 feet a day was cut. One pity of all this was that seven-eighths of the timber was wasted. The young growth was cleared out by the swampers, or it was broken and gnarled by the falling of the large trees. The slash was piled 30 feet high in some places—huge firetraps. And the forest fires came, of course, the like of which had never been seen before

FOREST FIRES

Dr. Walter Havighurst of Miami University, Ohio, in a remarkable article written several years ago, dramatically described the atmosphere of these great fires He said:

"I grew up in a Wisconsin lumber town. In the autumn months there was always the terrible fog of forest fires in the air, and the sun was a dull dollar in the sky. At night there were no stars and people slept tensely with that faint fear in their throats, wondering if the wind would change in the night."

When I lived in Louisiana around the turn of the century, this process of cutting and slashing and burning was going on all over the State. A large sawmill would rarely be in one place more than 10 years. It would cut and slash the timber, leave the place desolate, and move on. It has left many ghost towns in its wake. One lumber town in Louisiana had 5,000 people in 1917. It had churches, schools, paved streets, and parks. By 1927, the mill and the timber had gone and the town had one inhabitant. Literally the grass was growing in the streets and the houses were occupied by bats an wild animals.

From 1909 on for 25 years I lived in Idaho. There I saw the same process going on in the West The most desolate lands I ever saw were those in Washington, Oregon, and North Idaho where the lands had been denuded of their finest fir, tamarack, and white pines, and laid waste. No attention was paid at first to selective cutting, to preservation of the young timber or to fire prevention.

DESOLATION

Dr. Havighurst again describes the process of desolation in graphic words:

"When all the forest was ruined," he said, "they blew the long whistle and the town was abandoned. When the echoes died away, desolation settled down. Grass grew up in the streets, the saloons and dance halls decayed in the sun. The landing that had swarmed with teamsters and loaders and whistle punks became a burrow for muskrats. The vast piratic enterprise left its empty camps and its abandoned towns scattered over the ruined North "

It all adds up to this—of almost 1,000,000 acres of original forest land in the United States, only one-half, or about 460,000,000 acres, are now available for producing timber. Nearly all the finest forests are gone and on millions of acres the seedbeds for the best trees have been burned. It would take a long time for such lands to seed themselves and to grow forests like the original, if they ever would. And in some sections of the country, particularly the West, it takes a hundred or more years to grow the big trees. There is in the statehouse at Boise, Idaho, a crosssection of a large western pine with markers showing how large the tree was at different important events in the history of the United States. It was a good-sized tree when Washington was President.

STILL GOING ON

The process of destroying the forests of the country is still going on, not so rapidly as in the past but faster than they are being replaced by growth. There is much less waste now than before, and cutting practices are gradually improving everywhere. There is more selective cutting, more cleaning up of slash, and more fire protection than ever before. But there is still a long way to go. Government holdings—national parks and forests and State timberlands—have largely increased within recent years. Improved practices for cutting on these lands and for fire protection have not only benefited the timber in these reserves but have spread into cooperative efforts by and with private owners on their lands.

In spite of all this, however, there remains much to be done. In a recent report by a special committee of the Department of Agriculture, it was pointed out that the war has taken a heavy toll of timber in both public and private holdings; that the consumption of wood products is far exceeding the amount that is being grown. The committee found that the need is "to double the present growth of saw timber and all other timber as well." The restoration of these forests to full productivity, the committee concluded, would provide employment for hundreds of thousands, if not millions, of people.

TENNESSEE GOING THROUGH SAME STAGE

Tennessee and the Tennessee Valley, of course, have been going through this same stage for more than a hundred years. The lumber industry was one of the first major industries developed in the Tennessee Valley. During the early years, most of the lumber was produced by small circular mills and used by the settlers for homes and other construction purposes. Later on, when transportation facilities improved, large mills were brought in from the North where they had just finished cutting the virgin timber. These operators bought large tracts of timber and by the close of the nineteenth century lumbering operations had reached large-scale proportions. The peak came in 1909, when more than one and one-half billion board-feet was produced. Since then production has been going down, except during the present war, when production has been about 1,000,000,000 board-feet per year. Most of the virgin timber is gone, and most of the large mills have abandoned the territory.

In 1939, when the T. V. A. made a study of the situation, it was found that about 90 percent of the lumber produced was by small mills with a daily capacity of less than 20,000 feet. And it was found also that for a long time there has been a steady and increased loss of forest capital. The drain has far exceeded and is now exceeding the growth of saw timber. It is estimated that this drain has been and is now about one and three-tenths times as great as the annual growth of saw timber.

AN EARLY REPORT

The timberlands within the valley have practically all been cut over, many more than once. And they have been burned over repeatedly. One of the most interesting documents that has come to my attention is a report in 1874 by the State of Tennessee on the resources of the State. It discusses timber resources at considerable length. It deplores the destruction of the forests that was

then going on. Among other things, the report stated:

"The annual conflagrations that sweep like a devouring fury through the old coaling lands, destroying the young sprouts and rendering barren a large scope of country, should be checked. Old fields are lying idle and unfenced in every portion of the State that could be reclaimed by being planted in trees. They are now unsightly and hideous pictures in the landscape, worthless to the owners and to the State."

The report concludes by saying:

"He who shall be instrumental in restoring the lost fertility of those worn places and making them things of beauty and profit, may well be numbered among the benefactors of the State."

Those were brave and prophetic words in 1874. Nevertheless, the depletion from cutting and from fires has gone on. The old, exploitive cutting practices have continued, and there have been and now are something like 10,000 fires every year in the Tennessee Valley and about three-quarters of a million acres of land are burned over annually.

DRAIN EXCEEDS GROWTH

Too much emphasis cannot be placed upon the fact that our capital in the Tennessee Valley forests is being depleted at a serious rate. Instead of being built up, or even holding its own, it is running down at a pretty rapid rate. If the capital in our banks, in our businesses, or in any of our other institutions was being impaired at the same rate, we would know bankruptcy would soon be inevitable.

In spite of the continued depletion of the good saw timber in the Tennessee Valley, however, the forests of the region support an industry of over $100,000,000 income a year. There are some 3,500 sawmills and wood-using industries within the area. When one realizes that the total income from farm products received by the farmers in Tennessee in 1941 was only $109,000,000, the importance of this industry and of the remaining timber resources of the valley is very evident. It is estimated that 1 family out of every 12 gains its livelihood from work in this industry.

What is the future, then, of the timberlands and the woodworking industries in the Tennessee Valley? Will it be necessary for the few large mills to close down in the course of a few years because of the lack of good timber? Must the income from this industry constantly decrease? Is there a way out?

THE WAY OUT

Not only can the industry be maintained, but those who know most about forestry development and management insist that its annual income can be doubled or even trebled. They say also that the forest lands can be improved and their effectiveness for watershed protection be greatly increased. It can be done by management—by a widespread program of society cooperating with nature. This is the third stage of man's relation to nature.

Let us see what this means and what has been done within the last few years in that direction. Through the combined efforts of the State forestry agencies, the Extension Services, the United States Forest Service, and the T. V. A., there have been set up in the valley several industrial and institutional forest management demonstrations, and hundreds of farm woodland demonstrations. All these have been based upon the principle of sustained yield. There have been adopted selective cutting practices, reforestation and erosion control, and utilization of what had been regarded in the past as waste materials. Forest-fire control has been largely extended in all of the valley States, although it is still far from being adequate in many sections. Surveys have been made of kind, quality, and amount of forest growth.

ONE HUNDRED AND FIFTY MILLION TREES

In the last 12 years more than 150,000,000 seedlings from T. V. A. nurseries have been set out in the valley, in addition to other millions produced in the State nurseries. An educational program conducted by the several State and Federal agencies is making people conscious of forest deterioration—conscious of the bad cutting practices, conscious of the waste, conscious of the fire menace. Efforts have been made to create an anti-forest-fire attitude, an anti-soil-erosion attitude. Up to June 30, 1944, there had been held nearly 6,000 meetings of farmers and landowners in the region, with an attendance of close to three-quarters of a million people, where these problems have been discussed. This included hundreds of meetings with school children and teachers. More than 20 community forest-fire-control plans had been put into operation, and organized fire control has been extended to 15 additional valley counties.

There is no better example of progress than that found here in Wayne County. Recently I saw an article written about Wayne County developments. The writer began the article in this way: "I have seen a miracle." Of course I read on, delighted with the story of what has taken place in this county during the last 3 or 4 years. I shall not, of course, go into the details of the story for you know them. It is the story of your achievements. It tells how you had long been subjected to the inequities of forest exploitation, how you finally broke with the past, how you took stock of your remaining timber resources, and how you have much improved a situation that a few years ago seemed almost hopeless.

WAYNE COUNTY EXAMPLE

For the sake of those who do not live in this county, however, let me summarize the story. It is one of which all Tennesseans may be proud. It is one in which the people here have adopted a policy of growing timber instead of merely cutting it. Eighty percent of Wayne County is in timber and probably always will be. Its 13,600 residents are classified by the Census Bureau as rural; and Waynesboro, the county seat and largest community, has a population of a little over 1,000. For 50 years the valuable hardwoods were cut and barged to St. Louis, Cincinnati, and New Orleans. Some of the operators gave little thought to the future of the county. It was their policy to buy land and stumpage cheap, skim off the cream, and move on.

By 1940, only cut-over remnants of a once unbroken timber stand remained. Yet about half of the able-bodied men in the county worked at least part time in the wood-using industries. In that year a T. V. A. forester, working with the State Division of Forestry, moved to the county. He traveled up and down the county, getting acquainted with the people, holding more than 300 meetings and talking about the timber situation. He wrote articles for the newspapers, tacked up posters, and talked about forest fires.

WHAT COUNTY IS DOING

Late in the year 1941, a group of interested landowners met and formed the Wayne County Forest Protective Association. They raised among themselves $450 which was matched by the State; a motorized crew was set up to look after fires on 60,000 acres around the Waynesboro lookout tower. Later on your Lutt's tower was built of wood because no steel could be obtained. This overlooked 75,000 acres and was taken care of by another motorized crew. In 1943 the county court contributed $1,000 which was matched by the State and two more crews were installed. There are now six lookout towers and six crews. During the 5 years preceding these efforts there had been an average of 12,000 acres burned over; in 1943 there were only 3,000 acres burned. Sentiment had grown so strong in the county that an old trapper remarked: "Mister, I'd shoot my own brother if I caught him firin' the woods."

Not only had Wayne County people been working on reduction of forest fires, they were changing their ways of cutting the timber. The landowners took hold of this matter with the same vigor they did fire protection. Hassell & Hughes Lumber Co. has done one of the most encouraging things that has come to my attention in the whole field of forest conservation. In 1943 this company had to make a major decision. Most of the pine saw-timber had been cut on their 70,000-acre holdings. Should they complete the liquidation and go out of business or should they revise their cutting practices and plan a permanent operation?

PERPETUAL HARVEST

T. V. A. foresters made an inventory. They estimated that the present stand of timber is growing new wood at the rate of 5,300,000 board feet each year. If 3,000,000 feet were cut each year the annual gain would be 2,300,000 feet. After 10 years of this kind of management the volume of timber would have increased to 100,000,000 board feet. This suggestion has been followed by the company, and by so doing it will in 20 years have a stable industry based on a growing stock of 150,000,000 board feet of high-quality timber, and a perpetual annual harvest of 7,500,000 board feet. By making other adjustments the company has continued to run without decreasing its income or the number of its employees. I take off my hat to the people of Wayne County and to the Hassell & Hughes Lumber Co. You have performed a miracle.

The work in this county has served as an example for a number of other demonstrations in the Tennessee Valley. It has led six owners of properties aggregating 210,000 acres in Virginia, Tennessee, and North Carolina to explore the possibilities and to initiate similar demonstrations on their own properties. It has encouraged the hundreds of farmers who are using their woodlands as demonstration projects. This is applied resource development based on the natural law of sustained production.

There has been much talk about the 24,000 agricultural demonstration farms in the Valley, and people come from all over the world to see them. The woodland demonstration farms and the industrial forest demonstration areas may likewise create Nation-wide, if not world-wide, attention. The results that are coming from these forest demonstrations, and especially the Wayne County demonstration, would seem to be as significant in forest conservation as the demonstration farms in soil conservation. It would be difficult to find any conservation demonstration more heartening than that in your own county.

WHAT OTHER COUNTRIES HAVE DONE

There are other countries in the world that have practically solved the problem of forest conservation. As far back as 1752, Sweden classified her land in a land-use survey. The United States is just now thinking of such a survey. In Sweden there are sawmills that have been in continuous operation for 200 years. Of course, they cut the timber only when it matures; they protect it from fire; they carefully protect the young growth of timber. After two centuries of large-scale lumbering, there is more timber in Sweden now than there was in the year 1700. Denmark has twice as much forest now as she had 50 years ago.

The people of the Tennessee Valley can do the same thing whenever they make up their minds to it. Wayne County is pointing the way.

Franklin Delano Roosevelt and President Truman

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 17 (legislative day of Monday, April 16), 1945

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD four editorials, two being from the Philadelphia Evening Bulletin, one entitled "Franklin Delano Roosevelt" and the other "President Truman," one from the Philadelphia Record entitled "He Died in Service," and another from the Philadelphia Inquirer entitled "Franklin Delano Roosevelt" all of date April 13, 1945.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Philadelphia Evening Bulletin of April 13, 1945]

FRANKLIN DELANO ROOSEVELT

President Franklin D. Roosevelt has expended the last ounce of his strength in the service of his country and passed on. This tragedy befalls at the most critical moment of the world's history.

Not alone is our President stricken, but hundreds of millions who looked to him for leadership feel the blow. He carried the flaming torch of victory to the very verge of triumph. His skill and his indomitable will were counted upon to shape the future security of the family of nations.

President Roosevelt had risen to his position of world preeminence by way of a succession of steps that won him first the esteem and confidence of his own followers and the respect of his political opponents. He had, to begin with, broad knowledge of public affairs, a magnetic personality, a sense of humor, a deep sympathy for the underprivileged, a keen political acumen, and a dogged determination to conquer his physical infirmity that won universal admiration.

With these assets and a record of achievement in public service, he came into control of domestic affairs at a time of economic upheaval that threatened to end in chaos. He adopted drastic measures to cope with the fear that lay at the bottom of the national unrest of that period. He followed up with advocacy of almost revolutionary social reforms. His was the unprecedented distinction of winning four elections to the Presidency.

This eminence in a country of commanding wealth, natural resources, and industrial development made President Roosevelt's convictions about foreign affairs matters of supreme international importance. The world took notice when he spoke his mind—and it was the American mind—in condemnation of aggressor nations. He tried by warnings to divert the dictators from self-destruction through pursuit of their ambitions. He saw more clearly than most of his countrymen whither the world was heading.

When war came, President Roosevelt shaped his course to safeguard American interests. What the outcome of his struggle to unify national sentiment might have been but for the incredible stupidity of the sneak attack on Pearl Harbor and Hitler's declaration of war none can say. The folly of the aggressors fused American national will overnight. It stood four-square behind its leader's determination to beat Germany and Japan into unconditional surrender. It subscribed to his belief that the price we must pay now for freedom is less than the cost of world submission to a hateful tyranny.

Upon our entry into the war the President plunged, unsparingly of himself, into an active personal participation that would have worn down many a man of stronger physique. Regardless of risks to health and life, he repeatedly crossed the oceans to confer with the leaders of our allies. He took a direct hand in the planning of military and political strategy. He devoted himself to ironing out difficulties. He cemented ties that produced unity and assured victory.

And now, with military triumph over Hitlerism apparently only a matter of days—or at most of weeks—now, with the nations about to assemble at San Francisco to go over the blueprints for a shock-proof structure of world security; now, with the world leaning more heavily than ever upon his council and guidance—he pays the price of a devotion to duty, a courageous acceptance of overbearing responsibility, that carried him beyond his strength.

Truly, the United States has lost a great President, the United Nations a powerful champion, the world an outstanding humanitarian leader.

In this hour of consternation and grief petty political considerations are forgotten. Americans will see Franklin Delano Roosevelt in a clearer perspective. History will record in indelible words the devotion of his extraordinary talents to the realization of humanity's hope—peace and prosperity for all.

A stunned and sorrowing world pays tribute to his memory. His is a name that will ever be remembered in his own country with gratitude and pride.

PRESIDENT TRUMAN

Normally a change in the Presidency caused by death has been of real concern only in this country. But the transfer of Presidential power due to the passing of Mr. Roosevelt is a matter that stirs the whole world. For possible changes in American policy might affect all humankind.

The world must needs ask, what manner of man is Harry S. Truman? How does he stand as to prosecution of the war? The making of the peace? The fulfilment of the hopes of the peoples everywhere for security against other wars, new aggression?

The answer of his record is reassuring. It will comfort the friends of freedom, deprive our enemies of even the faintest hope that the change in Washington will save them from their just fate.

The new President has been one of the most useful Members of Congress in promoting effective prosecution of the war. The Senate inquiry over which he presided has served to prevent delays, cut out abuses, and curb morale-shaking profiteering.

On every issue concerning the war, the peace, the due punishment of our enemies, he has been on the right side. The record supports the pledges he now makes.

He comes from simple folk, of the sturdy stock that has given the Nation some of its best Chief Executives. His is a call to meet the need not only of the present, but of future generations, that would challenge any American to offer of his best.

As the war enters its closing phase in Europe, thoughts naturally center more and more on the problem of security. There is matter for encouragement in the belief that President Truman's influence with the Senate, born of a decade of service in that branch of Congress, will be helpful in getting that body in line with the people's will.

The American people have faith today that their new President will measure up to the high responsibilities to which destiny beckons him. Regardless of party, they will rally to his support in this hour of grief and crisis.

[From the Philadelphia Record of April 13, 1945]

HE DIED IN SERVICE

The only tribute to Franklin Delano Roosevelt we can put into words tonight is one we pay in common with millions more throughout the world.

President Roosevelt was our friend. We were proud of that.

Millions were proud to call him friend. That was the quality of his greatness. He was a friend of all mankind.

Now, at the floodtide of victory in Germany, even as our highest Army officers forecast the end of hostilities "in a few days," our President joins the gold-star honor roll of American war casualties. He was just as much a war casualty as any G. I. Joe laid low by an enemy bullet.

Few of us have realized how hard Franklin Roosevelt drove himself, how he spared nothing, least of all his strength and devotion. Perhaps he knew it would be this way, that he decided all he had to give must be given before it was too late.

We may grieve that he has not lived to see completion of the Allied triumph which he planned so brilliantly and with such uncanny foresight. Yet before he passed on he could have no doubts that triumph was inevitable and imminent.

Posterity will think of us as "the Roosevelt generation." Often with envy. There never has been any doubt that his place in history was preeminent and secure.

History also will record that he was as great in peace as he was in war, a recognition already given him by the Nation—through unprecedented election to four terms in the White House.

Yes, he was a valiant leader; loved by his people because he wholeheartedly loved them.

He is gone. And the only mitigation of the Nation's sorrow is the realization that providence gave him to America when America needed him most.

[From the Philadelphia Inquirer of April 13, 1945]

FRANKLIN DELANO ROOSEVELT

Immeasurably shocked by the sudden death of their President, the American people feel an acute sense of loss that is intensified by the especially tragic circumstances of his passing at the climax of his long and devoted service to his country's welfare.

To be deprived of Franklin D. Roosevelt's militant leadership just as the day of victory over America's cruel foes is beginning to dawn, just as he was preparing to exercise his powerful influence toward insuring the future peace of the world, constitutes a stunning blow to the Nation as it bows its head in sorrow.

Few of his illustrious predecessors had been forced to bear so many and so grave responsibilities and burdens. None had been called upon to contend against such a grievous physical handicap as marked his long years of office.

President Roosevelt's splendid triumph over his grave disability, which would have caused a lesser man to give up in despair, will ever remain an inspiring object lesson to American youth. His death at this particular hour of the Nation's history recalls poignantly the tragedy of Abraham Lincoln, who, also laden with the cares of a great war, died only a few days after the preservation of the Union had been assured.

History will appraise Mr. Roosevelt's true place among the world's great statesmen, but at this moment of national mourning certain facts stand out, in the amazing career of the

man who was four times elected President of the United States, that admit of no dispute.

From early manhood and during his service as a member of the New York Legislature and Governor of the State Mr. Roosevelt had evinced a keenly sympathetic interest in the lot of the poor and underprivileged.

After he became President it was natural that he should continue this humanitarian interest by proposing and urging far-reaching measures of social reform, including the system of social security which provides pensions for the aged unable to earn a living.

Shortly before his death, Mr. Roosevelt had lent his active support to plans for greatly expanding these benefits to our people.

The Nation-wide campaign for the prevention and cure of infantile paralysis will ever be associated with Mr. Roosevelt's name. The famous institution at Warm Springs, Ga., was especially near to his heart, and the March of Dimes has become an annual national enterprise productive of untold good to countless sufferers from the dread disease. His leading part in this beneficent work will never be forgotten.

At a time when the danger signals were flying over unhappy Europe, Mr. Roosevelt was prompt to perceive the gathering storm and to warn his countrymen to be prepared.

In his memorable and striking speech in Chicago, he clearly portrayed the perils to America of a world ablaze with war and urged the adoption of measures to quarantine and curb all would-be aggressors.

He was quick to realize the folly of attempting to appease such bloodthirsty monsters as Hitler and Mussolini and to advocate preparations for the defense of our own country on a scale commensurate with its huge material and military resources.

A beginning was made toward strengthening our Nation's bulwarks, but only a beginning, for it was difficult to overcome the obstinate prejudices and shortsightedness of those isolationists who foolishly believed that the United States could withdraw into a watertight compartment and be secure.

Then came the Japanese stab in the back at Pearl Harbor, unparalleled, as Mr. Roosevelt so righteously declared, in the annals of infamy, and an aroused Nation leaped into the war under his vigorous leadership.

Long before America was forced to join the fight against the international gangsters, Mr. Roosevelt had perceived the impossibility of pursuing a neutral course. With scant regard for precedents and technicalities, he had moved to obtain for our Nation strategic outposts of defense which were later to prove their inestimable value.

When war came, President Roosevelt did more than issue a clarion call to arms. Under his direction, Congress moved swiftly to fit the Nation for a conflict which, he warned, would be long and arduous.

He initiated the program for building the greatest Navy the world had ever seen and witnessed its successful conclusion. He stressed the need for harnessing every major industry in the land to the war effort. Today we are reaping the fruits of this enterprising, enlightened leadership.

In order to further the progress of the war, Mr. Roosevelt never spared himself but endured the dangers and hardships of long-distance journeys by air and sea to confer and plan with the leaders of our allies.

It was natural that the stress and strain induced by these extraordinary exertions, enough to break down a healthy man of half his age, should have given rise to constant fears and anxieties on the part of all good Americans. The supreme tragedy is that he did not live to see his efforts for victory and an enduring peace brought to final accomplishment.

It may be said of President Roosevelt that he gave his life for his country as truly as the soldier who is slain on the firing line. He died in the path of duty. He could have wished for no better epitaph.

Why Italy Should Be Accepted As An Ally

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Committee on Foreign Affairs, April 11, 1945:

Mr. Chairman, April 25 will mark the beginning of a new era. The conference at San Francisco will decide whether or not the "four freedoms" mean what they say and apply to all nations.

Representatives of the United States have been invited to attend the conference to discuss the new world peace organization. America and other Allied Nations have it within their power, by extending the hand of friendship and encouragement to the Italian people and backing up this gesture with lend-lease aid, to avoid chaos and destruction and to imbue them with new hope, faith, and trust in the United Nations.

Conditions in Italy have become such that unless new life, encouragement, and hope are extended to the people of Italy, it will be plunged into a protracted period of chaos and despair, which would be calamitous for the peace and progress of the 45,000,000 people of Italy.

The people of Italy, by the shedding of their blood and by the endurance of starvation and other privations, are giving unquestionable proof of their sincerity of purpose in attempting to destroy and defeat all Nazi and Fascist military and nonmilitary forces and influence. Their courage and sacrifices have been recognized and praised by the leaders of the United Nations, and in all their actions and deeds, the people of Italy have proven themselves to be the firm friends and allies of the United Nations.

The plight of the people of Italy demands early and effective action by our Government and the other Allied Nations, so as to continue to secure the cooperation and support and confidence of the democratic peoples of Italy. I believe that recognition of Italy as an ally of the United Nations would be a strong force in giving the people of Italy the uplift, new courage, and a new spirit in their struggle to build a genuine democracy.

Certainly the Italy of tomorrow, the democratic Italy that we American citizens of Italian origin have labored to create, at the request of our Government, first, by our appeals beamed over the air waves to the people of Italy to revolt against their Fascist-Nazi oppressors, lay down their arms and accept the guaranties of the Atlantic Charter and the "four freedoms"; and now, by the blood and sacrifices of soldiers of Italian origin, 1,000,000 strong, fighting on every battle front in the American service, have given and are giving ample proof of their devotion and valor, and are laying their lives on the field of battle; and the 7,000,000 loyal American citizens of Italian origin residing in America, and many millions of others interested in true democracy, have expressed a sincere desire and hope through their organizations, their leaders, the press, and the labor organizations, that such sacrifices and hopes and sincere cooperation on the part of the people of Italy shall not go unrecognized by our Government and other Allied Nations.

I urge that the United Nations extend their formal recognition to Italy as an ally of this World War, and also extend to Italy an invitation to attend the San Francisco Conference.

Mr. Chairman and members of the Foreign Affairs Committee, I wish to thank you for extending to me the courtesy of permitting me to appear before you today to urge that Italy be recognized as a full and equal ally.

Government by Decree

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. PHILLIPS. Mr. Speaker, under the permission given me to extend my remarks in the RECORD, I call attention to the constantly growing volume of "directives" and regulations today pouring out of the Federal agencies here in Washington. This is a matter of serious concern to Members of Congress and to people in all parts of the United States. The question, which I ask again today, is pointedly, "When is Congress going to do something about it?" Quite a few of us asked this question last year when the renewal of the Emergency Price Control Act gave Congress a simple and excellent opportunity to make certain amendments to that act.

With that in mind, and with another renewal coming up shortly, it is interesting to read the following editorial from the Los Angeles Times of April 8, 1945. It was written by Warren B. Francis, the Times staff correspondent in Washington. The Octopus, to which Mr. Francis refers, is a mimeographed sheet put out weekly by C. J. S. Williamson, the Washington representative of the California State Chamber of Commerce. It shows briefly the regulations, orders, directives, and other evasions of the constitutional intention to make the Senate and the House of Representatives the lawmaking bodies of Congress. It has surprised and interested me as much as it did Mr. Francis, when he wrote this editorial:

GOVERNMENT BY DECREE

(By Warren B. Francis)

WASHINGTON, April 7.—Few people seem to do anything about the weather, as Mark Twain observed. Nor do they do anything about Government by decree.

Several years ago an enterprising advertising man won a seat in Congress by promising to repeal a law a day. The time seems to be ripe for a candidate who will promise to hold down the issuance of directives to one a day.

Careful checking of the official records shows that miscellaneous Government agencies issued 1,338 orders, rules, regulations, amendments, and other instructions in a 3-week period. Lawyers, businessmen, Washington observers, and even bureaucrats cannot keep up with this stream of decrees unless they devote full time to checking on the revisions, modifications, changes, and interpretations.

A GREAT FLOOD

Historically, Executive orders signified a White House decision. They were aimed at other Federal agencies, at assorted Government officers. They have come from the President's office in legitimate fashion for generations. These formal documents bear the President's signature.

The stream of proclamations, ultimatums, and other directives lately has reached the proportion of a surging flood. They have the standing of Executive orders, though signed by a host of individuals, and also the effect of congressional enactments.

In the case of laws, presumably some debate and discussion and deliberation precedes final approval. In the case of Executive orders, there is no such assurance.

SOME OF THE FACTS

The degree to which the administrative branch of the Government has taken advantage of hastily conferred authority to tell the people where to head in cannot be appreciated without a few statistics.

Thanks to the research of an enterprising Californian, some of these vital facts are available. The Washington representative of the California Chamber of Commerce, Charles J. S. Williamson, has noted there were, on a single day, 33 pages of "detailed amended instructions in relation to meat inspection." He adds, pointedly, "What meat?"

In one 7-day period the output of rules, orders, decrees, and other directives ran from a high of 168 to a low of 62, totaling 444 for the week. One order carried nearly 50 footnotes, referring affected parties to earlier versions.

This "octopus," to steal a phrase from the industrious Californian, seems to be an insidious animal. He is infiltrating into the home-front ranks with the persistence of Japanese. He is using a streamlined model of the "If you can't lick 'em, join 'em" vehicle. He is using the war effort as a smoke screen to cloak his movements.

Significant warning about the dangers of government by decree can be found in a congressional report warning about the number of orders signed by the President. This does not enumerate the volume of decrees from such agencies as the O. P. A., W. M. C., W. P. B., and other alphabetical conglomerations.

HOW LONG?

Ironically, the "do this—or else" notices derive the force of law by being printed in the Federal Register. Not one is enforceable—as in the case of the curfew—until it appears in that publication. The Federal Register, incidentally, bears the motto, "Littera Scripta Manet." Loosely translated, this means "The written word remains."

A review of the orders, etc., prompts two questions: How long does the written word govern the conduct of the Nation? When is somebody going to do something about it?

The Late President Roosevelt

EXTENSION OF REMARKS

OF

HON. JAMES W. WADSWORTH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Hon. William S. Bennet, president of the Empire State Society, Sons of the American Revolution, on the death of President Roosevelt at a meeting of the New York Chapter, S. A. R., at the Hotel Plaza April 12, 1945:

As president of the Empire State Society, S. A. R., I feel that we should all leave this meeting with a united thought. We are all Americans. Eighty years ago this month Abraham Lincoln lay dead at the hand of an assassin. That also was at a time of great crisis. Here in this city, Gen. James A. Garfield was called upon to address from a hotel balcony a vast throng of silent, anxious people. He said but one sentence: "God reigns and the Government at Washington still lives." Today, also, that is the guiding thought of every true American.

Poland

EXTENSION OF REMARKS

OF

HON. JOSEPH F. RYTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

After a careful consideration of the policies adopted at the Yalta Conference we, Americans of Polish descent, assembled at a meeting of the United Polish Societies, consisting of all (23) the Polish-American organizations in the city of Hartford, Conn., February 28, 1945, at the Polish National Home, 100 Governor Street, Hartford, Conn., approaching from an American point of view cannot approve of the stand adopted by the President of the United States, a country for which our predecessors have fought to establish a truly democratic and liberty-loving system of government and we condemn the high-handed treachery at Yalta of our American ideals.

We have never had any occasion to complain, and believe us we hate to reproach our President, but we are profoundly disturbed by this gross injustice to the people of Poland, not because we share a common heritage of blood, but because like the average American we demand a better solution to this problem, which we believe as it stands will have sown seeds for hatred and resentment which will eventually plunge the world into another World War and in which the United States will again be involved.

Is this to be a reward that awaits the Polish fighting men and women on the battlefields far flung from their native land and those unsung heroes of the Polish underground? Do you think, that in an attempt to salvage the hurt pride and outraged feelings of the fighting Polish forces, to offer them asylum in this country, will be sufficient and a satisfactory solution of their predicament in face of being outlawed from their native land by Moscow imposed puppet regime? Is this to be their reward for their important part they played in defense of Great Britain, for their bloody sacrifices at Tobruk, in Italy and other battlefields, on land, in the air and on the sea? Is this to be a reward awaiting the Polish nation for defending her heritage as well as the heritage of other freedom-loving nations at all times, when freedom was at stake? Is this the gratitude shown by the Democratic nations of the so-called Western civilization, to throw the Polish nation to the well-predicated fate and mercy of the most brutal dictatorships in the history of the world? In return for being the bulwark of the western civilization against all the aggressions which have always come from the east.

The Polish people, although not alone in their struggle against the German aggressor, are being discriminated against. Britain and the United States are condoning the aggression from the east, at the same time exacting a heavy toll of lives to bring down Germany to its knees.

Our position is very clear. We shall never acknowledge any aggression and the outrages committed upon the land of our forefathers. Our troops are driving out the invader from lands belonging to the English crown. In anticipation of any changes favorable to the Polish nation, we are at the same time prepared for even a greater enchantment, to which we shall react not with tears and pleas for mercy, but shall expend all our energies in building a resistance with such strength of character that even the mightiest enemy cannot tear down.

Today, we may not be a match for brutal force; but we, solemnly promise the American nation, though they deal us even a deadlier blow than this, that we shall not waiver in our obligations as pledged in the allegiance to our flag under whose stars and stripes countless numbers of freedom-loving peoples saw the light of day, and are fighting to preserve the untarnished tradition our flag represents.

We shall teach our children to love truth, freedom, and beauty, though there be none around them. We shall coach them carefully to follow in the footsteps of the founders and makers of our Constitution and we shall assure them "that he who breaks faith with our American ideals shall be judged by history and future generations for his treacherous acts."

We shall preserve dignity and honor to the end, and let not malice enter our hearts. The destiny of the world is in the hand of God, and not in the hands of the dictators.

We agree that amongst the Polish people there are certain tendencies toward disfavor and distrust in regard to Russia. But if those tendencies exist it is only fitting to ask why.

The answer is clear. Despite the best of intentions it is impossible to forget through one generation all that Russia has done to Poland for the last century and a half.

For a century and a half Russia had tortured the Poles, as she is doing now. Thousands were sent to Siberia, thousands thrown into prisons, as she did with several million of the best part of her own population, the Ukrainians particularly. The use of Polish language was forbidden, worship of God was interfered with. Every tiny glimmer of national Polish life was quickly and rigorously extinguished, same as it is being done now with the aid of the treacherous Moscow-sponsored puppets of professional Communists.

Can all this be forgotten and so quickly disregarded? And now let us pass to the period of Soviet rule in Russia. This period began with splendid and lofty promises and assurances made by the U. S. S. R. to Poland. In a sweeping gesture the Bolshevik leaders broke with all acts of violence Poland's rights to the integrity of the territory and her sovereignty. And this was not done in the moments of Russia's weakness, as some subsidized publicists and agents try to influence the American public opinion. Poland was in fact weaker militarily. But her spirit was undaunted and it will remain undaunted.

However, in spite of these lofty disavowals by the Communist leaders, continuous struggles were fomented within Poland by Moscow Communist agents.

We are deeply convinced that if Russian people had understood the necessity or given the change to determine the necessity for an amicable and honest policy toward Poland, honest in our sense of the word, then without a doubt, friendly relations based upon a mutual respect and the recognition of their respective interest between the two countries could have been established.

International laws, international justice and international morality must be equally applied to all nations and then cannot be opportunistically stretched one way or another to make them applicable to current needs of some single nation, because as practice has shown such a procedure inevitably leads to catastrophe: Be it further

Resolved, That copies of this resolution be forwarded to the press, the Senators and Representatives of the State of Connecticut, to the members of the American delegation to the coming San Fransisco United Nations Conference, to the Secretary of State, and to our parent organization the Polish-American Congress in Chicago.

Furthermore, we urge our Government to use its good offices in facilitating and speeding relief to the destitute people of Poland, now that the Nazi aggressor has been driven out of that country. This alone will demonstrate most effectively Russia's willingness to cooperate with the United Nations.

Adopted at Hartford, Conn., February 28, 1945.

STANLEY A. OZIMEK,
President.
EDWARD I. JAKOWSKI,
Secretary.

Pay of Postal Employees

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

To the Congress of the United States of America, Washington, D. C.:

Whereas it has been a matter of common knowledge for several decades that our Federal postal employees are among the hardest worked and poorest paid of all public servants; and

Whereas the exigencies of war have greatly increased the labors and duties of these faithful servants to a point where a large proportion of them are working to the very limits of their capacity; and

Whereas a temporary war bonus of $6 per week, the postal employees' first pay increase of any kind since 1925, will expire in June of this year; and

Whereas H. R. 2071, now pending before Congress, and planned to permanently replace above temporary increase, must pass by July 1, 1945, else postal employees' wages will revert to their former status, and instead of receiving a small merited increase over what they now receive, postal workers will suffer a cut of $6 per week: Therefore, be it

Resolved, That this councilmanic body of the city of Los Angeles, representing one of the most significant war production centers in America and a city of magnificent distances which add materially to the requirements placed upon our postal workers, does hereby petition and pray the Congress of the United States of America for the speedy passage of H. R. 2071, to the end that further injustice may be prevented to a large and loyal group of public servants; and be it further

Resolved, That copies of this resolution be forwarded by the city clerk to the Secretary of the Senate and the Clerk of the House of Representatives, in Washington, D. C., and to Members of Los Angeles County's delegation in the House of Representatives, and to California's two Members of the United States Senate.

Boxcar and Grain Storage Situation in Kansas

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. HOPE. Mr. Speaker, pursuant to unanimous consent granted me to extend my remarks in the RECORD, I include a report from the Kansas State United States Department of Agriculture War Board covering the boxcar and grain storage situation in Kansas at the present time.

This report clearly indicates the necessity for getting more boxcars into Kansas at once if we are going to avoid a shocking loss of food and livestock feed:

UNITED STATES DEPARTMENT OF AGRICULTURE,
U. S. D. A. WAR BOARD,
Manhattan, Kans., April 14, 1945.

Hon. CLIFFORD R. HOPE,
House of Representatives,
Washington, D. C.

DEAR SIR: The Kansas State U. S. D. A. War Board submits the following summary statement as a second report on the boxcar and grain storage situation.

1. The April 10 Kansas Crop Report issued by the Agricultural Statistician for the Bureau of Agricultural Economics and the State Board of Agriculture shows that farm stocks of grain on Kansas farms are 33 percent larger than those of a year ago.

2. Stocks of grain in practically all country elevators make impossible the acceptance of deliveries from farms unless some loading out into grain cars is accomplished. The January 1, 1945, stocks of wheat in interior mills, elevators, and warehouses were 21,360,000 bushels compared to 16,500,000 bushels a year ago and 16,644,000 bushels for the years 1935–43.

3. County agricultural conservation committees report that 650,000 bushels of grain sorghum and about 2,450,000 bushels of corn are on the ground at present and deteriorating in quality.

4. The moisture content of much of the grain sorghum and corn now in storage is very high and quality will deteriorate rapidly when warm weather arrives.

5. The Kansas Crop Report indicates a 1945 wheat crop in Kansas totaling 231,557,000 bushels. If this production is secured, it will be the second largest crop on record. Favorable moisture conditions continue to benefit most of the major grain producing areas of central and western Kansas.

6. There has been no noticeable change in the boxcar movement into this area recently. The very large stocks of grain in bins and elevators and the moisture content of much of this grain makes it imperative that it be moved. Failure to move the grain will cause loss and will choke the outlets for 1945 crops.

7. It is highly probable that 75,000,000 bushels of wheat and other grain will have to be piled on the ground at harvest time unless all intensive efforts possible are taken to prevent this condition.

8. Agricultural agencies are encouraging farmers to provide adequate storage for at least a portion of the grain which they expect to produce in 1945. Bins owned by the Commodity Credit Corporation are being sold and rented and all such bins will be used. Judging from the applications for farm lumber or grain storage construction received, it is our opinion that not enough farmers are availing themselves of the lumber and building materials now available for grain storage. More individual farmers should make their applications at this time before the harvest season arrives.

9. The prospective winter wheat crop is 40,000,000 bushels above last year. April 1 farm stocks of grain (including corn, wheat, oats, and barley) are 23,000,000 bushels above a year earlier. Very heavy farm reserves of sorghum grain (January 1, 1945, farm stocks were 32,000,000 bushels), with grain stocks much heavier than last year, have caused country elevators to become blocked. The situation is becoming extremely critical, particularly throughout the western two-thirds of the State.

It is the opinion of the war board that the only satisfactory solution of the present problem is that more grain cars be made available immediately to move stocks of grain from country elevators.

Very truly yours,
LAWRENCE NORTON, *Chairman,*
Kansas State U. S. D. A. War Board.

The Expansion of Japanese Shipping

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include therein an article appearing in the Shipping World of January 31, 1945, entitled "The Expansion of Japanese Shipping, Built for the Purposes of War":

THE EXPANSION OF JAPANESE SHIPPING, BUILT FOR THE PURPOSES OF WAR

(By Sir Archibald Hurd)

The rise of Japan as a commercial sea power was the most sensational event in the history of shipping in the past 50 years. It was largely fostered and financed by the state in pursuit of the policy of aggression to which it has increasingly been committed for many years though the plans were skilfully camouflaged.

At the beginning of this century, Japan owned about half a million tons gross of shipping, other than sail; by 1913 the figure had been trebled; by the end of the First World War, during which the other allies had been preoccupied in defeating the common enemy, suffering heavy losses of tonnage, Japan's merchant shipping had rapidly increased, and by 1919 it was of 2,325,000 tons gross; when she made her treacherous attack on Pearl Harbor and subsequently overran British, French, and Dutch territories, she possessed no less than 5,630,000 tons, all of which was employed in the various amphibious military operations on which she had embarked.

Thus, since the beginning of the century, the expansion has been from about half a million to upwards of five and one-half million tons, and that movement, it is now apparent, was undertaken in preparation for her policy of conquest—quite as clearly as was the development of her Navy. The Japanese taxpayers paid vast sums in expectation of a rich reward. In The History of World Shipping (Fayle), it is stated that "the highly subsidized Japanese lines made

profits so large that they could have distributed a handsome dividend even without the subsidy, which thus became a sheer gift from the nation to the shipowners." The shipping, as well as the shipbuilding industry, was nursed by the Japanese Government, as has since become evident, for the purposes of war.

EARLY OPERATING AND BUILDING SUBSIDIES

As long ago as 1896 laws were passed to encourage the shipping and shipbuilding industries. Under the navigation law of that year any Japanese subject or any commercial company whose partners or shareholders were all Japanese subjects engaged in carrying passengers and cargo between Japan and foreign countries or between foreign ports in their own vessels—which had to be of at least 10,000 tons and registered in the shipping list of the Empire—became entitled to subsidies proportionate to the distance run and the tonnage of the vessels. Under the shipbuilding law, bounties were given for the construction of iron or steel vessels of not less than 700 tons by any Japanese subject or any commercial company whose partners or shareholders were all Japanese. This policy proved costly to the Treasury at Tokyo, but it was regarded as a national investment. Shipyards were laid out, and shipping became a very prosperous adventure, practically without risk of loss. But the expansion of shipping did not keep pace with the ambitions of the Government, and ships were purchased abroad and, of course, qualified for the liberal navigation subsidy.

Year	Built in Japan		Purchased abroad	
	Steam	Sail	Steam	Sail
1898	479	1,301	194	9
1899	554	2,771	199	12
1900	653	3,302	206	7
1901	754	3,559	215	6
1902	813	3,585	220	6
1903	855	5,304	233	8
1904	947	3,324	277	8
1905	1,028	3,508	357	11
1906	1,100	3,859	387	11
1907	1,150	4,033	419	12

Japan had plenty of sailors in the fishing industry, and training schools for officers and men were established, so as to fit them for service in the merchant ships. Japan rapidly developed into a maritime nation of the first rank. Whereas about 77 percent of her exports had formerly been carried in foreign bottoms, Japan's ships were carrying 39 percent by 1902. Her success encouraged further schemes of expansion.

JAPAN AND GERMANY'S SHIPPING

When the last war closed, Japan had not decided what her future relations with other nations should be, for the Anglo-Japanese alliance still existed and was a useful cloak for her warlike policy. As one of the allies, she agreed that Germany, whom she then regarded with jealousy as a rival, should surrender all her oceangoing and half of her smaller ships by way of reparation for the injury she had inflicted on the victors, and in the distribution after the signing of the Treaty of Versailles Japan shared. When the present struggle is over, she will have to surrender all her oceangoing ships if official opinion in the United States is any guide to the course which the peace settlement will take, and she will be barred from the trade routes—for a time, at least.

It is impossible to withhold some measure of admiration for the way in which Japan strengthened her position on the trade routes of the world between the First and Second World Wars without exciting wide suspicion of her ultimate objective. The story of the means which she employed in developing her mercantile marine was not told—and then only partially—until a report of the imperial shipping committee was issued early in 1939 on the eve of the present struggle, when it attracted little attention in or out of Parliament. All the Dominions were represented on the committee, as well as India, while Mr. W. Lionel Hichens, Sir Kenneth Lee, Mr. D. T. Lewis, Mr. Robertson F. Gibb, and Mr. T. Harrison Hughes were also members as "persons experienced in shipping and commerce." The inquiry, over which Sir Halford Mackinder presided, was concerned generally with "British shipping in the Orient." In view of the events of the present war, the revelations as to the manner in which Japanese shipping, as well as shipbuilding, was fostered by the Government, are of particular interest.

The abnormal conditions prevailing during the Great War of 1914–18 diminished the need for subsidies, but soon after the war the annual amount of operating subsidies tended to revert to the dimensions of 1914. From 1922 to 1929, operating subsidies were of the order of 10,000,000 yen a year or, say, £1,000,000 sterling. During this period the Government did not give direct shipbuilding subsidies, but assisted shipbuilders by means of bounties on domestic steel production and certain exemptions from import duties.

In 1929 the Government framed a program for the assistance of shipping in the form of loans on easy terms for shipbuilding. A loan fund of 30,000,000 yen (about £3,000,000 sterling at 1929–30 rates of exchange) was made available, but owing to the world economic depression which followed, little use was made of this facility.

THE POLICY OF SCRAP AND BUILD

In 1932 a new marine policy was initiated with a view to modernizing Japanese shipping. The first of 3 scrap-and-build schemes came into operation in October of that year and provided for the construction of 200,000 tons gross of new shipping, on condition that 2 tons of vessels of 25 years and over were scrapped for each ton of new vessels built under subsidy.

Each new vessel had to be 4,000 tons gross or over, had to be capable of at least 13½ knots speed, and had to be built in a Japanese yard. The subsidy varied between 45 yen per ton for vessels of 13½ knots and 54 yen per ton for vessels over 18 knots. The scheme resulted in the scrapping of 94 vessels of about 400,000 tons gross and in the building of 31 new vessels of about 200,000 tons gross. Fifteen of the new ships are capable of a speed of 18 knots or more, and 13 of these have a gross tonnage of between 6,000 and 8,000 tons. It was estimated that the expenditure involved in building the 31 ships was a little less than 55,000,000 yen. The total Government subsidy was nearly 11,000,000 yen, or about £650,000 sterling at 1934 rates of exchange.[1]

The second and third schemes, which took effect in 1935 and 1936, respectively, were on a smaller scale than the first. Their combined result was the scrapping of 100,000 tons gross, and the construction of 17 vessels of about 100,000 tons gross, the rate of subsidy being little more than half that under the first scheme. The vessels built have a gross tonnage of 4,000 tons or more and are capable of over 14 knots speed.

THE AUTHORITIES WERE NOT SATISFIED

By the early part of 1937 the three scrap-and-build schemes had resulted in the scrapping of some 500,000 tons gross of old tonnage and the construction of 48 fast new ships of some 300,000 tons gross. These 48 ships included more than four-fifths of the total number of Japanese vessels of over 4,000 tons gross and less than 5 years old. At that time, Japan had more tonnage under 5 years of age in proportion to her total tonnage than any other country.

A fourth scheme came into operation in April 1937, and provided for the subsidized construction of high-class passenger and passenger-cargo liners of not less than 6,000 tons gross and 19 knots speed, at rates of subsidy approximating, in some cases, to half the building cost. In a supplement to the Official Gazette of July 1937, it was stated that the subsidies, though payable by installments spread over 18 years, would be paid in respect of construction during the next 4 years of 150,000 tons gross of passenger vessels and 150,000 tons gross of passenger-cargo vessels. It was proposed to spend a total of over 50,000,000 yen (£3,000,000 sterling at current rates of exchange) on this scheme during the 18 years beginning with 1937–38.

GENEROUS CREDIT FACILITIES

The Imperial Shipping Committee's comment on the expansionist movement was as follows:

"In addition to providing direct subsidies, the Japanese Government has always been ready to provide credit facilities for shipping and shipbuilding enterprises. The Government has made arrangements with the Industrial Bank whereby loans for shipbuilding are made at low rates of interest, the rate in mid-1937 being 3.7 percent per annum. The Ministry of Finance adds 1 percent, bringing the bank's receipts from interest on such loans up to 4.7 percent. The Ministry also undertakes to pay to the bank up to 70 percent of any capital lost in case loans are not repaid.

"The system was instituted in 1930, and the bank is at present authorized to make loans of this kind on certain conditions, up to a maximum of 100,000,000 yen within 4 years from 1937–38. The loans may be made only in respect of the building of steel ships of 4,000 gross tons and over and of a speed of 13½ knots or over, but in exceptional cases may be made also in respect of the building of cargo ships of 2,000 tons or over and a speed of 11 knots or over. It is difficult, for obvious reasons to assess the cost to the State of these facilities."

In the opinion of the committee, in comparison with the assistance for building ships, the subsidies for operation were of minor importance. From 1931 to 1938 operating subsidies averaged about thirteen and one-half million yen a year, or, say, £1,000,000 sterling. About half this sum was paid by the Central Government for transoceanic services, and half was paid by the Central Government and the Governments of Formosa, Korea, the South Sea Mandated Territories, North Sakhalin, and Kwantung for coastal services and services to China, Java, and Singapore.

By far the greater part of the estimates for transoceanic subsidized services represent payments to be made to the N. Y. K. and O. S. K. in respect of the following six services. (The figures are taken from the estimates for the financial year 1938–39.)

	Yen
N. Y. K.:	
Japan-San Francisco Line	2,501,231
Japan-Seattle Line	1,190,521
Japan-West Coast of South America Line	408,670
O. S. K.:	
Japan-East Coast of South America Line	1,035,314
Japan-East Africa Line	300,000
Japan-West Coast of Africa Line	300,000

In addition, 150,000 yen is to be paid to the Yamashita Line for the Japan-Persian Gulf service.

[1] The differences in the sterling values of the yen as quoted in the committee's report are accounted for by the rapid and heavy depreciation of the yen after Japan abandoned the gold standard in December 1931; by 1935, while the pound stood at about 60 percent of its former parity with gold, the yen stood at no higher than 35 percent.

Services operated by the N. Y. K. between Japan and London receive payments for the carriage of mails, the amounts varying in recent years between 500,000 and 750,000 yen.

All these payments for the transoceanic services were made under the Ocean Lines Subsidy Law of 1909. Under the original terms of this law, vessels operating the services had to be over 3,000 tons gross and 12 knots speed, less than 15 years old, and built in Japan. The payments were made according to the length and nature of the route traveled and the speed and age of the vessels, and were subject to the conditions that mail and certain government officials were carried free, that the voyages to be made and the number and kind of vessels to be used were all to be subject to government control, and that the ships were liable to be requisitioned by the government in time of war.

AID TO TRAMP SHIPPING

Of the principal competitors of British tramp shipping in the Orient in the years before this war, Japanese tramp shipping alone was subsidized in 1938 in respect of operation. Tramps under some other flags were subsidized, but very few were engaged in Oriental trades.

In the Japanese budget for 1937–38, provision was made for the first time for a subsidy for tramp ships amounting to some 1,100,000 yen, and it was stated that this was to be the first installment of a total amount of some 10,500,000 yen (say, £620,000) to be distributed in 5 years among tramp vessels continuously employed outside Japanese waters for more than 180 days. The vessels were to have a gross tonnage of over 4,000 tons and were to be less than 25 years old. The basic subsidy was 90 yen per ton of gross tonnage to be paid for each 30 days of the voyage, so that a ship of 5,000 tons gross continuously employed outside Japanese waters for 12 months would receive a maximum of about 54,000 yen, or £3,000 sterling at the prevailing rates of exchange. A British tramp ship of the same tonnage would have received about the same amount of subsidy from the United Kingdom Government had the subsidy granted in 1935 and 1936 been continued.

Japan had the advantage of cheap ships built with State aid which she could operate cheaply owing to the low standard of living of the country. The committee declared that the relative lowness of the costs of Japanese shipowners was "beyond dispute." It added that "the effect of low costs is different in times of good and bad trade."

At a time when the merchant shipping of the world is fully employed, the advantage of low costs takes the form of high profits. On the other hand, when the merchant shipping of the world is under-employed, any country with exceptionally low costs can afford to cut rates, and may be able to keep its ships fully employed, the main burden of under-employment being thrown upon its competitors. The Mitsubishi Economic Research Bureau explained the exceptional activity of Japanese tramp shipping in oceanic trades in 1933 as due to the depreciation of the yen; at that time a large proportion of oceangoing tramp shipping under other flags went out of commission. It is obvious that a country with the advantage of low costs will tend to expand its mercantile marine.

The committee made some interesting comparisons. It stated that the annual charges for wages and victualling on board a medium-sized British cargo liner in 1936 were about £8,000 sterling and those on board a comparable Japanese ship were about £4,000. The figure of £4,000 was arrived at after taking into account various allowances paid to the Japanese crew. As regards shore staff and management, it appeared from the evidence that the rate of wages and salaries was lower in Japan than in the United Kingdom, but that greater numbers of clerical workers were usually employed for a given volume of work in Japan. "It may be assumed that other operating costs, such as fuel, harbor dues, pilotage, and stevedoring, were at the same level for the two vessels."

Summing up the matter, the committee claimed that the annual operating cost of the British vessel was about £40,000, and that the annual operating cost of the Japanese vessel, because of the lower cost in wages, victualling and management, might be taken at about £35,000, or £5,000 less.

COOPERATION OF MERCHANTS AND SHIPOWNERS

The Japanese Government not only paid large bounties on shipbuilding and subsidies on ship operating, besides indulging in other maneuvers, but the commercial community cooperated by ingenious means to feed Japanese ships. Practically the whole of the large-scale enterprise of Japan was under the financial control of one or other of three great family businesses (known in Japan as "Zaibatsu," or money-groups)—Mitsubishi, Sumitomo, and Mitsui. The Mitsui and Sumitomo families had been important in Japan as financiers and bankers for over 200 years. Mitsubishi was of relatively recent origin, but all three were founded on the property and enterprise of feudal Japan.

It was upon these great preexistent houses that the Japanese Government had to rely, after the Restoration of 1868, for the execution of its policy of creating rapidly the industrial equipment of a great power in a country with scanty resources and with little or no experience of Western technique. Apart from the three major groups, practically the whole of the remainder of the Japanese industry and trade is in the hands of a vast number of small businesses. In the Zaibatsu and in the Government are now concentrated almost the whole of the mobile capital and business experience of Japan.

The organization of the Zaibatsu is on an elaborate scale, and it is often difficult to detect the ramifications. Each of the Zaibatsu consists of a group of families. In the case of Mitsui we understand that there are 11 kindred families. But more important is the organization of their greatly varied interests in a network of companies.

Each of the Zaibatsu owns one of the six great banks of Japan, and controls a series of commercial and industrial companies. For example, Mitsui owns the Mitsui Bank and controls the Mitsui Bussan Kaisha (M. B. K.), a great merchanting company which handles between one-third and one-half of the coal, wheat, raw silk, sugar, and cement in Japan's foreign trade, and owns a considerable and rapidly-growing fleet of cargo vessels. Toyo Menkwa, a Mitsui concern, is the largest importer of raw cotton and exporter of cotton textiles.

Steelworks, paper companies, engineering works, cement works, electrical apparatus, manufacturing firms, sugar mills, flour mills, coal mines, cotton mills, and chemical works are under Mitsui control, including some of the most important plants in each of those industries. We do not enumerate the many interests of Mitsubishi and Sumitomo, but they, too, are vast, though neither is quite as large as Mitsui.

The committee glanced back to the genesis of the Japanese organization of commerce and shipping:

The three Zaibatsu control a large number of industries ancillary to shipping, including shipbuilding, insurance, warehousing, and stevedoring. Thus, a single Zaibatsu can build ships in its own yard, operate them, provide them with fuel from its own mines or storage tanks, insure them and their cargoes, load and unload them, warehouse the cargoes, and discount the warrants at its own bank. Its merchanting companies provide a considerable proportion of the cargoes carried, both outward and inward, and of these goods in turn a substantial part comprises raw materials for its own factories, or finished articles produced by those factories.

The policy of the Zaibatsu appears to be that each of the many concerns controlled should maintain its position as an independent entity and work for its own profit. We have been assured, for instance, that a Mitsui producing or trading firm would not hesitate to put even a foreign shipping company into competition with Mitsui vessels if the foreign company offered better terms. None the less, it is obvious that in the main the whole group of companies financially controlled by a family interest will normally play into the hands of one another.

The general comment of the imperial shipping committee in reviewing Japanese policy was that the combination, under the same financial control, with those industries on which he depended for his business was an important source of strength behind the Japanese shipowner. In the traffic between Japan, on the one hand, and Australia and India on the other, the Japanese exporter, selling manufactured goods, sold c. i. f., and the Japanese importer, buying raw materials, such as wood and raw cotton, bought f. o. b. In each case the Japanese merchant had the power of routing cargo; the Japanese shipowner, provided he could offer as efficient a service as his competitors, was assured of traffic in both directions.

JAPAN AND THE CONFERENCES

Space will not permit to trace in detail the methods by which the Japanese shipowners forced themselves into one conference after another until they had secured, in some cases, a dominating position. It must suffice to cite the general conclusions of the committee. It recorded that Japanese shipping and most of the other principal competitors of British liner shipping in the Orient received subsidies, whether for operating or building, or both, on a fairly substantial scale, and that the German and Italian and particularly the Japanese subsidies had enabled their mercantile marines to be modernized with fast and efficient vessels. It also stated that, apart from subsidies, the cumulative effect of currency depreciation and of the different standard of living made it possible for Japanese vessels to be operated at a cost which in 1936 was perhaps of the order of 10 to 15 percent below the cost of operating comparable British vessels. It added:

"The major part of Japanese ocean-going shipping and also of Japanese overseas trade is under the financial control of a few great houses which have interests in banking, merchanting, and manufacturing, and in shipbuilding yards and other firms and industries ancillary to shipping; and, as a result, it is possible to bring powerful financial and commercial support to the aid of the Japanese shipowners in competition with the foreigner."

What is to happen after the present war? As is now apparent, Government aid was given to Japanese shipping and shipbuilding in pursuit of her policy of aggression, for an island state needed plenty of ships for use as transports for troops as well as for the carriage of munitions and stores. If Japan is permitted to restore her shipping, what guarantee is there that she will not pursue the same policy as before the war? It is certain that if Japan had not had a large volume of tonnage at her disposal, she could not have entered upon her policy of aggression. Merchant ships, it may be realized, were as necessary to the attainment of her objective—the domination of the eastern world—as was the Imperial Navy. The one was complementary to the other and both were supported by the state for the same end.

SHIPS FOR WAR

By the use of seapower—ships of war and ships of commerce—Little Japan, completely surrounded by the sea, became, in the course

of a lifetime, Great Japan, the Land of the Rising Sun. Formosa, Pascetories, Sakhalin, the Kwantung Peninsula (with its fine port, Darien), Korea, the Marshall, Caroline, and Marianas Islands, and Manchuria. Such was the rapid and progressive expansion of Japan that the area subject to the Emperor's rule was increased from less than 160,000 square miles to 262,000 square miles. It was achieved at small cost to the Japanese people—though their standard of life remained low. Nothing succeeds like success, and nothing is so intoxicating. The revolution in China seemed to offer another opportunity for a cheap victory. So on July 7, 1937, when Japan was strong by sea, land, and air, and China was weak, what was to have been a short war of conquest was entered upon. But China did not fall an easy victim to the aggressor. Japan was still deeply involved in this, the most ambitious of all her amphibious operations, when her Axis partners in the West seemed to be winning; Europe had been overrun, the British had been compelled to withdraw their ships from the Mediterranean, and it looked as though the seizure of the Suez Canal would link up Germany and Italy with their eastern partner. In December 1941 Japan, supreme as a naval power in the Pacific and with merchant fleets of five and a half million tons to serve the purposes of war, treacherously attacked Pearl Harbor, sent expeditionary forces to all the territories which formed the perimeter of her offensive scheme, and even prepared to overwhelm India. Everything, at first, went according to plan, but Tojo and his fellow gangsters assumed that command of the sea, essential to their success, could not be wrested from them. Their miscalculation will cost Japan all her ill-gotten territorial gains of the past 50 years. If the Americans are not overruled at the peace settlement, which is beyond the bounds of possiblity, they will also cost her her shipping—that is such of it as remains after the huge losses which have been sustained.

JAPAN'S SHIPPING DEVELOPMENT

In another column, a correspondent recalls the measures which were adopted by the Japanese Government to dominate the Pacific Ocean. His account of the movement is based, as will be seen, on the report of the Imperial Shipping Committee, which was issued only a few months before the Second World War opened and was overlaid by the swift movement of events. Its conclusions were published but were forgotten before they could be digested, much less action taken. The report is already out of print, and its revelation of Japan's ingenious plans for fostering her shipping has been forgotten. So it is not inappropriate that a summary of this report should be published now that Japan in the East faces defeat as inevitably as does Germany in the West. Her Navy has been crippled and one-half, or perhaps more, of her merchant shipping has been sunk. Like the British peoples, the Japanese cannot continue to fight without ships of defense and supply. Her sun, which was rising, is now setting. Will she be permitted to resume her policy of aggression after an interval of 10 or 20 years, or will her teeth be drawn so effectively that she will never again, being without ships, be able to threaten her neighbors? To us, as an island people, as well as to the Australians and New Zealanders, the future of shipping must be a primary interest when the terms of the peace settlement come to be discussed. The Germans, Italians, and Japanese must never again be permitted to indulge in discriminatory measures and thus prepare for another war. The freedom of the seas must be preserved, and the victors must take the necessary measures to prevent shipping being built and operated not for the purposes of peace, but for those of aggressive war.

The Meat Situation

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD upon the subject of meat, I also wish to insert with my remarks an editorial from the Omaha Daily Journal-Stockman of April 9, 1945, entitled "No Real Solution in Sight."

Mr. Speaker, what is the mystery of meat? The committees in the Senate and in the House have been busy investigating all phases of meat production and distribution. They have had conflicting reports. Many people are wondering if they will bring out a constructive program which may provide more meat in the near future.

Mr. Speaker, I have just recently spent 10 days out in the bread basket area of America, where they actually produce meat and all kinds of food. I find that people are hungry for meat. They want meat and not reports from a committee.

The United States is faced with a serious shortage of meat, not only for the people at home but for all our armed forces. It has been a problem of production, distribution, and consumption—all of which has been in the hands of governmental agencies. The folks out in the Midwest realize more than the consuming public that Washington regulations do not encourage production. Regulations by Government bureaus have greatly discouraged the production of meat. I have found the feed pens of the Midwest practically empty. There are more cattle on the ranges of Nebraska than ever before. There is corn spoiling that should be fed to cattle, hogs, or sheep. During January, February, and March of this year all of the terminal markets receiving cattle had an unusually large run of cattle. These cattle were lightweight. They did not carry the 300 or 400 pounds of additional meat which would have been put on them had they been properly fed.

Mr. Speaker the Federal agencies, principally the O. P. A. and the W. F. A., have issued many orders and regulations covering the production of meat. They have ranged from price ceilings on hogs, subsidies, roll backs, ceiling prices on live cattle, and intricate regulations which, to date, have forced the feeder and slaughtering houses out of business. Even the large packing houses complain that they are losing money. The man who ordinarily feeds cattle may lose from $20 to $50 a head if he properly fattens the animals for market. The total production for meat in March is 27 percent less than in March 1944. The production of pork was 50 percent less. Surely something is wrong with Government rules and regulations which do this to the beef-production industry of our country.

In the matter of hogs, the population has declined from 122,000,000 in the fall of 1943 to around 80,000,000 today. Few sows are being kept for farrowing purposes. The farmer was urged to raise more hogs in 1943, and he responded. Then the Government agencies suggested ceilings, market quotas, and froze corn, which, with other regulations, so thoroughly discouraged the producer of hogs that he quit that business.

Today there is a flourishing black market. It is freely admitted by the O. P. A. and other agencies that it does exist and that they are unable to do anything about such a condition. The operators of black markets pay no taxes. They sell their product at an enormous increase in price. The O. P. A. and the W. F. A. are responsible for this condition.

Mr. Speaker, several weeks ago I suggested that there should be a housecleaning in the O. P. A., as this agency is principally responsible for the shortage of meat as it exists today. It has been due to the inexperience of those in charge of price control. The Nation should not tolerate the blundering mistakes of the O. P. A. This agency has refused to take the considered judgment and advice of the men who grow, feed, and slaughter livestock. The men responsible should be forced to resign, and in their place should be men of practical experience in the production of meat. These pencil-pushing planners are responsible for crippling the meat industry. They were warned of what would happen, but they took no heed.

Now, Mr. Speaker, I want to suggest, following these critical remarks, a remedy which will in a short time make more meat available. There are no regulations that can produce meat tomorrow or next month, but some things can be done which will encourage production in the near future. In the case of hogs, it is possible to have a plentiful supply of pork within 6 or 8 months.

I want to suggest that the O. P. A. and the W. F. A. raise the ceiling price on pork where it will insure a profit to the producer. They must set forth a program covering at least the next year, in which they do not change the rules. The only way to get production and, at the same time to discourage the black market, is to insure the producer of pork a reasonable profit.

In the case of cattle, the live ceilings which were placed on cattle about 3 months ago should be either removed entirely or adjusted upward. The price of meat to the consumer will, naturally, be adjusted upward but I am certain the consumer would prefer to pay a little more and be able to get meat. The consumer now has more money than ever before for the purchase of meat.

The subsidies, as soon as practical, should be entirely removed. The producer takes the stigma of subsidies but the consumer receives the benefit in a deferred payment plan for his meat.

The price of labor and everything going into production of beef has gone up. Therefore, the feeder must have an adjusted ceiling on live fat cattle if he is going to feed cattle and thus produce more good meat for the country. It cannot be done under present ceilings and regulations.

The meat producing business should be turned over to the men who know how to produce meat. It should be freed from the entangling red tape of today and, with a reasonable profit assured, there will be no question about the supply.

As long as the Government insists that finished cattle are a waste of corn and grain and discourages their use by price regulation there will be a shortage of beef.

Mr. Speaker, the dismal failure in the attempts of the O. P. A. and the W. F. A. to regulate the amount of pork makes a poor case for further Government planning as a permanent policy. It is a poor substitute for the remarkable record which has been made by the meat industry in the past.

In my opinion, meat should be accepted from a larger number of slaughtering houses. The Army could afford to pay from $1 to $2 a hundred more for its meat. Slaughtering houses that have been State-inspected should be acceptable to the military.

I am certain, Mr. Speaker, that the key to the increased production of beef, pork, and lamb products is that of insuring a reasonable profit, not only to the grower but to the feeder and the packer. It cannot be done by Government regulations, subsidies, and other artificial means being advanced by the O. P. A. and the W. F. A. These agencies have had their chance. They have failed. Their jobs should be turned over to individuals who know about the production of meat. If this is done, we can reasonably expect within the next 6 months or a year to have an ample supply of meat for not only the civilian population but for our armed forces and the Allied needs.

The editorial referred to follows:

NO REAL SOLUTION IN SIGHT

As the meat shortage becomes progressively more difficult, protests to Washington will increase in volume and vigor. On the one hand, O. P. A. is still arguing that there is more meat for civilians than before the war; on the other, O. P. A. is struggling desperately to relieve the situation. And that is just going through motions—nothing more. There is absolutely nothing that can be done to make more meat available overnight, when the meat just doesn't exist. But does that faze O. P. A.? Not at all. It has appointed John J. Madigan to head a "livestock allocation program," the gentleman who posted his number on the occasion of the Kansas City cattle ceiling meeting last fall. Allocating all the livestock in America won't make more pork chops. It will only create more confusion and add to the aggravation of producers. In addition, the all-wise boys are engaged in juggling the subsidy, a bit up here and a bit down there, to take effect then, if not when, till every packer has to maintain a battery of lawyers and accountants to try to keep out of jail. And then there are those prosecutions for ceiling and other violations, which are just about as effective as is the scratching of a dog on the flea population.

And all this needn't have been, had the boys in the saddle paid any attention to sincere counsel and informed warning. Today's critical meat situation wouldn't exist had production been permitted to move along somewhere in the neighborhood of meat needs. So long as meat supply is so far short of needs, live animals and the products thereof will be sold outside the ceilings, required points will be counterfeited and stolen, and some will get all the meat they want while others will starve for it. And nothing much can be done to correct such evils. For meat is of first necessity of practically all the people. They will do most anything to get it. The situation is and will be infinitely worse than prohibition bootlegging, for in that disgraceful period in our national life only a small percentage of the people felt that they had to have liquor.

And still nothing is done to get at the root of the trouble. It still takes the better part of a year to make a marketable hog. It still takes about 3 years from breeding to put a good steer on the market. Hog production is picking up only a little, and the effect of that little won't appear till late next fall. While on the cattle end, the production trend is now definitely downward.

And still nothing is done to provide real production incentive, with respect to any class of meat animals.

Farm people, unless they have close contact with city relatives, will scarcely appreciate how serious the meat shortage in the cities is. It is a fact that there just is hardly anything in the meat line to buy.

United States Board Hails New York Trade Zone Results

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas E. Lyons, executive secretary, Foreign Trade Zones Board, from the Journal of International Economy, March 10, 1945:

UNITED STATES BOARD HAILS NEW YORK TRADE ZONE RESULTS—URGES OTHER GATEWAY PORTS TO INSTALL THIS FACILITY

(By Thomas E. Lyons, executive secretary, Foreign-Trade Zones Board)

Sounding a note of warning that needs of the armed forces for domestic port facilities will continue after actual fighting has ceased, the Foreign-Trade Zones Board, of which the Secretary of Commerce is chairman, recently reported to the Congress that our ports should be prepared to replace such facilities immediately upon the termination of the war. The report, bearing the signatures of the Secretary of Commerce, the Secretary of the Treasury, and the Secretary of War pointed out that our post-war fleet will consist of larger and faster ships, but these advantages will be lost unless adequate terminal facilities to service these ships are provided in our ports.

NEW YORK PIONEER ZONE

Although legislation permitting the establishment of foreign-trade zones in our ports of entry has been on the statute books for the past decade, the New York foreign-trade zone was the only one in operation at the close of the fiscal year ended June 30, 1944. Established on Staten Island in 1937, the New York Foreign-Trade Zone increased its activities progressively each year until 1942, when a substantial part of the zone area was taken over for war purposes. Foreign-Trade Zone activities were then transferred to North River piers in Manhattan where many operations formerly carried on at the original zone site were continued.

WAR DELAYS PORT PLANS

When the New York Foreign-Trade Zone had progressed beyond the experimental stage, both commercially and financially, its admitted success prompted officials of several other major ports to reappraise the advantages of establishing similar facilities in their own harbors. However, the European War had already dislocated world trade and later on, following Pearl Harbor, all available port facilities were acquired or occupied with our own war demands. This situation, linked with the shortage of critical material for commercial construction, therefore, necessitated further postponement of plans for establishing several additional foreign-trade zones which previously had been announced by local harbor officials.

Ports which have applications for foreign-trade zones pending with the Foreign-Trade Zones Board include New Orleans, La.; San Francisco, Calif.; Houston, Tex.; and San Juan, P. R. While the Houston and San Juan applications are presently inactive, harbor officials at San Francisco recently advised the Foreign-Trade Zones Board that they were prepared to proceed with the establishment of a foreign-trade zone at San Francisco as soon as war conditions permit.

NEW ORLEANS ACTS

Plans for establishing a foreign-trade zone in the port of New Orleans are rapidly taking definite form. In addition to submitting all the necessary exhibits in support of the application, the Board of Commissioners for the port of New Orleans has selected a proposed foreign-trade zone site on the Industrial Canal and a hearing on the project was held in New Orleans on January 15, 1945.

The report reminds American port officials, who share the responsibility for developing our foreign trade, that they should not underestimate the potentialities of the foreign-trade zone for attracting and holding transshipment and reexport trade. Although showing brief promise at the conclusion of World War No. 1, it can be stated with assurance that the United States has not enjoyed transshipment, reexport, and consignment business mainly for the reason that we have failed to provide adequate facilities for servicing this class of trade. Excessive port expenses resulting from multiple cargo handlings and transfers along with costly formalities stifled the development of this lucrative traffic.

TRANSIT TRADE BECKONS

Much of the world's so-called colonial trade—running into millions of tons and valued at billions of dollars—has heretofore relied for redistribution on ports and other facilities razed by the ravages of war. Inasmuch as this traffic will be resumed long before port facilities can be rebuilt and channels of distribution restored, a substantial part of this trade will perforce seek at least a temporary haven here. Traffic diverted from hostile areas might well be retained to our advantage, provided our ports are equipped to handle this business economically.

HANDLING COSTS VITAL

Shipside storage and more extensive use of mechanical equipment, including pallets for the handling and warehousing of large units of packaged merchandise, will reflect considerable reductions in terminal costs of cargo intended for reexport or transshipment. While the foregoing facilities should be regarded as standard equipment at all deep-water terminals, the foreign-trade zone has the added advantage of reducing the cost of surveillance. The stabilization of charges in a foreign-trade zone are an added protection for foreign merchants who intend to utilize a zone's facilities for extended periods. Improved banking facilities and a better knowledge of world trade on the part of our merchants and traders also augur well

for the future development of important consignment markets here.

LAW'S BASIC PURPOSE

The purpose of the law authorizing the establishment of foreign-trade zones, approved June 18, 1934, generally is to provide enclosed and policed areas, under Federal supervision, in or adjacent to ports of entry where foreign and domestic merchandise may be landed without application of the customs laws.

In such a facility goods may be stored, processed, or otherwise manipulated, but not manufactured or exhibited to the public, and may be exported or brought into customs territory subject to the laws and regulations of the United States affecting imported merchandising.

To qualify under the law for consideration as a foreign trade zone the area covered by an application, among other things, must have adequate ships, docks, wharves, warehouses, loading and mooring facilities, where the zone is adjacent to water, and, in the case of an inland zone, must have adequate loading, unloading, and warehouse facilities. This latter provision for inland zones is especially significant in the light of the amazing development of air cargo transport.

WORLD'S CROSSROAD

The purposes of a foreign-trade zone are amply illustrated in the 1943 annual report of the city of New York, which was transmitted to Congress with the Board's report. After stating that considerable business has been lost to the zone because of the lack of accommodations, the report also reveals several interesting instances which reflect the shifting trends in world trade resulting from a global war.

SINGLETS FOR SENEGALESE

During 1943 more than 5,000,000 pounds of cotton thread valued at $6,000,000 were shipped from the United Kingdom to the New York Foreign-Trade Zone and then redistributed to 26 foreign countries, including all Latin America, Soviet Russia, and British West Africa. Another significant trade development revealed by the city's report on the foreign-trade zone concerned the purchase by African natives of large quantities of cotton piece goods and singlets from Mexican mills. Lack of direct services between Mexico and African ports resulted in a considerable part of this merchandise being transshipped at the New York Foreign-Trade Zone during the year 1943. Prior to the war Japan had supplied the natives of Africa with these articles.

The report of the New York Foreign-Trade Zone shows that during 1943 Switzerland sent substantial quantities of aniline dyes to the zone for sampling and reexport to Central and South American countries, Africa, and New Zealand. During the same period, large consignments of burlap sugar bags from India were held in the zone awaiting transshipment to Cuba, Nicaragua, and Iceland.

The handling of Sumatra tobacco continued to be an important operation at the foreign-trade zone. More than 100 persons were employed in the tobacco warehouse erected by the Dutch growers at the Staten Island zone site. The contents of each bale of tobacco is carefully examined and all substandard leaves removed. Originally this rejected tobacco was destroyed, but recently a foreign market has been developed for this commodity.

LIQUOR LAWS OUT

The right to store and manipulate imported liquors in the foreign-trade zone without regulation by the New York State Liquor Authority was clearly defined in an opinion of the appellate division of the Supreme Court of New York County. In *During* v. *Valente*, decided February 11, 1944, the court said: "The imposition of these (New York alcoholic-beverage control law) complicated regulations upon foreign commerce in liquor within trade zones would not only interfere with the exclusive control of Congress over this commerce but would seriously impair, if not defeat, the purpose for which these zones were established."

INCOME AND EXPENSES

Although the total amount of warehouse space available for storage and manipulation was reduced by 80 percent as compared with similar facilities at the original Staten Island zone, the 1943 operating revenues amounted to $504,709.95. This was only 25 percent less than the $691,000 gross income for the last full year's operation on Staten Island. The operating and administrative expense for 1943 amounted to $385,735.64. This sum included the cost of customs service, which has been substantially increased due to the necessity of policing three widely scattered zone areas. It also included the zone operating company's profit which the city continued to carry as an administrative expense. The net operating profit to the city for 1943 amounted to $128,049.31.

In 1943, 194 different commodities from 51 foreign countries were received at the zone. While the tonnage of foreign goods reexported was lower in 1943, its value, $14,453,355, was the highest in the zone's history.

Cargo received in the zone in 1943 was transported by 2 vessels engaged in foreign trade, 426 inland waterway and harbor craft, 1,689 motor trucks, 3 rail car, and 8 parcel-post and hand-lot deliveries.

WAR SLOWS ZONE PROGRESS

The activities of the zone since January 1, 1940, are reflected in the data shown below.

ZONE HIGHLIGHTS

In 1943, 45 percent by weight and 44 percent by value of all foreign merchandise forwarded from the zone was reexported or transshipped abroad. Similar figures for 1942 show reexports and transshipments were 50 percent by weight and 40 percent by value of all foreign merchandise forwarded from the zone.

Distribution of merchandise in 1943 from the zone to 67 countries amounted to 39,234 short tons, valued at approximately $35,000,000 including that imported into the customs territory of the United States which weighed 22,383 short tons and was valued at $20,466,977. The merchandise remaining in the zone on December 31, 1943, weighed 22,406 short tons and was valued at $19,363,866, which was substantially the same tonnage but a considerable decrease in the value of the merchandise in the zone at the start of the year 1943. Merchandise shipped from the zone in 1943 was transshipped by one vessel engaged in foreign trade, 408 inland waterway and harbor craft, 3,630 motortrucks, 6 rail cars, and 79 messenger deliveries.

In order of importance by value, the leading commodities handled at the zone in 1943 were: Cotton thread, $4,533,731; watches, $3,959,666; distilled spirits, $3,480,844; watch movements, $2,855,223; cotton piece goods $1,766,069; cotton, $1,285,039; sugar bags, $943,500; woolens, $777,472; tobacco, $729,543; and canned foodstuffs, $519,346.

In order of importance, by value, of merchandise received in the zone, the leading countries of origin in 1943 were: Switzerland, $7,038,081; United Kingdom, $6,531,036; Mexico, $1,881,264; Cuba, $1,741,250; Egypt, $1,308,689; United States, $1,272,719; Virgin Islands, $1,227,645 British India, $1,058,871; Canada, $642,631; and Netherlands Indies, $526,340.

Merchandise forwarded from the zone during 1942 and 1943, including exports, reexports, transshipments, and imports

Item	1942		1943	
	Quantity	Value	Quantity	Value
	Short tons		*Short tons*	
Foreign goods reexported	31,237	$12,817,244	16,685	$14,453,355
Foreign goods imported	31,644	18,253,468	20,606	18,660,561
Domestic goods exported	8,651	6,204,805	165	49,433
Domestic goods imported	1,345	203,109	1,310	312,051
Foreign and domestic exported [1]	1,158	315,737		
Foreign and domestic imported [1]	13,174	6,147,833	468	1,494,365
Total	87,209	43,942,196	39,234	34,969,765

[1] Consists mainly of foreign merchandise repacked in domestic containers.

Merchandise received	1940	1941	1942	1943
Lots (number)	2,952	4,216	2,378	2,609
Short tons (do)	215,658	136,860	45,542	36,876
Value (dollars)	83,434,000	88,623,194	36,894,635	25,212,174

In order of importance, by value, of merchandise shipped from the zone, the leading countries of destination in 1943 were: United States, $20,466,977; Cuba, $2,434,080; Colombia, $1,392,459; Chile, $1,191,078; Belgian Congo, $817,876; Venezuela, $762,004; British West Africa, $706,355; Mexico, $614,482; Canada, $528,366; and British India, $521,276.

IMPORTERS MANIPULATE IN ZONE

According to the Deputy Collector in Charge, a number of important manipulations and forms of processing covering numerous commodities were carried on in the zone during the year. Despite limited accommodations and restricted space, many importers found it convenient to perform these activities in the foreign-trade zone. Some of the principal types of manipulation included: Maturing, examining, reconditioning, sampling, weighing, destroying damaged leaves, and repacking tobacco; examining and replacing watch movements for reexport via parcel post; examining, cutting, sampling, combining part of different lots with domestic products, and repacking cotton and woolen piece goods for export; examining, reconditioning, and repacking raw cotton; the examining, sampling, recoopering, bung-filling, gaging, affixing strip stamps on liquors (brandy, rum, wine, and whisky); examining, labeling, repacking into domestic cartons and destroying and reexporting rejects of pork and beans, tomatoes, and South American canned meats; trimming leather; grading, cutting off fringes, and repacking rugs and fringed merchandise; examining, grading, and repacking fur skins; examining, segregating, camphorizing, and repacking household effects; examining and repacking pharmaceuticals; reduction of the alcoholic content of toilet water.

CUSTOMS COLLECTIONS SOAR

The collection of customs duties and excise taxes on merchandise imported into customs territory from the zone during 1943, amounted to $11,285,623. For the previous

years 1940, 1941, and 1942, the amounts were $1,931,296, $2,867,352, and $1,998,851.70, respectively. The huge increase in the collection of customs revenue is attributed to the fact that importers of spirits have found the zone of considerable advantage for the handling of this commodity prior to customs entry.

WAR EFFORT AIDED

Ninety-five steamships and 4,170 lighters, engaged in war work, used the zone piers for berthing space only without any zone lading or unlading. The steamships were accomodated through an arrangement with the War Shipping Administration because of the lack of berthing facilities at piers in customs territory. While in the zone these vessels discharged ballast, took on stores, and underwent repairs.

Stock Piling of Strategic Raw Materials

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. CASE of South Dakota. Mr. Speaker, last month, in the March 9, 1945, issue of the Pathfinder there appeared an item with respect to the stock piling of strategic raw materials which prompted two questions that were submitted to the Administrator of the Foreign Economic Administration. I wish to submit the exchange of correspondence with the Foreign Economic Administration:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 20, 1945.

FOREIGN ECONOMIC ADMINISTRATION,
Washington, D. C.

GENTLEMEN: The current number of Pathfinder magazine says that the Foreign Economic Administration is developing a plan for stockpiling raw materials from South America and considering increasing the capital of the Export-Import Bank to permit such purposes.

Will you kindly advise me whether this is correct and whether any legislation is contemplated in this connection with relation to domestic production of strategic raw materials?

Sincerely yours,

FRANCIS CASE.

FOREIGN ECONOMIC ADMINISTRATION,
OFFICE OF THE ADMINISTRATOR,
Washington, D. C., March 31, 1945.

Hon. FRANCIS CASE,
House of Representatives,
Washington, D. C.

DEAR MR. CASE: In your letter of March 20, 1945, you ask whether a news item in Pathfinder to the effect that the Foreign Economic Administration is developing a plan for stockpiling raw materials from South America and considering increasing the capital of the Export-Import Bank to permit such purchases is correct. You also inquire whether any legislation is contemplated in this connection with relation to domestic production of strategic raw materials.

In reply to the first question, no plan is presently contemplated by the Foreign Economic Administration which would involve an increase in the capital of the Export-Import Bank to permit purchases of raw materials from South America for the purpose of stockpiling.

With respect to the second question, I notice that the story in Pathfinder of March 19, 1945, states that legislation may be sought limiting our domestic production of strategic raw materials. The Foreign Economic Administration is not contemplating any such legislation.

Sincerely yours,

LEO T. CROWLEY,
Administrator.

Bottleneck in Boxcars

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, April 14, 1945

Mr. HOPE. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Topeka Daily Capitol for Thursday, April 12, 1945, on the critical boxcar situation. I am in thorough accord with the viewpoint which is so ably expressed in this editorial:

BOTTLENECK IN BOXCARS

Too many Washington officials continue to adopt the sneering attitude that the Midwest simply doesn't know there is a war on, as evidenced by the caustic remarks of Col. J. Monroe Johnson, head of the O. D. T., with respect to Grain Belt pleas for boxcars.

The truth is, everybody in the United States knows there is a war on—but a great many Washington bureaucrats fail to realize that every State has a part in that war.

We cannot win this struggle with eastern steel plants alone. We cannot win with western coast shipping alone. We must win it with wheat from Kansas, with corn from Iowa, with oil from Oklahoma, with cotton from Texas, and with every resource required for victory.

We can win more quickly, and with less expense in terms of human lives as well as material things, if the high command in Washington will only coordinate the efforts of the entire country in a sensible and efficient manner. Washington frequently blames the people for failing to cooperate, but at the same time it persists in muddling the situation and confusing the people to such an extent that those who try wholeheartedly are accused of impeding the war effort.

That is exactly why there is a boxcar mixup threatening to contribute to the destruction of millions of bushels of potential food needed for consumption at home and abroad.

At a meeting of midwestern representatives Tuesday in Kansas City, it was made clear that this region has been drained of its boxcars by train movements to the east coast. And once the cars reach the East, most of them stay there. Some railroads have as few as 5 percent of their own cars on midwestern lines. Most of the grain cars which do return are "battle axes," old and worn and unfit to hold grain.

Every State in this region has vast amounts of corn and other grains piled on the ground. Much of it has rotted, and corn being sent to market brings as little as 17 cents a bushel. Because of O. P. A. manipulations, there is comparatively little livestock to absorb the grain. Farm storage places are filled to overflowing, many country elevators are glutted and have been forced to quit business, and the great terminals are clogged. Millers are shutting down production because of inability to ship. On top of all this, one of the biggest grain crops in history is forecast—and it will begin rolling out within a few weeks.

This means economic losses for farmers, grain dealers, millers, and all who place financial dependence upon such crops. But what is of highest importance is that it means a criminal waste of potential food—the destruction of a weapon of war.

Colonel Johnson gives the official O. D. T. reply to requests for boxcars in the Midwest when he calls appeals for cars "presumptuous." It is anything but presumptuous to insist upon helping carry the war load. It is an act of patriotism, and those making the appeals deserve, as Governor Schoeppel says, "commendation instead of a kick in the pants."

Everyone realizes that certain types of war goods must take precedence over others. If all of the boxcars in the East were needed for the shipment of highest priority goods, no one could complain. But there seems to be ample evidence that the cars are used for shipping goods which would be shipped in other types of cars and which, for that matter, need not be shipped at all.

Railroad men in this area are doing what they can to ease the strain, and they have succeeded in achieving a great deal. But it is not enough. Unless cars are returned from the East, there will be a tragic spoilage of potential food.

H. B. Lautz, general manager of the Santa Fe system, typifies the spirit of midwestern railroad men when he accepts problems philosophically and works with his associates to overcome them whenever this is possible. Refrigerator cars, he discloses, are being made over and used for grain hauling. Double-decker sheep cars are being revamped for the same purpose. And livestock cars of every description are being boarded up in order to contain grain. Open gondolas are pressed into service. But in spite of all the ingenuity which can be brought to bear, the railroads can haul only comparative drops out of a big bucket.

If they could get lumber and labor, farmers might build additional storage space on their own farms. Hybrid corn, in some areas, yields so high that available space is inadequate. And because of peculiar weather conditions, some grain which can be stored will not keep for long periods.

The situation boils down to the fact that, in spite of every effort here in the Midwest, the engineers at the throttle up in Washington must solve the boxcar problem or put a big dent in our war effort.

Instead of coordination in the Nation's capital, there is confusion.

Instead of agreement on needs, there are contradictory policies.

There are too many little czars, each trying to outdo the others in regulating the people.

There are too few public servants dedicating themselves to the best interests of the people as a whole.

And the red tape of Washington contributes to shedding the red blood of young Americans overseas.

A delegation of midwesterners will go to Washington and attempt to present the boxcar picture in a factual way. Perhaps the bureaucrats can be made to see the light. If not, it will be tragic for this Nation.

What is needed, of course, is common-sense coordination, based upon the top needs of the country at any given time as this war is pushed to its conclusion.

First. Every governmental agency connected with the war should be represented in a general council. Decisions should be made, and every department should be required to act accordingly. That is not being done now. One agency demands that farms produce more and more food, and a shortage of food here at home is predicted by some. Almost everyone says that vast quantities must be sent overseas to help win the peace. But at

the same time, such men as Colonel Johnson ignore the importance of food.

Governmental agencies should agree that so many tons of munitions will be shipped first, then so many tons of food, then so many tons of something else. Irrespective of the priority order, it should be agreed upon and enforced.

Second, every organization and individual should be required—through rationing or any practicable means—to fit in with the general plan. This is being done quite generally with respect to gasoline and to several other commodities. Why can't it be done with boxcars? Why should the East be permitted to hoard the cars while the great food production center of the world—here in the Midwest—is asked to raise crops and then let the crops rot on the ground?

Colonel Johnson and those of his stamp have not even attempted to prove that the East has a war priority on boxcars. But the Midwest is accused of being presumptuous in asking for a share of them.

Perhaps it was also presumptuous for the Midwest to send its quota of fighting men to the fronts; to buy its share of War bonds and to contribute its full part in salvage drives; to develop a network of industrial plants; to pour into this war all of its resources, ingenuity, and patriotism.

Presumption of that kind is winning victories on both sides of the world. It must continue, in spite of the red tape and the bureaucrats and the shallow thinkers, until the peace is won.

Resolution Adopted at the Death of the President by the Iowa Legislature

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following resolution adopted by the joint convention of the fifty-first general assembly of the State of Iowa:

"Resolution of the joint convention of the fifty-first General Assembly of Iowa

"Whereas we, with all other Americans, have heard with deep sorrow of the great bereavement that has befallen this Nation and the world in the loss of our great President at this most eventful period in our national history; and

"Whereas regardless of party affiliation, we all bow in sincere sorrow and profound grief at the untimely passing of Franklin Delano Roosevelt, whose great leadership was most outstanding and most essential to all the world in these most trying and crucial times; and,

"Whereas we recognize the devoted patriotism, the arduous labors, the zeal for liberty for all men everywhere, which characterized his untiring service for humanity: Now therefore be it

"Resolved by the Joint Convention of the Fifty-first General Assembly, That, in behalf of all the people of this Commonwealth, we express our deep sorrow in the loss of this great American and our most sincere sympathy to his bereaved widow and family; be it further

"Resolved, That the portraits of the late President Roosevelt now in the Senate and House Chambers shall be suitably draped in crepe for a period of at least 30 days; be it further

"Resolved, That a copy of this resolution be duly certified and permanently preserved in the office of the secretary of state, and that a copy so certified be sent to Mrs. Roosevelt."

I hereby certify that the foregoing resolution was adopted by the joint convention of the fifty-first general assembly meeting at Des Moines, Iowa.

Done at Des Moines, Iowa, this 12th day of April 1945 A. D.

A. C. GUSTAFSON,
Clerk of the Joint Convention.

Achievement at Bremerton

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 16, 1945

Mr. DE LACY. Mr. Speaker, I desire to relate here, under the privilege which has been extended me, a story of this war which deserves especial recognition. It is a story of the great ingenuity and devotion to duty of the war workers and naval personnel, working together as a team, at the Puget Sound Navy Yard in Bremerton, Wash. It is a story of how this great teamwork put back into action one of our baby flattops at least 4 weeks ahead of schedule.

This flattop, the U. S. S. *Suwanee*, is now again in action against the Japanese, a part of our great fleet which is roving the Pacific at will and driving ever closer to the homeland of our enemy.

Four weeks were saved by the great men of Bremerton—the sailors of the homefront. Our enemy can gain little comfort from this story, told so well in an article from the April 6 issue of the Bremerton Sun, one of those vigorous American newspapers which is contributing so much to our homefront morale.

The planning of our naval personnel at Bremerton, coupled with the ingenuity of workers who could produce needed replacements simply from photographs of the battle damage to the *Suwanee*, and the tireless efforts of both officers and workmen, has certainly changed the meaning of the old bromide "soldiering on the job."

For this was "soldiering" in the new sense which this war has given the term.

I have asked the Secretary of the Navy to give some especial recognition to this accomplishment of our homefront production, and to the men and women of the Bremerton yard. Under unanimous consent, I include here the complete story of this achievement as it appeared in the Bremerton Sun:

ADVANCE PLANNING SAVED 4 WEEKS IN REPAIRING "FLATTOP"—PUGET SOUND NAVY YARD MEN PRAISED

Crew of the U. S. S. *Suwanee*, "baby flattop" of the Pacific Fleet, will long remember with mixed pride and some annoyance, that Puget Sound Navy Yard workmen are efficient and swift when it comes to overhauling a battle-scarred fighting ship.

Anticipating that their proud vessel would be hospitalized for some time, they looked forward to longer periods of leave when they could return to their homes. But it didn't work out that way. Here's what happened:

Shortly after the battle for Leyte Gulf, Puget Sound Navy Yard was alerted to expect at an early date a new peak load of battle-worn ships, with the instructions to "get them repaired and back into the battle line with all possible speed."

ADVANCE INFORMATION

Yard workmen, already confronted with a huge overhaul and new construction load, welcomed an opportunity to assist the fleet and show what a speedy repair job could be done—especially on the *Suwanee*, which the fleet needed. So a plan was worked out to obtain advance information on the repairs that vessel would require. If photographs and a comprehensive description of the battle damage could be obtained, planners, shop masters, and their assistants believed, a large part of the necessary work could be started in the yard shops while the ship was still on her return trip to the United States.

So well in advance of the arrival of the "baby flattop," the ship's first lieutenant, D. R. Dodson, arrived with pictures which showed gaping holes in the flight deck, shrapnel-torn superstructure, and a tangled mass of wreckage that once hauled planes up to the flight deck from the hangar deck below.

With only the pictures and Lieutenant Dodson's report to go, the planning section, under George A. Hastings, chief planner and estimator, consulting with Principal Marine Engineer R. E. Johnson and Principal Naval Architect H. T. Schairer, were able to produce blueprints and assemble other information in advance, and get production started on all major items. Shops were fabricating material for the *Suwanee* while she was still many hundreds of miles at sea.

Ship fitters, under the direction of Master Ship Fitter Herman Petersen, a veteran of 43 years' service at Puget Sound Navy Yard, started construction on a new flight deck elevator. Welders began the prefabrication of large stretches of deck plating to be cut to accurate size as soon as measurements could be taken after the ship finally arrived. When the outside machinists were shown a photograph of a mass of twisted steel in the carrier's catapult room, one quick look convinced them that they should start construction immediately on a new plane launching mechanism. Master Machinist E. C. Jolly, who came to Puget Sound Navy Yard from the Cavite Navy Yard in the Philippines, directed the building of the new catapult.

Boilermakers, headed by Master Boilermaker George W. Penketh, and inside machinists under Master Machinist Theodore Peterson, were shooting at the same goal—to have necessary repair material ready and waiting for the *Suwanee* before she came to rest in drydock at Bremerton.

Work was well under way when the carrier arrived at the entrance to Puget Sound. Estimators, planners, and heads of departments—a mixture of civilian and Navy personnel—took a fast boat and boarded her prior to her arrival at the yard. They looked the ship over, discussed battle damage and construction problems with its officers, then made accurate measurements so that shops back in the yard could incorporate them into their plans. Suggestions were made to the ship's company regarding the areas and compartments that had to be cleared of ship's gear before she docked. This "prior arrival" visit to the ship allowed the shops to crystallize many of their estimates and plans into factual information without loss of time or the chance of error in production.

ARRIVES DAY EARLY

Late on a blustering Sunday afternoon the *Suwanee* nosed her way alongside a pier at

the yard—one full day ahead of schedule. Thirty-six hours after the *Suwanee's* lines were secured the ship-fitter shop had finished manufacturing a new flight-deck elevator, and riggers under the direction of Master Rigger Walter H. Bruns, were easing it down the dock with the yard's largest crane.

Many hours, and much material were saved by cutting two huge slices of deck out of the ship and taking them to the ship-fitter shop, where the girders and plating were heated and reshaped. It is estimated that the job, if it had been done with new materials would have required 33⅓ percent more man-days. Work continued day and night at white heat. Electricians installed approximately 55 miles of cable. Pipe fitters estimate that they replaced enough damaged pipe to carry a stream of water 7 miles. Ship-fitters used iron enough to cover a football field. Painters, under the direction of Shop Master Harry Jaixen, coated the repaired sections as fast as the other shops could complete them. When the *Suwanee* steamed out she sported 4,200 gallons of new-type paint on her frame—42 tons of paint.

At least 4 weeks were saved by careful advance planning and by starting the manufacture of sections of the *Suwanee* before she arrived in Bremerton. Wholehearted cooperation between departments and shops in the yard is credited with saving an inestimable amount of time. And, while damage repair work proceeded, the ship received a complete routine overhaul * * * all of the work which is ordinarily necessary after long months of wear and tear which results from cruising thousands of miles from home.

Aboriginal Claims of Alaska Indians

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas until Congress by specific legislation definitely extinguishes all aboriginal claims of Alaska Indians the Secretary of the Department of the Interior will create or will threaten to create further reservations of lands, shore space, and waters in Alaska for the exclusive use of Alaskan Indians; and

Whereas such reservations and the threat to create them causes an uncertainty as to the use and tenure of use of the natural resources of Alaska, not only by Alaskans but also by industry generally, and has retarded and does retard the progress and development of Alaska and prevents the use of such natural resources for domestic, industrial, and other purposes: Now, therefore, be it

Resolved by the Alaska Territorial Chamber of Commerce, That the Congress of the United States be promptly petitioned to immediately enact legislation definitely and forever extinguishing any and all aborigine rights, if any, that the Alaskan Indians ever held or possessed and all claims now, heretofore, and hereafter asserted to such, if any aborigine rights, and authorize Alaskan Indians to sue the United States of America in the United States Court of Claims, or other appropriate court, for the recovery of the value of such, if any, aborigine rights now or ever held or possessed by them, and provide that in the event of such, if any, recovery, the United States of America shall pay said Indians in money therefor.

Passed and approved unanimously March 23, 1945.

ALASKA TERRITORIAL CHAMBER OF COMMERCE,
By HOMER GARVIN, *President.*
Attest:
MARTHA WENDLING,
Executive Secretary.

House Joint Resolution 99

EXTENSION OF REMARKS
OF
HON. JOSEPH E. TALBOT
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. TALBOT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Albert P. Morano in support of House Joint Resolution 99, made before the Foreign Affairs Committee of the House of Representatives, April 11, 1945:

Mr. Chairman. at the very outset let me ephasize and make very clear that this statement in support of House Joint Resolution 99 does not necessarily reflect the position, attitude, or views of my boss, CLARE BOOTHE LUCE.

I shall confine myself merely to the military contribution being made by Italy in the present war.

On September 8, 1943, an armistice was signed between Italy and the United Nations. Immediately after this armistice the Italian Regular Army and the underground forces (which had been fighting fascism and nazism) were actively engaged against the German forces occupying Italy. The slow development of the very difficult military operations on the bridgehead at Salerno rendered vain the fighting put up in the different sections of the peninsula by the Italian Army against the Germans, but already in those days following the armistice many Italian units sustained heavy losses. Let me quote from President Roosevelt's speech last Columbus Day:

"And there are also Italians themselves fighting bravely for the liberation of their country. They are fighting in the Allied armies and they are fighting in the underground forces behind the German lines."

With the declaration of cobelligerency, the Italian Government started the reorganization of the Army. Today, according to various publications and reports made on the military participation of Italy in the war, one can safely state that more than a million men are contributing, either on the Italian front or in other theaters of operations, in the rear lines or elsewhere, to the war effort of the Allies.

At the front itself Italy has already five divisions fully trained and equipped, fighting at the side of the Allies and on many occasions the Italian forces have been mentioned in connection with some hard operations and fighting. Two weeks ago there was an extensive report regarding the occupation of an important position on the Adriatic coast by Italian forces. If no more than five divisions are actively engaged, this does not depend from the will and desire of the Italian Government and people, who have repeatedly requested to be allowed to give a more active and substantial contribution. Also well known is the valuable work done by Italian transport units bringing materials to the Allied forces fighting in the very difficult theater of the Appenines, where they had to overcome enormous difficulties in the accomplishment of their task. Moreover, more than 250,000 Italian soldier are employed in labor units in the rear lines, thus relieving a substantial number of Allied forces from similar duties.

The Italian press has also published interesting reports on the splendid fighting of the Brigata Garibaldi against the Germans beside Marshal Tito's forces in the Balkans where it has sustained very heavy losses which range to more than one-third of the effectives operating under extremely hard logistic conditions.

Concerning the contribution given by the Navy, it should be observed that the entire Italian fleet is now at the disposal of the Allies, and a recent report of the Allied Commission has made special mention of the services rendered by the Italian ships in escorting convoys, operating against enemy forces in the Adriatic and, as it has been revealed, forcing harbors on two occasions, with submarines or light torpedo boats. One can reckon, according to pre-war figures and subsequent reports, that the Allies can count on at least 5 battleships and 400 ships of different sizes.

Mention must be made also of the 300,000 Italians still called prisoners of war, who have joined service units and are now working for war purposes with the Allies throughout the world.

One has also heard of the progressive reorganization of the air force and of the various war missions it has accomplished.

Special mention must be made of the activity shown by the armed patriots fighting in northern Italy, who are continuously growing. One has to recall the difficult situation in which they found themselves during the winter months, especially after the announcement made in December by General Alexander asking them to lay down arms for the time being and return to their houses, because military operations were in a stalemate. On the contrary the patriots enduring the most difficult hardships, have valiantly pursued their various activities—sabotaging of power plants and German military installations, endangering German ways of communications, actual fighting, and so forth—and their number has also been increasing every day. According to a recent announcement, they number about 200,000, which constitutes the highest figure of partisan forces fighting for the Allied cause in the occupied territories of Europe. Recognition of this fighting unit is seen in the proclamation of General Clark of 10 days ago, when he called on the partisans to take up arms to fight against the common enemy, in the final offensive to drive the Germans from Italian territory.

On the economic and financial side much could be said, even ignoring the terms of the armistice which have not yet been made public. One knows that through requisitioning, mobilization of industry, utilization of materials and machinery still found available, the important work of the navy yards, the Allies have practically at their disposal all the economic resources of the country. Thus is found the actual participation of the whole Italian economy in the war effort.

Then too, one can gather how heavy is the burden borne by the Italian Government and people in the financial field if one gives attention to the problem of the issuance of the money of occupation. The Treasury Department has stated, in this respect, that neither the American Government nor the other allies can be held responsible for this money of occupation, whose redemption and responsibility lies with the Italian Government. President Roosevelt announced in September, however, that a credit was to be granted to the Italian Government for account of amlire issued for the American troops' pay in Italy. Figures have begun to

circulate estimating the amount of this credit at $150,000,000. Nothing, however, has been provided for the rest of the issuance, regarding payment of Allied troops or the amlire paid for the services and materials bought with amlire on Italian soil by the fighting armies. Accordingly, it can safely be stated that the Italian Government and people are still bearing a considerable amount of the cost of war fought on their own territory, including the devastation and destruction brought on the Italian Peninsula. It is no longer a question of the Italians having to bear the financial burden of the occupation of the Allied armies, but they are now contributing effectively and extensively to the whole Allied war effort in Italy.

A form of agreement as the one concluded with the French, on a reciprocal aid basis, would recognize these efforts and give shape to the present financial disorderly relations between the two countries. In this agreement all that America on its part is now contributing to the Italian economy (foodstuffs, raw materials, weapons, machinery) could be earmarked as American and not appear as it has with the present system, as a general contribution of the Allies. Moreover, from this point of view, important advantages would derive.

Against the argument that the war in Germany will soon be over is the fact that the underlying fundamental principle of the lend-lease agreements is the one previously laid down by the President of the United States: "Until the unconditional surrender of both Japan and Germany, we should continue the lend-lease program on whatever scale is necessary to make the combined striking power of all the United Nations against our enemies as overwhelming and as effective as we can make it."

Not Wholly Gone

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star:

NOT WHOLLY GONE

It is not so much because of his greatness as President that the Nation genuinely mourns today for Franklin Roosevelt. It is not the remembrance of that greatness that fills millions of Americans with a sense of personal loss. It is something else. It is the remembrance of his bright spirit, his gallant and affirmative approach to life, his smile, his voice, his pleasant and handsome face. It is the remembrance of the warmth he irradiated, the goodness of heart he so frequently displayed, and all the other traits and mannerisms that made his leadership so splendidly human.

More than any other President, with the possible exception of Abraham Lincoln, Franklin Roosevelt was endowed with a personality that could not be changed or made to seem remote by the tremendous pressures and august power of his office. He liked the people, and by and large he remained close to them to the end. There was a quality in him, a spark, an intangible force not readily defined, that called forth an affectionate response from legions of men and women—young and old alike—who had never met or seen him in the flesh but who nevertheless felt personally attached to him as to a tried and true friend.

It is because they remember him now in that light—as a friend who inspired and encouraged them as a man whose greatness in office never detracted from his magnetism as a human being—that multitudes of Americans feel individually bereaved by President Roosevelt's death. And it is a further measure of his unique stature and personality that the same feeling is widespread abroad and that in places as distant as London and Moscow obscure people wept when they heard that he was gone. Perhaps the soundest explanation of all this is the simple one: That he won so many hearts because his own heart was so much and so consistently for humanity.

Today Franklin Roosevelt is at the White House for the last time, and tomorrow the earth at Hyde Park will take him to itself forever. But death cannot triumph over spirit, and his spirit, like that of his great predecessors, will be part of this Nation—and through this Nation part of the world—for as long as our history is written. In that sense, surely, it may rightly be said on this day of mourning that he is with us yet.

Let Us Begin Here

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over State-wide broadcast in the State of North Dakota on the San Francisco Conference:

My fellow citizens of North Dakota, it seems a long time since that eventful day when the broadcasting system announced to our country and to the world the tragedy of Pearl Harbor. Immediately thereafter, we dedicated ourselves, and we pledged our resources by an act of Congress to an all-out war. We have kept the faith and filled the bill. We have raised one of the greatest armies in all civilization. We have built a greater navy than will probably ever be built again. We have changed the production line of the airplane to produce thousands. This has all been done under the American system.

Well may we rejoice tonight in the fact that we are Americans. We can rejoice in the great genius of our industrialists—in their patriotism, despite here and there a criticism of excessive profits. We can rejoice in the noble contribution of labor, despite here and there an unworthy strike. Both of them, working together, have astounded the world. Not alone have we supplied our own forces—and remember, we started almost from scratch, but we have very materially aided our great allies with food and with war supplies. Without our help, none of them could have remained in the fight. Each succeeding day, as we add to the list of liberated peoples, food from the farms of America is rushed to them. When General MacArthur gallantly returned to the Philippines and began the liberation of those islands, their liberation became our problem because their people needed food. France needed food, Holland needed food, Greece needed food, Italy needed food, and, finally, so will Norway. What a crown of glory must rest forever upon the brows of the American farmers.

In my days in Congress, I have recognized the fundamental importance of food in this war, and despite some criticism, I have fought with great courage to retain the farm boys on the farms of North Dakota. I have stated and restated that there does prevail the Tydings amendment—a law of the United States Congress which protects these men and their families in their rights. I have said again and again that men who remain on the farms must be given every conceivable consideration. Their work is vital. Their work is noble and in every sense a highly important part of the war effort.

We all recognize with grateful hearts the glorious contributions that have been made on the fields of battle, on the ships of the sea, and in the air. History books for generations will record the gallant deeds of these American men and women, and as a Member of the United States Congress, I pledge you tonight that I shall stand committed to full and complete recognition of the honors and the rights that are theirs, and I shall courageously take my part to see that they receive them—the most important of which, in my personal judgment, is to create through Congress an economic climate under which these men and women can return and start life over again.

There must never be another war. We must have peace—permanent peace in this world, and that means that something must be done about it now. Some people will charge me with being idealistic. Perhaps it is an ideal—but idealism is but the expression of a wish, and it must always precede planning and action.

The planning and the action have begun. Great criticism has been heaped upon Dumbarton Oaks, and grave concern is expressed about the San Francisco Conference. The President is charged with double dealing. Much debate is being heard about the ratio of votes at the Conference. We hear about the ambitions of Marshal Stalin, and great skepticism of England.

Well, let us not forget, my friends, that much as we want peace, those countries want it just as completely. The lands of Russia that will have to be rehabilitated, cover a territory almost as large as half of continental America. That is a task that will take a generation to effect. Russia must crave peace. England can never rebuild her Empire—can never rebuild her trade lines—can never continue as a great Nation unless she has peace. These countries have been our allies in war. Each has performed her task steadfastly and courageously. Never have we had cause to question their sincerity, and their contribution. Our faith in them has been fully justified in the prosecution of this war. Russia's final act—her break with Japan—is but a further and more satisfying proof of her sincerity. England, Russia, and America are the countries most deeply concerned with peace because we have paid the greatest price in the war. Then, it seems to me that the criticism we are hearing about the voting ratio—Dumbarton Oaks—and Bretton Woods, is somewhat academic. Ours is a land in which the individual has been developed. England develops the individual, too. Russia is a country strangely different from us in thought and action, but, yet, through it all, we have a common goal, and that goal is lasting peace.

I believe the people of this Nation, even though disturbed and rightly concerned about some phases of the situation—even though there is some doubt about the intentions of England and Russia—even though we see in their practices "power politics" and efforts being expended to enhance their positions in days to come, I repeat, I believe the people of this Nation are

saying "Come what may, let us try something that will stop war." I believe the American people are demanding, by and large, that we participate in the San Francisco Conference, that we take a leading part, that we make reasonable compromises, that we do not go too far and become involved in a situation that might become dangerous; I believe the American people are saying, "Let us begin here."

You will recall the problems that beset, years ago, our own Constitutional Convention. The men who met there, met the deep convictions, with hearts and souls dedicated to the building of a new nation. Outside, there was great criticism, there was grave doubt, there was deep skepticism, and many people questioned whether or not the efforts of that Convention could bear fruit. I think it is safe to say that very few people believed the Constitution would stand.

But those men moved wisely and courageously to set up the framework. They waited for the element of time to play its part. The Bill of Rights came later, and out of it all came a nation that in this dark hour is leading the peoples of the world out of the wilderness. Is it not reasonable to hope—yes, to believe—that a similar situation could occur at San Francisco?

Yes, our task is difficult. Yet we live in an age when facilities for enlightenment, for education, and for knowledge are far greater than was the case at the time of the Constitutional Convention. They were prompted with a desire to build a nation that could be free and independent. This meeting is prompted with a desire to build a structure for permanent peace. It has a chance to succeed, and a good chance to succeed because back of it all rests the spirit of the people of Russia, of England, and of America—the spirit of burning zeal to build a framework for enduring peace.

We, as the United States, must be brought forcibly to learn that peace cannot come to us by accident. It cannot endure by accident. If we are to have and maintain a lasting peace, machinery must be set up, and we, as a nation, must resolve that we shall take our place to make it endure. There are certain fundamental things that must claim the attention of the San Francisco Conference. In this connection I want to read to you from an editorial in the Bismarck Tribune under date of April 3, written by its editor, Kenneth W. Simons. I quote:

"At the end of the last war we made the mistake of believing that peace would take care of itself. When the guns were silenced we went back to minding our own business, neither noticing nor caring what went on in other lands. Ethiopia, we thought, was far away. Fascism, unpleasant though it sounded, we discounted as a way of life peculiar to Italy. Even the rise of Hitler found most of us unmoved. We dismissed him as a 'crackpot' and laughed at his rantings. Thus it went on until we saw that we had missed the forest for the trees. The 'local incident' in Ethiopia led to aggressions in Spain, Albania, Greece, Austria, Czechoslovakia, and Poland. Fascism, once peculiar to Italy, spread like wildfire over Europe. And that German 'crackpot' who began by attacking minorities in Germany, finally became the greatest single enemy humanity has even known. The small flame that consumed at first the rights and freedoms of a very few, soon spread until it threatened to devour us all. The protection of individual rights, wherever they may be threatened, is no longer a question of altruism. Most of us have stopped feeling like Santa Claus, because we are doing our share to bring peace to the world. For now we know that the only hope for our own security lies in a peace that protects the rights of all peoples, wherever they may live."

In this San Francisco Convention, so soon to assemble, there must be first and foremost, a spirit of candor, there must be frank discussion. Remember, every nation will have the veto power at San Francisco. From that effort must come a finished product in the form of a treaty that is satisfactory to every sovereign nation. There will be no way in which a nation can be compelled to join.

I quote you here the thought so ably expressed by David Lawrence. He says:

"The San Francisco Conference, fortunately, is to be unlike Yalta. It is to be open. It is to be free from bargains and trades related to the continued prosecution of the war. It will have compromises and adjustments, no doubt, but in the direction of achieving the objective that the whole world seeks—namely, a means of insuring peace." He goes on to say: "Let us ratify the charter that comes out of San Francisco, but strive ever to improve it and make it the ideal instrument that it can become when the principles of representative government and the "four freedoms" are accepted by all nations as a prerequisite to world peace. For no matter what is written in the San Francisco agreement, the most powerful influence in the preservation of the peace will not be in the wording of the charter, but in the character and integrity of the statesmen of the member governments of tomorrow, who are to rule over vast populations. One-man government can plunge a country into war overnight and disturb world peace. Governments that must act through parliaments and congresses can be influenced by moral force."

While we, as Americans, enter into this event prompted by the noblest of desires—that of peace—let us not forget that having made the beginning in that direction, there rests upon the shoulders of all of us a responsibility to make it work. We must not overlook the fact that in addition to our responsibility here, we must labor long and hard to retain forever our American plan of life.

Great new forces, resulting largely from war, have invaded our country. Bit by bit, they take their measure. America at peace, with its great farms, its huge industries, its free and intelligent labor, possesses without question the essential things for leadership of the world. The mantle falls upon us. The place once held by England is ours today. We must keep this country a country of individuals. It must never be leveled off under these new influences, masquerading under the guise of patriotism. Bit by bit, they hand us their insidious ideas, veiling them under the name of democracy. I say to you tonight, my friends, they are the antithesis of democracy. As for myself, I shall have no part with these new ideas that belittle or deny the value, the strength, and the greatness of our American way of life. There is nothing so vital, nothing so fundamental, nothing so worthy of our diligence and our effort as to keep this America in tune with the spirit of the men who met in Philadelphia in the year 1789.

Easter

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. ANDERSON of California. Mr. Speaker, the editor and publisher of the Half Moon Bay Review in Half Moon Bay, Calif., has written the following thought-provoking editorial. I take pleasure in calling it to the attention of my colleagues.

EASTER

Easter has an eternal and immeasurable significance for mankind. The resurrection of the great Nazarene was the highest and most convicing proof of his teachings. It gave to humanity unquestionable evidence of the immortality of life.

The resurrection serves as a permanent reminder to the world that although the forces of tyranny and oppression at times seem invincible and able to defy the very power of heaven, they are inevitably swept to destruction by the onward march of truth.

Today darkness still covers much of the earth, but the forever fact that right makes might is again being demonstrated. Since last Easter the great rock of despotism has been rolled away from many a nation. In Europe nazi-ism and all that it stands for reels toward its doom. In Asia the days of its counterpart are numbered.

Christian men and women would much rather settle differences between nations by peaceful means. But they have learned that it is wiser to take up the sword in defense of democracy and decency than to permit their God-given rights to be lost even temporarily.

Christian civilization believes in the individuality of man. It holds that even the lowliest and most humble of men are deserving of respect and consideration from their fellow beings. Christianity is the antithesis of totalitarianism.

The teachings of Jesus are something infinitely more than can be expressed in rites or rituals alone. They find their true manifestation in practical goodness in daily life.

At this Eastertide each one of us can renew his efforts to make this world a better world by making his life a better life.

St. Lawrence Waterway

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. BIEMILLER. Mr. Speaker, the people, not only of my district but of the entire State of Wisconsin, are vitally interested in the construction of the St. Lawrence waterway. They firmly believe that this project would aid immeasurably in stimulating postwar trade and helping to achieve our goal of full employment.

Evidence of the widespread interest of the State in this matter is shown by the recent passage by the Legislature of the State of Wisconsin of the following joint resolution:

Assembly Joint Resolution 8

Joint resolution memorializing the President and Congress of the United States to take such steps as are necessary to enable development of the Great Lakes-St. Lawrence waterway immediately upon termination of the war

Whereas the President has termed the proposed development of the Great Lakes-St. Lawrence waterway for travel by seagoing vessels more important to the country's public than any other project of this nature; and

Whereas for 50 years outstanding Americans in official and civilian life, concerned with the economic welfare of the people of this country, have urged this undertaking as vital to the full development of the country's resources and inland transportation facilities; and for 20 years the Governors and Legislatures of the State of Wisconsin, regardless of political affiliations, have gone on record as favoring such a project; and

Whereas every effort in the past to make this seaway a reality has failed because of vigorous opposition from selfish interests; and

Whereas the urge for this seaway is today strong and virile and will continue so to be until the Great Lakes-St. Lawrence waterway is made adequate for navigation of seagoing vessels and furnishes Midwest farm, factory, mine, and shipyard products access to the markets of the world; and

Whereas a seaway from the Great Lakes to the tidewaters of the Atlantic will increase our national security in time of crisis, aid in the restoration of our foreign markets after the war, stimulate development of the resources of the Midwest and lower transportation costs; and

Whereas, if authorized and undertaken as an immediate post-war works program, such project will provide a cushion to the employment shift when the eventual change from war to peace time conditions arrives, and will furnish a full measure of opportunity for employment to the returning soldier: Now, therefore, be it

Resolved by the assembly (the senate concurring), That the Legislature of the State of Wisconsin memorializes the President and Congress of the United States to make such treaties and to enact such legislation as is necessary to authorize development of the Great Lakes-St. Lawrence waterway for navigation of sea-going vessels immediately upon termination of the war; and be it further

Resolved, That properly attested copies of this resolution be sent to the President, to both Houses of the Congress, and to each Wisconsin Member thereof, to the governing bodies of Wisconsin port cities, and to the major cities bordering the Great Lakes with a fervent plea for aggressive action in furthering this cause.

DONALD C. McDOWELL,
Speaker of the Assembly.
ARTHUR L. MAY,
Chief Clerk of the Assembly.
CONRAD SHEARER,
President pro tempore of the Senate.
LAWRENCE R. LARSEN,
Chief Clerk of the Senate.

Wanted, a Modern Joseph To Prepare for Food Famine on Today's Horizon

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Morning Call, of Paterson, N. J.:

WANTED, A MODERN JOSEPH TO PREPARE FOR FOOD FAMINE ON TODAY'S HORIZON

One year ago the Morning Call made a plea for more aid and encouragement to the farmers of the Nation, warning of an inevitable food famine for curselves as well as the scorched and plundered nations in the battle zones.

Our shortsighted food administrators, however, still blinded by the false and godless philosophy of prosperity through economic scarcity, refused to listen and slumbered contentedly on, obvious to the fact that the continuous turning of plow-shares into guns and farm hands into soldiers has been slowly but surely depleting our farms of both manpower and equipment so necessary to keep our farm lands at full production. Now as a result, according to James Patton, president of the National Farmers Union, we are likely to lose 25 percent of our potential food production this year, at a time when food and more food is the need of the hour. Already the great surpluses of which our Department of Agriculture boasted last year are dwindling like ice in a summer's sun, due to the unprecedented and apparently underestimated demands of the starving peoples which our victorious armies have been liberating by the millions. Our War Food Administrator also underestimated the supposedly "vast surpluses on hand in the Army warehouses," for only last week Assistant Secretary of War Patterson revealed that the 108-day Army supply at overseas ports had been reduced to less than 70. In fact the entire reserve at home and abroad is now so low that if it were all released it would not feed our civilian population for 1 week.

Already as our loyal housewives are daily finding out, where only last year there were bulging surpluses as reported by our Secretary of Agriculture, shortages have already developed in meat, fats, oils, sugar, and dairy products. Even the faithful chicken has suddenly become as scarce on the market here in Paterson as an egg in England. And it is not all going to our half-starved allies either, for early this past winter the Bureau of Agricultural Economics revealed that we did not even then have enough to take care of Europe's barest relief needs in four of the six prime food necessities—meat, fats, and oils, sugar, and milk.

So in spite of last year's bumper crops, blessed with good farming weather, scarcity in this land of wealth and plenty looms in front of us at a time when the whole world is crying for food. Should there be a Nation-wide drought this year to add to our mounting food troubles (and it is pretty near time Dame Nature decreed one) how long will our fast vanishing stock piles fill the breach? It takes no divine prophecy to foretell another food famine to plague the world, thanks to the wasteful and destructive follies of mankind, as it did 3,660 years ago in the prophet Joseph's time.

What Egypt faced then, America may face in 1945. Would that we had another Joseph in Washington today to foresee and prepare for its coming; a Joseph, who would step up spring farm plantings all over this long blessed land, who would rebuild and provide modern farm machinery, and construct vast granaries and storehouses to meet the famine that will descend and bring tragedy upon us in the wake of war if we are as criminally unprepared as we are today to meet it.

The Wailing World's Heart-Felt Good-bye

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. GRANT of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Horace C. Carlisle:

THE WAILING WORLD'S HEART-FELT GOODBYE

G–one from the earth, deeply mourned by mankind
O–f every race, for whose freedom he stood—
O–n world occasions, the Roosevelt mind
D–ared to direct, for humanity's good—
B–orn to become a great leader of men,
Y–ea, a creator of national thought,
E–verywhere have both his voice and his pen

T–actfully told the world, time and again,
O–f the great battles that had to be fought.

P–resident Roosevelt laid his own life
R–eadily down, to retrieve the lost world—
E–ver advancing, he led in the strife,
S–milingly, under Old Glory unfurled—
I–n a great way, he did more than he should—
D–aily he sought divine aid from above,
E–ven for wisdom to teach humanhood
N–ational justice, for man's common good,
T–hus overcoming his hate with God's love.

R–ight was his helmet and truth was his sword—
O–n these he counted, in every combat—
O–ver his problems his best thought he poured,
S–eeking solutions through prayer, pleading that
E–ven this war may continue until
V–ictory shouts, too delighting to cease,
E–ver may—his dying wish to fulfill—
L–ast, in accordance with God's purposed will,
T–ill every land shall enjoy endless peace.

—*Horace C. Carlisle.*

In Service to His Country He Paid With His Life

EXTENSION OF REMARKS
OF
HON. GEORGE F. ROGERS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. ROGERS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Frank E. Gannett, president, the Gannett newspapers, Rochester, N. Y.:

IN SERVICE TO HIS COUNTRY HE PAID WITH HIS LIFE

(By Frank Gannett)

Tragedy struck our country yesterday and the entire Nation mourns the passing of its President, a great leader, a great person, a friend of mankind, whose name will be written large in the annals of history.

Even his bitterest political opponents are saddened by the passing of Franklin D. Roosevelt, for he rarely made a personal enemy, even among those with whom he differed on Government policies.

For 12 years he faced the torments of the most perplexing problems the world has even seen—the problems of a depression never equalled in intensity, the problems of the bitterest, bloodiest war of all time. For 12 years he faced these problems with a smile, the same indomitable courage and determination that helped him, when stricken and crippled, to overcome the disease which laid him low, as a young man.

He had a kindly, friendly charm which won for him millions of faithful, loyal admirers, a following such as few leaders in public life ever have had.

Yes, he had fortitude seldom surpassed or equaled. He must have been aware last fall that his strength was fast ebbing, but he drove himself on through a hard campaign to reelection believing, without a doubt, that it was his solemn duty to carry on in this crisis regardless of all personal consequences. In service to his country he has paid with his life as much as if he had died on the battlefield.

What a pity that he could not have lived to see the magnificent military forces he did so much to develop, overwhelmingly defeat our fiendish enemies. He did, however, have the gratification of seeing the approach of a glorious victory and he died knowing that triumph was near.

His passing could not have come at a more unfortunate time, at the peak of a world crisis.

It is for us now to redouble our efforts for the beloved country which he strove so hard to serve, and for which he gave his all. It is for us to rally to the support of our Government, to forget partisanship and to help with all our might to win victory and to win the peace.

On his successor in office have fallen tremendous burdens and, besides, to him has come a great opportunity to serve mankind. That he may rise to the great emergency we face and give us wise leadership, is the hope and prayer of all Americans.

The End of the Road

EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. WOODRUM of Virginia. Mr. Speaker, in an old-fashioned garden at Hyde Park on yesterday, a distinguished company of sorrowing friends said a final good-by to President Roosevelt. It was not my privilege to be in the distinguished company but I am sure that it must have been impressive. A very great man has left us. One who, in my humble judgment, will grow in stature as the coming years permit us to appraise his life and work objectively.

Were a star kept on high,
Forever would it's light
Still traveling downward
Through the sky
Fall on our mortal sight.

So, when a great man dies,
For years beyond our ken,
The light he leaves behind him
Falls upon the paths of men.

America today mourns the passing of a great President. The lovers of freedom and liberty the world over have lost a great champion.

I think one of the splendid things that has happened in the last few days in the way of an expression of great esteem and appreciation of the President was the very fine way in which American radio responded. The several broadcasting chains, as well as individual stations, laid all commercial activities aside and brought only appropriate news ano information in the hour of mourning. In my judgment, one of the classics of the several programs was the description of the ceremony at Hyde Park made immediately thereafter by Baukhage, a distinguished analyst and commentator of the American Broadcasting Co.

I believe this description should be preserved and, under leave granted me, I herewith include the same:

Baukhage talking from a little house down the Boston Post Road—a bit from Hyde Park where I've come, following the President's funeral. A little way from the rolling farmland, the woodland and hedgerows, and stone fences, and plowed fields, the old home behind the trees where Franklin Roosevelt first saw the light over the hills of the Hudson, and where I've just left him in the midst of his own acres, taking his last long rest.

I'm not going to talk about the death of the President today because I'm thinking of something else. I'm thinking about an American—like others who fell at Lexington, Appomattox, at San Juan Hill, and Chateau-Thierry, on the Normandy beaches, on Guadalcanal, at Aachen, and now at the very gates of Berlin. I am thinking of Franklin Roosevelt that way because of the last broadcast I made from Hyde Park on September 8, 4 years ago on a mellow autumn day. On that day thousands in America were not thinking of the most thought-about man in the country then in terms of politics or policies or rank or title or achievements or failures. But they were thinking of him humanly and vainly trying to share the grief that a son alone must bear when he repays with the anguish of parting, the debt in travail of her who bore him. That was the day when Sara Delano Roosevelt passed away. And that is what I said then—then, not a President but a man mourning for his mother.

And today a Nation mourns not for a President but for a loss made the more poignant by the sorrow of the mothers all over the Nation whose sons have been lost on the wide battlefields of the world. To me there is no question whatever but that Franklin Roosevelt died in the service of his country, a service grown too great for any single man to bear, just as other mothers' sons have died for their country, the ones who gave their lives in action. To me, this ceremony that I have just witnessed is part of the great panoply of sacrifice that men since time began have made, giving their life to preserve an ideal which lived on because they were willing to exchange their own lives for it. A part of the eternal miracle of nature when earth takes back her seed only to return it in the rich harvest, in flower and stalk, to be the nourishment of others that mourn.

I have come, as I say, from Hyde Park where in an ancient old-fashioned garden, protected by the high walls of a hemlock hedge, another American has gone to rest on the acres where he was born, the acres he loved. He chose this spot among the old-fashioned blooms, now only brown shoots, I noticed before me, brown and unobtrusive compared to the mountain of riotous color heaped above the grave. But those were plucked flowers—they will fade. The others, they will bloom again in this eternal miracle of spring. Over the boxwood hedge the old red barn looks down. Thousands of those red barns are on America's farms. Beyond and hidden by the great trees is the old home and beyond—the Hudson River flowing gently to the sea.

And now as I have taken the notes down I'll give them to you:

First there was the roar of planes overhead and then the sharp order "Attention," the salute, and then echoing over those deep hills of the Hudson, like Hendrick Hudson's bowling balls, came the salute of 48 guns. And between those shots all was so silent that you could hear bird songs everywhere. And then "Present arms," and then the planes coming back. And then last in the distance, the low tap of the muffled drums from the West Point band and then the sound of the slow rhythm of the dead march which grew louder and louder as they entered the grounds. And now they come in before us, and the West Pointers follow at that strange slow march, and finally the caisson is outside the hedge, you can hear it. It halts just beyond the little entrance where I am standing. The bombers soar over and now the colors are advanced—the Stars and Stripes, the gold of the Presidential Flag. And now "Order arms," "Present arms," and the bugles sound off, the Star-Spangled Banner, and at that moment the cool wind from the Hudson River blew and whipped out the flags. "Order arms," "Parade rest," and now softly the band began Lead, Kindly Light. And now a choir boy with the crucifix comes in, behind, in white surplice, the white-haired minister, and then the coffin with the pallbearers, soldiers and sailors and marines, and next the wife and the daughter and the son, Elliott, and then President Truman. The coffin rests, a flag upon it—the flag is raised and held above it. And now the minister speaks, there comes a prayer, and then the poem that he reads with this refrain: "Father in Thy gracious keeping leave we now Thy servant sleeping." And then after the silence, bird songs again. And then the sharp order to the firing party: "Fire three volleys," "Ready," "Aim," "Fire." The shots ring out—three times the volleys are shot over the grave—and after each the bark of a little lonely dog. And then that sweetest and saddest of all music—the bugle sounds Taps. There is a pause as the echoes die and the coffin is lowered into the earth. The sergeant, with military precision, marches over and lays the flag that decked the coffin in the hands of Mrs. Roosevelt. And so, an American has gone to rest in the green of the garden, in the shadow of the old red barn, and his spirit, like that of all his fallen comrades on the battlefield, rolls on like the eternal river flowing softly to the sea.

The Late President Roosevelt

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank Gannett:

FRIEND OF MAN LOST TO UNITED STATES, SAYS GANNETT

Tragedy struck our country yesterday. And the entire Nation mourns the passing of its President—a great leader, a great person, a friend of mankind, whose name will be written large in the annals of history.

Even his bitterest political opponents are saddened by the passing of Franklin D. Roosevelt, for he rarely made a personal enemy, even among those with whom he differed on Government policies.

For 12 years, he faced the torments of the most perplexing problems the world has ever seen—the problem of a depression never equalled in intensity, the problem of the bitterest, bloodiest war of all time.

For 12 years he faced these problems with a smile and the same indomitable courage and determination that helped him when stricken and crippled to overcome the disease which laid him low as a young man.

He had a kindly, friendly charm which won for him millions of faithful, loyal admirers—a following such as few leaders in public life have ever had. Yet, he had fortitude seldom surpassed or equalled. He must have been aware last fall that his strength was fast ebbing. But he drove himself on through a hard campaign to reelection, believing, without doubt, that it was his solemn duty to carry on in this crisis, regardless of all personal consequences. In service to his country, he has paid with his life as much as if he had died on the battlefield.

What a pity he could not have lived to see the magnificent military forces he did so much to develop overwhelmingly defeat our fiendish enemies.

He did, however, have the gratification of seeing the approach of a glorious victory and he died knowing that triumph was near.

His passing could not have come at a more unfortunate time, at the peak of a world crisis.

It is for us now to redouble our efforts for the beloved country which he strove so hard to serve and for which he gave his all. It is for us to rally to the support of our Government, to forget partisanship, and to help with all our might to win victory and to win the peace.

On his successor in office have fallen tremendous burdens, and besides, to him has come a great opportunity to serve mankind. That he may rise to the great emergency we face and give us wise leadership is the hope and prayer of all Americans.

Lincoln and Roosevelt

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. DONDERO. Mr. Speaker, I offer for the RECORD an address delivered by Dr. M. L. Wilson, Director of Extension Work of the Department of Agriculture of the United States at a memorial service held at Ford's Theater here in Washington on Sunday, April 15, 1945.

This occasion was sponsored by the Lincoln Group of Washington, assisted by the National Park Service of the Government, commemorating the eightieth anniversary of the death of President Abraham Lincoln:

This day is a peculiarly sad day, just as April 15, 1865, was a historically sad day. This meeting, which it has become a custom of the Lincoln Group of the District of Columbia to hold each year on April 15, was planned to assist in the noble purpose of revering the memory of Lincoln. Yet fate has decreed that within the last 4 hours the mortal remains of our great war President, our Commander in Chief in this war to preserve democracy and Christianity on the face of the earth, have been laid to rest in the peaceful mother earth of his ancestral home which he loved so well. It is one of the odd circumstances of history that significant dates of three of our greatest Presidents lie within the small compass of 4 days. Franklin D. Roosevelt died on April 12. Thomas Jefferson was born on April 13. Abraham Lincoln became immortal on April 15.

Today is a day that the living will never forget. Eighty years ago our fathers and mothers, our grandfathers and grandmothers, were shocked by the sad news of the most dastardly tragedy of history, which was enacted in this room. Today we are shocked by the death of our great President, Franklin D. Roosevelt. The suspense and tragedy of war made "Father Abraham" almost a member of the family circle of many of our ancestors, and friend to those soldiers and sailors who served under him. For the same reason, war and modern ways of communication made Franklin D. Roosevelt, our Commander in Chief, an intimate friend, a friend to us all.

There are many similarities that are much more than surface traits of these two men—Lincoln and Roosevelt. While it is true that both had different backgrounds, different types of ancestors, different opportunities as young men, yet both were truly American and were products of the soil, and of the people of our great Republic. With both, there was that hope and courage so characteristic of democratic society that led their spirits to become triumphant over handicaps that would have overcome lesser men.

In Roosevelt there was the great triumph over illness that would have incapacitated for life a less hardy soul. Lincoln triumphed over the lack of educational opportunity and the other handicaps of a humble pioneer boyhood. Yet both, when the opportunity for service to mankind came, when the crisis had to be met, developed into the greatest of the leaders of mankind. Above all, both had a peculiar and deep sympathy for humanity, for all humanity, regardless of race, creed, or color. I think both men were in this respect different from most men. By deed and works they proved their love for their fellow man. No matter how humble the person, they were always ready with understanding sympathy to assist the troubled, the sick, and the insecure.

While the domestic policies of all our Presidents have to be evaluated ultimately in the light of historic perspective, and subsequent events in the government of the Nation, I think I can quote with propriety at this time the following comment appearing in this morning's New York Times:

"In one of his state papers Mr. Roosevelt remarked that his own philosophy of government could be found in a quotation from Abraham Lincoln which said, 'The legitimate object of government is to do for the community of people whatever they need to have done but cannot do at all, or cannot do as well for themselves in their separate and individual capacities.' "

Both Lincoln and Roosevelt rose to the highest peaks of greatness when there appeared the crisis of their age. For Lincoln, the crisis of the unity of the Nation. For Roosevelt, the crisis of the threat of the most cruel and inhuman totalitarian philosophy which challenged the whole of our democratic and Christian way of life. Both became world figures that were looked to with hope by most of mankind, and both were taken away by an all-wise Providence when, like Moses, they could see the fruits of their labors and victories and look into the promised land.

In the words of the Lord, as He spoke to Moses in sight of the Promised Land, so may we also regard the Lord as having said to both Abraham Lincoln and Franklin D. Roosevelt:

"I have caused thee to see it with thine eyes, but thou shalt not go over thither" (Deuteronomy, 34, 4).

All of us consider the Gettysburg Address as one of the few great expressions of a great soul that will live as long as democratic Christian civilization lives. It possesses the literary movement and thought of the Bible more than any other speech of modern times. We can apply the thought in the last paragraph paraphrased to apply to these two men:

"It it for us the living, rather, to be dedicated to the unfinished work they have thus far so nobly carried on. It is rather for us to be here dedicated to the great task remaining before us * * * and that we here highly resolve that these dead shall not have died in vain, and that this Nation, this world, under God, have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth."

A Great Time To Be Alive

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks, I include a lecture given to Burrall Class, Calvary Baptist Church, Washington, D. C., by Miss Margaret K. Patterson, assistant teacher, Sunday morning, March 11, 1945. Miss Patterson is administrative principal of the Fillmore-Hearst Schools in the District of Columbia. I consider this a most worth while article and I believe Members of Congress, as well as others, will be interested in reading it.

First, may I say that the lesson this morning was inspired by that recent little book of Dr. Fosdick's, A Great Time To Be Alive. I've drawn particularly upon the first chapter which bears the same title as the book itself. You who have read the book will realize that I have followed his development and his wording rather closely in the first part of the lesson.

The title, "A Great Time To Be Alive," catches our attention immediately. It rather startles us and stimulates our thinking. We find ourselves in a questioning attitude as we exclaim, "A great time to be alive. What do you mean by that? Were times ever more terrible or more terrorizing than they are just now?"

Dr. Fosdick, realizing, no doubt, that such a title sets up a debatable question, starts out by agreeing with our first reaction. His very first sentence in the book is, "This certainly is a ghastly time to be alive." He continues, "Our earth has seldom, if ever, seen the unheralded mass of human misery which exists," in spite of the headlines of victory for the Allies in practically every theater of war. " 'Because of the last war,' says Dr. Hambro, late president of the League of Nations, '35,000,000 human beings died of starvation and epidemics, but that is only a drop in the bucket compared with this war's disaster.' "

We don't need Dr. Fosdick or anyone else to remind us that "we are living in a grim and hideous time." For example:

When we read of especially constructed death chambers erected for the sole purpose of snuffing out human lives en masse, including women and childen—chambers so devised that those who planned them can sit by and look through glass at the success of their experiment.

When we read that masses of people in the recently liberated countries are practically starving to death and are so destitute that they have even become impatient with their liberators because of the slowness of supplies coming through.

When we look at pictures of men and women who have spent months in enemy prisons in the Philippines and see in their faces and bodies evidences of slow starvation.

When we think of the anxiety of one family—a family we know—whose son was over

there going through the most horrible experiences that civilized man has ever endured—and then, later, that family was plunged into sorrow on the arrival of the ever dreaded message "Missing in action" or "Killed in action"—and multiply that one family by thousands in both Allied and enemy countries.

When we know of one case, at least, where a father counseled and worked out a plan with his own son before the son went over, that if he were captured by the Japanese, he would take his own life rather than take a chance on being subjected to debasing physical and mental torture.

When we read that our own Allied officials, after much thought and deliberation, have decided on terror bombing—that is, bombing of residential districts, of civilian population centers, of roads and streets filled with fleeing and terror-stricken evacuees.

And finally, when we begin to contemplate the mass hatred that is filling the world and will continue to permeate it for generations to come.

Truly, with one accord, we can say with Dr. Fosdick, "This is a ghastly time to be alive." We are prone to ask the same question as the writer of the fourth psalm, "Who will show us any good?"

Can any good come out of it all? If we really think seriously about the problems facing us of both a personal and public nature, how can we stand up under the pressure? What will sustain us? Dr. Fosdick emphasizes that "ours is a day when we cannot seek for ease but must seek for adequacy. Some eras are like a lullaby; some are like a spur. Which of the two is likely in the end to be greater?"

History helps us to answer these questions.

Look at the era in which Thomas Jefferson lived. He called it "appalling," feeling that the gains of civilization were completely dissipated. He wrote, "Those moral principles and conventional usages which have heretofore been the bond of civilized nations * * * have given way to force, the law of barbarians, and the nineteenth century dawns with the vandalism of the fifth." And yet today, as we look back, we glory in the generation in which Jefferson, Washington, Hamilton, Marshall, and others lived. It was a time, to be sure, that was far from being a time of ease; it was a time that called for adequacy, and, rising with all the best that was in them, they made of it a great time.

Dr. Fosdick tells of Victor Hugo's success as a young man—a success seldom equaled in France—and the tragedy which followed, with Napoleon III's growing power and tyranny. Banished from his country he became an exile for 19 years. Hate it as he did, his greatest work came out of that period. He "seemed miraculously inspired," writes his biographer, and "became twice the size of the man he had been." Even Hugo himself was led to exclaim, "Why was I not exiled before?"

War is the denial of everything Christ stood for, and yet example after example in history shows that in just such times as these, turbulent and revolutionary, whole generations have been brought to their senses; strong souls called on for adequacy have proved adequate; creative gains have come which long afterward were recognized as having tremendous value, and gave glory to the period in which they were born.

Christ, too, "had His hours of serenity and ease when He looked with joy upon the flowers of Galilee and said that 'Solomon in all his glory was not arrayed like one of these.' But at last He came to another kind of place, where no ease was His but fearful crisis, demanding adequacy, as in Gethsemane He prayed for insight and strength. That, too, was a great day."

Such times as these "drive us back to the fundamentals" and cause us to ask, "What shall it profit a man or a nation to gain the whole world and lose the soul?" Such times as these show up the weaknesses and the falsity of the things we have trusted in, have relied upon. For example, we have put great trust in inventive science and it has done wonderful things, but the power it has furnished mankind has been put to destructive ends and it has failed to solve human problems—it has only complicated them. "There is no more scientifically competent nation on earth than Germany."

We have put our trust in education and great achievements have been made. We are thrilled at "the spread of literacy, the invention of printing, the dispersion of books, the privilege of schools." We know that education is a power, but we also know that "There is no more literate and educated nation on earth than Germany."

What, then, can we trust? What can we rely upon? What will hold and carry us through times like these? How can we make it a great time to be alive?

Recently I heard Dr. Alexander Stoddert, superintendent of the Philadelphia schools, speak at one of our meetings, and I should like to pass on to you the essence of three statements that he made—the extent to which they are accepted by an individual, he said, revealed the extent to which that person is educated. I should like to go further than Dr. Stoddert and say that I believe the extent to which we as individuals can accept and practice these three ideas, to that degree can we make this time in which we live, great.

First. The extent to which we are capable of being concerned with what is going on in the world that is not directly connected with us.

It is easy enough to be concerned with things which affect us personally and directly. It does not take any special effort on our part, nor is it of any special credit to us to be concerned with the rationing program, for example, the income-tax legislation, housing legislation, provided that it may affect our living arrangements, the illness or distress of our own friends and relatives here or elsewhere, but when it comes to the more impersonal and indirect problems, that of the starving peoples of the war-torn areas, of the suffering of the peoples of bombed countries, of the plans set up for the enemy countries when the fighting ceases, the principles laid down at these great conferences which will determine the world's future as to peace or war, are we vitally concerned? Concerned enough to take the trouble to become enlightened, to add our support whenever an opportunity presents itself, to ally ourselves with some organization which is working toward the great ideal of world peace, to speak out in behalf of minority groups that are so frequently and so unjustly maligned?

What did Christ say along this line? Let us listen to His words in the fifth chapter of Matthew on being concerned with those outside our own little circle:

"For if ye love them which love you, what reward have ye? Do not even the publicans the same?

"And if ye salute your brethren only, what do ye more than others? Do not even the publicans so?"

I like Moffatt's translation on this last verse:

"And if you only salute your friends, what is special about that?"

It is true that Jesus had been talking here about loving one's enemies, but I believe that He would also include those to whom we are totally indifferent, in whom we show no concern.

No; this cannot be a special time, a great time for you and for me, nor a great era, if we fail to widen our horizons to include a real and an active concern for peoples, problems, conditions, and events outside of and beyond our own immediate interests.

Secondly, we can make this a great time to be alive to the extent that we can be concerned here and now with what will happen in the world when we are no longer here—when we are dead and gone—so concerned that it makes a difference in what we think and do now.

With children, rewards and satisfactions cannot be postponed—they must be immediate, else interest is lost in the doing. Some of us have not advanced very far beyond our childhood in that direction, I fear. Probably none of us here will live to see some of the great ideas and ideals being born now, or being advanced, having been born in earlier generations, come into fruition, and yet, not for one moment must be relax our zeal, our interest, and our support, either in our convictions or in our actions.

Lincoln, in the face of bitter opposition, fought for his great conviction on the slavery question, well knowing that he would probably never have to experience the joy and satisfaction of the fulfillment of his great act.

Said Wilson, in his zeal for world peace and his belief in an international organization to bring it about. "I would rather fail in a cause that will some day triumph than triumph in a cause that will some day fail."

And writes Laurence C. Staples:

"Not for this day, but for long years before us,
Far distant years our eyes will never see,
We plant the seeds of life surpassing wonder—
Peace, justice, love, for all humanity.

"Man truly lives in life that is beyond him;
His harvest waits for reapers yet to come;
Far in the future, hidden from our seeing,
Ripen the fruits of fields which we have sown.

"Out of long toil, there comes the great achievement;
We strive for peace, peace will at last prevail.
Though sharp the pain and struggle of the moment,
Our children's children will our strivings hail."

Finally, we can make this a great time to be alive to the extent that we have faith.

First. Faith in ourselves. We must believe in the worthwhileness of ourselves as individuals, and that what we do counts. How often we've said during a great moment when some ideal which we held important and significant was at stake, "I'll write a letter," or "I'll see my Congressman," and then later when our ardor cooled and we failed to follow through, we rationalized, "What would one individual's opinion matter anyway? Who am I to commend or protest?" Let's try to remember that everything we do in support of that which is good and strong and right is worth while, and that we cannot always measure the value of our action. It may be that your letter, your visit, your act may be just the deciding one, following an accumulation of similar protests or commendations. Yours may be the turning one.

Again, haven't you had the experience that long after you've said some little thing, expressed some opinion perhaps, so long that you've forgotten the incident altogether, someone recalls to you what you said or did and tells how that one little thing has influenced him ever since?

Let us have faith in ourselves as individuals and believe that what we do counts.

Faith in ourselves is not enough. We must go one step further and have faith in God, that Power which we cannot see but of which we know. These days are ghastly for many people, but how much more so they would be without that faith. What else can carry them through except a great faith that somehow, out of it all, our vision will clear and that the awful things endured now will not have been in vain. Our vision is so limited—we must trust, though we cannot see. Paul knew that when he said, "Now faith is the substance of things hoped for, the evidence of things not seen," and then he goes on, you remember, to relate in that 11th chapter of Hebrews, the great achievements

resulting from faith, citing individual after individual who acted upon and triumphed by faith.

We read last Sunday in our little devotional booklet, The Secret Place, of the chaplain who was sailing along in a bomber, 6,000 feet above North Carolina's coast line. He was greatly impressed by the grandeur of the ocean sweeping out to the horizon on one side and the beauty of the landscape on the other, but troublesome questions kept coming to him "Why? Why all this training for destruction? Why this terrible war?" He kept reminding himself that we have limited vision and cannot see the whole picture. We have to go ahead.

Just then he looked down upon the expanse of clouds below and saw a circular rainbow. For the first time in his life, he saw the rainbow, not semicircular, an arc, incomplete, but a complete and perfect circle. He regarded his experience as symbolic—a symbol of God. "There is the whole picture," he said, "even though I just see a fragment." There are complete and satisfying answers to these baffling questions and these dark days, and our faith and faith alone in a God that is dependable, that never fails, will carry us through. "We must be still and know—Thou art my lamp. O Lord, and Thou wilt lighten my darkness."

"Strong Son of God, immortal love
Whom we, that have not seen Thy face,
By faith, and faith alone, embrace,
Believing where we cannot prove.

"We have but faith; we cannot know,
For knowledge is of things we see;
And yet we trust it comes from Thee
A beam in darkness; let it grow."

Resolution of the Capital District Affiliate of the Polish-American Congress, Schenectady, N. Y.

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks, I include the following resolution which was sent to me by the secretary of the capital district affiliate of the Polish-American Congress, Schenectady, N. Y.:

Mindful of the tragic historical role that Poland, the loyal Ally of the United Nations, has played since the beginning of the present global war; convinced that one of the main goals of this bloody conflict is to assure complete freedom to all nations large and small; fortified by the act that the principles of self-determination, the right of a people to govern themselves, has never been denied by the American Nation to any other people—we, the representatives of the Capitol District Affiliate of the Polish-American Congress, representing over 60,000 Americans of Polish origin, embraced in 145 societies and organizations, gathered together on this 25th of March 1945 at the Polish National Alliance Home in Schenectady, hereby solemnly resolve as follows:

We go along with our fellow Americans in staunchly supporting the military decisions calling for unified action against our enemies as outlined by the Big Three at the Yalta Conference. We approve all political decisions pertaining to regulation of our conduct toward our common enemies. We warmly support the idea of a world organization to keep the peace. But, we are greatly disturbed and strongly disapprove of the decisions reached at Yalta regarding the small nations of the world. It is apparent from those decisions that in the future only the large and powerful nations will have the freedom of self-determination while the small nations must accept control and be limited by the welfare of the larger nations. If such a situation comes to pass, the people of the small nations will be deprived of all those democratic and moral principles emphasized so strongly in the Atlantic Charter and in the international bill of rights. The present war will have been fought in vain.

At Yalta the Big Three solemnly agreed to set up a provisional Polish Government on the basis of representation of all Polish democratic elements in Poland and abroad. Yet, despite the assurance of a positive program of reorganization of the Polish Government, it is now becoming evident that this agreement is finding great difficulties at the meetings held by the three representatives of the great powers, namely, Kerr, Harriman, and Molotov. No really democratic Polish Government has yet appeared. Then, too, despite the Yalta agreement about the form of the Polish Government, the present Lublin government is usurping its powers and fast eliminating all individuals who were and still are loyal to the Polish Government in London. As proof of such violations, which are absolutely contrary to the spirit of the agreement at the Yalta Conference, we need only to cite the recent charges of the British Foreign Secretary, Anthony Eden, against the Lublin government: Poles being punished for being loyal to their nation and because they remain true to their convictions. That does not augur well for a free Polish Nation, though we have the utmost confidence that the original plan of such a truly representative Polish Government will be carried out without variation if the wishes of Great Britain and the United States prevail.

We have the assurance of the great majority of American citizens that the arbitrary eastern boundary line drawn for Poland at Yalta, ceding two-fifths of all of Poland, with 13,000,000 inhabitants, without allowing those people to participate in a free and impartial, secret referendum or plebiscite to determine their future, is a procedure contrary to all moral and democratic principles governing human beings and nations. Such cession of territory of an allied nation is a new and unique departure in modern history—one which violates the high sense of American feeling of justice.

We believe that Poland has become the acid test of the United Nations and also the cause célèbre of all small nations. Unless the Polish problem is resolved with justice to the Polish people and in accordance with democratic principles in international relations, there can be no lasting peace after this war.

It is with deep sorrow that we approach the San Francisco Conference for it seems now that an empty chair will be found at that Conference, the chair in which rightly the Polish representative should be found, the representative of a people who have suffered so horribly during the past 5 years.

We, therefore, appeal to every freedom-loving man and woman in these United States, both official and layman to petition and prevail on our representatives at the forthcoming San Francisco Conference, to restore justice to the Polish people and to insure freedom for all nations in the post-war era, and to remove the threat that now hangs over small nations who are so unfortunate as to find themselves in the orbit of large powers. The dangers to world peace lurking in the compromises made at Yalta are only too real—those dangers must be removed before they become festering sores which ultimately would destroy all chance for world cooperation and lasting peace. Sanctity of international obligations must be guaranteed, and international bill of rights must be brought into existence—decency in international relations must become a fact—might must succumb to the principles of right—otherwise the bloody sacrifices of our men and women on hundreds of far flung battlefields all over this plant will have been in vain. Let us not fail those making the supreme sacrifice. It is the solemn and bounded duty of all American people to win the peace as well as winning the war.

Adam Stepan, Chairman, Schenectady, N. Y., John Lapinski, Secretary, Watervliet, N. Y.; Lucian Szczepkowski, Albany, N. Y.; M. A. Rekucki, Schenectady, N. Y.; W. Lesiakowski, Amsterdam, N. Y.; Mrs. Caroline Milos, Troy, N. Y.; John Nieckarz, Cohoes, N. Y.; John Bator, Albany, N. Y.

Bretton Woods Proposal

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of radio address I delivered over the Columbia Broadcasting System, 10:30 to 10:45 eastern war time, April 10, 1945, relating to the Keynes-Morgenthau or Bretton Woods scheme:

KEYNES-MORGENTHAU OR BRETTON-WOODS SCHEME

Fellow Americans, in the short time at my disposal this evening I want to tell you a few things about the Keynes-Morgenthau scheme, or what is now being so widely publicized by the Government as the Bretton Woods proposal for an International Monetary Fund.

Numerous Government departments, particularly Treasury and State, are flooding the country with propaganda, at a tremendous cost to taxpayers, to force Congress to adopt this scheme.

But the spokesmen for the scheme seem to be very careful not to tell you what it really provides and what it would do should Congress approve it. They describe it in glittering generalities, tell you it would bring about stabilization of currencies, internationa cooperation, provide millions of jobs by stimulating our export trade, and form one of the main pillars of the peace structure.

Those are expressions of praiseworthy objectives, but from my study of this proposal I am convinced that it will not accomplish any of them. It might cause spurts of false prosperity. In my judgment it would, in the long run, destroy more jobs than it would create, destroy what real international cooperation is still left, and endanger world peace rather than sustain it. Indeed I look upon this proposal as an immeasurable peril to our Nation and people.

Why call it the Keynes-Morgenthau scheme? Because Lord John Maynard Keynes, an English nobleman, contrived it and Mr. Morgenthau, Secretary of the United States Treasury, has assumed responsibility for selling it to the American people and inducing Congress to adopt it. Just as Mr. Morgenthau copied his proposals for an international monetary plan from Lord Keynes' international clearing union scheme so practically all of the main provisions in the Bretton Woods proposal for an international

monetary fund were derived from the same source.

This scheme proposes that the United States be shorn of her power over her money and that this power be handed over to foreign countries. Actually, this power would be taken from Congress and given to the President of the United States and 43 foreign countries. The President would have only 28 percent of the voting power, and much less than this after other nations not now included became members of the scheme. This means that the President would be outvoted by about 3 to 1 and that foreign countries would be in control of our money.

Control of its money is the lifeblood of a nation. In fact, a nation cannot exist without this control.

The founding fathers, in writing the Constitution, vested all power over our money in the Congress. This has never been disputed. The courts have on numerous occasions upheld the right of Congress to control our money. How does Mr. Morgenthau justify this suicidal proposal? Here, in substance, is his answer: If at any time in the future the United States wishes to regain her power over her money, she may do so by first withdrawing from the international monetary scheme.

That, of course, answers nothing. It is the grossest subterfuge, because he and all of the other proponents of the scheme avow that it is to be permanent.

First, they tell us that the world will go to pot unless the United States permanently adopts this international monetary scheme, which implies the permanent surrender to foreign powers of the control of our money. Then to justify the destruction of our independence as a nation, they tell us the Constitution would not be violated because we could regain control over our money by withdrawing from the scheme.

The essence of their proposition is something like this: It is necessary for the United States to permanently surrender to foreign countries her power over her money in order to whip up export trade, provide jobs for our people, and to form one of the main pillars of the peace structure, but if at any time in the future the United States should take a notion to regain her power over her money and again become an independent nation she could do so by destroying our export trade, throwing millions of people out of work, pulling the foundation out from under the peace structure, and starting World War No. 3. That is precisely the mess the proponents of this scheme get themselves into when they are driven to explain their true position.

Russia could not give up any part of the power she exercises over her money because of her communistic system. Lord Keynes, the man who devised the scheme, and other prominent Englishmen, have asserted that Great Britain intends to retain control of her money and that she will join it only on that condition. Great Britain and Russia would exercise control of our money, but we would have no control of theirs.

To lose control of our money to foreign countries would be to lose our nationhood to them.

The scheme proposes that the United States furnish, to start with, billions of dollars to be loaned to about 40 countries without any interest to her, or any time limit. The borrowing countries being in control they would dictate to the United States the terms upon which the loans to them would be made. Did you ever hear of anything like this before?

The dollars loaned to foreign countries would be used by them to buy American goods. The process would be essentially one of giving our goods away.

The scheme involves the adoption by the United States of a policy of pledging her resources to support nearly all the rest of the earth's population. It would confer upon them the right to share in the fruits of American labor and enterprise. This would have the effect of lowering our standard of living to that of the rest of the world.

The scheme contains a provision for periodic world inflation. This would have the effect of repudiating international debts and domestic government debts as well. Mr. Henry Hazlitt, editor of the New York Times and a keen student of this scheme, has pointed out that this provision would cause the following:

"Commodity prices would rise. Everybody's cost of living would go up. Those who lived on pensions, either private or part of Government social-security systems, would find them buying less than before. The holders of Government securities would find the real value of their securities greatly cut. All those with fixed incomes would find themselves subjected to an invisible but real and ungraduated income tax. All those with savings accounts and insurance policies would find them cut by an invisible but real and uniform capital levy. In short, private citizens, as before, would be cheated by their governments."

But the proponents of this provision will tell you that it can't be put into operation until Congress passes another law saying it shall. But why should Congress pass a law which recognizes the need for repudiation of international and national debts, and the destruction of the purchasing power of the dollar?

As stated, the United States would put billions of dollars into the scheme at the start. Everybody agrees that the borrowing countries would consume the dollars at a rapid rate. The time would come when dollars would become scarce. The scheme would then ration dollars out to the countries wanting them. That means that exports would be rationed, industry and employment dependent upon export trade would collapse and depression would intervene.

It is provided that if dollars should become scarce, the operators of the scheme could petition Congress to pour more dollars into it. How possibly could Congress refuse such a request? Manufacturers, farmers, wage earners, and who not would be on every Congressman's neck to vote more funds to keep the scheme going. You can readily see how pouring dollars into it and giving our goods away could become an endless process, or could continue until the United States would be bled white.

Or the operators of the scheme could say to the United States, "We are not going to borrow any more dollars from you. Instead you must lower or abolish your tariffs and open up your markets to us. In that way we will get all of the dollars we need to buy American goods." That would mean sudden dumping of cheaply made foreign goods into our domestic market, throwing many of our people out of work, reducing the income of our wage earners, farmers, and others and forcing them on to a lower standard of living. One of the main objects of the scheme is to compel American workers to compete with poorly paid foreign labor.

Lord Keynes made a speech in the House of Lords in which he boasted of this provision, and even spoke about it containing a sanction, that is a penalty, which could be used to force the United States to her knees. He ought to know what he is talking about because he wrote this provision.

The Keynes-Morgenthau scheme is a scheme to set up world communism. Avowed Communists were quick to see this and to rally to its support.

Soon our soldiers will be returning from the far-flung battlefields of the world to their homeland, leaving behind them hundreds of thousands of their comrades who made the supreme sacrifice. Millions of them returning will be casualties for the rest of their lives. Upon their return they will find their share of the public debt burden to be $120,000,000,000 or more. In the face of that load their G. I. bill of rights will be as nothing.

All of us, of course, want to give as much help as possible to the war-torn peoples of the world, but in view of all the sacrifices that we have made for our allies the time has come when we must begin to look after our own.

But over and above this we must stop the Keynes-Morgenthau, alias Bretton Woods, scheme from being passed by the Congress. If we fail in this, 12,000,000 soldiers will return to their homes to discover that the Nation they fought and bled for has been handed over to foreign powers and made a vassal state. Let not such everlasting shame come upon this Nation.

As a member of the House Committee on Banking and Currency and after long and careful study of this scheme, I am convinced that it presents a most perilous threat to American independence and plead with you to do all within your power to prevent its consummation.

Thank you and good night.

The Boy Scouts

EXTENSION OF REMARKS

OF

HON. DAN R. McGEHEE

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. McGEHEE. Mr. Speaker, that great American, James A. Farley, former Postmaster General of the United States, even though he has departed from the political arena, is continually giving his life and services for and in behalf of every movement, the purpose of which is the upbuilding of his country and progressive advancement in every phase of the human life.

He finds time to travel throughout this land and address the business, civic and other organizations wherein that great and magnanimous heart of his directs that he can be of service; doing this regardless of the many manifold duties devolving upon him in his business career.

At the celebration of the Boy Scouts of America's thirty-fifth anniversary, Jim Farley paid a fine tribute to this organization, which was commented on most favorably by the editor of the Charleston, Miss., Sun. Under leave to extend my remarks, I include therein this editorial:

THE BOY SCOUTS

This week the Boy Scouts are celebrating their thirty-fifth anniversary. The Sun has always been strong for the Boy Scouts, and knows that youth has come a long way since the beginning of that movement a generation ago. When this editor was of Scout age—and that was a long, long time ago—there was no such organization, no one to direct us as a body, no places for recreation, no Camp Tallaha, no anything, as we know it now.

How infinitely better the world would be if all observed that part of the Scout law which reads: "A Scout is reverent. He is reverent toward God. He is faithful in his religious duties, and respects the convictions of others in matters of custom and religion." If that had been the law for boyhood all over the world, there would have been no racial persecution in Germany, and the world would

not now be embroiled in the bloodiest war in history.

We wholly agree with that fine tribute James Farley paid to the Scouts on their anniversary and in which he said:

"There is nothing the matter with our boys and girls today except the same thing that has always been the matter. The problem is not juvenile delinquency, but adult indifference. Boys want adventure. Of course they do. They always have. The thing to do is to give them the right sort of adventure. The time to stop juvenile delinquency is before the boy becomes delinquent.

"There are four things to my way of thinking that play a very important part in the life of a boy, that have everything to do with fixing the way his future life will be. First is the home. In nine times out of ten if a boy gets into trouble, you will be able to trace the cause of it to bad conditions at home, bad example, indifference, neglect.

"The second great influence on a boy is the church. It is impossible to overestimate that influence. Religion should be a real and compelling thing in the life of a boy.

"The third important influence on youth is the school. There is no need to elaborate on that. We all know how necessary a good education and vocational training are for the future of a boy. What the home and the church do for the heart and soul, the school does for the mind.

"But in our complex modern life when the home and the church and the school have done their part, there still is need for something more in the lifetime of a boy. He is a social being. He naturally looks for companionship, and he looks for adventure, something to do in his spare time. That is where the Boy Scouts of America comes into his life and does a job which, in my judgment, no other organization can do more effectively."

A Nation Mourns

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Foster's Daily Democrat, Dover, N. H., of Friday, April 13, 1945:

A NATION MOURNS

Today a Nation mourns after hours of stunned silence, the passing of one of the great leaders in history.

It is one of the tragedies of our times that he died before his work was finished. Like Abraham Lincoln, he lived through bitter years of struggle, but died before the reconstruction of those years could begin. That calm, yet forceful leadership which carried us to within sight of victory, would have been an even greater influence for the good at the peace table ahead.

Few men in our history have been the subject of so much controversy as Franklin Delano Roosevelt. Yet in him the people placed greater confidence than in any American since George Washington. The center of partisan strife through more years than any other President, he led the Nation through the ravages of a terrible depression, and through the sordid years of a great war. His was a burden greater than that of Lincoln or Wilson.

Whatever his virtues, whatever his faults, history will finally judge his place in the archives of this Nation, and of the world. And history will find a place for him along side Washington, Lincoln, Jefferson, and another Roosevelt.

Despite a Groton and Harvard background, Roosevelt was essentially a man of the people, the champion of the common man. He was a man who fought physical adversity from early youth, and weathered over 12 years of partisan criticism in the highest public office, yet kept his smile and personal charm intact.

His death at this time, with his work unfinished, comes as a crushing blow, not only to followers of his leadership here in this country, but to our allies in this great war. Franklin D. Roosevelt was not only a man of the people in his own country, but the champion and defender of little people all over the world.

At the peace table he would have been the most powerful man in world history, and much of his power would stem from a personal honesty and sincerity which were above reproach or suspicion. In England, in France, and in China his passing is mourned today even as it is in these United States. In Russia, in India, and in South America he was looked upon as one of the key men in the world security organization to come.

While mourning his passing, as the world has seldom sorrowed for the loss of an individual, we must look ahead to insure the carrying out of those principles which made him great.

Today, in our sorrow, we have a new President of these United States. His is a terrifying task, that of carrying on for his beloved chief. To him, as the symbol of America's leadership, we owe our allegiance, with all the tolerance and understanding so inherent in our American sense of fair play.

We must not make another Andrew Johnson of Harry Truman. The shameful chapter in American history after the death of Abraham Lincoln must not be repeated in this hour of crisis. The bickerings of Congress and of aspiring politicians must not persecute this President as they did the sincere figure of Johnson.

If Roosevelt leaves behind a mandate to fulfill it is to form a world organization which will insure the "four freedoms." If he leaves a legacy it is one of leadership and influence which we must not tear down from within for mere political gain.

In this hour of mourning it is hard to look ahead with hope and vigor. But Franklin D. Roosevelt once said, "All we have to fear—is fear." These are reassuring words in this dark hour.

He did not live to finish his work, as few men do. But he lived to see the foundation laid for the downfall of those forces of evil and aggression which he fought so well.

History will remember Franklin D. Roosevelt as the man who led us from our lethargy and isolationism to a state of preparedness. It will remember him as the man who bolstered a beaten Britain and supplied a threatened Russia. It will remember him as the man who gave us the greatest fighting machine and productive capacity in world history, and then turned that mighty force loose upon Adolf Hitler and his satellites.

He lived to see Pearl Harbor avenged in a shower of bombs on Tokyo. He lived to see the London blitz erased in devastation rained on Berlin. He lived to see Americans march back to Bataan. He lived to see the yoke of aggression lifted from Greece, France, Belgium, Luxembourg, and much of Holland. He lived to see the war won. A few weeks longer and he would have seen the final collapse of Germany, one he planned and executed.

A great leader, a great statesman, and a great humanitarian died last night at Warm Springs, Ga.

It is, perhaps, fitting that Warm Springs should have been his last habitation here on earth, for it was at Warm Springs that the personal side of Roosevelt was best known. It was here that he devoted much of his effort of saving little children from the ravages of the dread disease polio. It was typical of the great man that he should have been the guiding figure in the March of Dimes, and this effort may in years to come be as important to mankind as the winning of World War No. 2. In this field alone he leaves behind a fitting memorial—a living memorial—to his memory.

Through our sorrow we may still take pride in his achievements, and in the position his leadership has placed this Nation.

The world is thankful that he lived, as it now bows in sorrow at his passing.

The Late Dr. Dixon Ryan Fox

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD on the untimely death of Dr. Dixon Ryan Fox, president of Union College, Schenectady, N. Y., on January 30, 1945, I include an editorial from "The Concordiensis," the student newspaper, by Prof. H. A. Larrabee.

Dr. Fox's death was a startling shock to the college, the community, the leaders in education all over the world, and the hundreds of his friends, associates, and admirers. Dr. Fox, the twelfth president of Union College, had been in office 10 years. During these years many changes have occurred at Union—its academic standards are higher; its reputation among colleges and universities of all types is high, and for many of these things, Union owes a debt to its president—to his foresight and leadership, to his progressiveness and determination, to his imagination and persuasive power. Scores of tributes have been paid to Dr. Fox, and one of the most fitting is the following:

A LEADER HAS FALLEN

(By Prof. H. A. Larrabee)

There is a sense in which President Dixon Ryan Fox was just as much a casualty of war as any Union man who has gone down before the hail of bullets or bombs. For he met the challenge of wartime acceleration and uncertainty by redoubling a tireless devotion to duty that had long been a marvel and a source of concern to his associates. Never one to spare himself in any good cause, he gave to Union 20 or 30 normal years of service in the space of 10, by packing extra hours of toil into each day, extra days into each month, and extra months into each year. For the college and the country which he so ardently loved, he labored to the last ounce of his strength. He died in harness, and he would not have had it otherwise.

Colleges like Union inevitably take their shape and color from their presidents, and that is particularly true of a leader like Dr. Fox. It is useless to attempt to put into words what the presence of his warm and rich personality on the campus has meant to the men of Union in the past decade. Prexy has entered into the immortality of the living legend of Union that dwells in the hearts and minds of all of us.

For we are what we are, in part, because he spent himself utterly in our behalf. The only way in which we can repay that debt is to keep on striving for the goals he cherished and for which he freely gave himself.

President Dixon Ryan Fox, administrator, historian, author, dramatist, and moderator, will be remembered long and for many constructive achievements, but perhaps longest in the minds of many of us because he was so unfailingly kind in little, unexpected ways. He went out of his way to make people feel that they were appreciated. He really loved to find occasions for praising others. He must have written literally thousands of such letters in the course of his incredibly active life Wherever he went, he made friends for Union Few men have been liked so much by so many different kinds of people.

A leader has fallen; and our hearts are heavy with grief. But the war goes on—the never-ending war which he fought against ignorance and ill-will and apathy and pettiness of spirit. A leader has fallen; but we must close our ranks and go forward, even as he would have gone.

Activity in Philippines

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. STEFAN. Mr. Speaker, the American evaluation of the superb war effort of the Filipino guerrillas is not confined to limited groups or limited areas of the United States.

We believe, as Tomas Confesor, Philippine Secretary of the Interior, said recently:

> If the common man had not asserted himself in this war, democracy in the Philippines would have been lost.

Although the legislator, the worker, the business executive, the miner and the farmer in this country are interested in the contribution of the Filipino guerrillas, it is the American military leadership—whose task it is to save as many American and Filipino lives as possible while driving the Japanese out of the Philippines—who have paid the highest tribute to guerilla activity in this area.

United States Secretary of War Henry L. Stimson said at his press conference Thursday that:

> The American Division on Cebu and the Fortieth Division on Negros and Panay, in conjunction with Philippine guerrillas, have practically cleared up these islands of the Visaya group.

Gen. George C. Marshall, Chief of Staff of the United States Army, emphasized these views later in the same day when he said:

> Large portions of the islands have been liberated by Filipino guerrillas, who have rendered great service to our own troops and to their own people.
>
> The attitude of the Filipino people in their period of trial and endurance and their vigorous, aggressive fighting now, I think, are great tributes to them as a people.

The American people know what the Filipino guerrillas have done to advance the liberation of the Philippines. They know of the scores of guerrilla groups, such as that in northern Luzon commanded by Col. Russel W. Volckmann. In order to join Volckmann's command the candidate had to kill a fully equipped Japanese soldier and to take from the enemy a full bandolier, rifle, canteen, steel helmet, and 2 weeks' supply of rations. It is no wonder that the one group has inflicted more than 16,000 casualties on the enemy.

No matter in what part of the islands these groups operate we learn of their deeds of valor. Our sympathy and understanding, as well as our material support, goes out to these bands of heroes fighting grimly and efficiently in the common cause of liberation.

President Roosevelt's Last Letter on Domestic Policy Reaffirms His Faith in Reclamation

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. MURDOCK. Mr. Speaker, it is my privilege, on behalf of the Committee on Irrigation and Reclamation, to submit for inclusion in the RECORD a letter received from our beloved late President. It was delivered to me by White House messenger at the opening of a committee hearing on Thursday, April 12, 1945, just a few hours before the President's death. That letter thus is one of his last official papers. It relates to a hearing by my committee on H. R. 520, a bill to facilitate settlement of returning veterans on farms in projects constructed, operated, and maintained by the Bureau of Reclamation, and it is perhaps the last outstanding pronouncement made by President Roosevelt on national domestic policy. The letter was read at the opening of the committee hearing in the presence of Secretary of the Interior Ickes and Commissioner of Reclamation Bashore. All in attendance there were deeply impressed by the recognition Mr. Roosevelt reiterated of his great interest in Federal reclamation in the West, and of his sincere desire that opportunities for settlement on irrigated land will be available to our returning servicemen.

I will reserve my tribute to the leadership and statesmanship of President Roosevelt until another time, but I am sure that the Nation will be impressed by the significance of this typical manifestation of his deep concern for the welfare of the men and women as they return from the wars.

The letter is eloquent of Franklin Roosevelt's Presidency. In the midst of weighty matters of war, he was attentive to the problems that the young men of this Nation will face in the peacetime life for which they are fighting. While directing the fierce might of our armies and navies to destruction of the enemy, Franklin Roosevelt also planned the permanent conservation and full beneficial use of our national natural resource wealth.

This letter speaks of pioneering, a way of life that we prize as a national heritage. It speaks of the opportunity to make a secure livelihood and home for a family, the privilege that, throughout our history, has been the most valued grant to veterans. Those frontiers of opportunity are linked in Franklin Roosevelt's letter, as they were throughout his Presidency, with the wise development of the entire Nation and with the full enjoyment by all of the people of fruits of their full productive employment.

APRIL 10, 1945.

Hon. JOHN R. MURDOCK,
Chairman, House Committee on Irrigation and Reclamation, House of Representatives.

MY DEAR MR. MURDOCK: In connection with the hearings that, I understand, will shortly be held by the House Committee on Irrigation and Reclamation on H. R. 520, "A Bill to Facilitate Settlement of Returning Veterans on Farms in Projects Constructed, Operated, and Maintained by the Bureau of Reclamation," may I bring to your attention certain broad policy considerations.

On July 28, 1943, I outlined a minimum program to assist servicemen in meeting the problems of readjusting to civilian life after their discharge. The G. I. bill of rights is the legislative foundation of such assistance. In addition to that general measure, numerous complementary authorizations are needed for specific programs. Every area of this country and every sector of national life is represented among the 11,000,000 men and women who will have served with the armed forces. Each of these will have special problems in once more becoming a civilian, engaged in satisfying and productive livelihood. To deal adequately with the great multitude of these varying situations, individual measures consistent with a general national program and policy are required.

As I stated in my message to the Congress of January 13, 1944, demobilization starts long before the war ends, and it is essential that programs of assistance to veterans be authorized and adequately prepared now. One such program has been under active study and is in the advanced stages of planning through the work of the Bureau of Reclamation, Department of the Interior. I have frequently spoken with pride of the accomplishments of this Administration in Western Reclamation projects. The great Columbia Basin project in the Northwest, the projects in the Missouri River Basin, and others of equal significance, will, as I said at Chicago on October 28, 1944, be golden opportunities for returning veterans. Such projects constitute great increases in national wealth and income. They also offer splendid opportunities for secure and abundant livelihood to men and women willing to engage in the arduous, though stimulating, tasks of pioneering these latest frontiers. I commend and urge your favorable consideration of Federal Reclamation projects as an important opportunity for returning veterans.

The men and women who settle on Reclamation projects after the war will, however, face problems more complex than those of the earlier pioneers. It now is more difficult and more expensive to establish a farm and a farm home than it was 40 years ago. In offering to veterans an opportunity to settle on Federal Reclamation projects, we should also provide such forms of assistance to them as will be needed to make their pioneering efforts fruitful to the country and truly beneficial to themselves and their families.

A program to facilitate settlement of returning veterans on farms can be of great value in assisting them in returning to civilian life. It can also be of great value in the reconversion of our national economy to a fully prosperous peacetime basis. Full enjoyment of the great productive resources of this Nation by all of the people requires that all have opportunity to engage in productive labor. The purchasing power created by Reclamation projects is a stimulus to industry and commerce, thus promoting full employment throughout the Nation. Those engaged in agricultural production should secure ample livelihood so that they can participate in enjoyment of the products created by full industrial employment. Measures in addition to those dealing with Federal Reclamation projects will be needed to round out a comprehensive program in this regard.

I have not examined the bill that is before your Committee and, therefore, I am unable to comment upon it specifically. I desire, however, to endorse the foresight which has led to preparation now of legislation to authorize needed programs.

Sincerely yours,

FRANKLIN D. ROOSEVELT.

Mr. Speaker, it is my sad privilege to present this, what is probably his last state paper. I am deeply honored to be its recipient. Yet it is in truth addressed to all of us in the Congress. This letter is a last testament, bequeathing to us the abiding responsibility to enact a postwar program that will build an ever finer America, to develop this land of opportunity for which have died so many American soldiers and their Commander-in-Chief.

The Committee on Irrigation and Reclamation is resolved to carry forward its share in formulating such a postwar program. The bill which is the subject of President Roosevelt's letter is a principal item of our legislative agenda. Hearings on that bill will be resumed on April 19 and will be continued each succeeding week until the committee can report to you a legislative program that meets the purposes stated by Franklin D. Roosevelt.

Lands for Veterans

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. MILLER of California. Mr. Speaker, there has been much discussion about settling the returning veteran on the farm. The Congress has talked about this problem at some length.

The first practical, down-to-earth suggestion that has been made came in the statement by the Honorable Harold L. Ickes, Secretary of the Interior, when he appeared before the Committee on Irrigation and Reclamation of this House on April 12, 1945. Mr. Ickes spoke in support of H. R. 520, a bill by Mr. MURDOCK, of Arizona, that would give veterans a 90-day preference on lands open to settlement by the Bureau of Reclamation. Under leave to extend my remarks, I include the statement by Secretary Ickes:

One of the most valuable privileges ever conferred upon veterans by the Government would be granted by the Congress through the enactment of H. R. 520, the bill upon which this hearing has been called. If this bill should become the law, servicemen returning from the present wars who might wish to acquire rich, irrigated farm lands on projects constructed, operated, or maintained in the West by the Bureau of Reclamation would be given preference over all other purchasers for a period of 90 days. This opportunity would continue for 20 years following the enactment of H. R. 520.

This would mean that as the irrigation of more lands becomes possible, qualified veterans would be given first choice of several million acres of good land, if the Congress should authorize the postwar program of the Bureau of Reclamation, and provide funds for the construction of the engineering works proposed. An opportunity to purchase reasonably priced irrigated lands, at a time when most farm values will tend to be inflated, is a privilege not to be discounted.

I wish first to tell you how this proposal for the development of our western States fits into the national and international scene.

We all are now aware how the march of modern technology has advanced by leaps and bounds in recent years through the annual expenditure of hundreds of millions of dollars on scientific research in the laboratories of great corporations, universities, and governments throughout the world. The knowledge obtained from this research has enabled us to make far greater use of the world's natural resources than ever before, and, therefore, has increased their value tremendously. But science also has enabled us to use the products of research to much more deadly effect in warfare than ever before. Control of the deposits of petroleum, coal, iron, aluminum-bearing clay, and other resources carries with it economic and military control. Linked to the tremendous electric energy that can be derived from water power, and the chemicals which can be extracted from the air, ownership of the natural resources of the earth has assumed a significance far beyond the importance of such resources to private industries.

It was for the control of these resources throughout the world that Germany reached out for mastery over everything on this planet. It was partly because of Russia's developing technology, which, fortunately, had advanced much faster than most of us realized, that the Soviet Government was able to turn the tide in the present European war.

Now the whole world has become conscious of the newly discovered wealth that every land possesses in its water power and mineral resources. The future strength and greatness of every country depends upon its ability to organize the development of its own natural resources and avail itself of raw materials shipped from other countries.

We have discovered in this country, partly through the 43 years of experience of the Bureau of Reclamation in the development of the water resources of the West and partly through experience in the Tennessee Valley, that the most economical and efficient manner in which to obtain the greatest use of our natural resources is through coordinated engineering of an entire river basin.

In this manner not only are millions of acres of dry land reclaimed from the desert by irrigation and the destructive effects of floods eliminated or lessened, but river transportation is provided and low-cost power is supplied for use in homes and the expansion of industry. Power development helps to carry the cost of land development, and, applied to mineral resources, low-cost power also means the extraction and smelting of minerals not hitherto practicable and the manufacture of new alloys for many purposes. The reservoirs that are built for impounding power and irrigation water also provide new water supplies for cities, towns, and factories. Reservoirs also create new game refuges and fishing in many streams that once were dry in summer. The advantages of coordinated river basin development can be measured in dollars and cents, but they can be measured also in happier living, which, after all, is the object of all of our activities—if we could only remember it.

This new approach to river-basin development is spreading today throughout the world. John L. Savage, chief designing engineer of the Bureau of Reclamation and one of the world's greatest engineers, over a year ago was loaned to the State Department, and as one of its cultural relations men was sent to assist other nations in making plans for postwar progress. Mr. Savage designed for the Bureau of Reclamation the great Boulder, Shasta, and Grand Coulee Dams, as well as scores of others throughout the West. Now he is designing for the Chinese a dam that may some day be constructed in the gorge of the Yangtze River, and which would develop five times as much electrical energy as the Grand Coulee Dam, now potentially the greatest hydroelectric power producer in the world. He has advised the Chinese where they could build numerous other dams on tributaries of the Yangtze.

In India, he has looked over some of the great rivers that flow from the snows of the Himalaya Mountains, and advised what might be done to harness the energy of these rivers and use their waters for irrigation. On his return trip, he visited Australia to give similar advice.

But it is not China, India, and Australia alone that are determined to develop the resources of their river basins to the utmost. There have been great plans proposed for the Danube River, which, in time, may bring about cooperation among the nations that live along its banks, and become a potent force for keeping the peace of Europe.

America early caught this vision of natural resources, conservation, and development. Throughout this country there is a growing consciousness of how greatly national prosperity can be stimulated through this type of enterprise, when guided wisely. Upon this new concept is based the great post-war plan of the Bureau of Reclamation, which looks to the coordinated natural resource development of 15 river basins in the West—plans which contemplate the construction of some 415 separate projects. The total cost would mount to approximately $5,000,000,000, more or less, depending upon the conditions under which the work should be done. Within a few months the Bureau of Reclamation will have completed reports on the coordinated development of 15 river basins throughout the West.

Through the sale of electric power and of water for irrigation, domestic and industrial purposes, a major part of the expense of this development would be paid for in cash over a period of from 40 to 60 years. But the benefits of flood control would be paid for through the elimination of incalculable human misery and the saving of hundreds of millions of dollars in relief. The benefits from improved navigation are fairly obvious. And the provision of new recreational facilities and the preservation of game and fish not only would bring a financial return in the stimulation of many businesses, but satisfactions hard to measure in dollars and cents.

In connection with irrigation projects there will spring up villages and cities, as they have in the past. From the low-cost power industrial areas will come into being. The indirect benefits through stimulating creative energy and the development of trade and industry will repay the monetary costs

many times over—even if reckoned only in tax collections.

The construction of these projects would begin soon after appropriations have been made by Congress; but as the work got under way it would require the services of more and more men, until the number employed at the sites of construction would mount to some 400,000 workers. This would include everyone from chief engineer down to the man who worked by the day or hour shoveling dirt or mixing cement.

Naturally, a very large number of the men employed to build dams, irrigation canals, and powerhouses would be ex-servicemen. By using the most modern machinery for moving earth and materials, the cost of construction could be kept down and the wages of the men employed could be maintained at a high level, which is necessary, if we are to keep our economic machine running in high gear after the war. The cost of the new irrigation farms would be kept low, and the power generated at the dams which we built could be sold at a price that would make it available even for cooking and heating.

This tremendous construction activity taking place in the wide open spaces of our western lands would be reflected in the mills and factories of the East, which would manufacture the equipment used in construction, which would make and fabricate the steel, cement, and other materials necessary in building dams and canals, and which would construct generators, cables, and other electrical equipment.

I could explain at length the benefits which arise from well-conceived reclamation projects, which bring into being new towns and industries, which can mean the doubling of populations. Most of you know that story, however. Many of you have profited by it.

Let me explain a little more in detail, however, how today's approach differs from that of the past. In the past, each separate project has been justified on the basis of the possibilities of repayment from the project itself. A specific example is that of the Columbia Basin project, which included the building of the most massive concrete structure in the world—the Grand Coulee Dam. The final construction cost of this project will be about $487,000,000, which does not include replacements and other operating expenses. Even distributed over more than a million acres of land to be irrigated, this cost would be far beyond what is practical, if the entire expense were borne by the irrigation project, itself.

But when the Grand Coulee Dam is fully equipped with generators, it will be by far the largest producer of hydroelectric power in the world. Even when this energy is sold at very low rates, it will be possible for such sales to repay at least three-fourths of the cost of the project within about 60 years.

The share of the cost which will be allocated to irrigation will make possible the development of farms at a cost that will place them in an excellent position to yield a good return upon prudent investment, if efficient management is used.

In our present approach, however, we go one step further. We ask whether the development of the entire river basin will return benefits to the people who live within it commensurate with expenditures. This cannot be measured alone in direct cash returns, but in the economic development that will be stimulated, the abatement of the menace of floods, the benefits from river transportation, the value of municipal and industrial water supplies and other satisfactions which come from health-giving recreational facilities. This is something new in reclamation of the West.

The promise which this holds for veterans is something more than money can buy—it is the opportunity through hard work to build a place where they can spend their lives in comfort, good living, and happiness. It will depend, of course, upon the character and intelligence of the men and women who settle these new acres how prosperous or how happy the communities which grow upon them will be.

But the Department of the Interior is ready to do its part in assuming a responsibility for giving technical advice and other aid to all who will join with it in making this development a desirable place in which to work, live, and rear their families. Through the cooperation of the people with their local, State, and Federal Governments, services can be rendered which will prevent many of the hardships and trials which settlers on new lands generally must experience.

Some will say that privation and suffering are good for people—that such is the manner in which our Nation became strong. Well, that may be true. But men are also made strong and become good citizens when good food, good schooling and opportunity for leisure and travel make their lives richer and expand their opportunities for understanding the modern problems of society. In fact, I think that I can say that unless more Americans achieve the leisure which will enable them to follow the complex problems of national and world affairs and better understand them, democracy eventually will give way to some order in which a chosen few who have leisure will take the management of the world into their own hands.

So you see, I do not conceive of coordinated river-basin development merely as the completion of great engineering enterprises, but of laying the economic foundation for richer and happier living, which will enable our men and women to perform their necessary economic tasks with less effort and greater profit, and to devote more time to citizenship and cultural growth. That is the way not only to preserve our freedom and independence as a nation, but to becoming a nation of men and women who will be regarded by other nations as wise and generous, to be envied, not for our wealth alone, but because we understand and appreciate what is good in life, including a sense of international justice.

Now I shall ask you to go just one step further in evaluating the Bureau of Reclamation's post-war program. The creation of prosperous and happy communities benefits more than the people directly involved. Such communities contribute value to the entire Nation. Their industry enriches the Nation and provides a market for all manner of goods produced in other sections, just as the development of the West has done since our beginnings.

In closing, let me explain a practical point I raised at the beginning to the effect that a 90-day preference to veterans in the purchase of land on projects constructed, operated, or maintained by the Bureau of Reclamation is a very great privilege that you gentlemen could confer upon returning servicemen.

It does not take a great deal of calculation to realize that the price of farm land is climbing steadily beyond the point at which it is economical, from a long-term viewpoint, to buy a farm. The boom in farm real estate today is comparable to that which occurred during the last war and immediately following it. It threatens to undermine one of the economic foundations of farming in the United States.

Reclamation farms will be the very best priced farms on the market in the years that immediately follow the war—and a 90-day option on the purchase of one will be a very great privilege, and one possessed only by veterans. This is an opportunity about which every serviceman who can qualify for the purchase of an irrigated farm might give serious thought.

Moreover, it is true that a Reclamation farm is a good purchase at any time. Under the Reclamation Project Act of 1939 there is a real working partnership of the settlers and the Government in the development of the West, which is still a land of opportunity for young men and women. Here there remains rich promise for the farmer who operates intelligently and puts in the hard work necessary for success on any farm. Here is to be found a better than average chance of making his venture successful.

Our Irrigation Prospects Are Good and Reclamation's Future Achievement May Be Brilliant

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. MURDOCK. Mr. Speaker, on April 12 at a hearing of the Irrigation and Reclamation Committee of the House, Commissioner Bashore followed the Secretary of the Interior with a statement amplifying the broad outline of policy which the Secretary had announced earlier in the hearings with regard to the future of reclamation. The Commissioner summarized plans and prospects and detailed the feasible outlook of reclamation, as he and his staff of engineers view it, as an aid to the Congress. Even to those of us who have long been members of the Reclamation Committee and who have for years been giving study to these problems, the Commissioner's statement was very enlightening. He set some goals in reclamation toward which the Government should work and gave detailed expressions to the policy of development which the Secretary of the Interior had laid down, based squarely on the cornerstone so well laid by the President himself in regard to this wise construction. Commissioner Bashore's statement follows:

There isn't a sane man in the United States today or in our armed forces throughout the world who isn't concerned with the post-war economic outlook. H. R. 520 is an important step in the direction of full post-war employment and a high level of national income, because it offers servicemen an important stake in a program which looks toward a tremendous expansion of agriculture, industry, and trade in the West.

By giving veterans a 90-day preference in acquiring irrigated farms on Bureau of Reclamation projects when the farms are made available for purchase, this bill gives the exserviceman who can qualify an opportunity to own a fertile irrigated farm on which an adequate water supply is assured, and upon which he can build a home that should provide him and his family with secure and healthful living through the years. The price will be so fair that the purchaser can expect a reasonable return on his investment. The reclamation program already authorized for post-war construction will provide about 100,000 new farming opportunities in the early years, and additional projects under study when authorized would provide an additional 100,000 such opportunities.

If you will stop and think about that for a minute, you will conclude that it is a substantial proposition H. R. 520, the reclamation soldiers' settlement bill, would offer. Yet the significance of the reclamation pro-

gram to returning servicemen goes further than that. In fact, as I look upon the matter, the outline which I shall present today is one step in the direction of assuring what everyone wants—a high-production, high-income-level economy after the war.

It is against this broad background of the need for a sound public program that I shall discuss the importance to the returning soldier of the Bureau of Reclamation's post-war plans, for unless we can assure our men a chance to work when they return, nothing else that we can do has any meaning. Here are some figures which suggest what we shall be up against:

We are today spending around $5,000,000,000 a month on munitions production—seven billion a month for all war purposes. When the war ends this will stop. But with the men coming back from the fighting to the working ranks, we shall have more workers available, despite the fact that many women will return from the factories to their homes.

This look as though we would have to increase our production for peace purposes if we want to keep our domestic economy operating on the high level that will mean continued prosperity. Support of our domestic economy will not be brought about by mere spending, which would contribute to inflation, but rather by construction of permanent, productive works. That is the reason for the planning now of an extensive public-works program as an essential part of the total construction program. The requirements for such a works program has been variously estimated. Conservative estimates by responsible Federal agencies place the need for construction at from fifteen to sixteen billion dollars annually, of which from four to five billions a year would be a public-works program.

Now the inventory of projects offered by the Bureau of Reclamation is not a complete answer to a statesman's prayer, but it is significant. It calls for expenditure during a 10-year period of a sum, figured at 1940 prices, which is less than 1 month's total war expenditures—about the same as 1 month's munitions production. This may not seem a lot of money in the light of present destructive activity, but it would give a tremendous boost to the upbuilding of the West and would set in motion a train of constructive forces that would spread throughout the Nation.

The construction of these projects would not make jobs for anything like all of the returning veterans, but it would help. If funds are provided by the Congress for these projects, at its peak the construction would give employment at the site to some 400,000 workmen, and to about 640,000 more in mills and factories and on transportation systems—more than 1,000,000 altogether. Those 1,000,000 jobs mean much, if one remembers that when the work is completed almost 200,000 irrigated farms will have been created to enrich the Nation permanently and provide incomes and homes for many servicemen, and that around those farms will grow towns and villages, and that from the power produced at reclamation dams new industries will spring up. It is just the opposite of what happens in warfare.

Today about 2,500,000 more people live and obtain their livelihood, mostly from war industries, in the 11 far Western States, which are arid or semi-arid, then resided in these States in 1940. This is an increase of 17.8 percent in the population of these States, compared with a national increase in the same time of only seven-tenths of one percent. Many of these new residents of the West will remain in the West. An increase in the basic irrigated agriculture of the area will be essential to support and sustain this growth and a continuing industrial livelihood for them. In addition nearly 1,000,000 Western boys will be demobilized from the armed forces, and they will probably more than offset the number of war workers who leave their new homes and return to the East.

And when one places this picture against the background of river basin development that is emerging from the Bureau of Reclamation and the Department of the Interior, as Secretary Ickes outlined it for you, you begin to see a proposal so productive of wealth and well-being that you wonder why we haven't been smart enough to do these things before.

I think the reason is simple enough, though. We have been building up gradually to these great multiple-purpose and basin-wide developments. The small projects were built first, the easy diversions have all been made. We have learned to build great dams and complex engineering works. As a Nation, we are now ready to undertake the development on a unified basis of whole river basins. I believe we are on the threshold of a new era in the conservation and use of our resources, the most important of which, in the West, is water. Evidence of the opening of this new frontier is found in the Missouri Basin plan.

Last June the Bureau of Reclamation presented to the Congress an inventory of post-war projects which looked to construction of some three billion dollars of projects. Since then, the Congress has approved the Missouri River plan and authorized many of the projects. Today, I lay before this committee a more comprehensive inventory, including some four hundred and fifteen projects, the cost of which would amount to about $5,000,000,000.

Of these, more than 100 projects ranging from small pumping plants to interrelated multiple-purpose projects, and estimated to cost about $1,338,000,000, already have been authorized by the Congress. Work upon them will be initiated as soon as men and materials become available, provided we are able to complete the engineering plans.

I want to emphasize right here that the speed with which our projects will be started after the war will depend largely on how thoroughly engineering plans have been prepared for them before that time. It costs money to prepare engineering plans. Detailed surveys have to be made. Core drilling at proposed dam sites is essential to determine the foundations of the dams, and hence the type of dams to be constructed. Working drawings have to be made to estimate the amount of materials and to prepare specifications which can be used as the basis of asking bids on contracts. I have consistently advocated the preparation of the engineering plans in advance of the need, and, within the funds provided, we are doing just that.

The Bureau of Reclamation has presented the Missouri River plan and is preparing similar proposals for the 14 other major river basins of the West.

Let me summarize the post-war inventory of authorized projects. Construction of these would irrigate about 5,600,000 acres of land in the arid and semi-arid regions of the West on which will provide about 80,000 new farms. At the same time they would bring much needed supplemental water supplies to maintain the existing agricultural economy of some 5,700,000 additional acres so that by closer settlement some 20,000 additional farms could be established on authorized projects. Additional power installations would total 2,612,000 kilowatts capacity.

The over-all inventory includes these authorized projects and those now under study. The whole group—authorized and proposed—would bring water to 10,809,000 acres of land which never before has been irrigated, upon which some 154,700 new farms could be created, and supplemental water for some 10,617,000 acres, upon which about 38,600 new farms would spring up. That makes a total of 21,426,000 acres to be served, and 193,300 new farms to be set up. The estimate of total construction cost at 1940 prices is $4,792,372,000, which, let me repeat, is less than the cost of 1 month's munitions production during this war.

At this point I would like to present for a statistical summary of the Bureau of Reclamation's present post-war inventory tabulated to show State by State what projects are included.

All of you may know that the Bureau of Reclamation, for whose activities I am responsible, is the largest producer of power in the world, but I do not think this fact is generally known. During the fiscal year ended last June, output of Bureau of Reclamation hydroelectric plants was more than 13,500,000,000 kilowatt-hours as compared with combined steam and hydro power of 11,000,000,000 by the Tennessee Valley Authority. Some of the power produced by this Bureau was marketed by other Department of the Interior agencies, but most of it was sold at wholesale by the Bureau itself to cities, cooperatives, the Rural Electrification Administration, and private utilities. That is a fact more Americans ought to know.

The present capacity of our plants is 2,440,000 kilowatts. The post-war program calls for increasing the capacity of present plants to 4,863,000 kilowatts principally by adding generating units for which space was provided in original construction. Additional installations in the post-war inventory call for the addition of generating units which would give Bureau of Reclamation plants a total capacity of 9,324,000 kilowatts.

Part of the plan for the upbuilding of river valleys lies in the orderly development of mineral resources and processing industries which would use a large part of this additional power. The balance would be used to lighten work upon farms and to bring greater comforts and conveniences to the homes of our 17 Western States.

This means that the projects in the post-war inventory would create not only immediate construction jobs for returning servicemen, but jobs in factories and workshops throughout the country which manufacture materials and machinery for the construction projects and power plants—and then for a long time to come it means jobs on farms, jobs in servicing the people who live on farms, jobs building the towns and villages that spring up to serve the farms, and jobs in the industries which low-cost power brings to life.

While the entire impact of these projects upon the national economy cannot even be estimated, we can do a little figuring upon the most immediate results of the jobs we have laid out. The Bureau of Labor Statistics has estimated that for every hour of work at the site of a reclamation project about 1.6 hours of employment will be provided off the site. It must be realized that these are only extremely rough estimates. Of some four and one-quarter billion man-hours of labor estimated to construct the authorized projects and the others in the inventory, roughly, 1,650,000,000 man-hours would be required at the site, and three-fifths of the total, or 2,600,000,000 man-hours, would be spent working throughout the Nation. This distribution of labor also means a comparable distribution of expenditures.

Iron and steel, cement, electrical equipment and supplies, foundry and machine-shop products and lumber from their beginnings as raw materials, their transportation to the factory for fabrication, their processing, and again their transportation to the place where they are used, this material requires millions of man-hours of labor in mines, forest, and factories, and in transportation, distribution, and administration. Thus, every State in the Nation is affected by western construction.

These figures mean that part of the great labor force of 60,000,000 which will be available will be needed in the forests of Washington and Oregon and in the southern pine region, in the coal mines of Alabama, Colorado, Ohio, and Pennsylvania, and in the iron mines of the Mesaba Range. Southern labor will be needed to supply cotton to make tarpaulin and miles of wire braiding; the workers in the Ohio and Indiana area will have jobs building road machinery and drag lines.

Many man-hours will be spent in New York State on making cranes. Men will be working in Birmingham and Mobile, around Pascagoula, Baltimore, and Gary, Ind., fabricating great high-pressure gates and valves.

Electrical equipment will come from New England, generators from Milwaukee, Schenectady, and East Pittsburgh. Orders for hydraulic turbines will reach Virginia, subcontracts for special castings will go to the Southeast, and others for iron and steel fabrication to the Middle Atlantic. Add to that money in weekly pay envelopes which will buy clothes, fresh fruit, and vegetables, canned goods, radios, watches, and automobiles.

The importance of this construction viewed from the public works angle is that it permits a quick get-away. Provided with funds and manpower to complete field investigations and preconstruction work, as well as appropriations for actual construction, the bureau could put from 150,000 to 200,000 men to work at project sites the first year. Peak employment could be reached in the second or third years. Although construction would be centered in the western States, more than half of the resulting employment would be in mines, mills, and factories of the Midwest, East, and South.

Eastern interests look on western development as a good means of underwriting their own prosperity. It has been estimated that the construction of these projects, the building of these new homes will increase western purchasing power for products of the North, South, and East by about $2,000,000,000 a year.

There is one point which I have not emphasized sufficiently up to this point. It is that the benefits of this work we are proposing do not end with the construction of the engineering works, but continue from generation to generation in wealth-producing activity. This continuing benefit, also, is not confined to the western area in which new farms and industries are created, but is spread perpetually throughout the Nation. It required a devastating depression to bring home how dependent each part of the country is upon every other part. Just as the drying up of income in one place affects every other place, so does the production of new income. Cotton farmers in the South benefit from doubling the population in the West. So do the manufacturers of refrigerators and automobiles and cameras and fishing tackle—everything that we use for work, convenience, and pleasure. And this goes back and forth and around the Nation.

It is not too soon now to take definite steps to meet the situation that will be upon us before very long. VE-day appears to be nearer every day. No one can tell when VJ-day will arrive; but we should be prepared when it does come to move rapidly on post-war jobs for returning soldiers and sailors, and provide settlement opportunities on irrigated land. As a matter of fact, demobilization already is going on at the rate of about 100,000 a month, although war activity is still absorbing those who need jobs, and are physically fit for work.

We hope that in considering the plans of the Bureau of Reclamation, Congress will regard them as a whole. We present them as the basis for a soundly conceived program for post-war work. The major part of the investment will be self-liquidating. Flood control does not pay cash, but saves the Treasury more than the cost of the engineering involved by avoiding large cash-relief payments, and by protecting property values against destruction. Municipal water supply makes direct cash returns; and the preservation of wildlife and game, and the creation of park areas around reservoirs in the West pays indirect returns in pleasanter living. The stimulation of travel and the industries that thrive on recreational activities are directly wealth producing.

Any way you figure it, the projects which we propose will more than pay for themselves. This would be true if one figured only the additional income taxes resulting from prosperous farms and industries which are created.

Construction of these projects which we propose will form the firm foundation which will give value and importance to the privileges which you could confer upon veterans under the terms of H. R. 520, which is now before you.

A Tribute to the Late President Quezon

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. HAGEN. Mr. Speaker, we have had the extreme opportunity of listening to the Honorable CARLOS P. ROMULO, Resident Commissioner of the Philippines, who has told us today of the ravages that have been visited upon the Philippine people during the occupation by the Japanese, and of the terrible destruction that has been wrought by the cornered barbaric Jap fanatics.

We are most grateful for this authentic first-hand report. Judging from the hearty reception General ROMULO has received here today, there is no doubt in my mind that the sympathies, best wishes, and support of this House are with his valiant people.

Just yesterday I had an opportunity to read a letter which was addressed to General ROMULO by P. W. Reeves, a congressional secretary, who has spent considerable time in the Philippines. I am a member of the House Committee on the Territories, and am interested in both Territorial and insular possessions. It has been suggested that I insert Mr. Reeves' fine tribute to Manuel Quezon, the late President of the Philippines, in the CONGRESSIONAL RECORD. I am very glad to do so.

It is as follows:

WASHINGTON, D. C., *April 9, 1945.*

HON. CARLOS P. ROMULO,
Resident Commissioner,
Commonwealth of the Philippines,
New House Office Building,
Washington, D. C.

DEAR GENERAL ROMULO: It was my rare privilege to meet the late Manuel Quezon in 1935. I talked with him again on one of his trips to Washington in 1937, when he was the guest of honor at a luncheon given in the National Press Club. I saw him several times at his office in Manila in 1937. I corresponded with him after I left Manila. I saw him for the last time about 1 year before he was taken from us.

When I learned the shocking news of the passing of this great man, I wrote to Mr. Gil Montilla, Judge Sabino Padilla, Mr. Raf. Alunan, Mr. Vicente Carmona, Hon. Jose Yulo, and others. I told them how I had been saddened by the death of this man among men. I also wrote to General MacArthur because he knew how greatly I admired his departed friend. I wanted you, as Resident Commissioner, to know that those of us who knew President Quezon mourn his passing.

Because of his fine friendship, I shall never forget him. Because of what he did for his country and his people, the world will never forget him. His passing is a loss to the world because he was a statesman of the highest type. He was, indeed, one of the most remarkable men I have ever known or read about. Whether one knew Manuel Quezon intimately or merely watched his activities as an onlooker, all admired him. So many fine things can be said about him that it is extremely difficult for one to choose any particular quality upon which to dwell.

President Quezon was endowed with that extraordinary clarity of vision, that vivid imagination, which is the mark of the truly great man. He had that boundless energy which brought into execution dreams which he had dreamt. He could see what others could not see. He could see further than others could see. And he could see before others saw.

There was not a coarse fiber in the make-up of this great leader. His love and devotion for his people was beyond compare. He gave his life to the cause of his people. The full extent of his sacrifice will never be known. He was modest beyond description. He was a man of great learning and high ideals. He had a warm heart and a sympathetic personality. With his wonderful qualities and his vast experience, he devoted himself unsparingly for the benefit of his people. He was a slave to his honest convictions, and he could not be swerved from them. He feared no man or combination of men. Political expediency never entered into his calculations or decisions. His bitterest enemies never challenged his honesty of purpose. The impelling force which guided this man throughout his eventful life was his desire to help the Commonwealth of the Philippines. He never shirked a duty. He never wearied in his efforts. He never hoisted the white flag of defeat. He spent himself utterly. He had no thought of his own comfort or his own welfare. He was at all times completely at the service of his Commonwealth. He died as he lived, fighting for the welfare of humanity.

The example set by your former President will forever stand out as a beacon light, typifying the quality and character that go to make up a great man in all senses of the word. He used his great talents to advance the cause of justice. One of my dearest friends in Manila is also your friend—Judge Sabino Padilla. One night when I was a dinner guest at the home of Judge Padilla he told me that President Quezon sent for him and said: "We have not agreed on many things, but I want you on the court of appeals." Judge Padilla thereupon said to President Quezon: "Mr. President, I have been one of your severest critics." President Quezon then said to Judge Padilla: "Yes, I know you have differed with me many times but the Commonwealth needs you now." Judge Padilla accepted the appointment from his President and still serves on the court of appeals. Like all great leaders President Quezon had bitter opponents. One of his opponents for many years was the Honorable Sergio Osmeña, now President of the Commonwealth of the Philippines. In 1935 President Quezon won Mr. Osmeña over to his side, as you know. From that date right up until August 1, 1944, when Mr. Quezon was taken from this earth, Sergio Osmeña remained one of Quezon's staunchest friends and supporters.

Enemies of the late President Quezon said he was a despotic ruler. He was obliged to rule firmly in order to accomplish his ambitions for the Filipino people. There were a few selfish interests in the islands which spent vast sums of money in opposing Quezon, but a large majority of the people were with Mr. Quezon in all of his undertakings. The American press printed a great deal more against Mr. Quezon than in favor of him. Opposition and criticism always make good copy for the papers. I was not in Manila very long before I discovered that most of the criticism of Mr. Quezon came from the very people whose interests had been best served by President Quezon's reforms and progressive leadership. The critics seemed unmindful of the fact that their business profits and well being came about because of the wise leadership of their great President. Yes, President Quezon ruled with an iron hand, but he was not a dictator. He permitted the minority party to have a strong voice in island affairs. He personally saw to it that the Philippine constitution contained definite safeguards against the concentration of power in the hands of one man.

Labor troubles, unrest, uprisings, and revolts in the islands ceased after Mr. Quezon became President He gave to his people opportunities which they had not known before. Beautiful homes, modern office buildings, and fine highways were built. Up-to-date school buildings were erected. Manila was provided with adequate transportation and lighting facilities. There are few cities in America which are better lighted than Manila at night. Prior to the Japanese invasion, Manila had a number of wonderful hotels. The hotels which I saw there 7 years ago would be a credit to New York, Chicago, Los Angeles, Philadelphia, or Boston. In my opinion, no hotel in America could compare with the Manila Hotel before the Japs destroyed it. The thoroughfares in Manila were beehives of activity. Places of business were crowded at all times. It was just as difficult to find a table in a restaurant or a seat in a moving-picture theater from 1935 until Pearl Harbor as it is in Washington today. Everyone had money and enjoyed what money would buy. No depression was felt in the Philippines at any time while Quezon was President. The people in the streets, in the stores, in the homes, in the shops, in the mills, in the mines, on the plantations, in the hotel lobbies, in the cabarets, in the dance halls and night clubs, on the benches for miles along Dewey Boulevard around Manila Bay—yes; the people everywhere were happy and contented, with smiles on their faces and songs in their hearts. Sir Thomas More must have envisioned Manila and the islands when he wrote Utopia.

After Mr. Quezon improved business conditions, living conditions, working conditions, etc., for his people, he wanted to improve the national defense. He always appointed the right man to the right place. And he sought the right man to organize the national defense. He knew General MacArthur was the man he wanted. The achievements of General MacArthur— in the islands before Pearl Harbor and in the South Pacific since Pearl Harbor have shown the world that Quezon was again right in his judgment of men. Right up until Pearl Harbor, when the rest of the world was in a state of war or confusion, and when our own country was suffering from a depression, thanks to President Quezon the Philippines were enjoying an uninterrupted era of prosperity which started less than 1 year after he became the Commonwealth's first President.

Your country and your people are fortunate in having such a worthy man as Sergio Osmeña succeed Manuel Quezon. I saw a great deal of Mr. Osmeña in Manila and I talked with him frequently during the time he lived in Washington. It is difficult for me to believe that he was ever at any time an opponent or antagonist of Mr. Quezon. No man in the islands understands better than Mr. Osmeña, the aims of Manuel Quezon. No man in the islands is better fitted to carry out those aims than is Sergio Osmeña. The prosperity in the islands which existed under Quezon will continue under Osmeña.

Yes, indeed, President Quezon was a real patriot. He gave to the cause of civic righteousness his stalwart support. He fought against every form of oppression and discrimination. He was a great lover of humanity and he used his wisdom, his influence, his energy and his material means to help those who needed his help and guidance. He was ably equipped for every emergency which confronted his people.

We can say of Manuel Quezon that which was said of Abraham Lincoln, "He now belongs to the ages." Only history itself will be able to present the true size and stature of your former president Amid the sad times in which we are now living, the dauntless soul of Manuel Quezon will be a shining light and example. He was stricken down at a moment when he was most needed in his people's cause. Yet our grief at the overwhelming loss we have sustained is tempered by the realization of the fact that President Quezon lived to bring about the crowning achievement of his life—the granting of full independence for his people.

The goal of the late President Quezon was to have "a country where poverty is unknown, and where justice is the watchword, and democracy and freedom the motto." No president could have a higher goal.

A great soul has departed. His understanding mind, his profound sympathy, his moral courage, his fearlessness, and his memory will be an inspiration and blessing and an illustration of how a great personality can utilize the opportunities of the land—our America—which he so deeply loved.

In the hush and awe of this dark hour there need be no eulogy of the late Manuel Quezon other than lies in the simplicity and purity of our love for him. I know the world is richer and happier and better because Manuel Quezon lived in it. Death can have no fears for such a righteous character.

When the breath of the eternal morning touched his brow and for him the final summons came, I know he went to his Maker tranquil and unafraid, to stand before Him face to face with the same brave, calm consciousness with which he faced and performed his every duty. In that region of the blest I know that the noble soul has reached its home and is at peace.

Sincerely yours,

P. W. REEVES.

Churchill

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a few excerpts from a newspaper, when a few weeks ago Prime Minister Churchill said some things in a speech before the annual conference of his Conservative Party which should be of interest to all us Americans. Here are a few brief excepts:

Let there be no mistake about it—it is no easy utopia of airy phrases that lies before us. This is no time for windy platitudes. The Conservative Party had far better go down telling the truth and acting in accordance with the verities of our position than give a span of shabbily bought office by fickle froth and chatter. * * * Woe betide those public men who seek to slide into power down the slippery slope of vain and profligate undertakings. * * *

No restriction upon the well-established liberties that is not proved indispensable to the prosecution of the war and the transition from war to peace can be tolerated. Control for control's sake is senseless. Controls under the pretext of war or its aftermath which are, in fact, designed to favor the accomplishment of totalitarian systems, however, innocently designed or whatever guise they take, whatever liveries they wear, whatever slogans they mouth, are fraud which should be mercilessly exposed to the British public.

At the head of our mainmast we fly the flag of free enterprise. We are determined that native genius and the spirit of adventure and of risk taking, in peace as in war, shall bear our fortunes forward, finding profitable work and trade for our people, and that good, thrifty housekeeping both national and private, shall sustain our economy.

Franklin Delano Roosevelt

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. D'ALESANDRO. Mr. Speaker, a great tragedy has befallen the whole world, a truly great man has passed away. He served mankind until the very last. History will record his great deeds, his humanitarian interests, his love of the poor and downtrodden, his leadership of the democratic nations and his blueprint for world peace. The world will miss him more than we can realize now. In the passing of Franklin Delano Roosevelt, America has lost a great President and mankind a great friend.

As we mourn the loss of our late and beloved President, we pledge our full support to our Commander in Chief, Harry S. Truman, for a speedy victory and a lasting peace for which President Roosevelt has worked, fought, and died.

Franklin Delano Roosevelt

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. LARCADE. Mr. Speaker, every man, woman, and child in our country, and most of the peoples of the world were shocked and stunned by the announcement of the death of our great President, Franklin Delano Roosevelt.

When the sad message was flashed over the radio, I was in my office in my home town of Opelousas, La. My office

is in the largest hotel there, and after hearing the details, I repaired to my room in the hotel for meditation, and to pray for the President, his successor, and our country.

I had not been seated long in my chair until I looked out of the window which gave me a view of the post-office building and our county courthouse when I saw simultaneously and in unison the flags from the staffs of the post office and courthouse buildings being lowered at half mast, and in perfect unison.

For several minutes both of the flags remained motionless in their position, as though bowing and reflecting the terrible grief of our people in the loss of our great leader and our beloved President.

Then, at the precise moment, both flags unfurled in the breeze, straightened out, and boldly and bravely continued to fly outstretched, sadly but gloriously defiant, and as I watched the lags fly I envisioned emblazoned in their center the seal of our great country, with our motto "E pluribus unum," and thought that while we had sustained a terrible loss in the death of our great President, this mirage on our glorious flag and all that it represents, was a challenge to me and the rest of our country and the world. We must go on under the leadership of our new President, Harry S. Truman. May God bless him and us.

Radio Statement of Walter Winchell

EXTENSION OF REMARKS

OF

HON. R. EWING THOMASON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. THOMASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram received by me from my colleague from Texas, Mr. MANSFIELD:

COLUMBUS, TEX., *April 12, 1945.*

EWING THOMASON,
Member of Congress,
Washington, D. C.:

I am informed that Walter Winchell has stated over radio that I have given some person authority to send out postal matter under my frank. This is infamously false, as no person has ever had authority to use my frank for any purpose. Please place this in the RECORD.

J. J. MANSFIELD.

Memorial to the Late President Roosevelt

EXTENSION OF REMARKS

OF

HON. EMORY H. PRICE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. PRICE of Florida. Mr. Speaker, I would like to suggest to the people of the United States that as a fitting memorial to our late beloved President, Franklin Delano Roosevelt, a hospital be erected at Warm Springs, Ga., by public subscription, for those afflicted with infantile paralysis. This would be a living memorial and, in my estimation, more fitting than a monumental stone.

Tribute to the Late President Roosevelt by Former Senator Jackson, of Indiana

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 18 (legislative day of Monday, April 16), 1945

Mr. HATCH. Mr. President, this morning I received a rather unusual letter from a newspaperman in Fort Wayne, Ind., with which he enclosed a copy of a radio address in tribute to the late President Roosevelt delivered by our former colleague, former Senator Jackson, of Indiana. The circumstances are so unusual, and the address itself is so eloquent, that I ask unanimous consent that the letter and the copy of the address enclosed with it be printed in the Appendix of the RECORD.

There being no objection, the letter and address were ordered to be printed in the RECORD, as follows:

JOURNAL-GAZETTE CO.,
Fort Wayne, Ind., April 16, 1945.

Senator CARL A. HATCH,
Senate Office Building,
Washington, D. C.

DEAR SENATOR HATCH: I am enclosing a copy of a radio address delivered by former Senator Samuel D. Jackson from Westinghouse Radio Station WOWO, in Fort Wayne, Ind., late in the afternoon on which President Roosevelt died.

It seemed to me that it was worthy to be inserted in the CONGRESSIONAL RECORD; in any event, I thought you would be interested in reading it. The full text was published in our newspaper, the Journal-Gazette.

When the news of the President's death reached Fort Wayne, Senator Jackson was attending a meeting of the Scottish Rite here. The radio station had some difficulty in locating him; when it had he went immediately to the station, where he was asked to make an address. He went into the studio, rested his head in his hands for a short time, and then said: "I am ready." He was put on the air and delivered this address without notes or manuscript.

Sincerely yours,

FRANK ROBERTS,
Executive Editor, Journal-Gazette Co.

P. S.—A recording of the address was broadcast to the Nation Saturday night over the Blue network.

AT LONG LAST HE CAN REST—EX-SENATOR JACKSON PAYS A STIRRING TRIBUTE

Former United States Senator Samuel D. Jackson paid glowing tribute to the leadership of President Roosevelt in a statement he read last night over Station WOWO. The statement follows:

"Ladies and gentlemen, and my fellow countrymen, the President is dead. At long last he can rest. Rest from his labors, rest from his ambitions for his people, rest from the lance of his enemies. Rest from all that burden which he carried. For 12 long years with a broken body he has taken upon himself the cares of the people of the United States of America, and much of the trials and tribulations of a weary hell-ravaged war-torn world. Let those who doubt democracy learn a lesson today.

"Within a few minutes after the death of the President of a hundred and thirty million people, with 12,000,000 men and women under arms, a new one takes his place. The war will proceed to victory, and peace will follow the footsteps of victory. The world will be well again.

"The President is dead. He brought to political life in the United States of America a handicap little-mentioned while he was active in politics. In the area of political campaigns those who disagreed with him most violently were kind about that.

"Last year was an election year, and during that year the people of this country, of all political persuasion, had by and large three main hopes: The hope of an early conclusion of the war; the hope of an abiding and enduring Christian peace; the hope for the restoration of the United States after the war. They concluded that the answer to all three of these hopes was the great world leader who was called home today. Today the angels touched down his eyelids forever; he belongs to history.

"THE GREAT DEMOCRAT

"I remember my first impression of President Roosevelt was when he was Democratic candidate for Vice President, with Governor Cox, of Ohio, running for the Presidency. I saw him in the great parade at the fair grounds in the county seat outside Dayton, Ohio. On the occasion when Governor Cox was notified of his nomination for the Presidency, I saw this young man walking in the parade starting in before the grandstand about the three-quarter-mile post, thin and straight and strong, well, and brisk. No man could have dreamed his future. At a glance you could see that he was a scion of some distinguished and wealthy family. He was, indeed, something of an aristocrat. He was the aristocrat who turned to be the great Democrat, or rather he was the great Democrat.

"You know, those of you who are interested in the mystic things of this world, I am sure, had your attention arrested as I did when I first read of a tiny incident which may mean nothing. When he was a young man at the age of about 28 he met his affliction. But prior to that time in his early college years, he formed an attachment for a chap who was a sculptor, and the young man began to carve out of ebony a figure about 2 feet in height, a figure of Franklin D. Roosevelt. And he worked on it, while they were together, and a year would go by and he would work on it again, and finally the crude black piece took form and shape. That giant head took expression, and from its photograph now, it appears to have the same facial expression the President wore 'til the closing days of his life. There is the great broad torso, there is the deep chest, the great arms, the extraordinarily large hands. Now, when the worker got down to about his lap it was to be a sitting figure—for some mysterious and unexplainable reason, though the subject was in full health, something attracted the attention of the sculptor or something intervened. No one seems to know what, and there the working of the rough piece stopped. And so nothing was thought of it, of course, at the time, but it sat upon his mother's mantel in his mother's home after his affliction and after he became a President of the United States, it was indeed a tie to the infinite to see how the incident presaged the man's great affliction."

WHY THEY LOVED HIM

"I saw him one time in 1936 when he was on his way to the Dust Bowl to confer with Governor Landon, his then opponent, with reference with what should be done with the

windstorms of the West. On his way to Iowa he stopped at Garrett, Ind., and I was invited to go to the train and to meet with him and visit with him. I went with a quartet of men; we went into the station, learned the train was soon to arrive. There was a crowd of a couple of hundred persons waiting for the train to come in the railroad station. We looked way down toward the east and saw the black dot which we knew was the President's Special. It puffed and poured its smoke out, and threw itself down upon us. But, as it came close to the crowd, the engineer slowed down to just so it moved and that's all. It came into the midst of that crowd and stopped and Secret Service men dropped from all the steps of those fine and splendid coaches and if you've never seen a Presidential Special you should see one. It's a great bar of steel, bearing a precious cargo. Made up of a thousand moving, acting parts. The cordon of police closed in about the steps to guard that precious passenger and finally someone from the steps of the last Pullman car, motioned to us to come on and I was the last of the four or five of us who went in. We went down the side aisle of that car to the end which was furnished as a living room and I heard the voice of the President, and I knew, of course, that I would soon be in his presence, for it was the first time I would meet him for conversation. There he was, sitting in an overstuffed chair, wearing a seersucker suit. He stopped to visit with me and we had time to talk. He asked about the crops, the weather, and about Indiana, and he talked about things, as if he wanted to know things and about situations. I looked at that great head again with those blue eyes. I looked at that big body. I looked down at the almost empty trousers of that seersucker suit, and saw the cruel steel braces, and when I heard that matchless voice and saw the sympathy which he used in inquiring about the interests of his people in this locality, I knew then how it was that so many people loved him. And they said: 'Mr. President, if you're going to speak to this crowd you'll have to go out on the back platform now and you men who are visiting, if you'll go on the outside you can hear him better.'

"The arrangements were made and in the twinkling of an eye we were standing out on the railroad track looking up at the back platform, and the President was talking. I heard him speak for the things for which he aspired. Then it was I knew why so many men hated him. Then all too soon the radio apparatus was disconnected and the train started almost imperceptibly to move away and the last I saw was the President waving his hand at us and smiling with that smile which won him both ridicule and tears. And as that B. & O. train sank down to another dot in the west I somehow had a feeling that there was one of God's own chosen men no matter what any man might think of his political career or policies."

MANY GAMES TO PLAY

"And so last year without any partisan reference at all, the people elected him, and may it be said to the very lasting praise and patriotism of his political opponents though they may have disagreed with him in his policies in this trying time when the fate of this republic is in the balance, they prayed for his health and hoped for his continued guidance.

"The President is dead. All cannot agree with what he did, and what he stood for, but we can all recognize that he was a master at government. He, like the expert chess player didn't have one chess game to play, he was like an expert that plays 40 men at once, and wins every game.

"Men who criticize him undertake to set up their judgment against his, so often we've heard that. But he had not one chess game to play, not two, he had a hundred. He had the Japanese chess game, he had the European chess game, he had Hitler, he had Churchill, and Stalin, he had Congress, the Senate, he had all of his administrative bodies, he had all of his boards and bureaus, he had everything that goes to make up the long story of government for 12 long years.

"Perhaps more will be written about him than any other President who has ever served the United States of America. Such a long story of government. So we are deeply sympathetic to all of the other people of this country. We are deeply sympathetic with the armed forces, and we know they will never waver nor falter. We're sympathetic toward his family, but when we think about it all the most important consideration to us is we are to dedicate ourselves to the task which remains before us. Let none despair; heaven rescued this land. God will preserve it."

The President Is Dead; Long Live the President

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 18 (legislative day of Monday, April 16), 1945

Mr. HATCH. Mr. President, the Woodford Sun is a newspaper published at Versailles, Ky. The president of the Woodford Sun Co. is our colleague, the junior Senator from Kentucky [Mr. CHANDLER]. There was recently published in that newspaper an editorial entitled "The President Is Dead; Long Live the President." The concluding paragraph of the editorial reads as follows:

To the late lamented President we pay our profound respects. To the new President we offer our heart and hands in humble service. With millions of other Americans we say, "The President is dead; long live the President."

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PRESIDENT IS DEAD; LONG LIVE THE PRESIDENT

This Nation, and by far the majority of the citizens of other nations all over the world received a great shock last Thursday afternoon when it was announced that President Franklin Delano Roosevelt had "slept away" into eternity in the Little White House at Warm Springs, Ga.

To most people, President Roosevelt's death came as a complete surprise. To others, however, who had been intimately associated with him during recent weeks, it was not wholly unexpected. The steady and alarming decline in his health had been viewed by his intimate friends and associates since early in this year. They believed that only a miracle would enable him to live until the end of his fourth term as Chief Magistrate of this Nation.

No President, perhaps, has had more arduous duties thrust upon him than were encountered by Franklin Delano Roosevelt from 1933 to 1945. He took over the Presidential office for his first term in one of the most trying eras of the Nation's history. He was forced to lead the Nation out of the wilderness of depression and despair in a period when fear gripped every American heart and rendered unsteady every American hand.

Then came the trying days of the war in Europe, and eventually this country's declarations of war against Germany, Italy, and Japan. As Commander in Chief of this Nation's armed forces President Roosevelt, already heavily burdened with domestic and foreign problems, found the load increasingly burdensome. The strain upon his physical endurance became heavier and heavier as the months and years passed by. The peak of that endurance was reached last Thursday afternoon at Warm Springs, Ga.

Future historians will appraise the life and works of the late lamented President and future generations will learn of the services and sacrifices he rendered not only to this country but to the entire world.

While universal sorrow prevails throughout this Nation and most of the other countries of the world, precipitated by the sudden death of President Roosevelt, the people of this Nation do not face the future with feelings of despair. Their late President has gone to join the ranks of the world's immortals in that land from whence no traveler e'er returns. They are, however, buoyed up by the belief that God still reigns, and the Government at Washington still lives.

Taking their lesson from the pages of sacred and secular history, the people believe that no mortal is indispensable—that others can and will carry on when their predecessors have passed to the Great Beyond. Franklin Delano Roosevelt is dead, but there are those who can and will carry on where he left off.

Modest, unassuming Vice President Harry S. Truman, of Missouri, has stepped into the role of Chief Magistrate of this Nation. He has pledged himself to carry on the great work just laid down by his immediate predecessor. Under his courageous, considerate, and conservative leadership this Nation undoubtedly will carry forward the war against the Axis Powers and continue to play an important part in the establishment of an enduring world peace.

As time goes on, there probably will be changes in the domestic policies of this Government under the guidance of President Truman. Many changes have appeared to be inevitable, and the new Chief Executive assumes his duties at a time which seems ideally suited for the kind of leadership he undoubtedly can and will give to this Nation.

To the late lamented President we pay our profound respects. To the new President we offer our heart and hands in humble service. With millions of other Americans we say, "The President is dead—Long live the President."

Tribute to Franklin D. Roosevelt by Walter F. Howard

EXTENSION OF REMARKS

OF

HON. JAMES M. TUNNELL

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 18 (legislative day of Monday, April 16), 1945

Mr. TUNNELL. Mr. President, a great deal of beautiful language has been used in paying tribute to our late President, but very little of it has been in poetry. I have received this morning from Delaware poems by Walter F. Howard which

depict the President, his coming, his ministry, and his passing. I should like to have the poems printed in the Appendix of the RECORD, and I ask unanimous consent that they may be so printed.

There being no objection, the poems were ordered to be printed in the RECORD, as follows:

HIS COMING

By the grace of God and His holy wisdom, America is given Franklin Delano Roosevelt.

Whence will, O God, the veil be lift;
Whence will the son of man
Receive release from blindness
Thy will to understand.
Out of a darkening East he came
When first we knew him near,
Declaring with simplicity
Man's greatest foe was fear.
Declaring that on Thee he looked
For Thou wouldst be his guide
And lest his foot be dashed 'gainst stone
He'd stay close to Thy side
Calling on Thy holy name,
Girding Thy crusade lance.
He then went forth to battle
For the "meek's inheritance"
Conquering, that the "lowest," "least"
Might view the daylight sun
Thy newest of disciples
His ministry begun.

—*Walter F. Howard.*

APRIL 12, 1945.

HIS MINISTRY

The ministry of America's greatest American, Franklin Delano Roosevelt.

Permit, Almighty Father,
That I might choose this man,
And not blaspheme reviewing
His ministry of Thy land.
Tho longer was his ministry
And older when began,
Not since Thy holy coming
Has world so loved a man.
Godlike is Thy countenance,
Spiritual Thy thought,
But mortals few as closely lived
The teachings Thou has taught.
Out of the dark of chaos
His ministry took form,
The world was in "confusion,"
His faith rode out the storm.
Unwavering and confident,
His smile dispelled our "fears,"
Thy blessing gave him wisdom,
Error lessened with the years,
Like Thine in great adversity,
His stature gained full height
To meet and master Satan
In his glorious "righteous fight."
This friend of those who suffered—
The halt, the lame, the blind—
Was one who subjugated self
That others peace might find.
Mistake not that his work is done,
Lest frost his vineyard kill
While tiredly he sleepeth,
A sleep not of his will.
'Tis certain that "Thy will be done,"
And reverently we yield,
As did this true disciple
That labored in Thy field.
Ministering to the humble,
Ministering to the weak,
To the strong who paused to listen,
To that he sought to speak,
And suffer did his ministry,
Misunderstanding friends;
But with its purpose understood,
Their faith returned again.
His virtue and humility,
His urge to do Thy will,
Engenders beauteous memory
With voids no man can fill.
For such are Thy disciples
Who've passed in endless chain,
Whose teachings grow e'er brighter.
Their brilliance never wanes,
For stewardship is holy trust,
And ministry endowed,
Fulfillment of this sacred trust
Still keeps the head unbowed.
Unless unto Thy holy shrine
We bend in reverent prayer,
For Thou hast promised where Thou art,
Thy servant shall be there.
God, rest this tired traveler,
In reverence, we pray,
And on Thy right hand seat him
When comes the Judgment Day.

—*Walter F. Howard.*

APRIL 12, 1945.

HIS PASSING—WARRIOR'S REST

With dauntless faith and courage
He served his native land
Though wounded was this soldier
Yet wounds stayed not his hand.
The danger ever threatened, lurking.
Stealthily poised to strike
Conviction held him to the course
No compromise for right.
The magnetism of his voice
Inspired the wavering soul
Encouraging the fight that wins
And ends in victory's goal.
A warrior leading at the front
To stem onrushing horde
With hero will to conquer
In faith blessed by the Lord.
No earthly force e'er stops such men
Their steel withstands each test
No hero's spirit ever dies
It just lies down to rest.
Arising it soars to heaven's height
To saint and spirit shrine
And dwells with the immortals
Where rest is peace sublime.
God rest this noble patient soul
And grant his last request
That peace this time shall bless us;
What more could he bequest?

Dedicated to the greatest champion the cause of peace has yet known—Franklin Delano Roosevelt.

—*Walter F. Howard.*

APRIL 12, 1945.

Feeding at the Public Trough

REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. CARLSON. Mr. Speaker, the grain-producing States of the Middle West are short a hundred thousand boxcars in order to move last year's wheat, corn, and sorghum crops. They are also unable to purchase lumber needed for building storage space for millions of bushels of grain which is now stored in the open and deteriorating every day.

An article in the March 15 issue of the California Lumber Merchant may shed some light on both of these problems.

For instance, 4,744,680 feet of high-grade lumber was shipped from California to a manufacturing concern in New York to be made into 29-inch troughs. It took 190 cars to transport this lumber to New York. It took many more than 190 boxcars to move this material back to California. Is it any wonder the Middle West is short of boxcars? Approximately 5,000,000 feet of lumber was wasted in this transaction. I don't know what the troughs could have been made for, but those of us who grew up on the farm know that 2,400,000 wooden troughs would feed a lot of pigs. It would relieve the pork shortage if we did have pigs drinking out of all these troughs.

The article from the California Lumber Merchant reads as follows:

Probably the greatest wooden trough sale ever heard of in the history of mankind is being conducted at the present time by the United States Government. Just a small matter of 2,400,000 wooden troughs, 29 inches long, are piled up on the Southern Pacific Railroad siding at Benicia, Calif. They are made from ponderosa and sugar pine, and it took 4,774,680 feet of lumber to construct them. They are offered for sale to the highest bidder by the United States Treasury, Procurement Division, Office of Surplus Property, 30 Van Ness Avenue, San Francisco, Calif.

A circular has been issued by this department offering these wooden troughs for sale, describing them, and stating the terms under which they will be sold. What the troughs were made for in the first place is not stated. Whether or not they were ever used is likewise not stated. All this huge amount of lumber was shipped to a manufacturing plant in New York, where these 2,400,000 troughs were manufactured, and now this lumber in its manufactured form is back in California where it came from, and being offered for sale in the shape of troughs

Figuring 25,000 feet to a car, this huge amount of lumber required 190 cars to take it east, and more than that number to bring it back west in the shape of troughs. This appears to be one of the biggest, most unusual, and most interesting transactions that the Surplus Property units of our Government have had to handle; at least from a lumber standpoint.

New York Legislature Approves Equal Rights Amendment

EXTENSION OF REMARKS
OF
HON. JOHN M. ROBSION
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. ROBSION of Kentucky. Mr. Speaker, public interest in House Joint Resolution 71, introduced by me in the House on January 16, 1945, and the companion or similar resolutions introduced by other Members in the House and in the Senate, proposing an amendment to the Constitution of the United States as follows: "Equality of rights under the law should not be denied or abridged by the United States or any State on account of sex" appears to be growing in favor among public officials and the citizens of the country. One of the recent declarations on this important subject was the adoption of a resolution by both branches of the New York Legislature at its recent session on March 24, 1945, memorializing Congress to take favorable action on this proposal. This resolution declares that "the rights of women

before the law are abridged in many States, and this legal discrimination on the basis of sex constitutes an intolerable burden upon thousands of women"; and it further declares that "this legal discrimination against women on account of sex is a flat contradiction of the American principle of equality, wholly out of accord with the status of American women in other fields of endeavor."

Other official groups and many organizations as well as many pominent individuals, men and women, have recently declared their support of this proposed amendment. The adoption of the resolution by the New York State Legislature brought forth the following editorial from the New York Herald Tribune of date Thursday March 29, 1945:

NEW YORK FOR EQUAL RIGHTS

Another creditable deed of the 1945 legislature, one which has escaped attention in most summaries, was its espousal of the equal rights amendment. The Brees resolution memorializing Congress to write equal rights for women into the Constitution was passed by both Houses on March 24, the last day of the session. "The rights of women before the law are abridged in many States, and this legal discrimination on the basis of sex constitutes an intolerable burden upon thousands of women," the resolution reads, and is "a flat contradiction of the American principle of equality, wholly out of accord with the status of American women * * * in other fields of endeavor."

It may be that one more resolution from a State legislature will not move a Congress having wartime difficulties enough with manpower. But those difficulties may, just possibly, have taught its Members that it is harder to be unfair than to be fair when defining rights and assigning responsibilities. In that case, they will decide not to go on being unfair to women, some of whom they must, almost perforce, tap on the shoulder and say, precisely as they say to young men, "Put on a uniform and go to the aid of your country." And they will forthwith decide to submit the equal rights amendment to the States for approval.

The Republican and Democratic Parties, at their national conventions in 1944, placed in their platforms a plank urging the adoption of an amendment to the Constitution that would do away with discrimination against either men or women on account of sex. President Roosevelt and Governor Dewey, as the candidates of their respective parties, accepted their respective platforms with this plank. All Members of the House and Senate of both parties ran on their respective platforms and they were elected on their respective platforms, pledged to do away with this discrimination.

It seems to me that we are all honor bound to submit this question to the American people for their consideration.

The legislatures of various States are passing laws against discrimination against persons on account of race, creed, or color. If such legislation is justified, how can we continue to discriminate against women on account of sex? This matter is of such public interest and such importance that the Judiciary Committees of the House and Senate should, in my opinion, report this proposed amendment to their respective Houses, and the House and Senate should then submit the question for approval or disapproval by the people. It certainly will be the American way to give the American people an opportunity to express their will on this important matter.

Civil Air Patrol

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. SUMNERS of Texas. Mr. Speaker, under leave granted to extend my remarks, I herewith tender, to be printed in the CONGRESSIONAL RECORD, a resolution recently adopted by the Legislature of the State of Texas with reference to the service of the Civil Air Patrol, which organization was initiated voluntarily at the beginning of the war by private, patriotic civilians who tendered to the Government their airplanes and their services without compensation. I understand Col. D. Harold Byrd, of Dallas, Tex., was the leading spirit in this movement. This resolution refers to his activities also:

House Concurrent Resolution 28

Whereas immediately after the attack on Pearl Harbor by the Japanese in 1941, a voluntary organization was formed by thousands of civilian airmen and airplane owners throughout the United States, known as the Civil Air Patrol; and

Whereas throughout the 3 years of American participation in the war the Civil Air Patrol, now an auxiliary of the United States Army Air Forces, has been called upon for various emergency active duty missions including antisubmarine patrol of our coastal waters, border patrol, tow-target, and antiaircraft training, radar testing, forest-fire patrol, search and rescue, and the enlistment and preflight training of thousands of Army Air Forces aviation cadets; and

Whereas there are now more than 130,000 adult and cadet members of the Civil Air Patrol who volunteer their services and give their time from civilian life to work without compensation, a total of more than 5,000 adults and 5,000 teen-age cadets of these volunteers being attached to the Texas Wing of the Civil Air Patrol under the command of Lt. Col. D. Harold Byrd, Texas C. A. P. wing commander; and

Whereas the large number of Texans who volunteered for active duty service in the antisubmarine missions, border patrol, forest-fire patrol, and other active duty assignments calling for the use of privately owned airplanes and voluntary personal services, have brought honor to the State of Texas for their heroism and sacrifice over and above the call of duty, including those who gave their lives in the service of their country; and

Whereas Civil Air Patrol members of Texas through their unselfish contributions of time and money have preserved and extended the State's civil aviation facilities during wartime through training of Texas youth, education, good citizenship, and airport operations to the end that Texas has a strong base for post-war aviation expansion and employment; and

Whereas Lt. Col. D. Harold Byrd has contributed several planes, a great part of his time and considerable money to the successful operation of the Texas Civil Air Patrol, and his sacrifice and leadership has been followed by other leaders and members of the organization, and the results of their work having been evidenced in their patrol of the great forest fires in East Texas which were patrolled, investigated, and ended through the Civil Air Patrol's cooperation with other State officials; and

Whereas the members of the Civil Air Patrol risked their lives in flying planes in search of submarines and disabled boats along the waters of the Gulf and Atlantic coasts and the members of such organizations should be recognized and commended by the State of Texas for their splendid work: Therefore, be it

Resolved by the house of representatives (the senate concurring), That the forty-ninth legislature recognize the excellent accomplishments of the Civil Air Patrol of the State of Texas and express its appreciation to Wing Commander D. Harold Byrd, the officers and enlisted membership, and that the organization be commended for its unselfish and patriotic services in the preparation and the defense of this State and Nation against sabotage, espionage, invasion, and attack by the enemies of this country.

H. Gilmer, speaker of the house.

I hereby certify that house concurrent resolution 28 was adopted by the house on February 21, 1945.

[SEAL] CLARENCE JONES,
Chief Clerk of the House.

I hereby certify that house concurrent resolution 28 was adopted by the senate on March 15, 1945.

NOEL K. BROWN,
Secretary of the Senate.

How High Are United States Tariffs?

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the American Tariff League:

SUMMARY AND BRIEF COMMENT ON HOW HIGH ARE UNITED STATES TARIFFS?

The study entitled, "How High Are United States Tariffs?", published by the American Tariff League, reveals that the level of American import duties, contrary to the general misunderstanding, is among the lowest of the world's great trading nations.

Of 19 nations whose tariffs were studied, the United States was found to rank seventh from the bottom. The United Kingdom, popularly considered a free-trade nation, was ninth from the bottom—two above this country. Comparative averages (taking the United States as 100) were as follows:

Spain	465.0
Turkey	359.6
Germany	279.0
Brazil	239.4
Greece	166.0
Hungary	160.0
Italy	150.5
Mexico	149.0
Egypt	130.0
Switzerland	128.0
United Kingdom	118.3
Argentina	110.0
United States	100.0
Japan	98.0
Belgium	96.8
France	85.0
Canada	76.3
Netherlands	37.4
Sweden	32.8

Compared were import duties on 10 separate groups of commodities: farm products, foods, hides and leather, textiles, fuels, metals, and metal products, building materials, chemicals and drugs, house furnishings, and miscellaneous.

In five groups—food, fuels, metals, building materials, and chemicals—the United States ranged among the bottom six. In two groups, textiles and house furnishings, it ranked tenth. In only one, farm products, was it in the upper half.

In all, 170 commodities figured in the study. They were selected in accordance with their relative importance in consumption in the United States. Amounts and prices of each were based on the total quantity and value of each in the combined exports and imports of both the United States and the United Kingdom.

Figures used were for 1937, last full year before World War II for which statistics were available. The Soviet Union was omitted because it operates under a closed economy and the necessary data were not obtainable.

Under the Reciprocal Trade Agreements, of course, many rates have been reduced since 1937. Inasmuch as the study was based on figures for 1937, it does not reflect the real status of our tariffs. Today they are even lower than shown in the report. Furthermore, the duty collected by the United States on all imports, free and dutiable, was only equal to an average of 15.6 percent in 1937 and has fallen every year since—so that in 1940 the figure was 12.51 percent.

Three years were spent on the study. Only fully qualified experts participated, and every precaution was taken to make it thoroughly objective. With tables and appendixes, it runs to 65 pages.

(NOTE.—For a complete list of commodities used in the study, see p. 7. For tariff percentage levels of the 19 countries by category, see p. 14.)

The American Tariff League is a nonpartisan, fact-finding organization founded in 1885 to carry on continuous research into all the facts and forces brought into play in trade between the nations. It makes these facts available in an educational effort designed to provide a better understanding of the effect of these forces on the prosperity of American labor, agriculture, and industry.

Following is a list of the commodities considered in the study "How High Are United States Tariffs?":

Farm products: Apples, barley, calves, corn, cotton, eggs, hogs, oranges, potatoes, steers, tobacco, wheat, wool.

Foods: Bacon, bananas, beef, butter, canned peaches, canned asparagus, canned peas, canned tomatoes, cheese, cocoa beans, cocoa (powdered), coffee (raw), corn starch, dried apricots, dried prunes, dried raisins, flour, ham, lard, milk (condensed), milk (evaporated), pork, poultry, salt, sugar (granulated), sugar (raw), tea.

Textile products: Burlap, cotton cloth (not bleached), cotton cloth (bleached), cotton cloth (dyed), cotton collars, cotton hosiery, cotton overalls, cotton shirts, cotton underwear, cotton yarn, linen handkerchiefs, raw silk, rayon staple, rayon piece goods, rayon yarn, silk hosiery, wool overcoats, wool piece goods, wool suits, wool underwear, wool yarn.

Chemicals: Alcohol, ethyl; alcohol, methyl; aluminum sulfate; ammonium sulfate; camphor; caustic soda; citric acid; cocoanut oil; copra; creosote oil; dyes, indigo; dyes, direct black; dyes, sulfur black; dyes, vat blue; fertilizer; glycerin; nitrate of soda; phosphate rock; potash, crude; potash, muriate; potash, sulfate; salt; soda ash; sulfur; superphosphate; tallow; tankage.

Building materials: Brick, common; cement; doors, wood; lime; linseed oil; lumber; paint; plate glass; rosin; shingles; turpentine; varnish; window glass.

Metals: Aluminum; barbed wire; copper; copper wire; cultivators; harrows; lead; manganese ore; motor vehicles; pipe, black steel; pipe, cast iron; pipe, galvanized; pig iron; plows; shovels; steel billets; steel plates; steel rails; steel sheets; steel sheets, galvanized; steel, structural; tin; typewriters; wire nails; woven wire fencing; zinc.

Fuel: Coal, anthracite; coal, bituminous; fuel oil; gasoline; petroleum, crude.

House furnishings: Carpets; chinaware; electric refrigerators; furniture, wood; linoleum; pillowcases; sewing machines; sheets; wool blankets.

Miscellaneous: Cameras; cigarettes; cigars; diamonds, cut but not mounted; films; furs, undressed; matches; newsprint; perfumery; radios; rubber; rubber tires; soap, laundry; soap, toilet; starch, cassava; starch, corn; starch, potato; whisky, Scotch; wine, champagne; wine, still; wood pulp, chemical; wood pulp, mechanical; wrapping paper.

Hides and leather products: Gloves, women's; hides; leather, calf upper; leather, sole; shoes, men's.

The chart below shows the comparative treatment accorded various groups of commodities by the 19 nations figuring in the study, How High Are United States Tariffs? All percentage figures are equivalent ad valorem rates:

	Percent
Farm products:	
Egypt	119.8
United States	95.8
Turkey	91.8
United Kingdom	89.0
Spain	80.5
Japan	65.1
Brazil	64.0
Greece	50.0
Farm products—Continued.	
Mexico	50.0
Switzerland	46.2
Germany	37.9
Canada	33.0
Argentina	24.9
France	24.2
Italy	17.9
Hungary	9.1
Sweden	8.8
Netherlands	6.7
Belgium	6.4
Fuels:	
Germany	308.0
Spain	269.3
Belgium	149.5
Switzerland	124.8
Turkey	122.8
Greece	111.0
United Kingdom	88.6
Hungary	82.1
Brazil	59.2
France	55.6
Argentina	53.4
Netherlands	33.0
Mexico	31.6
Japan	29.8

America Was Never a One-Man Country

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks I include this editorial from the Detroit (Mich.) Free Press:

THE UNITED STATES NEVER WAS A ONE-MAN COUNTRY

As Franklin D. Roosevelt goes to his eternal rest, the unspoken thought on the lips and in the hearts of his countrymen poses the question: "What of the future?"

Without detracting anything from the stout-hearted leadership of the late President, we can as a people be comforted by the knowledge that in a land as great as ours, no man was ever intended to preside over our destinies in perpetuity.

Six other Presidents of the United States have been taken by death or the assassin's bullet while in office. But the Nation did not wither and die with the passing of the immortal Lincoln or the great McKinley. Other men, stanch and stalwart Americans, carried on. And so it will be again.

Franklin D. Roosevelt will ever be remembered for his inherent love of humanity, his unfailing courage and resourcefulness in meeting one crisis after another, and his abiding conviction that the future peace of the world lies in nations working together as good neighbors.

I would be somewhat less than truthful if in the hour of the country's loss, I were to represent that our views were ever in complete consonance.

I resented the needless promotion of class warfare and the constant sniping at equally patriotic Americans who were bold and courageous enough to disagree with administration measures, which, they feared, would permanently alter and undermine the foundation of a great republic.

I resented the deceptive half measures and lulling of the public conscience which brought us to the brink of war. I disliked our moral dishonesty and the devious measures by which the American people were "conditioned" for war. In reflection, I disliked them then, and even more now.

But when the blow came at Pearl Harbor, this newspaper pledged its unlimited support and loyalty to the President.

It has ever been faithful to the pledge.

President Truman is not a great man as world leaders are judged. Though personally forthright, his political background is none too savory.

However, it is a truism in American political life that average men, suddenly elevated to positions of the greatest public trust, often find themselves and grow in stature and understanding.

Our new President revealed capacity as chairman of the War Investigating Committee bearing his name. It was there that he was first brought to national attention. He has a very real capacity for teamwork and a fine sense of modesty, attributes which should aid him tremendously in these grave and troubled hours.

Disturbed as we are over the sudden death of a President destined to occupy a very high place in the history of the world, there are these reassuring factors which should impel us to hold steady.

1. Under the capable leadership of General Marshall and Admiral King, there need be no fear that our war effort against the enemies of civilization will lag or diminish in force.

2. The San Francisco Conference for establishing world security proceeds on schedule and will, I believe, make a very real contribution to the cause of world peace, because everyone now realizes that civilization can never again withstand the ravages and devastation of another world war.

3. President Truman understands the necessity for helping to rehabilitate the crushed and broken victims of Hitler's mad ambitions. We shall and should do our part. But I think he will also understand that we cannot reconstruct world economies on a firm footing and at the same time be constantly sapping our own. World prosperity depends in great measure upon a prosperous America. The cause of world peace will not be advanced if we are overly lavish with our own resources. Let us aid but not endow.

4. From his experience as a United States Senator, President Truman will appreciate the importance of friendly cooperation between the Congress and the White House.

Franklin D. Roosevelt was ever supreme. Such congressional rebuffs as he received developed because of his insistence upon pushing measures and appointments that were an open affront to members of his own political party.

President Truman's stature as a national leader will rest largely upon his ability to bring the dissident forces in Congress to see that a truly united war effort demands teamwork in the finest sense of public service.

We think he will succeed in accomplishing that desirable and essential end.

5. President Truman's Middle Western background offers a guarantee that his advisers will be truly representative of the country at large. His administration should be free from the radical fringe which has successfully been reshaping the Nation to conform to ideologies not in keeping with our own.

6. There will be a great and sadly needed rebirth of party responsibility.

The Republican leaders have a splendid opportunity to prove that they represent something other than party negation.

The Democrats can once more reassert themselves as a national party rather than a strange assortment of opportunistic politicians who have continued in office through the ignoble expedient of clinging to a greater man's coat tail.

Representative government in this country can once more be restored. It is sadly needed.

Saddened as we are by the passing of a valorous leader, there is, nevertheless, no reason for an outbreak of disillusionment or fear. The Nation's destiny does not hang upon the life thread of a single man nor is there any reason why it should not forge ahead to the realization of our greatest dreams.

Peace on earth and better living for all can be achieved if we have the will and the intelligence to push ahead. The United States of America is still the greatest country on earth, the envy of the world.

In this unhappy hour there is solace and comfort to be found in the following quotation:

"God grant me the serenity to accept those things I cannot change, the courage to change those which I can, and the wisdom to know the difference."

An era is over.

JOHN S. KNIGHT.

Article by Mrs. Eleanor Roosevelt

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mrs. NORTON. Mr. Speaker, under leave to extend my own remarks in the RECORD, I ask unanimous consent to include in the RECORD an article appearing in the Washington News on Wednesday, April 18, by the distinguished and beloved wife of our late President, Mrs. Eleanor Roosevelt:

MY DAY

(By Eleanor Roosevelt)

MRS. F. D. THANKS SYMPATHIZERS AND WHITE HOUSE STAFF

TUESDAY.—Of one thing I am sure. When people's hearts are freed by sympathy and sorrow, it makes them wonderfully kind. I have had evidence of this during the past few days.

My husband's friends and associates have come to assure me of their desire to help me in any way. From all over the country messages poured in, wanting to know how the senders could be of assistance. For the moment, of course, the only people who can actually do something are the people in our secretarial staffs under Mrs. Helm and Miss Thompson's direction. They have worked day and night and will continue to do so until we leave on Friday. The people who were on my husband's staff, his secretary, Miss Grace Tully, and the others in the Executive offices have a terrific mountain of mail to attend to. Up to last night, 25,000 letters alone faced them!

Also under great strain are the ushers. With the help of the workers who bring a President's family into the White House and take them out again, they have to work on all the details, not only of removing such belongings as we may have, but of getting the White House in order for President and Mrs. Truman. Then there are the staff of the White House, the housekeeper, Mrs. Nesbitt, and all the employees and their families, who must still carry on despite the people coming in and out. One of the people to whom I am most grateful is Mrs. Mabel Webster, who has been my personal maid ever since I came here and who now finds herself packing from early dawn to dark.

Yesterday I took Mrs. Truman all through the White House. In the years that we have been here I have taken many people through the House, sometimes only in the formal rooms, sometimes on the family floor, very rarely to the attic and the kitchen. I always have a pride in the beauty of the rooms—their proportions, the interesting furnishings, which remain the same no matter what individuals may live here. It was good to find Mrs. Truman so appreciative of the things that I have loved.

One of my great joys has been in the flowers which were always around us in profusion. When the White House greenhouse was taken down, the other greenhouses in the city still provided us with all that the flower room needed to keep the White House beautiful. Sometimes it was gay, sometimes more subdued, but always the men who worked in that particular department have seemed to love and appreciate the beauty of the job they did. No one will be more grateful than I am to all the various people with whom we have been in contact because we lived in this house, and who made life not only possible but pleasant and gracious.

Jones Mills Aluminum Plant

EXTENSION OF REMARKS
OF
HON. W. F. NORRELL
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 12, 1945

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following communication and its enclosure, which was sent to me under date of March 21, 1945, by members of an organization known as the Ouachita Area Development Council:

OUACHITA AREA DEVELOPMENT COUNCIL,
March 21, 1945.

Congressman W. F. NORRELL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN NORRELL: We have an organization known as Ouachita Area Development Council to promote the full interest of four counties in this area. We expect to take in a few additional counties in this immediate area.

While our purposes are general and will cover all subjects that we think will be particularly helpful to this area, we are very much interested in the operation of Jones Mills aluminum plant and the construction and operation of the power plant at Jones Mills by private enterprise. We are against the Government going into any further business, or any branch of the Government operating the aluminum plant or the power plant at Jones Mills. Our recent legislature passed unanimously a joint resolution to this same effect, a certified copy of which is enclosed.

We think we represent the almost unanimous feeling of the people in this territory, and we do hope you will take this request and this legislative resolution seriously. In fact, we believe it expresses the views of yourself and the other members of our delegation.

We cannot afford to have more Government operations. We must have taxpaying institutions. If the Government is to go into the aluminum business and the power business in this area, it will likely next be in the banking business or most any other kind of business.

The undersigned is the committee named to represent the people of this area.

Sincerely yours,

J. C. Cuffman, chairman, Malvern, Ark.; H. A. Daugherty, vice chairman, Arkadelphia, Ark.; J. W. Ramsey, secretary-treasurer, Malvern, Ark.; George Lindahl, Malvern, Ark.; Zera Caldwell, Malvern, Ark.; George S. Dews, Arkadelphia, Ark.; Leon Bond, Arkadelphia, Ark.; Billy Anderson, Hot Springs, Ark.; T. W. Stone, Hot Springs, Ark.; Prince Cook, Hot Springs, Ark.; Henry J. Gingles, Benton, Ark.; W. R. Alsobrook, Benton, Ark.; H. W. Anderson, Benton, Ark.

Sponsored by the chambers of commerce of Hot Springs, Arkadelphia, Malvern, and Benton, Ark.

STATE OF ARKANSAS,
DEPARTMENT OF STATE,

To all to whom these presents shall come, greeting:

I, C. G. Hall, secretary of state of the State of Arkansas, do hereby certify that the following and hereto attached instrument of writing is a true and perfect copy of Senate Concurrent Resolution 17 of the fifty-fifth general assembly.

In testimony whereof I have hereunto set my hand and affixed my official seal. Done at office in the city of Little Rock, this 20th day of March 1945.

[SEAL] C. C. HALL,
Secretary of State.
By V. COLLIE,
Deputy.

Senate Concurrent Resolution 17

Whereas the Jones Mills aluminum plant, located on Lake Catherine, is near the richest aluminum deposits of the United States, and Whereas due to the adequacy and suitability of labor and abundant markets, the Jones Mills aluminum plant should operate continuously in the future, and

Whereas continued operation of the Jones Mills plant will also assure operation of a substantial portion of the important Hurricane Creek aluminum plant at Bauxite, Ark., would encourage establishment of additional factories related to the aluminum industry, including aluminum fabrication, and would necessitate completion of a large power plant at Jones Mills: Now therefore be it

Resolved by the Arkansas Senate of the Fifty-fifth General Assembly (the House concurring therein), That enthusiastic approval be given to operation of the Jones Mills aluminum plant continuously in the future, together with any other plants constructed therewith; and be it further

Resolved, That completion of the power plant heretofore undertaken at Jones Mills be urged at the earliest possible date; and be it further

Resolved, That the Arkansas General Assembly respectfully endorse and urge that the construction and operation of all plants herein named be undertaken by private enterprise, it being the considered opinion of this Arkansas General Assembly that private enterprise is preferable to public construction and operation.

Approved March 20, 1945.

The American Life

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Batavia (N. Y.) Daily News, of March 27, 1945, concerning a speech delivered by Hon. James A. Farley at Northampton, Mass., on March 26, 1945:

THE AMERICAN LIFE

Addressing the Rotary Club of Northampton, Mass., last night, James A. Farley, former Democratic national chairman, did a good job in reminding Americans who talk about the American way of life that a way of life is, "in the last analysis, the product of human beings."

Our attention is called to the fact that a way of life "is not a social or a political philosophy that someone has thought out and handed to other people as a guide for their activities," but that it is rather "a name that we give to the habits and methods and characteristics in their relation to other men."

The same problems that helped to create the average American, he contends, exist today and "may be with us as long as men live upon this earth" because these problems are problems of Europe which he describes as

a section of the earth which has "suffered for centuries from the fact that it could produce more people than it could feed."

Recalling that those who made America left a "barren and unfruitful continent for many reasons," Mr. Farley points out that they used the elements of culture, and constitutional Government, and the interest of workmanship, and technical skills with which Europe, despite its limitations, provided them and with which they made this land of promise the America we know and live in and fight for today.

We are furthermore reminded that we still have the courage and enterprise which produced the American way of life for the price which this land exacted and which they were willing to pay. Then he tells us that we have "stretched out our hands to the unhappy people of Europe" and have "offered them opportunity for a better life," asking only that they have "strong hands and loyal hearts."

Finally, he asks us to remember that "the United States was not built upon formulas; it was built upon the individual" and that "we shall retain the power that is essential to the maintenance of America's responsibilities in the world only so far as we retain the spirit of the pioneer in each individual American. The door of opportunity must be kept open."

Thirty-three Members of the United States Senate Must Not Have the Power to Kill Peace Treaties.

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. GOSSETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by the gentleman from New Hampshire, Hon CHESTER E. MERROW, on the subject of treaty ratification over the Columbia network, from the studios of WTOP in Washington on Tuesday, April 17, 1945.

Ladies and gentlemen, if we are to build a just and lasting peace, 33 Members of the United States Senate must not continue to have the power to kill peace treaties. Article II, section 2, of the Constitution is as follows: "He"—the President—"shall have power by and with the advice and consent of the Senate to make treaties provided two-thirds of the Senators present concur." This places in the hands of a Senate minority, one-third plus 1, or 33 Members, life and death power over all treaties. Very presently the House of Representatives will vote on a resolution to submit to the State legislatures for ratification a proposed amendment to the Constitution giving to both Houses of Congress the right to validate treaties by a majority vote. Aside from winning the war, this is the most important single question before the Nation. The Seventy-ninth Congress will not be required to pass judgment on any measure of greater significance than the amendment now under discussion to revise our constitutional peace-making machinery. I hope that the House will adopt the treaty resolution by far more than the required two-thirds vote, and that the measure will be acted upon immediately by the Senate. This would then afford the State legislatures an opportunity to vote on the amendment this year.

The work of making the Constitution of the United States did not begin with the great Convention of 1787, nor did it end when the framers of that immortal document finished their task. Their ancestors had been working on the Constitution for centuries. Their descendants have labored ever since the Constitutional Convention adjourned. Twenty-one amendments to the Constitution have been adopted. In addition to these formal changes, the Constitution has grown by means of statutes, judicial decisions, and usages. Political systems must constantly change to meet different conditions at different times. They must undergo modification to fit the demands of a changing environment. The Constitution of the United States has proved itself to be highly adaptable. The fathers knew that developments would come and therefore provided four ways to amend the original document. If the United States of America is to assume its proper place as a world leader, then we must strike from the Constitution the antiquated treaty-ratifying procedure.

For the future salvation and the continued progress of our civilization, for the protection and the promotion of the self-interests of the United States, this Nation is in dire need of a positive foreign policy, a dynamic foreign policy, an enlightened foreign policy, a foreign policy based on expanding international cooperation. Developments within the last half century have made this imperative. Foreign policy can only be effected through the mechanism of international agreements and treaties. The nature of the agreements and treaties to be decided upon during the next 15 or 20 years will determine whether or not a dynamic foreign policy of expanding international cooperation will be successful in averting future wars. Treaties and agreements are the only means whereby such a policy can be translated into cooperative action in a world of sovereign states. Not only will it be necessary to secure the ratification of treaties written at the cessation of hostilities but for several years many international undertakings supplementing the original treaties will have to be acted upon by this and other Governments.

The United States is the only great Nation requiring a two-thirds vote of one branch of the national legislative body to ratify treaties. The reasons motivating the writers of the Constitution to insert the requirement have long since disappeared. The Articles of Confederation providing for treaty ratification by a vote of 9 out of the 13 States were in the immediate background as the makers of the Constitution did their work. The continuity between the Constitution and the Articles of Confederation, which is to be found at so many points, is also present in certain fundamental aspects of the treaty provision. Under the Articles of Confederation the treaty power was exercised by a Congress in which the States were not only represented as States but voted as States. The power to make treaties was regarded as one of the fundamental attributes of State sovereignty.

Demand for the two-thirds rule came from the jealousies and suspicions of the original States. The South was interested in navigation on the Mississippi River. The New England States were concerned in protecting fishery rights. Sections were fearful lest treaties might be made which would interfere with their respective economic interests. With the growth of the country the conditions which caused the insertion of the two-thirds rule have long since passed off the stage and today the United States of America stands alone as the only great Nation to employ the cumbersome, obstructive, and senseless two-thirds requirement.

The record of the Senate in the disposition of treaties for the settlement of international disputes is most disheartening. In writing this record the Senate has ably demonstrated its inability to act constructively in international affairs. Peace treaties and treaties of arbitration have suffered irraparable mutilation at the hands of the Senate. Since the Spanish-American War the United States has been a growing world power. Again and again during the last 50 years the Senate has frustrated moves to substitute the peaceful settlement of international disputes for war. The Olney-Pauncefote Arbitration Treaty of 1897 was rejected. The Hay Arbitration Treaties of 1904 were emasculated. The Senate maintained a strangle hold on the Root Arbitration Treaties of 1908 and 1910. The life was taken out of the Taft Arbitration Treaties of 1911. The Treaty of Versailles and the League of Nations were defeated by the two-thirds rule of the Senate. On January 29, 1935, the World Court was rejected by a vote of 52 for to 36 against. In recent years few treaties of any great consequence have been ratified. One is forced to the conclusion that no treaty of far-reaching importance in connection with the establishment of peace can be validated under the two-thirds rule.

A fundamental principle of democracy is majority rule. The present method of treaty ratification is undemocratic in the extreme. The population of Nevada, for example, is 110,247; of New York; 13,479,142. Since the adoption of the seventeenth amendment Senators are elected directly by the people. In rejecting treaties the vote of a Senator from Nevada is worth twice that of a Senator from New York who votes approval. The power of a voter in the State of Nevada in this connection is the same as that of a hundred and twenty voters in the Empire State.

Opponents to the proposed amendment call attention to the unanimous consent required of juries; to the two-thirds provision for the impeachment of a President; to the two-thirds vote necessary to override a Presidential veto; and say that more than a majority should be necessary in certain decisions of grave importance. They then conclude that in the matter of making treaties we should retain the two-thirds rule. These cases are not analogous to the two-thirds provision for treaty ratification and have no bearing on the question at hand.

A majority of both Houses of Congress is sufficient to enact Federal statutes. A majority is deemed ample to commit the republic to such a program as land-lease and other policies of great national and international moment. A simple majority of Congress is sufficient to take us into war. Surely the formulation of the peace is as grave a matter as making war, yet it is easier for this Government to declare war than to write a peace. There is no conceivable reason why a majority of both Houses is not enough to validate treaties. Under the present system a treaty of far-reaching importance, a treaty embodying principles on which the structure of world peace might be erected could be rejected by a militant minority of the Senate even if a majority of the Senate wished to ratify it; even if a majority of the House of Representatives desired its acceptance, yes, even if a majority of the American people demanded its validation.

The House which is in a better position to reflect public opinion than the Senate, should have a voice in treaty making. So intricate have become human affairs that domestic laws are closely interwoven with foreign policy. The statutes affecting the merchant marine, the size of the Army, the exchange of materials of war, tariffs, and

appropriations to implement treaties are illustrations of subjects in which the House has a voice and are matters closely connected with foreign policy. It is impossible to draw a line of demarcation between local problems and the issues connected with foreign affairs. Few treaties can be sustained without implementing legislation requiring the concurrence of both Houses of Congress. No foreign policy agreed upon by the Senate can long endure unless it has the wholehearted support of the people. This can best be given by including the House of Representatives in the process of ratifying treaties.

The proposed constitutional amendment should be imediately adopted in the light of an imposing array of cogent arguments.

First. The present method is archaic and unsuited for this great Nation in the modern world revolutionized by science.

Second. Under the two-thirds rule it will be impossible to develop a dynamic foreign policy of expanding international cooperation adequate to establish and to guarantee the continuation of a just and lasting peace.

Third The present method for legislative review and approval is neither clear nor workable.

Fourth. The reasons for including the two-thirds rule in the Constitution no longer exist. This is the only great power to have such a stumbling block in the effective execution of its foreign policy.

Fifth. The two-thirds rule is undemocratic in the extreme.

Sixth The House of Representatives, much closer to the people than the Senate because it is elected every 2 years, should have a voice in treaty making.

Seventh. The Chief Executive of the United States works under a tremendous handicap in international conferences because he cannot negotiate with anywhere near the freedom possessed by diplomats from other countries.

Eighth. The two-thirds rule weakens the legislative branch of the Government; first, because the House has no voice in treaty making and, second, the Senate is under the domination of a small minority.

Ninth. There exists confusion concerning the relationship of joint resolutions and treaties. This would end with the adoption of the proposed amendment.

Tenth. The two-thirds rule in its present form emphasizes sectional and minority interests at the expense of national and majority interests. The Nation's primary interest today is to have a positive national foreign policy supported by and responsive to a majority of the people.

Eleventh. The conclusion of international undertakings being increasingly imperative for the protection and furtherance of the Nation's interests, the practical choice is either to compromise the Nation's interests through failure to conclude adequate international undertakings or to find an alternative to the unworkable two-thirds procedural requirement for treaties.

Twelfth. The two-thirds rule is a constant political barrier to the development of an adequate, generally recognized majority action procedure through the use of joint resolutions; and

Thirteenth. A majority of both Houses is more likely to represent the views of more people and more organs of public opinion than is a one-third minority or a two-thirds majority of the Senate. The foregoing are sound and compelling reasons for immediately adopting the amendment under discussion.

It is the duty of this Congress to give the people a chance to pass judgment on this amendment through their State legislatures. The responsibility for refusing to submit this amendment is so terrifying that those who oppose giving the Nation a chance to express its will must ponder long and seriously on the position they take. The eyes of the world are upon this Congress as we consider the revision of our constitutional machinery for making peace.

Franklin Delano Roosevelt

EXTENSION OF REMARKS

OF

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mrs. NORTON. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include two speeches in memoriam on a special program of the Catholic Hour of April 15, 1945, dedicated to the memory of Franklin Delano Roosevelt, one by Msgr. John A. Ryan, and the other by the Reverend Timothy J. Mulvey, O. M. I.:

IN MEMORIAM

(A special program of the Catholic Hour on April 15, 1945, dedicated to the memory of Franklin Delano Roosevelt)

INTRODUCTION OF MONSIGNOR RYAN

Thirty-nine years ago a young American priest wrote a book entitled "The Living Wage." In it he urged that Government had the responsibility not merely of suppressing crime and civil strife, but of intervening actively in the social arena; that it had the responsibility of assuring justice to the underprivileged and the oppressed. Twenty-seven years later he saw this principle embraced by a great President of the United States. His feeling for that great man—his admiration, his affection—has grown with the years. On the occasion of the late President's second inauguration and again last January on the occasion of his fourth inauguration, this priest, born on a Minnesota farm, was privileged to give the benediction. Now in his seventy-sixth year, he is here in the studio to pronounce the last final farewell to his departed friend. I present Rt. Rev. Msgr. John A. Ryan, director of the social action department of the National Catholic Welfare Conference.

MONSIGNOR RYAN'S TRIBUTE

In this broadcast, the Catholic Hour offers a sorrowful and affectionate tribute to the memory of a supremely great American, a supremely great President, a supremely sincere lover of his fellow men. Many of the comments that have appeared since his untimely death emphasize his interest in the common man, in the lowly, the weak, and the oppressed. All this may be summed up as a deep abiding concern with social justice. Let us glance at a few illustrations.

At the very beginning of his first administration, he induced Congress to pass a law for the insurance of bank deposits, up to $5,000. For upwards of 12 years now, persons of modest means have not feared to entrust their money to the banks. So accustomed have the American people become to this protection that they have mostly forgotten the dreadful years of the early 1930's, when thousands of banks failed and tens of thousands of depositors suffered grave losses. Other Roosevelt legislation vastly improved the condition of the farmers and provided means by which farm tenants could become farm owners. Through the W. P. A. and the P. W. A. millions of the unemployed were enabled to support themselves at self-respecting labor, instead of being condemned to live on doles and inadequate relief. To be sure, these measures did not completely abolish unemployment. Neither Congress nor public opinion would have sanctioned adequate public spending. Our political and business leaders were, and probably still are, misled by antiquated and false economic theories. Let us pray God to give them enlightenment before they are confronted with ten or twelve million servicemen demanding jobs after the war.

Finally, I would mention the three most effective pieces of legislation for social justice enacted during the Roosevelt administrations. These are the National Labor Relations Act, which has made real the right of labor to organize and to bargain collectively; the Fair Labor Standards Act, which has abolished the starvation wages formerly paid to thousands upon thousands of American workers; and the Social Security Act, which has provided some measure of insurance against unemployment and old age. I have no hesitation in asserting that these three laws have done more to promote social justice than all the other Federal legislation enacted since the adoption of the Constitution.

Social justice has international as well as national aspects. To this international social justice President Roosevelt made a far-reaching contribution. Long before the majority of his countrymen, he realized that the philosophy and designs of nazi-ism constituted a dire threat not only to the United States but to all the countries that have been touched by Christian civilization. Today the vast majority of the American people are convinced that he was right, that nazi-ism must be destroyed and that we must have an international organization to preserve peace and establish social justice in the relations between states. In defense of these aims Franklin D. Roosevelt laid down his life.

He was a great idealist, but he was also a genuine realist. In a letter written a little less than a year ago to congratulate me on my seventy-fifth birthday anniversary, he said:

"The things for which you have fought ceaselessly for twoscore years will not be easy to achieve. Much, however, has been accomplished. We must not be discouraged. The workers grow old, the work is never done; but the future is big with promise of better things."

Our beloved President has gone from this troubled world, but his place in history is secure. I confidently believe that his place in eternity is likewise secure; but it can be hastened by our prayers. All who accept the biblical declaration that, "It is a holy and wholesome thought to pray for the dead, that they may be loosed from their sins," ought to petition God for the repose of the soul of Franklin D. Roosevelt. If he could do so, I am sure that he would address us in the dying words of King Arthur to Sir Bedivere: "Pray for my soul. More things are wrought by prayer than this world dreams of."

INTRODUCTION OF FATHER MULVEY

During this month the Catholic Hour has been presenting a series of plays written by the gifted radio dramatist, Rev. Timothy J. Mulvey, O. M. I. Father Mulvey has written for this occasion, "Lines to a Departed President," which he will now present as his tribute to our fallen leader.

LINES TO A DEPARTED PRESIDENT

DEAR MR. PRESIDENT: It is, indeed, strange that we, who never had the privilege of speaking to you face to face in this life, should address you, directly, now. For while it is the high intent that a Chief Executive should be intimate with his citizenry, it is the unfortunate necessity that he should be removed from the citizens.

We are not removed from you, now, Mr. President. When your heart stopped beating; when you relaxed to that level which is the inevitable inheritance of pauper and prince, peasant and President—in that sad and historic moment, you were a child once again, stricken to that helplessness which is the sign of our mutual frailty, and the badge of our common humanity.

So, you are dead.

But, we can speak to you, now.

We can speak to you, Mr. President, by the three convictions of faith, hope, and charity. By faith, because it is our belief that your soul, even as the souls of all men, is immortal; by hope, because it is our common prayer that you have attained that final end for which you, and all men, were created; and by charity, because love is the law and the prophets, binding us to you as brother to brother, in life and in death.

Dear Mr. President, it will be no exaggeration to say, now, that few men of this or any other age have realized better than you how turbulent are the tides of this life. It will be no exaggeration to say that there have been few men of this or any other age, who have been called upon to guide the ship of State through more perilous waters. It is significant, now, that you loved the sea and ships. We have a strong recollection of you, leaning on a rail, looking out over the waters with the sun and wind in your face. You were a sailor at heart.

Dear Mr. President, it is in the nature of things that a man, entrusted with a national responsibility, should be willing not only to attack but to suffer counter attack in this arena we call political government. For it is both the process and the privilege of democracy to agree or disagree. You have been agreed with, heartily. You have been disagreed with, violently. This was not surprising, for a glorious predecessor of yours said, once:

"If I tried to read, much less answer all the criticisms made of me, and all the attacks leveled against me, this office would have to be closed for all other business. I do the very best I know how, the very best I can. I mean to keep on doing this to the very end."

That was the way Abraham Lincoln expressed it. That was the way you lived it, Mr. President. And you were not afraid. For when the last shot was fired, all America knew in its heart and soul that you had stuck to your guns to the very end. You were, also, a soldier at heart.

Dear Mr. President, and we say this now with the sympathy and affection of friends, the physical space your body required could have been circumscribed by the dimensions of a single wheelchair. The flesh was weak. But your heart, Mr. President, was ranging solicitously not only from the Atlantic to the Pacific seaboards, not only from the Halls of Montezuma to the Shores of Tripoli, but to every lake and island and hill—wherever despotism raised its ugly head, and wherever the crying of oppressed humanity lifted its voice to ears that wanted to hear. You heard. You were, also, a Marine at heart.

But, dear Mr. President, this is what we really want to say to you, now that a new twilight is hanging over the Hudson that you so dearly loved, and beside which your spent body is resting for the first time, tonight.

They escorted you all the way from Warm Springs, Ga. The escort is only a casual incident for the page of some future historian.

They allowed you to rest for a few hours in the East Room of the White House. This is the remembered detail of a journalist.

But, Mr. President, between the coming and going, a monument grew so large and spontaneous in the hearts of the people as to challenge the best efforts of a grateful posterity. They prayed and sang for you at the way-stations. They wept unashamed all the way north. And above the hoofbeats of the white horses, and the rumbling of the caisson that carried you up Pennsylvania Avenue, thousands of men and women called out "God bless him."

That is what we want to say.

"God bless you."

For you did speak of God, Mr. President.

And you believed in God, Mr. President.

And the last magnificent effort of your life was dedicated to the principle that men—all men—should be free and equal under God.

This is the precious ideal you left us. We won't forget it. We will work for it. We will fight for it.

But in the meantime, "God bless you, and keep you eternally, Franklin Delano Roosevelt."

Amendment of the Social Security Act

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and joint resolution adopted by the Legislature of the State of Maryland:

STATE DEPARTMENT OF PUBLIC WELFARE,
Baltimore, Md., March 27, 1945.

Hon. THOMAS D'ALESANDRO,
Member of Congress, House Office Building, Washington, D. C.

Re: Maryland Senate Joint Resolution 4—proposed amendments to Social Security Act.

DEAR CONGRESSMAN: I herewith enclose copy of a joint resolution that has passed both the Maryland House and Senate. I thought you might want to insert it in the RECORD.

Kindest regards,

Sincerely yours,

J. MILTON PATTERSON, *Director.*

Senate Joint Resolution 4

Joint resolution requesting the Representatives from Maryland in Congress to urge that certain amendments to made to titles I, IV, and X of the Federal Social Security Act, dealing with public assistance to the needy

Whereas the purpose of public assistance is to provide a reasonable subsistence compatible with decency and health; and

Whereas the Social Security Board, State departments of welfare, and many other agencies have pointed out the need for amendments to the present Social Security Act so that States can more adequately provide at least a minimum of economic security by supplying basic maintenance to needy persons who are not otherwise provided for: Therefore be it

Resolved by the General Assembly of Maryland, That the representatives from Maryland in both the Senate and the House of Representatives of the United States Congress, be, and they are hereby, requested to take whatever steps are possible to have the following amendments made to the Social Security Act:

1. To include a fourth category of general assistance so as to provide for those in need but who under the act are not eligible for old-age assistance, aid to the blind, or aid to dependent children.

2. To remove completely from the aid to dependent children law the maximum of $18 for the first child and $12 for other eligible children.

3. To provide for uniform residence requirements with 100-percent reimbursement from Federal funds for persons who do not meet the minimum requirements.

4. To provide that reimbursement be made to the States for direct payments to doctors or hospitals for medical care.

5. To make uniform Federal matching of administrative costs by providing 50 percent of the cost of administration to the States for all of the programs administered under titles I, IV, and X of the act; and be it further

Resolved, That the secretary of state of Maryland be, and he is hereby, requested to send a copy of this resolution under the great seal of the State of Maryland, to each of the representatives from Maryland in the United States Congress, and a copy to the Honorable Arthur J. Altmeyer, Chairman of the Social Security Board.

President Truman

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of April 14, 1945:

PRESIDENT TRUMAN

In one of the great moments of American history there steps into the office of the Presidency of the United States, and into a position of world-wide influence and authority such as no other living American has ever held, a man who is less well known to the people of this country than many other public figures and almost totally unknown abroad. This man is a farmer's son from the Missouri Valley, a veteran of the last war, self-styled "practical politician," a two-term Member of the Senate, a compromise candidate for the comparatively obscure office from which fate, with dramatic suddenness, has now catapulted him to power. We look at this record, and we look behind the record at the man himself, and we find much in both that is reassuring to the people of the United States and to our comrades in arms throughout the world.

That he was admittedly a compromise candidate for the office of the Vice Presidency—"the second Missouri compromise," we called him—seems to us the first and far from the least important item in the record. "Compromise," in the sense in which it was accurately applied to Mr. Truman's nomination—compromise in the sense of finding an acceptable middle ground between more extreme positions on either side—is not a bad recommendation for a man whose enormous responsibility it will be to find an acceptable middle road for the American people in the difficult post-war years, and to help put together the pieces of a broken world. When a great war ends, and when there is a sudden lifting of the pressure which has held men to a common effort, there comes a swift and inevitable tendency of groups within nations, and of nations themselves, to fly

apart. We have the soundest of reasons for believing that we shall find it valuable, in such a period of shock and readjustment, to have in a position of authority a man who is President today primarily because of the very fact that his candidacy was acceptable to every group and could unite rather than divide, hold together rather than splinter, the factions which compose the dominant political party of the United States. It is part of the record that, once nominated, he received the genuinely sincere support of left and right, North and South, of Democratic trade-unionist and Democratic manufacturer.

It is part of the record, too, part of the longer record of American political life, that out of the ranks of the practical politicians and out of the hard, tough schools of the ward machines have come men whose experience in the practical ways of accomplishing sound public purposes made them particularly useful to their country in a time of crisis. There is no need to blink at the one-time association with Pendergast. He is there, a part of the early story. But there was Croker, too, and there was Murphy. And there was a political machine on the Atlantic coast, as hard boiled and as sordid as any in the Missouri Valley, that produced a great and gallant Governor whose public service, as a practical man in politics will be long remembered. What is the chief practical problem of politics before the people of the United States today, beyond the victorious completion of the war itself, if not the avoidance of the ghastly error of the last war and the engineering through the Senate of a treaty commiting the American Republic this time to uphold the peace? We believe that in this great and necessary task the experience and the common sense and the native shrewdness and the Senate friendships and the practical politics of Mr. Truman will all be useful to his country.

We believe, too, that in the still unfinished business of the war itself the country will promptly find that it has no novice in the White House. No Member of the Senate, no elected officer of the Government of the United States, has had a better and more intimate view of the whole war machine than the man who directed the activities of the Truman committee of investigation. Delays in the production of aircraft, shortages of shells and powder, deficiencies in the production of aluminum and rubber, continuing problems of manpower, all came within the purview of a Senate group which dug hard into the facts before it and did not hesitate to fix responsibility even in the highest quarters. On the whole, the work of the committee was well done. Its chairman, by the general agreement of his colleagues, had the greatest part in it. It is not to be forgotten now that on the basis of his direction of the committee's work, Mr. Truman was chosen by the well-informed newspaper correspondents in Washington as the civilian who, next to President Roosevelt himself, "knew most about the war."

These facts we count as assets. We count it as an asset, too, that Mr. Truman takes over a going concern in Washington without being compelled to make changes in the direction either of the war effort or of the peace negotiations, as he would be compelled to do, for political considerations, if he came into power as the leader of an opposition party. We are thinking now not of the top military and naval commands—which would not have been changed even if a new party had come suddenly to power in a great crisis of the war—but of the civilian Cabinet officers who direct the war effort, the civilian under-secretaries who have established such close and invaluable relations with the military and naval personnel, the chairmen of the great committees of Congress. Mourn as we must the loss of the inspiration of Mr. Roosevelt's leadership, it remains none the less true that there will prevail in Washington a continuity which, with the unfinished business of the war before us, will stand both Mr. Truman and the country in good stead. This is particularly true in the field of foreign policy, where Mr. Truman's experience is most limited and where he will accordingly find himself most handicapped in the work that lies ahead. There is reassurance in the fact that Mr. Truman will have behind him a Democratic Party which, however great its internal disagreements on domestic issues, has achieved a high degree of unity in matters of foreign policy. There will be no necessity, in this crisis, of finding a line of action on which all factions of a party can agree. The line is there. From repeal of the Neutrality Act and the adoption of the Hull trade program, through lend-lease and the Atlantic Charter, to Dumbarton Oaks, and Yalta, and San Francisco, the road is clearly charted.

Finally, we count it as an asset, and perhaps the most important of all assets in the reassurance which it gives, that Mr. Truman now takes office with an immense fund of good will at his disposal. Surely, just as no other man has ever succeeded to the Presidency at so fateful a moment in the world's history, so no other man has ever found the American public so completely united in wishing him the fullest possible success in meeting the immense responsibilities which he now accepts.

Of this we may be sure. There is no American, of whatever party, creed, or section, who will not volunteer in this historic hour to aid his President and serve his country.

Concerning John Herling, Chief of the Division of Labor Relations of the Office of Inter-American Affairs—A Correction

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. COFFEE. Mr. Speaker, on March 15, I made an address, discussing Latin America, in the course of which I referred to John Herling, Chief of the Division of Labor Relations of the Office of the Coordinator of Inter-American Affairs.

Unfortunately, I inadvertently ascribed to Mr. Herling certain qualities which, I have now been advised, were ill-founded. I have no desire to do an injustice to any public official.

At the request of several friends, I am inserting hereinbelow a factual statement which I have been reliably advised, is a fair and accurate appraisal of the division over which Mr. Herling has charge. The statement is as follows:

Nelson Rockefeller, while Coordinator of Inter-American Affairs, emphasized the importance of labor relations among the organized groups of the Western Hemisphere. To carry out this policy John Herling, Chief of the C. I. A. A.'s Division of Labor Relations, has had the advice and counsel of Robert J. Watt, international representative of the A. F. of L., and James B. Carey, secretary-treasurer of the C. I. O.

This Division has carried on a regular service to the labor movement in the United States. More than a hundred top leaders of both organizations and the railroad brotherhoods receive regularly information for the use of their membership. More than 700 local labor organizations receive monthly the Inter-American Labor Notes prepared by this Division. Recently, under the work of this Division, outstanding leaders of the cooperative movement in Venezuela and Colombia came to the United States as guests of the Cooperative League of this country. A Who's Who in Labor and Social Welfare in Latin America, which I strongly recommended some time ago, has been in preparation. Such a compilation will prove an invaluable reference to the A. F. of L., C. I. O., and many Government agencies. The great interest on the part of organized labor is extremely gratifying to me and found expression in a special visit made by three representatives of the A. F. of L., C. I. O., and Railroad Brotherhoods to Latin America, accompanied by Mr. Herling, last year. The recent representation of labor as members of the United States delegation to the Mexico City Conference by Julius G. Luhrsen, executive secretary of the Railway Labor Executives' Association; David J. McDonald, secretary-treasurer of the United Steel Workers, C. I. O.; and George Meany, secretary-treasurer of the A. F. of L., is an expression of this interest which this Division has sought to cultivate.

The A. F. of L., at its annual convention in New Orleans November 1944, passed a resolution on the importance attached to the work of this Division and stressed the help it expected in that organization's expanded program. Similar assistance is rendered to the C. I. O. and railroad brotherhoods.

Franco—A Johnny-Come-Lately Convert To the Coalition Against Japan

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. COFFEE. Mr. Speaker, as the author of a House joint resolution, the purpose of which is to express the will of Congress that diplomatic relations be forthwith severed between the United States and Franco Fascist Spain, I have been a keen student of Spain and Latin America for many years.

In this connection, it is interesting to note the tremendous number of daily newspapers in America which are now commenting upon Franco Fascist Spain and its policies and attitudes in world affairs.

One of the interesting recent editorials appears in the Waterloo (Iowa) Courier of March 28, 1945. Here it is:

FRANCO HATES JAPS—NOW

The Spanish Government has instructed its diplomatic agents not to act in behalf of Japanese interests in belligerent capitals. General Franco is energetically agitating himself over Japanese "atrocities" to Spanish nationals in the Philippines; and there is talk of a Spanish declaration of war on Japan.

In the ruthless and deceitful game of international politics, everybody must hate a loser and Franco is attempting to compensate for his previous mistakes by jumping on the United Nations bandwagon. In Italy, every Italian who has any hopes of getting away with it now says he hated the

Fascists. Germans are now saying that they hated the Nazis. And Franco, whose pro-German policies permit no back-tracking on that score, hopes at least to take on the disguise of a Jap-hater.

This, at least, should be good for a laugh. The only way the Spanish Government can win any friends among the Allies is to permit all Spanish refugees to retur. to Spain, grant freedom of press and assembly and, after a suitable time, call a free national election. But nobody has any illusions about the possibilities that Franco will do this.

If the Spanish Fascists now hate Japan, they should of course be allowed to fight the enemy. But the United Nations naturally will require proof of sincerity. Should Franco and 30 of his leading ministers volunteer to descend by parachute into Japan to carry out sabotage, the Allies might conclude that adequate proof had been offered. Surely Franco will realize that this presents an admirable solution to his dilemma.

Farm Training for Negro Veterans

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. HAYS. Mr. Speaker, during the session of the General Assembly of Arkansas which was recently concluded, the following resolution was adopted:

Whereas the Farm Security Administration has been directed to sell what is known as the Lake Dick Plantation in Jefferson County, Ark., and lands held under similar circumstances and conditions by that agency; and

Whereas if said sale is effectuated, this plantation and lands similarly held, would be conveyed to individuals who, in the main, are intent on acquiring the same purely for speculative purposes and with a view to disposing of said lands at exorbitant prices to war veterans; and

Whereas the aforesaid Lake Dick Plantation, or project, provides a facility which is ideal for the training and education of returning war veterans, who are inclined to adopt the vocation of farming as a career; and

Whereas the Agricultural, Mechanical and Normal School for Negroes (Pine Bluff, Ark.) has been engaged by the Veterans' Administration to provide training in agricultural pursuits and related courses of study for eligible discharged colored members of the armed forces residing in the State of Arkansas, and would be enabled to furnish every advantage to such veterans to obtain the maximum opportunity in agricultural lines if the plantation is made available to said college: therefore, be it

Resolved by the house of representatives of the fifty-fifth general assembly (the senate concurring therein), That the General Assembly of the State of Arkansas, hereby respectfully requests and enjoins upon the Congress of the United States immediately and forthwith to withhold from sale the Lake Dick Plantation project with a view to its immediate conveyance or lease to the Agricultural, Mechanical and Normal School for Negroes (Pine Bluff, Ark.) to be used solely and exclusively for the education and training in agricultural pursuits of the discharged Negro members of the armed forces of the State of Arkansas, who apply and are found eligible, for such training and education; and be it further

Resolved, That the Congress of the United States is respectfully requested to announce it as the definite policy that all lands held by the Farm Security Administration suitable for agricultural purposes be withheld from the market with a view that all Government owned lands be impressed with a veterans preference in favor of returning war veterans who desire to pursue agriculture as a livelihood and who may seek to acquire and own farm size type farms, to the end that such lands be made available to said veterans for a reasonable consideration and under such terms and conditions as will be commensurate with the ability of such veterans ultimately to acquire a fee simple title thereto without undue burden or hardship.

Mr. Speaker, for the effectuation of one of these recommendations, all of which I heartily approve, I have introduced H. R. 2829, which has been referred to the Committee on Agriculture.

The proposal to use this land in the training of Negro veterans with a farm background is in line with sound economic and social principles and its adoption would be an appropriate evidence of the Nation's interest in the veterans' welfare.

Provision Should Be Made for Scientific Development—H. R. 2937 Would Be Beneficial If It Became Law

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. RANDOLPH. Mr. Speaker, in this global war both sides, winner and loser, suffer terrible losses in human life and economic disruption. The bigger the war the higher the price. In this conflict, the most catastrophic in history, human slaughter is the largest of all time. The cost in dollars and cents, to government, business and industry, has never been higher.

The curtain is drawn for those of our sons who have died. We cannot restore their lives and our condolences seem woefully inadequate.

The same finality does not apply, however, to the economic and social factors. Here, we can gather the threads and weave a new fabric.

In fact it is within our power, and we have every reason to believe that we will exercise that power, to enter an era of economic development in the post-war world that will raise the living standard of mankind and do much to implement the peace that will one day be written.

This development will stem from two sources: (a) from the rebuilding of much of Europe, England, and the Far East; (b) from new technological and scientific devices.

During the course of this war, and this is probably the only constructive aspect of war, science has produced countless devices, now used as weapons, that will have important peacetime applications. New products and chemicals have been discovered. New manufacturing and assembly processes have come into existence.

All these innovations can have a profound effect on our future economy. They can lead us to the heights or if not wisely used they can drive us to even greater economic chaos.

I hope to do everything in my power to see that our scientific and technological developments are wisely used. Toward that end I have introduced today in the House of Representatives a bill (H. R. 2937) to provide for the continuous study of the social and economic aspects of such developments. It is my belief that this measure, if passed by Congress, will serve as a valuable guidepost in the orderly recovery of peacetime economic prosperity.

Corp. Anthony P. Damato, United States Marine Corps

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. FENTON. Mr. Speaker, Corp. Anthony P. Damato, United States Marine Corps, whose family resides in my district at Shenandoah, Pa., has been posthumously awarded the Congressional Medal of Honor.

The presentation of the Nation's highest award for heroism on the battlefield was made in behalf of the United States Government by Brig. Gen. Maurice C. Gregory, United States Marine Corps, acting for the President, to Mrs. Frances Damato, mother of the young hero. The touching ceremony took place in the Lincoln School building at Shenandoah, April 9, 1945.

Only time will heal the wound that is now so deep in the heart of Mrs. Damato and the other loved ones in the Damato family. Yet I feel that the recognition that has been given, even in death, will in a small way help to alleviate the great sorrow caused by the personal bravery and love for his fellow men which was shown by Corporal Damato when he made the supreme sacrifice in behalf of the country he loved so well.

At this point I include in the RECORD an editorial written by Mr. James F. Haas in the Shenandoah (Pa.) Evening Herald of April 9, 1945:

CORP. ANTHONY P. DAMATO, UNITED STATES MARINE CORPS—"SEMPER FIDELIS"

Some thousands of miles separate the present resting place, in the Marshall Islands, of the mortal remains of Corp. Anthony P. Damato, U. S. M. C., from his home town, Shenandoah.

Yet, we would like to think his spirit was present in the Lincoln School this morning when his beloved mother, Mrs. John Damato, received the Congressional Medal of Honor in his behalf at the hands of a General of the Marine Corps at the direction of the President of the United States. For that matter, who dare say the spirit of Corporal Damato was not present?

Knowing the background of this boy as we do, of his views and attitude toward life, his intense pride in being an American, and, to be sure, his pride in "the Corps," we maintain Tony Damato would have been astonished at today's ceremonies.

Certainly, he never dreamed of the honors that would be accorded him in death on that memorable night in the fox hole in the Marshalls.

When that grenade rolled into the fox hole, Tony Damato acted fast. He had two particular buddies in that fox hole with him. All three had gone through bloody campaigns before that night. So, when Tony threw himself upon that grenade with a shout of warning to the others—Corp. Herman F. Dohms, Jr., and Pvt. (1st cl.) George W. Gale—he figured they would escape.

As we know, they did. Later, Private (1st cl.) Gale joined Tony Damato in a more peaceful world, for Gale gave his life during the assault upon Guam. Corporal Dohms was badly wounded in the same action.

No, there were no thoughts of any future honors that flashed through Tony's mind when he made the supreme sacrifice. He sought to spare his buddies and, that night, he did.

Now just suppose, for example, that the other two marines had been killed within a short time after Tony Damato's life had left his body. There never would have been a Medal of Honor issued at the President's order. Tony Damato would have been one more name on the Marine Corps roster of the dead. He would have been just another gold star on the service flag of Our Lady of Mt. Carmel Church and the Borough's service flag and honor roll.

You see, the service is very exacting in its procedure in granting the Nation's highest decoration. The heroism in question must be verified fully, and there is a good deal of investigating done in such cases.

But the men whom Tony saved survived that night, as did their platoon leader, Lt. Richard M. Pfuhl, who was the original officer to make the recommendation on behalf of Tony Damato. Today, the Shenandoah boy got his reward. How many, many other unsung heroes there must be on the various war fronts of the world? No one will ever know of their deeds.

Are we presumptuous in saying that God must have been aware of all these things and that He saw to it that Tony Damato's act of heroism was not to go unrewarded on this earth? We think not.

How proud Tony's father would have been to have witnessed the presentation. He loved his family and he was proud of his boys. John Damato died May 27, 1941. Tony was at home then and he was given his father's gold signet ring. This ring was fastened to a chain which held Tony's "dog tags" the night he was killed in the south Pacific. Today, it reposes, highly prized, among Tony's other personal effects which the Marine Corps sent to the folks back home.

Yes, indeed, John Damato's heart would have figuratively burst with pride today. A stonemason, who worked around various local collieries, John Damato never foresaw that one of his boys would become one of the Nation's immortal heroes.

All John Damato was interested in was rearing his family as best he could and teaching them to show their gratitude to this Nation for the liberties they enjoyed. He came over from Italy some 40 years back, and when he met Frances Speranza here in Shenandoah married and settled down to become a good citizen of Shenandoah.

Well, Tony Damato showed his appreciation to his country; he more than carried out his father's instructions. Don't miss extracts from some of Tony's letters to his family which we have reprinted elsewhere in these columns. There are real lessons in true Americanism in some of Tony's letters.

Then, think of Capt. Neil J. Damato, whom we have referred to elsewhere as the absent brother, missing in action for over 17 months in the European theater of war. How Captain Damato would have swelled with genuine pride had he, too, been present. Tony was Neil's kid brother and they were closer than most brothers. Need we say more?

And Mrs. John Damato, herself, who accepted the Medal of Honor today. We still don't think she fully comprehends the high honor conferred upon her son. The main thing in her thoughts is that Tony is dead and Neil is missing.

The rest of the family, of course, realizes the significance of today's events as do the people of Shenandoah.

We feel the story of Tony Damato should go into our town's history, never to be forgotten. It should serve as an inspiration for all other men in the service; for boys growing up into manhood. There was a man whom Shenandoah can be proud of for the rest of its days—Corp. Anthony P. Damato.

The Marine Corps, of course, is intensely proud of their fallen comrade. Let us cite part of a letter from a brother marine, one who played with Tony when they were boys. Here is what Corp. Frank R. Brutto, 532 West Penn Street, now in the Pacific area, had to say about Tony in a letter to the latter's sister, Miss Mary Damato:

"My being a marine and being in the South Pacific, I can easily understand what a courageous thing your brother had performed. I showed the clipping of the news story to some of my friends, and each time they'd answer, 'He sure was a real marine.' The boys down here know what it means for a man to do what he did. We all admire him greatly down here and want to send our sympathy to you and the family, for we know how you feel.

"There are many of us marines down here in the South Pacific, and so when something like what happened to your brother happens we all naturally stand up and take notice. It isn't every day a man sacrifices his life, as Tony did, to save a few of his buddies who might possibly get hurt.

"The marines in the South Pacific would like you to know that we admire him and recognize him as being a hero and a real marine. He shall not have died in vain."

That is a very fine tribute from a marine; is it not? We reprint it because we think it tells the story how the marines feel toward Tony Damato a great deal better than we could attempt to express it from second-hand information.

The motto of the United States Marine Corps is Semper Fidelis.

"Always faithful," that was Corp. Anthony P. Damato.

An Air Corps Officer Comments on the Coffee Proposal of a West Point for Diplomats

---

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. COFFEE. Mr. Speaker, last fall there appeared in the October 1944 issue of Coronet magazine an article by me entitled "Why Not a West Point for Diplomats?" This evoked comments from thousands of readers throughout our country and the world.

Many of these letter writers are officers and enlisted personnel of the armed services of the United States. I have been greatly encouraged and inspired by the fact that so many of our gallant fellow citizens in uniform have taken time out from the valuable work in which they are engaged, sometimes with the enemy very close at hand, and have manifested such a keen and intelligent interest in the foreign policy of the United States and the conduct and ability of our diplomats. These correspondents have a universally expressed desire for reform in our State Department.

One of the most challenging of the letters was sent me by a distinguished officer of the United States Army Air Corps. It will be noted that the author of the letter had discussed my article with his squadron commander, Col. Earl Aber, and quoted directly from the latter's comments and suggestions relative to my article. Dramatically and tragically, Colonel Aber was killed in a crash, as described in Major Monroe's communication, a few weeks ago.

Here is the letter:

JANUARY 5, 1945.

The Honorable JOHN M. COFFEE,
Representative from Washington,
Washington, D. C.

DEAR SIR: You have indicated in your article, West Point for Diplomats, that you were anxious to hear the public's reactions to your proposal. I hope that members of the forces can be included in that category, for I am convinced that there you will find the most gratifying of reactions if the men only have the time to orientate their thoughts for a reply.

In order that you may be able to correctly assess the value of this reaction, perhaps it would be well to give you, as a background, the few incidents that preceded my reading your article. I was on an air base in England, spending a very quiet evening with three of the officers with whom I came overseas in September of '42. It had been almost 6 months since my last session with them, and the champagne I had taken from Paris with me made it an even more auspicious occasion. Our discussion began with the usual things, sex, combat, acquaintances, the progress of the war, Allied policy, and finally postwar Europe and America. Someone made the inevitable statement that American foreign policy could have prevented the war in 1934 or 1935, if it had been truly representative of a well informed American public. You can imagine the trend the conversation took at this point. There were among us two engineers, a doctor, and a radio announcer, the oldest is 28 years of age. I'm sure that our comments were inconclusive, erratic, and possibly not too well founded, for all of us have had so little opportunity to observe carefully the events of the past 3 years, except those with which we've been personally concerned.

I decided to make known my plan to reenter college after my release from the Army. I explained that I was aware of the seriousness of the prospects of a married man who may perhaps be 30 or 32 years of age, discounting a long and tedious education and 6 or 7 years' technical experience to reeducate himself for a job in our Government which does not even exist at this time. My statement was received in the most surprising manner. Earl Aber (who is now the commanding officer of our old squadron) excitedly declared that he was in the process of making the same decision. Eagerly we compared our ideas and plans. Both are aware

that a law course is not adequate; nor is just the normal course in journalism nor economics nor sociology nor government nor history nor psychology. Our study of the sciences, though certainly no handicap, was not adequate. Then where were we to study for this job that certainly needs a transfusion from the young blood of America? Aber remarked "What we need is a 'West Point for Diplomats'" and opened a copy of Coronet to your article.

As soon as I began to read, I was aware that your article had acted as a sort of subconscious guide to Aber's conversation. He was so deeply infected by the germs of thought which your ideas had planted, that he in turn was infecting others—or in those already infected, he served to fan the flame of interest and decision that was already burning. This I am sure, you hoped to accomplish with your article. Yet your writing has accomplished more. It has served to restore to a great degree, the confidence which at least two thoughtful responsible persons lost in the process of cleaning up the debris left by the last soiree which our poorly prepared diplomats attended.

JAMES L. MONROE,
Major, A. C.

MARCH 6, 1945.

P. S.—As I came across this letter from day to day in my desk, my decision as to whether it should be sent has wavered from fear that you would not receive it in the tone it was meant, to self-derision for writing crank letters * * * that would probably have continued until the letter was lost had it not been that my decision was rudely crystallized by the death of Colonel Aber last night. He was killed in a crash just off the coast of England while returning from a night mission over Germany.

This seemed a fitting tribute at this confused moment, to offer his encouragement and mine in a task in which he had placed such great hopes.

J. M.

Labor Body Endorses Dumbarton Oaks Proposals

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. HAVENNER. Mr. Speaker, the San Francisco Labor Council, which is composed of official representatives of all of the labor unions affiliated with the American Federation of Labor in the city which I have the honor to represent, has gone on record as endorsing the Dumbarton Oaks proposals by the adoption of the following resolutions:

Whereas last summer and autumn at an old mansion named Dumbarton Oaks, representatives of Great Britain, China and the Soviet Union met with our United States representative, Edward Stettinius, and his aides and worked out draft plans for a world security organization; and

Whereas these plans, known as the Dumbarton Oaks proposals, were given a searching examination at the Crimea meeting of the Big Three and all problems concerning these proposals were worked out to the satisfaction of all concerned; and

Whereas at the Crimea Conference a United Nations meeting was called, starting April 25, 1945, at San Francisco, to work out final agreement on the Dumbarton Oaks proposals, namely, the establishment of a world organization to maintain the future peace and security of the world, in short to prevent another world conflict; and

Whereas in actuality what the United Nations Conference means is that wartime unity of the democratic countries of the world will be carried over into a permanent world organization, set up for the purpose which all suffering humanity desires at this time, that peace must and will be kept; and

Whereas once the Dumbarton Oaks proposals are given the finishing touches by all the delegates at the United Nations Conference, then the next step is the ratification of the proposals by each member nation, opening the greatest fight of all for Americans, guaranteeing that the Dumbarton Oaks proposals will be ratified by the United States Senate; and

Whereas it is the duty of all peoples everywhere to guarantee the acceptance of the Dumbarton Oaks proposals, essential to maintaining the future peace of the world, and certainly all know that the sufferings of the peoples in this war have been on a greater scale than ever before in history, and that if there is another war certainly the suffering will be on a greater scale: Now therefore be it

Resolved, That the San Francisco Labor Council assembled this 6th day of April 1945, does hereby go on record endorsing the Dumbarton Oaks proposals, recognizing that their ratification by the United Nations is necessary for the future peace and security of the world, and that we call upon the United States Senate to ratify the Dumbarton Oaks proposals; and be it further

Resolved, That copies of this resolution be sent to all affiliated locals of the San Francisco Labor Council, asking that they concur and so notify their Senators and, in the name of the council, to our two California Senators, the President of the United States, and our two San Francisco Congressmen, and to the press.

Across the Sunset Hills

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of April 15, 1945:

ACROSS THE SUNSET HILLS

It is March 4, 1933, and high noon in Washington.

On the streets around the Capitol, streets wet with the downpour of the previous night, hundreds of thousands stand.

Their faces are buried in the collars of their coats, upturned against the drizzle, and their mood is reflected in the overcast skies.

This is a moment grave with trepidation, shaken with uncertainty, dark with prospects and fraught with fear.

We have touched the depths of depression. The factory gates are locked. Farmers sow haphazardly. The banks are closing. This is the bottom.

The day, in ordinary times a gala one, is no holiday. The loudspeakers shout, the bands play, there are sporadic outbursts of cheers for dignitaries. But the hearts of those waiting belie the gladness.

Herbert Hoover, outgoing President, takes his place on the platform to one side of the dais. The burden on him has been heavy. His head bows slightly. His wife clasps his arm.

Mrs. Sarah Roosevelt, a rare mother privileged to see her son President, arrives, her white hair marking her, and by her side Mrs. Eleanor Roosevelt, tall and striking in a powder-blue suit.

A seemingly endless silence and then he comes, down the ramp slowly, on the arm of his tall son. He is solemn, erect, and thoughtful.

In a minute it is over, so simple and so quick the actual swearing in, a mere repetition of the oath after Chief Justice Hughes. The voice is clear and strong, "I, Franklin Delano Roosevelt——"

In what seems like an instant, he turns and with two hands grasps the rostra, looks out over the throng to the distant hills, and the new President of the United States speaks.

The first sentence is like an electric shock. It is firm and resolute. There is no hesitation. Confidence is in the tone.

America, that a moment before stood at the crossroads, in a manner stagnant and sterile, in a way cautious and waiting, marches again along a new road to a new destiny, as a new era for an old nation begins.

The Commander in Chief has taken charge. There is no question about that. People forget the rain and listen, listen carefully and hopefully, catching not only the words but the meaning, seeking a sign of hope.

"For the trust reposed in me I will return the courage and devotion that befit the time."

"We face the arduous days that lie before us in the warm courage of national unity."

"In the field of world policy, I would dedicate this Nation to the policy of the good neighbor."

"We do not distrust the future of essential democracy."

Then came the climactic thing, the single, ringing sentence that summed it up, that gave the new outlook and faced the future, and that will endure to guide and guard us down the long years ahead.

The thunder of the cheers that greeted it rolled out across the Potomac, across the Nation, and around the world. America, created and sustained in darker hours by those who knew no fear—the Pilgrim, Washington, Lincoln, Wilson—caught the implication. The long, uphill struggle began.

In other days adown the years, it will come back to us. Across the sunset hills that guard the approaches of the Great Beyond, the voice will ring again to lift the heart if skies are overcast:

"The only thing we have to fear is fear itself."

The Forty-fifth Chair

EXTENSION OF REMARKS
OF
HON. JOSEPH F. RYTER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. RYTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the New York Times:

THE FORTY-FIFTH CHAIR

There will be 45 chairs at the San Francisco Conference. One chair will be vacant

unless it is filled by virtue of decisions that must be made within the next few days. It is the chair reserved for Poland, first victim of Nazi tyranny in the present war.

Tass, official news agency of the Russian Government, reiterated yesterday its insistence that this chair must be filled by a representative of the Soviet-sponsored Polish Government at Lublin. We hope it will be found that Tass, despite its official status, was not speaking with the full authority of the Russian Government, just as it was found a few days ago that the celebrated journalist, Ilya Ehrenburg, was not speaking with full authority.

This matter was discussed thoroughly at Yalta. It was agreed then by President Roosevelt and Mr. Churchill that the Russians were to have the frontier in eastern Poland, approximately along the Curzon Line, which they thought essential to their safety. But it was also agreed, as a direct corollary of this decision and as an integral part of the same three-power understanding, that the Lublin Government "should be reorganized on a broader democratic basis, with the inclusion of democratic leaders from Poland itself and from Poles abroad." This has not been done.

Tass now expresses the hope that at the last moment the United States and British Governments will change their minds and invite Lublin to represent Poland at San Francisco. But this is to express the hope that at the last moment the Yalta agreement will be broken. Surely there are much better reasons for hoping that it will be observed.

We believe that it lies within the power of Marshal Stalin to see that it is observed. We are certain that if he does see that it is observed, in time for Poland to be represented at San Francisco by that broader democratic government which was pledged at Yalta, his action will pay rich dividends in American good-will and in the general confidence with which the San Francisco Conference begins its work.

For Whom the Bells Toll

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a touching and effective editorial to our late beloved President, Franklin D. Roosevelt, appearing in the April 13, 1945, issue of the Bulldozer, a fine paper published by the men of the United States Navy stationed at the United States Naval Construction Training Center, Camp Endicott, Davisville, R. I.:

FOR WHOM THE BELLS TOLL

"And therefore never send to know for whom the bell tolls; it tolls for thee."

John Donne wrote these words long ago. In recent years Ernest Hemingway chose some of them to title his eloquent plea against fascism. Today—April 13, 1945—they take on a new meaning. Today the people of America are not asking for whom the bell tolls. They know too well. They know it tolls for all of us; for every serviceman and every civilian, for every man, woman, and child in this country and in the other United Nations.

Yesterday we lost our President. Franklin Delano Roosevelt left us—his task unfinished.

Today it is up to us, the living, to finish that task as he would have done.

We owe our President much. We can attempt to repay that debt by fighting for the things he fought for; by believing in what he believed; by righting the wrongs he wished righted.

The German and Japanese Fascists won a great victory yesterday—their first in months. We were the losers. Let us not try to minimize that loss; let us try rather to fight that much harder for the country our President loved.

Our Commander in Chief is dead, but the bell tolls for us.

Flags for Memorial Day

EXTENSION OF REMARKS

OF

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. CORBETT. Mr. Speaker, it is a lamentable fact that Memorial Day will find us with insufficient flags to properly decorate the graves of our hero dead. It is also a shame that patriotic citizens will be unable to secure new flags to display on that day. It is now too late to adequately correct the situation prior to May 30, but I hope that the existing situation will be remedied without further delay.

The following authoritative letter should be read by the Members of Congress and the War Production Board:

AMERICAN FLAG DAY ASSOCIATION,
Pittsburgh, Pa., April 16, 1945.

Hon. ROBERT J. CORBETT,
Congressman from Pennsylvania,
Washington, D. C.

DEAR CONGRESSMAN: There has been brought to my attention as an officer of this organization and by an article from our local papers, a situation I think should have attention, and I would even suggest an investigation be made to determine who is responsible for the condition existing. The matter referred to is the fact that there will not be sufficient flags this year to place on the graves of our soldier dead. To me this is a very sad and serious condition. I understand this has not happened in the 77 years since Commander in Chief John A. Logan, of the G. A. R., issued General Order No. 11, May 5, 1868, which reads in part: "Let us then, at the time appointed, gather around their sacred remains, and garland the passionless mounds above them with the choicest flowers of springtime; let us raise above them the dear old flag they saved from dishonor; let us in the solemn presence renew our pledge to aid and assist those whom they have left among us, as a sacred charge, upon a Nation's gratitude—the soldier's and sailor's widow and orphan." Truly the only national debt that can never be repaid is to those who have given and those who shall yet be called upon to give the last full measure of devotion, their lives, that our way of life might be preserved. Let us not forget or neglect them. Let there be flags on their graves ever hereafter.

I feel the trust committed to us who remain, and whose obligation to render this tribute has been violated by someone and without any legitimate reason. These particular flags are made of cotton material, and there seems to be plenty of articles made of cotton for sale on the market, but regardless of this, the manufacturing of these flags should not have been restricted by Government regulation. I understand other flags of larger sizes will not be available to civilians; again, I think this is all wrong.

On investigation I find flag manufacturers have endeavored to get favorable action and permission from the War Production Board to procure material and manufacture flags, but without success. People generally are not aware of this condition, and it is going to come as a keen and heartbreaking shock when on Memorial Day this is discovered. What is going to be the effect when the loved ones of our soldier dead and particularly our boys who at this very time are fighting on the far-flung battlefields of the world and heroically dying to place our beloved flag on the objective they have been commanded to take and are taking, as we so well know.

Recently a photograph was taken of six soldiers placing Old Glory on Iwo Jima's Mount Suribachi. This picture, I understand, will possibly prove to be one of the most famous pictures of this war, will be featured in the Seventh War Loan drive, and used on our postage stamps; I concur with both of these ideas, but how can they consistently do this with the condition I write about existing. There is another flag picture so dear to us all that will be missing, that is the plot of the G. A. R. dead, in our cemeteries with the flag waving over that grave where they sleep; of course, the springtime flowers will be there, for an unchanging God in his infinite goodness provides them at the appointed time.

Congressman, I feel you would be doing a real service if you will bring this failure to the attention of Congress, with the view of having it corrected. However, I think it is too late to manufacture and distribute these flags before Memorial Day. I understand our county commissioners and our county American Legion post have protested with Washington, but without results.

Perhaps the persons responsible will try to justify this shortage of flags, but it will have to be a very good reason before the relatives of soldiers dead and living accept it.

Cordially yours,

A. G. TRIMBLE,
Vice President.

Honors Paid Nazis at Como Camp Mocked the Murdered Americans

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following timely and constructive editorial from the Clarion-Ledger, one of the leading daily papers of Mississippi, in the issue of April 13, 1945, as follows:

HONORS PAID NAZIS AT COMO CAMP MOCKED THE MURDERED AMERICANS

Many Clarion-Ledger readers, we know, were impressed and shocked, and many probably were moved to anger, resentment, and disgust, by the grim contrast between two stories printed in the same column on the front pages of our Monday's issue, these stories dealing with the treatment of war prisoners in this country and in Germany.

One story reported in detail the burial of a German major general in the cemetery of the prisoner of war camp up at Como. It described the full military honors rendered the dead enemy officier who had died of a brain ailment in a Memphis Army hospital

despite every aid modern medicine and surgery could give him.

The story described the honors rendered him by other Nazi prisoners of war with the cooperation of the camp officials and guards, and the honors paid him by the United States Army. The body "lay in state" with alternate squads of German officers serving as guards of honor. It rested in a Swastika-draped casket. It passed between lines of German prisoners who rendered the Nazi salute. All the military honors were rendered the dead prisoner—ruffles of muffled drums, a muted 16-piece band led by a Nazi in uniform, floral sprays, with prisoners permitted to march unguarded to the cemetery a mile from the camp. And a United States Army squad fired the volley of honor over the open grave!

The second story, sent by a reporter with the United States Third Army in Germany, described the horrors of a concentration camp at Ohrdruf, described the bodies of Americans and others murdered by the Nazis, the stripped and skeletonized bodies lying unburied, "naked and horribly bruised * * * sprinkled with quicklime * * * many of the skulls having been crushed * * *" the bodies of Americans who had been captured in battle and "who did not die of malnutrition but were beaten to death with clubs."

This was the black contrast between the stories—the German officer dying of a brain ailment despite the best possible medical and surgical care, the American prisoners in Germany dying of skulls crushed by Nazi murderers; the German officer buried with all military honors by his fellow prisoners and by the United States Army; the American prisoners not even given decent and Christian burial but piled in naked rows with quicklime thrown on them.

This was the contrast that angered and sickened many Clarion-Ledger readers, and the pictures on page 7 of the same issue, pictures revealing the living skeletons of American soldiers who had survived 3 months in German prison camps, added to that anger.

Anger, resentment, and demands for vengeance were the natural reactions of American readers, and we shared them.

To honor a captured or fallen foe who had fought gallantly is an American tradition, and our people would not change that tradition, but the Nazis, by their barbarous treatment of American prisoners, have forfeited all right and claim to such consideration, to such honors, and respect for their men, their flag, and their uniform. That's why this story of the pomp and ceremony attendant to the burial of this Nazi general in a Mississippi prisoner-of-war camp angered most of those who read it, especially parents and wives of soldiers overseas.

To live up to the letter and spirit of the Geneva agreements governing the treatment of prisoners also is an American tradition, and we would not change that, either, but the Nazis, by repeated and flagrant and wholly unnecessary violations of these agreements, have forfeited any right or claim to any excess of kindness or consideration over the minimum requirements of humane treatment.

We, and we think we speak for the average Mississippian, for the average American, in this respect, do not demand vengeance upon the individual Nazi prisoners in this country. We do not demand that they be starved, beat, tortured, mutilated, and killed to revenge the starvation, murder, and torture of American prisoners in Nazi hands. But we do demand that all pampering of Nazi prisoners be abandoned, and that spectacles such as that reported at Como not be repeated.

It is folly for Army officers in charge of prisoner camps to tolerate such encouragement of or pandering to Nazi "morale" by permitting the Nazi salute, by encouraging Nazi officers to command the respect and obedience of Nazi enlisted men in the prison camps in this country, by tolerating Nazi programs and meetings in the camps, by paying respects and honors to the Nazi flag and the Nazi uniform.

It is foolish, needless, and unfair to the American people, in any exaggerated observance of the Geneva agreement, to give to all Nazi prisoners the identical food that the American soldier gets under the best conditions, to feed them in almost unlimited quantities, to allow them regularly bacon and butter and other articles of food so scarce and high that most of our people often cannot get them and many of our people cannot afford them.

The American people do not demand vengeance upon Nazi prisoners in this country for crimes committed against American prisoners in Germany. But they demand an end to all pampering of such prisoners, that they be treated humanely but firmly, that they be fed an adequate diet, but nothing more, and that they be disciplined and worked not unmercifully but rigorously.

And the American people demand, in the name of the murdered American dead, in the name of the starved and tortured American prisoners, and in the name of their loved ones, that every Nazi official, officer, or private who can be identified as having any connection with these crimes against American soldiers be given summary trial and then be hanged or shot with short shrift.

Telegrams of Polish-American Congress of Chicago

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two telegrams sent respectively to Mrs. Eleanor Roosevelt and President Harry S. Truman by the Polish-American Congress of Chicago, Ill.:

MRS. ELEANOR ROOSEVELT AND FAMILY,
White House, Washington, D. C.:

Deeply and profoundly moved by news of the death of the President, a loss the more tragic because it occurs when so momentous and vital issues are at stake involving the future welfare of men, we of the Polish American Congress bow before the omniscient and inscrutable way of Divine Providence in a sense of tragic bereavement. May we extend to you, Esteemed Madam, our sincere and wholehearted sympathy in your deep and great sorrow, shared in by the Nation and the entire world.

POLISH AMERICAN CONGRESS,
CHARLES ROZMAREK, *President.*

HARRY S. TRUMAN,
President of the United States of North America,
Washington, D. C.:

The Polish American Congress desires to extend to you, Mr. President, its felicitations and sincere wishes on this so momentous to you and the Nation occasion. We desire to assure you on behalf of our membership of our sincere solidarity and support in all efforts for the preservation of the welfare of this Nation, of assuring the benefits of liberty to all freedom-loving nations, particularly to those like Poland who suffered so much to attain and preserve it for herself and for others, and in the establishment and preservation of a just and enduring peace for the entire world. May Divine Providence guide your efforts.

POLISH AMERICAN CONGRESS,
CHARLES ROZMAREK, *President.*

Franklin D. Roosevelt

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. IZAC. Mr. Speaker, my constituents have often heard me say that, in my opinion, the greatest man, in the true sense of greatness, who has ever directed the destinies of our country is Franklin Roosevelt. My period of observation has been a long one, for I have known him 28 years. He was my friend from the day we together watched the first Armistice Day parade from a balcony of the old State, War, and Navy Building across the street from the White House.

However, my loyalty to him was not entirely due to that friendship but even more because I was convinced that in his every move he was striving to better the lot of his fellow man. His accomplishments in our behalf speak for themselves and they prove that divine providence not only equipped him with vision seldom granted to mortal men, but approved his efforts and guaranteed their success.

Now he is gone. Some work remains unfinished. But what he leaves undone can only be a challenge to the rest of us to achieve the highest degree of accomplishment of those things in which he deeply believed. I for one accept that challenge and I pledge unremitting efforts to that end. May his soul rest in peace.

First Two Legislative Steps in Seventy-ninth Congress Conferring Reclamation Benefits on Veterans

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. MURDOCK. Mr. Speaker, two measures originating in the House Committee on Irrigation and Reclamation enlarging and establishing the policy of giving preference to veterans on newly irrigated lands are now in process of enactment. I refer to H. R. 2742 and H. R. 520 which are the first two bills carrying reclamation benefits for service men and women which may be shortly placed upon the statute books. There will be other items of legislation to be

called up presently of which these are the forerunners.

Yesterday Congressman GEORGE MILLER of California and I, together, placed in the RECORD the opening statements of the hearings on H. R. 520 held by our committee on April 12, these three statements being a communication from President Franklin D. Roosevelt—perhaps his last official statement to Congress—a statement by the Secretary of the Interior covering the general program and a statement by the Commissioner of Reclamation elaborating on the possibilities somewhat more in detail. It should be understood that the bill upon which hearings are now being held is a general bill affecting all future irrigation projects for the benefit of veterans.

I am glad to say that on April 17 the House passed H. R. 2742, which the Committee on Irrigation and Reclamation had reported out on March 27, which amends section 9 of the Boulder Canyon Project Act so as to give preference to veterans of this war in the same way as had been given to veterans of earlier wars. The nature of benefit to veterans in H. R. 2742 just enacted by the House on April 17 is the same as that in H. R. 520, except that H. R. 2742 applies only to projects on both sides of the river in the lower Colorado River Basin.

It must not be supposed that the new lands covered by the preference in H. R. 2742 are of little consequence, for my estimate is that no less than 1,000,000 acres of good land will be reclaimed on both sides of the lower Colorado River in Arizona and California in the best agricultural section of our Southwest. Land hungry veterans who can qualify as entrymen on these projects will be interested to follow the enactment of this legislation and the administration of it by the Bureau of Reclamation. Of course, these benefits also depend upon appropriations made to enable the Bureau to prepare the land properly for the entrymen.

Lincoln Filene

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an article written by Louis M. Lyons and appearing in the Boston Globe of April 5, 1945, on Lincoln Filene, of Boston, an outstanding American and philanthropist, whose visionary progressive mind has always been and is today, years ahead of his time. A close and valued friend of our late beloved President, Lincoln Filene's whole life has been constructive—a builder of real human values—in his eightieth year, but mentally young, he is still thinking and planning for a better future for mankind.

AT FOURSCORE A DISTINGUISHED BOSTONIAN LOOKS AHEAD

(By Louis M. Lyons)

Before the big eightieth birthday party for him at the Harvard Club last night, Lincoln Filene yielded to what he called the first interview of his life. "A flabbergasting experience," he called it. "Don't generalize," he admonished at the first question about the future of Boston. Talking was never his long suit.

As to Boston, he finds enough talking but not enough action. But he applauded the activity for development of the Port of Boston. "A direct outcome of thinking in terms of the future of the city," he called it.

Associates in the Filene store laughed when asked if he was still active in the business. "The day of the big blizzard when the stores didn't open, he was the first executive to get in," one said. That same week he made a business trip to New York. When his return train arrived 2 hours late, after midnight, he found no taxi at Back Bay and walked the mile and a half to his home with a suitcase, stopping in a snowbank to put on his rubbers.

While his associates were preparing for his birthday dinner, he was planning a management meeting of the store, starting according to his habit with a roomful of charts "to show what we think our problem is."

"The question he asks me most often," says one of the store executives, "is 'If we do that, where will we be 15 years from now?'"

Research, cooperation, and association have been cardinal principals of Mr. Filene's business life. Always a student, he was prevented from going to college by reverses his father suffered when Lincoln Filene was in school in Boston. But he holds an honorary degree from Dartmouth College, was elected an honorary member of Phi Beta Kappa, national college honorary scholarship society, and he served for almost 25 years on the Massachusetts Advisory Board of Education. Keenly interested in the Harvard graduate school of business administration from its start, he has always taken seriously his duties on the visiting committee.

The human side of business he has always rated of equal importance with production and distribution. "Personnel relations is a job that is never over," he says. "There's something new coming up all the time, just as there is in a family. It has got to be as continuous as production. Our large industries are becoming more responsible about personnel relationship. It will be a very hopeful sign if management and labor can get together. Neither labor nor employers can be catered to. They must be dealt with."

"Of course, there are difficult problems coming up," he says. Asked to name them, he answers, "I don't know. We've got to study and find out."

One of the activities in which he takes greatest satisfaction is his personal organization of leading merchants of the country 28 years ago, at a time when business was traditionally secretive, into the Retail Research Association for exchange of information. From this came the Associated Merchandize Corporation for cooperative buying, which grew from a $25,000 budget to one of $2,000,000 a year. He was president of the Retail Research Association for 26 years until 1943. One of his treasures is a cabinet filled with gavels presented to him by his colleagues in this organization.

"You can do constructive things in a group if everybody trusts one another," he says of this experience. "If there are suspicions you don't get group action."

Always a buoyant, genial personality, with a zest for hunting and fishing, Lincoln Filene's method in bringing his fellow merchants into close association was to follow his life-long precept that people need to play together to understand each other. He has always adjourned the R. R. A. annual meeting at noon and organized for the afternoon on the golf course or in some other recreation.

Mr. Filene is bullish on the prospects for Boston and New England. "There is a distinct advance now," he says, "from the period when the cotton and shoe industry were slipping away from here.

"We have learned our lesson," he says, "New England's only role is for quality and style. We never should have produced gray goods in our textile mills. That was only good for the South. Style leadership is our chance. We have the finest workers in the country. We can absorb all the tendency of big business to decentralize and establish small plants for making parts. Textiles can pay good wages by making style goods. New England is no place for cheap quality.

"Here we have designers and education in design. We have all the potentialities for anything we need for leadership. Boston is the center of the skirt industry, and of the leather industry and in men's clothing. How little we capitalize on the fact that we are the center of these important industries. We wouldn't have the skirt and raincoat industry here if we didn't have fine designers. Raincoats have to have style nowadays. We are the center of style footwear. It is designed here. People don't realize what's going on around here. They don't realize the influence Boston has on the clothing industry. Up in Lawrence the Pacific Mills are doing a great job now. And our underwear people are putting style into their product. That style show in underwear we had here awhile ago that they headlined 'From red flannels to black nighties' shows that our old-line textiles have changed their ideas."

Mr. Filene sat at a desk equipped with all the modern tools for work. But the work itself was out of sight. The desk was cleared. A picture of Lincoln hangs over his desk and under it a mask of the late Justice Brandeis. Photographs of his present and former store associates hang on the walls opposite his desk, among them his late brother, Edward, long his partner in William Filene's Sons Co., and the late Louis Kirstein, for many years president of the company. Lincoln Filene was the quiet partner. He has seldom been in the papers. But his associates say that he sees every employee who has an important anniversary and personally writes letters to employees who have serious illness in their families.

A table close to the desk is covered with framed photographs of his family, in groups and singly. They are his two daughters, Mrs. Jouette Shouse, of Washington, and Mrs. George E. Ladd, Jr., of Providence; a granddaughter, Mrs. Daniel Robertson, of Washington, wife of a naval lieutenant, and her two small children, David and John (his great-grandchildren); and four grandsons, William Shouse, a marine; George E. Ladd 2d, on a submarine in the Pacific; Lincoln Filene Ladd, in the Navy; and Robert M. Ladd, a student at Middlesex School.

Exports of Farm Machinery

EXTENSION OF REMARKS

OF

HON. MALCOLM C. TARVER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. TARVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

FOREIGN ECONOMIC ADMINISTRATION,
Washington, D. C., April 17, 1945.
Hon. MALCOLM C. TARVER,
Chairman, Subcommittee of Committee on Appropriations, House of Representatives, Washington, D. C.

DEAR JUDGE TARVER: On March 21 you introduced into the CONGRESSIONAL RECORD as part of your remarks a letter written by Mr. H. W. Parisius, Director of the Office of Food Programs of this Administration, subsequent to his appearance before the subcommittee of the Committee on Appropriations considering the Department of Agriculture appropriation bill. The purpose of Mr. Parisius' letter was to supplement his testimony before the subcommittee so that you might have in your possession more up-to-date figures than we could, under the regulations adopted in the interest of military security, furnish you as a matter of public record. Since Mr. Parisius' letter was of this character it did not purport to tell the entire story of the importance of our exports of farm machinery to the winning of the war. I am, therefore, taking the liberty of writing you this letter in which it is my intention to summarize some of the more important information orally presented by Mr. Parisius, in the hope that you will see fit to introduce it into the CONGRESSIONAL RECORD.

Our exports of farm machinery may be divided into three categories—lend-lease exports, commercial exports controlled by the Foreign Economic Administration under the export control law, and exports to Canada controlled by the War Production Board under its powers to allocate our productive resources. While these three types of export differ with respect to financing and techniques of control, their purpose in our joint war effort are identical. The export of farm machinery represents a specialized application of the principle of pooling United Nations resources, both of manpower and of machinery, which has played such an important part in speeding the day of final victory.

In this common war effort the provision of food and other agricultural products for our allies has been an important aspect of wartime strategy. The soldiers of the United Kingdom, Canada, Australia, New Zealand, other parts of the British Empire, France, Belgium, Brazil, and many other of the United Nations have fought side by side with our own fighting men. The valor in the field of battle of our Russian and Chinese allies is known to all. It was an obvious necessity of our strategy that our fighting allies be supplied with all the food and fiber and other products of the soil which they needed in order to fight along with us. Similar necessities dictated the provision of food for the war workers of our allies both in the factory and in the field. To some of the United Nations has fallen the task of fighting with us on land, on sea, and in the air at the same time that they were making important contributions to war production both in factory and in the field. In the case of others the most intelligent use of their resources of soil, climate, manpower, and other instruments of production required that they should primarily be called upon to supply needed raw materials from field and mine for use in the common war effort.

Vast as is our agricultural production in this country, we did not and could not have assumed the task of feeding all these soldiers and war workers of our allies. We could not produce enough for that. Many of the products which they needed could not be produced under our soil and climatic conditions. All of the United Nations had to adopt extensive agricultural production programs to supply the major portion of the food needs of their armed forces and workers—a burden which all of our allies have borne. Many of them were called upon to increase their agricultural production so that they could make exports of food, fiber, and other agricultural products available both to us and our allies.

If agricultural production was to be maintained abroad, our allies required agricultural machinery. Many of them had largely depended upon us for agricultural machinery prior to the war. Some of them, notably United Kingdom and Canada, are themselves important producers of agricultural machinery but required additional farm machinery which we alone could make available respite the fact that British production of farm machinery was increased during the the war and Canadian production has been maintained at high levels. Since all other sources for the export of farm machinery were unavailable to the United Nations, it became necessary for the United States and Canada to assume the full burden of the provision of farm machinery to the United Nations in the interest of the production of food and other agricultural products which were necessary to the winning of the war. In this connection, it is worthy of note that Canadian exports of farm machinery to the United States in 1944 were about equivalent to one-third of United States' exports to Canada in the same year.

Lend-lease farm machinery has enabled such areas as the United Kingdom, Australia, and New Zealand to increase their food production sharply during the war, in part, to meet the needs of the large numbers of the United States' and other United Nations' forces in the war theaters in which those areas are situated. For example, lend-leasing of farm machinery has aided the British in increasing their farm production by 70 percent. The food received as reverse lend-lease for our own armed forces from Australia and New Zealand up to October 1, 1944, is equivalent to 16 times the value of the farm implements supplied these two countries under lend-lease. In fact, Australia and New Zealand now provide under reverse lend-lease virtually all of the food consumed by the United States' forces in the South Pacific and a substantial portion of the food in the entire Pacific. This has enabled our forces to be supplied with an abundance of foods, such as meat and dairy products, which could not otherwise be provided because of the extreme shortage of refrigerated vessels.

Of equal importance is the saving in shipping space which results from the export of farm machinery. Approximately eight times more shipping would be required to ship a given amount of food abroad than is required to ship the agricultural equipment which can produce that amount of food within a single year.

The commercial export of farm machinery has been under very careful control. The War Production Board allocates a relatively small amount of steel for farm machinery for export. These allocations have consistently resulted in a large reduction in the production of farm machinery for export. In addition, the manufacture of spare parts for export has been restricted while, as you no doubt know, the manufacture of spare parts for domestic use has been permitted to proceed without restriction.

To supplement the control thus exercised by the War Production Board, this Administration has utilized its licensing power under the export-control law so as to restrict the export of farm machinery and spare parts. While recognition has thus been accorded to the importance of minimizing exports of farm machinery in view of the pressing needs of American agriculture, it has also been felt important to permit the exportation of a limited quantity of farm machinery so that these countries can contribute most effectively to the war program.

As for these commercial exports, I am sure you will agree that it has been necessary to endeavor to supply at least the minimum requirements to enable production of food for war and for wartime public health and safety of friendly and Allied countries, both in war theaters and in this hemisphere. Many Latin-American countries are fighting allies. Brazil has sent an expeditionary force to Italy and has taken over a large part of the antisubmarine patrol in the South Atlantic, as Mexico and other Central American republics have done in the Caribbean. In addition, many of these countries have made important contributions to the war effort by supplying us with agricultural and other commodities which we do not produce or which we do not produce in sufficient quantities for our needs. Among the agricultural commodities which we are now obtaining from Latin America for United Nations' purposes are cinchona from Guatemala, Costa Rica, Peru, and Ecuador; hard fibers from Guatemala, Honduras, Nicaragua, Costa Rica, Haiti, and Mexico; pyrethrum from Brazil; rotenone from Peru, Ecuador, Colombia, and Venezuela; loofa sponges from Cuba and Mexico; beans, peas, and lentils from Chile; rice and fats and oils from Brazil; fats and oils from Uruguay; sugar and molasses from Cuba, Haiti, and the Dominican Republic; and alcohol from Mexico and Cuba.

While, as Mr. Parisius indicated, exports to Canada have not been under license control under the export control law, this has been because of the fact that the two nations have been able to reach an across-the-boards agreement as to the pooling of productive resources for the war effort. Canada has been an important supplier of agricultural products to the United Nations, mostly to the United Kingdom and to the newly liberated peoples of Europe. But it has also supplied this country with significant imports of farm products. For example, last year when this country's feed supply was extremely precarious, we were able to import large quantities of wheat for feed in order to supplement our domestic supply. Canada has restricted in the same degree as we have the manufacture of beverage alcohol and has thus been enabled to export to us large quantities of industrial alcohol which we have so badly needed for war purposes. We have also imported from Canada large quantities of flaxseed both for feed and for oil.

While the export of farm machinery has been of this great importance in winning the war, exports of farm machinery during this wartime period have been of a very limited character. Out of a total scheduled production of farm machinery during the fiscal year 1944–45, of 2,183,000 short tons, 2,020,170 are scheduled to remain in the United States. Eighty-three thousand one hundred and sixty-six short tons are scheduled for export to Canada and 79,664 short tons are scheduled for export to all other countries to which the F. E. A. has responsibility under the Lend-Lease Act and under the export control law. In other words, only about 4 percent of our production will go to Canada and about 3½ percent to all other importing countries, leaving about 92½ percent which will remain at home to assist our farmers in making their important contribution to the war effort.

We of the Foreign Economic Administration are aware of the difficult situation which American farmers face in meeting their requirements for farm machinery. For this reason, we have done everything in our power to keep exports of farm machinery down to the absolute minimum consistent with the requirements of our allies. I am sure that you will agree that the minimum farm machinery program I have described is essential for the winning of the war.

Should the need arise for any further information on the subject, please do not hesitate to call on us.

Sincerely yours,

LEO T. CROWLEY,
Administrator.

Roosevelt Memorial

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. MICHENER. Mr. Speaker, at the memorial services honoring our late President Roosevelt, which were held at Sienna Heights College, at Adrian, Mich., on Friday, April 13, a very appropriate eulogy was presented by Sister Thomas Marie, O. P. Pursuant to the unanimous consent granted to me by the House, I include that eulogy, which is as follows:

PAX TECUM

Stalwart warrior for peace,
Stanch friend of the oppressed,
Franklin Delano Roosevelt,
In every land thy memory blessed.

America hails thee, reveres thee,
America, land of liberty.
Thirteen stars that set her free
Now wave for world-wide amity.

America, pledged throughout all time
To feel the beat and hear the rhyme,
In Freedom's call over land or sea,
Freedoms Four her destiny.

O nations purged in Victory's blood
For fellowship on earth—above
Discordant sound of want and fear,
Hark, hearken to thy brother's ear.

For we hold highest pledge to be
That all men their God may see,
And praise and bless, hold loved ones safe,
And with our dead—keep faith.

On every heart Four Freedoms pressed
In every land thy memory blessed.

Later Than We Think

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the March 31 issue of the magazine America:

LATER THAN WE THINK

As the date of the San Francisco Conference draws nearer, there is a growing realization of the urgent need for a mobilizing of the moral forces of the Nation, if the United States is to play a part worthy of its Christian, democratic tradition.

Father Edward Conway, S. J., in his nationally syndicated column for February 23, warned his readers of the urgency of the present situation:

"Sixty days may determine the history of the world for the next 60 years. * * *

"I wish—oh, how I wish—that these words were hands so they could reach out from this paper you are reading—reach out to grab the American public by the shoulders—to shake that public vigorously—to say: 'Wake up! For America's sake, if not for the world's sake, wake up! You have 60 days.' "

About a year and a half ago a wonderful opportunity for this moral mobilization presented itself in the statement known as the Seven-Point Pattern for Peace, sponsored by about a hundred and forty Catholic, Jewish, and Protestant religious leaders. For the Catholics, 24 archbishops and bishops and a large number of priests signed the Pattern, as well as many laymen prominent in Catholic life. It seemed just the opportunity that Catholics and religious-minded non-Catholics had been praying for.

The results, while good, have so far failed to come up to the high expectations of the signers and promoters of the Pattern. The Pattern, which should have become a household word and a rallying cry among all who seek a just and moral peace, seems unknown to far too many.

There have been notable efforts to publicize it—in Syracuse, N. Y., Gary, Ind., Toledo, Los Angeles, Kansas City, and other places, public forums were held and the people were made conscious of the Pattern. But there was not—as there might have been—an intense national consciousness of the Pattern and a firm national demand for its adoption as the minimum basis of a just peace settlement.

In his Christianity in the Marketplace, Michael de la Bedoyere shows a possible source of our weakness:

"It would be very much easier if Christianity could, as it were, condemn the whole world root and branch, stand away from it, preach the truth and wait for men to recover their sanity. * * * It is, however, unChristian, first because it is a false method and, second, because it is stupid and impracticable. Good and evil are inextricably confused in the world * * * and the Christian fidelity to truth lays upon the world the duty of trying to trace the good, to support it, to bring it back to the right path * * * to reintegrate it into the good."

The accent, to quote Father Conway again, is on action. And in his March 9 column he suggests positive steps. The catholic who continues to depore the injustices of Yalta without taking some of these steps stands self-condemned. Here they are:

1. Write to your Congressman urging passage of House Concurrent Resolution 21. This was introduced by Representatives Michael A. Feighan of Ohio, Charles M. LaFollette of Indiana and Samuel A. Weiss of Pennsylvania, and expresses the adherence of the Congress to the moral principles of the pattern for peace and its resolve that "the implementation of these principles shall be the objective of this Nation."

2. Write to the State Department, advocating certain amendments to the Dumbarton Oaks proposals, such as: a preamble acknowledging the sovereignty of God and the moral law; guaranties of the independence of small nations; a commission on human rights, international law and non-self-governing peoples; provision for future revision of wartime settlements; effective disarmament; elimination of the "unlimited veto."

3. Write to the American delegates to the San Francisco Conference to the same effect.

4. Call for the proclamation by the President of a national day of prayer on the Sunday preceding the opening of the conference.

It is very late; but not too late. It is only a few days since our Holy Father, Pius XII, reminded us that God holds in His hand the hearts of "the men who believe they have in theirs the destinies of the world." He can produce in those hearts "thoughts and sentiments that will inspire a peace corresponding to His designs and to the hopes of men of good will."

But, adds the Pope, God expects our cooperation. No Catholic—no one who acknowledges God—dare, in this moment of the world's history, refuse it.

One Nurse's View

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. HOFFMAN. Mr. Speaker, from a nurse in Honolulu, the wife of a Navy lieutenant on active duty, came a letter stating:

I'm ashamed of Michigan. There are lots of the servicemen very indignant about all those strikes. It looks like we are almost fighting ourselves to see the boys winning the war and the people at home striking. Maybe they should see some of the returned prisoners of war. It might help.

The strikes to which the nurse refers are described in the newspaper clipping which she enclosed and which reads as follows:

FULL SHUT-DOWN OF ALL DETROIT'S WAR PLANTS THREATENS

WASHINGTON, March 2.—The War Labor Board today called a hearing for tomorrow morning in an effort to end a strike at the Chrysler-Dodge main plant in Detroit.

Chairman William H. Davis, in a telegram to management and union representatives involved, termed the walkout a violation of labor's no-strike pledge and said it constitutes a direct interference with our war effort.

DETROIT, March 2.—Vice president of the United Automobile Workers (C. I. O.), Richard T. Frankensteen, warned the National War Labor Board today that this arsenal city faces a complete war production shut-down unless the W. L. B. changes its policy of handling disciplinary changes.

The warning came as two strikes made more than 25,000 war workers jobless at the Chrysler Motor Co., and the Briggs Manufacturing Co. plants.

In both cases the strikes were in protest against the firing of workers by company officials.

Chrysler's Dodge plant strikers at a mass meeting last night announced they would not return to work until eight workers discharged for loafing were reinstated.

A Treaty or No Treaty?

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 28, 1945

Mr. MURDOCK. Mr. Speaker, some of my constituents have, during recent

months, asked me how I stood on the pending water treaty with the Republic of Mexico. I have in reply pointed out that the Senate has the constitutional function of ratifying treaties and that Members of the House have no vote on treaties. Therefore any influence a Congressman may have on treaty making is probably the personal influence which any other citizen may have.

As to my attitude and thought toward this water treaty, I have long felt that there ought to be a treaty between these two countries respecting the disposition of their international rivers. I welcome some such treaty. I was not entirely pleased with the precise terms of the proposed treaty, as I shall mention later. However, it takes two to make an agreement. A treaty which I might draft might not be acceptable to Mexico.

When I first heard of this treaty about a year ago, and saw that it guaranteed Mexico 1,500,000 acre-feet of water annually under stipulated conditions of their choosing, I did not like that provision for I thought it too generous. I knew of course that that was about twice what Mexico had been able to use out of the Colorado River before Boulder Dam was built. I also knew that there are millions of acres of good land in the United States which cannot be irrigated even if we used every drop of water in the Colorado River within our own borders, because there is not enough water in that river basin. Such being the case any water guaranteed to Mexico means just that much lost to some good and thirsty acres in the United States.

However, when I learned that in the last year 1,800,000 acre-feet of water from the Colorado River had actually been put to beneficial use within the Republic of Mexico, I was forced to modify my previous views as to the proper amount of water which might reasonably be named in such a treaty. I was further convinced of the need of a treaty when I saw the possibility that Mexico could use, beneficially, not merely 1,800,000 acre-feet, but probably twice that amount, or more, annually, and in the absence of a treaty, could establish a claim to that larger amount which we would be bound to recognize as valid. This knowledge not only enforces the need of treaty stipulation but goes far toward justifying the amount of 1,500,000 acre-feet which at first had seemed to me excessive.

Certain reservations have been talked of, and no doubt will be acted upon to make the treaty more acceptable than the bare original provisions. If we are guaranteeing Mexico annually 1,500,000 acre-feet of water—except in times of great drought—I would like to see that made a maximum limit as well as a minimum limit to which the Republic of Mexico may have legal and perpetual claim. In other words if 1,500,000 acre-feet of water is to be a "floor" it should also be considered as a "ceiling." I believe that is the understanding and no doubt will be made definite in some way.

Having mentioned two of the most pertinent criticisms of the original treaty as I see them, I wish to mention one other which seems to me to be important but not having heard anyone else at Washington speak of it, it may be considered either unimportant or not germane. This is the thought that struck me on first reading the treaty: "This treaty abrogates an important provision of the treaty of Guadalupe Hidalgo of 1848 and the Gadsden Treaty of Purchase of 1853 with Mexico without putting any compensating provision in the present proposal." This is the thing to which I refer.

Both of the afore-mentioned treaties provided for the free navigation of the Colorado River by the ships and commerce of both Nations. The proposed treaty abolishes the navigability of the Colorado River without providing any substitute provisions for international commerce between the United States and the Gulf of California. To my mind there should be an international agreement for a right-of-way for some system of transportation—be it automotive, railway, or canal—between the United States and the Gulf of California. If some such international transportation provision is not jointly agreed to in this treaty or in some supplemental treaty, both Nations will be losers, but our Nation will be the chief loser.

The Legislature of the State of Arizona and Arizona's highest officials have gone on record as approving the treaty, and I believe, in the light of all the circumstances, that undoubtedly the adoption of a treaty—perhaps this treaty with proper reservations—will be a wise solution of this international problem.

The Views of a Typical American Mother

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 18, 1945

Mr. HOFFMAN. Mr. Speaker, from a constituent came the following letters:

MARCH 22, 1945.

DEAR FRIEND: * * * Of course you know both of our boys are in the thick of the mess in the Seventh Army under General Patch. Their reports in the paper and radio tell what that means.

A has been in the worst of it, where B is in an ordnance base and not in combat. Because of A being an engineer and at the lines, we get much different letters from him than from B. A studies things out in a deeper way and therefore writes interesting letters.

We have been surprised to find some of them pass the censor, and have mentioned it to him. His reply was, "You need not worry about what I write you for everyone over here, both officers and men, feel the same way and think it is high time some of the things going on over here should reach the American people. The truth should be told so you wouldn't believe the reports that are published by the press from the commentators and politicians when they return from a so-called visit to the front lines.

Only men in uniform ever see the lines, he said. They do talk with the men who have just returned from the front and still in a dazed condition ready to tell wild stories of things that don't make sense. The things that should be told are the things that hit the hardest that caused them to forget what really went on. After that they are not responsible for what they tell or do! That is what makes the front lines a living hell and can only be described in those words. After they live through that stage one bombing is no different than the other. If it hits you, O. K. If you're taken prisoner, that's fine, too. What's the difference, for nothing counts to them any more anyway.

Thirty days at a time of such strain would make any mind break. They had 8 days rest with only C rations to eat. Then back to the lines. He said over the Christmas holiday there was two barrels of beer rolled into his tent. The beer there is just like poison. It effects the mind as much as the nerves and stomach. He was one of four who did not drink and they had to clean up the effects of what the others drank—it was awful. Then they left for the lines January 1.

I am enclosing two letters from A which talk of the news they are allowed to read. Only what they want them to read (D) papers.

The clippings are taken from the Stars and Stripes and written by the boys themselves to express their feelings in some way, hoping, I expect, it will reach someone human enough to realize what it all means and maybe do something.

In a Kazoo paper we read a piece telling Mr. HOFFMAN said the conditions would remain the same as long as the home people here took them and did nothing about them.

Knowing you as we do here and knowing your advice has been a great help and comfort to a lot of * * * people, we have been wondering what you would advise us to do and still be legal.

We are compelled to do so many things that seem impossible for a human being to stand.

* * * * *

There is no law so binding on anyone in civilian life as there is on a man in uniform. They can alter their conditions by divorce, change living quarters, even climate, most anything, pay fines, but they get out some way. Even get out of prison. All that's done is go back in. But if a man in uniform does the least little thing he is court-martialed or shot. They have been forced to take the oath when they are drafted. I am enclosing a clipping which explains reason for some of these things that bring about such treatment, and it makes me shudder when I know my boys would break just as soon as the rest under the strain they are compelled to live. A asks us if he spells his words right, if his letters made sense. He is afraid he might be breaking, I guess.

Enclosed is also a clipping on how the boys feel about rotation furloughs. The report they sent back to SHERIDAN (Democrat) of Pennsylvania on his speech to the American people.

The one on compulsory military training I had put into our paper for him and it is a clipping from that paper. It was also from the Stars and Stripes.

It is a load off their chest when they can write these pieces. Maybe they think it will reach someone who will do something to bring about a rest for them before they have to be sent to the Pacific after the Germans are wiped up.

We have to listen to the reports of the torture of our boys in the islands, where there is a bond drive on to make us more war-minded, and then expect to allow our 18-year-old boys to go to be treated the same way and must do nothing about it. It's all wrong.

A piece in last night's paper told of four Negro WAC's who were sentenced to 1 year hard labor and then a dishonorable discharge because they refused to obey an order, but

Mayor LaGuardia of New York can get by, by frankly saying he won't obey the head of the country. He will run New York City, which is his job, and F. D. R. can do the same.

I can't see how the boys in uniforms in New York can keep their hands off from him. They'd no doubt take theirs off gladly and put it on him only they have sworn to respect the Army uniform.

Our country is like a wheel. It has to have all the spokes or cogs in good shape to keep the wheel true to form. And cities like New York are the spokes or cogs. Let one break or weaken and the load is thrown on the one nearest it, and it isn't long till the wheel cracks.

Naturally other cities will hold out if he is allowed to do as he wants and not made to obey orders the same as the armed forces. They always get ordered around and then yelled at to hike. Like making them leave the streets at midnight, even if he does stay open. The boys are still human, every mother's son. If it wasn't for the mothers in America, there wouldn't be any boys to fight this war for the Big Three; just a political job and money back of it.

I feel I can speak for thousands of other mothers when I say that the mothers will have to stick together to get something done to stop the slaughter of American boys and men.

* * * * *

Mr. VANDENBERG asked for letters from the armed forces before he goes to San Francisco, and I don't think it would do any harm to let E know how some of his friends feel. We thought it would be better to send this to you; but it's for him, too. * * *

Sincerely.

The letters from the boys in the service read as follows:

MARCH 9, 1945.

DEAR MOM AND DAD: I feel good tonite. Two letters came from you. The ones that you wrote February 16 and 18 and told about getting three of my letters for a change.

I finally found A. B. He had his air compressor over where we were working on the rifle range. He, too, has been wanting to find C. D., but he didn't realize how close he came to seeing him, because when we were on the line he was in ——— with the motor pool. At that same time, E. F. was there on detached service. A. B. wasn't on line with us, but his mail was no doubt held back the same as ours was, and it all went out at the same time.

The city that E. F. is in now is off limits to all troops except those few that are stationed there. That makes things much more pleasant for them.

We didn't build roads and bridges when we were on line, we just stayed in holes and watched for things that we didn't want to see.

I have never seen the Chicago Tribune, nor any part of it since I came overseas. The only paper from the States that I do see very often is the Lorain, Ohio, paper, which is strictly a Democratic paper. Anything that I write home in my letters are strictly my own ideas unless I say that someone else said or thinks something. I have sent, and will continue to send clippings from our paper that other fellows write to let you know what they think.

Now that our opinion of war bonds is being passed around and being commented on, perhaps I had better try to explain why I feel that way. How about comparing the war with a big show. For example "Gone with the Wind."

While that movie was being planned and made, it started getting publicity as an outstanding picture. The war was the same way. We knew that it was coming way back 10 years ago and we knew that it would be a bad one. When the picture was finally released, tickets were bought weeks in advance before its grand opening in various cities. In this other big show the same thing was done, only they were called defense bonds, because it sounds better. Everyone knew what it meant though. Just tickets to a big fight, and as in boxing, the promoters, managers, and such get all the profit, while the fighter gets a black eye and a life after retirement in poverty.

After the movie was open to the public it was publicized still more and prices for tickets was raised and more tickets were purchased. When we the people were told that there was something in it for us, the purchase of War bonds also went up. After all, what do we little people know of the big time affairs except what someone tells us.

When the movie box office receipts slackened a bit, the movie moved to new areas and later back to the old area in a different theater for those who missed it the first time, and still wanted to see it. Similarly new bond drives were made at varied and strategic parts or points of the war. All this time each of them held the interest of the public, but it couldn't be held for ever. To overcome this for the time being, last minute corrections were made in the movie. It was cut in length and prices were lowered. Then it was brought back to the screen for a last chance to see Gone With the Wind. It went over big and broke all records. The war was no different, it, too, got tiresome and seemed about over so the brains got together and proposed a one last victory drive. No direct statements, but many implied that the war would last as little as 6 weeks. That was last summer, but now after the big drive, which went way over the top, it seems that this show, too, will run a little longer. Roosevelt and Churchill each made statements this winter that the war would last from 18 to 24 months longer. What can we do but believe them. We over here must obey orders. We can hope that this show like the other one, will gradually fade away and also soon be gone with the wind.

As far as having anyone shot for saying that War bonds prolong the war; well, the Jerries and Japs have been trying for quite a while now, but we still think the same way.

MARCH 2, 1945.

DEAR FOLKS: This just happens to be my day to stay in again. All necessary work is completed and now to write home.

The only letter for me yesterday was from "A." He wrote it February 22, in Germany, and he was O. K.

This morning a chaplain happened to be here before anyone worked, and since we so seldom have any church services, one was conducted at 8 o'clock today. We were given several small pamphlets, some duplicates that I may send home from time to time.

Two fellows worked in the washroom across the hall all morning and finally have showers rigged up, as well as washbowls. I took a hot shower right after dinner.

I wish that you could see the pretty green valley below that I can see as I look out this window. It is a long distance to the bottom, but way out on a distant hill beyond the valley is another town with its red tile roofs very similar to this one.

Overhead I can hear the roar of 4 P–47's as they continually patrol the skies. Last week I saw more planes than I have ever seen before. Although there wasn't a cloud in the sky for 2 days, the blue was hidden by the white trails left by the high-flying planes. It is really pretty if one can forget the destruction that they carry with them. Down in Italy it was common to see 200 planes flying over in formation, but last week just in one wave I counted 7 flights of 50 or 60 planes each; all abreast or side by side across the sky. That was 1 wave. Those waves kept up one after the other for 2 days and nights. A continuous roar in the sky, coming and going. It is a wonder that they didn't get tangled up.

In this letter I am sending a short editorial that I found in an old magazine. The title is "Closer to the Stars." It is just interesting, you don't need to save it. I'll also send a poem about G. I. movies.

I have a lot of unstamped air-mail envelopes now, but no stamps. If you can get some 6-cent ones please send some, a few at a time, in your next few letters.

I am also going to mention a few little things for you to send to me. When you have enough to fill a box, send it. First is a bottle of ink, any color, but don't send Quink if you can get anything else. A few big handkerchiefs. Color and design don't matter. We work in dirt all the time. A couple pencils, and something to eat.

That is all that I can think of now, but I'll add more in my next letter.

Tribute to the Late President Roosevelt by Dean Alfange

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 19 (legislative day of Monday, April 16), 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a magnificent and eloquent tribute to our late beloved President, Franklin Delano Roosevelt, which was delivered by Dean Alfange on April 17 at the memorial services of the Liberal Party at Manhattan Center, New York City.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

Words are tyrannical things, so unavailing are they to portray our inner feelings.

Even Demosthenes, Cicero, or Webster would be taxed to rise to this occasion.

Daniel Webster reached his greatest heights in his tribute to his native State. "I need not," he said, "deliver an encomium upon Massachusetts. There she stands. Behold her and judge for yourselves. There is her history. The world knows it by heart. The past at least is secure. There is Concord and Lexington and Bunker Hill and there they shall remain forever."

Were he alive today, he could paraphrase this eulogy to say: "I need not deliver an encomium upon Roosevelt. There he stands. Behold him and judge for yourselves. There is his history. The world knows it by heart. The past at least is secure. There is Casablanca and Teheran and D-day and there they shall remain forever."

Roosevelt needs no monuments to his name. So deeply is it engraved upon the hearts of men, that it will last as long as time itself.

There has never been an American in history—indeed any man in history—who possessed the trust, devotion, the reverential love and affection of so many human beings on the face of this earth as Franklin Delano Roosevelt.

No death in the recorded annals of man has brought mourning to so many millions throughout the earth or has caused so many to feel that they would cheerfully have laid down their lives if by so doing they could have saved Roosevelt to complete his mission to the world.

His far-sighted vision in a blind world saved Britain in the darkest hour of her struggle against the combined forces of bru-

talitarianism. When he saved Britain from Hitler, he saved Russia from Hitler, saved western civilization, saved you, and me, and all of us, including those who are now counted as our enemies.

His prodigious accomplishment on the domestic front which has delighted and astonished our allies, dumfounded and shattered our enemies, and which will cause future historians to write down this war as the most brilliantly and successfully conducted war in the history of the world—this accomplishment was the result of his planning—a planning initiated and carried on with the purpose of harnessing and driving together in harmonious cooperation all of the great forces of industry, agriculture, labor, transportation, communications, invention, and science that go to make up the genius of our great American system.

Our children's children and their children's children will kneel on bended knees and thank God for Roosevelt. And so will freemen everywhere. Countless biographies will be written, millions of orations rendered by men yet unborn extolling his exertions for humanity and his monumental achievements for mankind. Wherever men shall breathe the fresh air of freedom, his name will be worshiped and his fame enshrined. The Atlantic Charter and the Four Freedoms shall be the Bible of political and economic salvation until the end of time.

Roosevelt is gone, but his spirit shall forever attend us. His vision enlightened the world, his courage strengthened it, his generosity enriched it. He has bequeathed to us a challenge that ought to stir the hearts and souls of men to action.

If Roosevelt had written his own epitaph, it would be two simple words—carry on.

And so, the finest tribute we, the living, can pay his memory is to carry on his work.

Christ said to his disciples (John 14, 15), "If ye love Me, keep My commandments."

The spirit of Roosevelt cries out to us and says, "If you love me, keep my policies."

To keep his policies should be the high resolve of liberals everywhere.

Many who added to his wartime burdens, fomenting strife and dissension at home, now place roses on his grave. Behold the praise of his erstwhile detractors But no sooner shall these roses wither, when they shall desecrate again the ideals for which he gave his life.

We who truly loved Roosevelt rededicate ourselves tonight to carry on his work. Let not the New Deal perish. Let bigotry and hatred and terror and fear vanish from the hearts of men. Let oppression, tyranny, and exploitation be rooted out from the soil of the earth. Let the nations of the world live in peace and dignity. Let godliness reign in the inner conscience of men, that there may be justice and equality and freedom from want and from fear.

That was the hope, the work, the life of Roosevelt. Let it, therefore, be our work to carry on, to give flesh and life and content to that magnificent framework of peace, security and freedom which he created in his lifetime and which he left as a legacy to all the peoples of the world.

The Congressional Medal of Honor

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 17, 1945

Mr. ROBSION of Kentucky. Mr. Speaker, I thank you and the Members of the House for granting unanimous consent to me to set forth certain facts and information concerning the Congressional Medal of Honor. This is the highest decoration which can be awarded by this Nation to any officer or enlisted man serving in the armed forces of the United States. It can only be awarded to an officer or enlisted man who shall, in actual conflict with the enemy, distinguish himself conspicuously by gallantry and intrepidity at the risk of his life above and beyond the call of duty and without detriment to the mission of his command, or of the command to which he is attached. It matters not what service any officer or enlisted man may render, or what courage he may show, unless this courage and great service is involved in actual combat with the enemy and unless he distinguishes himself conspicuously by gallantry and at the risk of his own life above and beyond the call of duty, he cannot be considered for the Congressional Medal of Honor.

This decoration was first authorized by an act of Congress December 21, 1861, when it was limited to noncommissioned officers and enlisted men of the Navy and Marine Corps for deeds of gallantry in action. In 1862 Congress authorized the presentation of this decoration to enlisted men of the Army, and under the same conditions as to the enlisted men of the Navy. For the first time by an act of Congress March 3, 1863, the President of the United States authorized to provide these Medals of Honor for commissioned and noncommissioned officers as well as privates who had thus distinguished themselves or who might thereafter distinguish themselves in action.

In 1863 the law was amended to make it a permanent award during war or peace, for acts of heroism in the Army and to include officers, but the award of the Naval Medal of Honor to commissioned officers of the Navy, Marine Corps, and Coast Guard was not authorized until March 1915.

The act of July 9, 1918, provided for Medals of Honor, the Distinguished Service Cross, and the Distinguished Service Medal. The reference for the Congressional Medal of Honor is as follows:

That the provisions of existing law relating to the award of medals of honor to officers, noncommissioned officers, and privates of the Army be, and they hereby are, amended so that the President is authorized to present, in the name of Congress, a Medal of Honor only to each person who, while an officer or enlisted man of the Army, shall hereafter in action involving actual conflict with the enemy distinguish himself conspicuously by gallantry and intrepidity at the risk of his life above and beyond the call of duty and without detriment to the mission of his command or to the command to which attached.

A similar bill was passed for the Navy on February 4, 1919. But in order to justify an award for the Congressional Medal of Honor the naval officer or enlisted man, as in the Army, had to perform in action a deed of personal bravery or self-sacrifice above and beyond the call of duty so conspicuous as to clearly distinguish himself for gallantry and intrepidity above his comrades, involving the risk of life or the performance of more than ordinarily hazardous services.

Congress approved a special design for the Congressional Medal of Honor for the Army, and also a special design for the Congressional Medal of Honor for the Navy.

According to the Army and Navy Register of date March 17, 1945, 159 commissioned, noncommissioned officers, and enlisted men in the Army, Navy, and Marine Corps have, in this war, been awarded the Congressional Medal of Honor.

In the Army these range from buck privates to General MacArthur and Brig. Gens. James H. Doolittle and Theodore Roosevelt. In the Navy they range from seamen to Rear Admirals Callaghan and Kidd; and in the Marine Corps from privates to Lt. Gen. Alexander A. Vandegrift.

Some two or three others have been awarded this great honor since this list was reported and published. Among these was Pvt. (1st cl.) Wilburn Ross, of Strunk, Ky. It was he who repulsed, according to the records of the War Department and of his own officers, 9 attacks of a German company, and he killed more than 40 Germans and wounded more than 18 others, killing and wounding in all, 58 Germans, and he forced the Germans to retire. The Germans killed or wounded all of the members of his company except himself and 8 of his comrades. He placed himself 40 feet out in front of his company with a machine gun and held his ground while the Germans made 9 attacks. He was not wounded. He saved his comrades. This was in France in October 1944. It was only recently that he was awarded his decoration. Before that he had been wounded twice—once seriously—in the Italian campaign. He had a brother who was severely wounded in General MacArthur's invasion of Leyte Island and a brother about 18 who recently went overseas.

I spoke at length about Private Ross in the House a few days ago. Private Ross makes two in my congressional district who have received the Congressional Medal of Honor in the present war. Up to that time there had been inducted into the armed forces approximately 14 000,000 men, and they have fought courageously on land and sea and in the air on all the battle fronts and all the seas of the world. The fact that only about 160 have been up to this time awarded the Congressional Medal of Honor indicates how much courage and daring one must display in actual combat with the enemy to be awarded this medal.

The following is a list of the 159 heroes as it appears in the Army and Navy Register of Washington, D. C., March 17, 1945:

ARMY

Lucian Adams, staff sergeant; Addison E. Baker, lieutenant colonel; Van T. Barfoot, second lieutenant; Carlton W. Barrett, private; Stanley Bender, staff sergeant; Willibald C. Bianchi, first lieutenant; Arnold L. Bjorklund, first lieutenant; Orville E. Bloch, first lieutenant; Richard I. Bong, major; Robert D. Boker, private; Maurice L. Britt, captain; Elmer J. Burr, first sergeant.

Jose Calugas, sergeant; Ralph Cheli, major; Ernest Childers, second lieutenant; Robert G. Cole, lieutenant colonel; James P.

Conner, sergeant; Robert Craig, second lieutenant; Demas T. Craw, colonel; William J. Crawford, private.

Charles W. Davis, major; Arthur F. DeFranzo, staff sergeant; Ernest H. Dervishian, second lieutenant; James H. Doolittle, brigadier general; Jesse R. Drowley, staff sergeant; John W. Dutko, private, first class.

Walter D. Ehlers, staff sergeant; James H. Fields, first lieutenant; William G. Fournier, sergeant; Thomas W. Fowler, second lieutenant.

William W. Galt, captain; Eric G. Gibson, technician fifth grade; Kenneth E. Gruennert, sergeant; Lewis Hall, technician fifth grade; Pierpont M. Hamilton, major; Lloyd C. Hawks, private, first class; James H. Howard, lieutenant colonel; Paul B. Huff, corporal; Lloyd H. Hughes, second lieutenant.

John L. Jerstad, major; Leon W. Johnson, colonel; William J. Johnston, private, first class; John R. Kane, colonel; Neel E. Kearby, colonel; Charles E. Kelly, corporal; John D. Kelly, technical sergeant; Patrick L. Kessler, private, first class; David R. Kingsley, second lieutenant; Gerry H. Kisters, second lieutenant; Alton W. Knappenberger, private, first class.

William R. Lawley, first lieutenant; Floyd K. Lindstrom, private first class; James A. Logan, sergeant; Douglas MacArthur, general; Troy A. McGill, sergeant; Joe P. Martinez, private; Archibald Mathies, sergeant; Jack W. Mathis, first lieutenant; Edward S. Michael, first lieutenant; James H. Mills, private; Nicholas Minue, private; Jack C. Montgomery, first lieutenant; John C. Morgan, second lieutenant.

William L. Nelson, sergeant; Beryl R. Newman, first lieutenant; Alexander R. Nininger, second lieutenant; Arlo L. Olson, captain; Truman O. Olson, sergeant; Harl Pease, Jr., captain; Frank J. Petrarca, private first class; John J. Pinder, Jr., technician fifth grade; Leo J. Powers, private first class; James W. Reese, private; Paul F. Riordan, second lieutenant; Theodore Roosevelt, brigadier general.

Joseph R. Sarnoski, second lieutenant; Henry Schauer, private first class; Robert S. Scott, captain; Charles W. Shea, second lieutenant; James D. Slaton, corporal; Furman L. Smith, private; Maynard H. Smith, sergeant; Joe C. Specker, sergeant; Junior J. Spurrier, staff sergeant; John C. Squires, sergeant.

John J. Tominac, first lieutenant; John R. Towle, private; Walter E. Truemper, second lieutenant; Leon R. Vance, Jr., lieutenant colonel; Junior N. Van Noy, private; Forrest L. Vosler, technical sergeant.

Kenneth N. Walker, brigadier general; Robert T. Waugh, first lieutenant; David C. Waybur, first lieutenant; Thomes W. Wigle, second lieutenant; William H. Wilbur, colonel; Raymond H. Wilkins, major; Homer L. Wise, staff sergeant; Rodger W. Young, private; Jay Zeamer, major.

NAVY AND MARINE CORPS

The following personnel of the Navy and Marine Corps have been awarded the Medal of Honor during the present war and to include February 8, 1945:

NAVY

Mervyn S. Bennion,[1] captain; John D. Bulkeley, commander; Daniel J. Callaghan,[1] rear admiral; John W. Finn, lieutenant; Francis C. Flaherty,[1] ensign; Samuel G. Fuqua, captain; Howard W. Gilmore,[1] commander; Nathan G. Gordon, lieutenant; William E. Hall, lieutenant; Edwin J. Hill,[1] chief boatswain; Johnnie D. Hutchins,[1] seaman, first class; Herbert C. Jones,[1] ensign; Reinhardt J. Keppler,[1] boatswain's mate; Isaac C. Kidd,[1] rear admiral; David McCampbell, commander; Bruce McCandless, commander; Edward H. O'Hare,[1] lieutenant commander; John J. Parle,[1] ensign; Oscar V. Peterson,[1] chief watertender; John J. Powers,[1] lieutenant; Lawson P. Ramage, commander; Thomas J. Reves,[1] radio electrician; Milton E. Ricketts,[1] lieutenant; Albert H. Rooks,[1] captain; Donald K. Ross, lieutenant; Herbert E. Sconland, captain; Norman Scott,[1] rear admiral; Robert R. Scott,[1] machinist's mate; Peter Tonich,[1] chief watertender; Franklin Van Valkenburgh,[1] captain; James R. Ward,[1] seaman, first class; Cassin Young,[1] captain.

MARINE CORPS

Richard B. Anderson,[1] private, first class; Kenneth D. Bailey,[1] major; John Basilone,[1] gunnery sergeant; Harold W. Bauer,[2] lieutenant colonel; William J. Pordelon,[1] staff sergeant; Gregory Boyington,[2] major; George H. Cannon,[1] first lieutenant; Aquilla J. Dyess,[1] lieutenant colonel; Merrit A. Edson, brigadier general; Richard E. Fleming,[1] captain; Joseph J. Foss, major; Robert E. Galer, lieutenant colonel; Henry Gurke,[1] private, first class; Robert M. Hanson,[1] first lieutenant; William D. Hawkins,[1] first lieutenant; John B. Power,[1] first lieutenant; Mitchell Paige, first lieutenant; David M. Shoup, colonel; John L. Smith, lieutenant colonel; Richard K. Sorenson, sergeant; James E. Swett, captain; Herbert J. Thomas,[1] sergeant; Clyde Thomason,[1] sergeant; Alexander A. Vandegrift, lieutenant general; Kenneth A. Walsh, captain.

[1] Deceased.

[2] Missing.

"Last Butcher House Closes Down in Washington"—Read It and Weep, While Chester Bowles Dances With Glee

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 19, 1945

Mr. MORRISON. Mr. Speaker, in Wednesday's Washington Daily News, on page 5, appeared this headline: "Last Butcher House Closes Down Here." The only difference between that headline and those in the rest of the United States is that the markets and butcher shops have already been closed in other parts of the United States while in Washington they hung on a little longer.
